The nineb yeare of the Era called Tenscio, the tenth of the eighth Moone, which is the two and twentieth of September, An. 1 590.

At your Highnesie feet.

Arimano, Sciurino, Daibu Don Protalins.

This Quahacondeno (as L. Froes writeth) was now growne the greatest Monarch that ever See of these Lapon had, having ascended thereunto from a base efface, which was (as hee hath divers times saporties Kings 50 with his owne mouth confessed) to cut wood, and to carrie it to the Market to sell for his daily and Rices my food. Nobusanga his Predecessor had growne to great height, such as many ages had not there Nationanga. feene. In Frenciama eight hundred yeeres before, a King of Lapon had builded 3800. Temples, with houses adjoyined for the Bonzie, which employed themselves in the studie of the Lawes and Secas: for whose quietnesse he removed the Husbandmen, and builded them two streets, allowing to their maintenance about the third part of the Cultomes (or Rents) of the Vomen Kingdome, Thus became it a fountaine of their superstitions. In time those Temples disperfed in fixteene Vallies were leffened to 800, and the Boszien discipline, and studies melted into pleasures, hardned into Armes, and ranged into robberies, so that they fired Mesco with great slaughter, and opposed Nobunanga: who having destroyed the Militarie Bonzi (called Icoxos) to and taken away their Cattles, intraded Fremoiama, professing he feared not their Gods. On the Fremoiama. top of a Hill was the Temple of Quanton, to whom prayers and pilgrimages were made for health, wealth, and long life; and yeerely folemnities and Playes with huge pompe and coft Were made in his honour (to which the Gibon feaft at Menco succeeded) with frequency of men,

Faxiba Cicugendono obtayned that title of Quabacondono (Dono is a generall title of honour)

the next to the Dairs, and having subjected lapon, minded to conquer China, by the way of Corai. The King of Corai fent his Embassadour to him with three hundred attendants in vaine.

he minding to lend and place in those new Conquests all the suspected Princes of lapan, and to eternize his owne name, being exceeding vain-glorious. He tookefrom the Bonzi their Lands: 30 and after that, making ditches round about Meace, hee forced them all to dwell together neere the faid dirches: which reducing their difcrepant Sects to an unformed Chaos together, made many of them for lake their protession. Hee enjoyed every foot of Land in lapon, gaue, or removed. or deprined Kings at pleafure, tooke away all Armes from the Ruftikes; forbad all contentions and fights upon paine of death, if any guilty hereof fled, punishing the kindred, or feruants, or neighbours, cruafying them. He administred instice very seuerely without partiality, or pardoning any man : and had almost put to death the Meacon Bonzi for their Concubines if the Gouernour of Meaco had not interposed and undertaken their amendment. Hee neuersuffered the Souldiers to be idle, but vied them in warres or buildings. The Vice-roy fent him an Em-

baffage and Presents; the foure Iavonian Lords which had beene in Europe attending Valigna. 40

nus the Embassadour. Quabacondono would needs heare these Iaponians play European Musicke, which they had there learned : and made great shewes of kindnesse to them all, and fent this

Letter with Presents to the Vice-roy.

Sir, I have received Letters which your Lordship from so remote Regions sent mee, in opening and reading whereof I feemed to fee the length of the leagues by land and fea. This Kingdome of lapon as

you wrote, contagneth abone fixtie States or Inrisalitions, in which before have beene great disorders and warres, no peace nor quiet. For many wicked men, Traitors to their Country confired to denge obidience to their . King, a thing which from my youth hath vixed me. And long fince I bethought me

of a course to subject this People, and to pacifie the ubole Kingdome: and layed for a foundation three vertues, towit, Gentlenesse and affabilitie of speech in conucrsing withmen; Prudence in considerate 50 sudging of things, and egregious fortitude and courage of minde : by the aide whereof I have (ubdued thaging 9 temps, see the second of the Kingdomes into this forms of one Empire, wicked men being extinit, and morke-men which labour in the fields promoted. And I have 6 referred peace and quietestimit, and worke-men which labour in the fields promoted. And I have 6 referred peace and quietestimit, and worke-men which labour in the fields promoted. nesse to these Kingdomes, and in few yeeres have so settled and stabished the Monarchie of Iapon, that et is now like a great Rocke which cannot be removed. Whence it is come to paffe that in all foure parts of the Kingdome they have a King eminent in much wisedome; and the King likewise bath all of them obedient. And in this order I have declared and exercised the power of a good Captaine, to whom these Kingdomes are subject; by taking away the wicked, and rooting out all Robbers by sea and land. So the china inuation. people, families, and all places of the Kingdome entoy maruellous quiet. I have also determined to invade the Kingdome of China, and in few dayes I will take ship and doubt not of victorie. When I shall 60

possesses, your Lordship may more easily communicate with mee in all things.

Now concerning the Fathers, " Iapon is the Kingdome of Chamis, whom wee hold to be the fame with Scin, which is the beginning of all things. This Scin is the jubstance and the very being of al The lessits. things; and all things are one and the same with Scin, and into Scin averesolved. Who in Scina is

called Iutto, and in Tescincu Buppo. Further, in the observation of the Lawes of this Chamis confifleth all the Politicall government of lapon, which being neglected, there is no difference betweet Lords and Subjects: if it be kept, the union and concerd is perfected which ought so bee twist the Father and Sonne, the Husband and wife. Therefore the whole, both internall and externall government of Men and Kinedomes is placed in the confernation of this unson and policie. Now the Fathers formerly have en_ Christian Relitred these Kingdomes to preach another Law for the saving of men: but because wee are instructed gion always by and fettled in the Lawes of Charmis, we defire no other Law: for the discriptions of Lawes and opining the Denill and ons are burtfull and preiudiciall to the Kingdome. Wherefore I commanded the Fathers to depart out a State-differof lapon, and have forbidden them to preach their Law, nor will I that becreafter they preach any ber. new Law in this Kingdome. Although these things be so, yet I greatly desire that a stable communi. Issuites banication may remayne betwixt vs: for so this Kingdome shall bee free from Theenes, by Land and Sea. thed.

And I guesses to all Merchants which bring merchandie, to fell them all without let. I defire your Lord/hip to approve the same. I received all the gifts which you sens out of those Southerne parts, as it is written in your Letters. I likewise fend some others out of these Kingdomes, with a memoriall of the gifts, and the names of them which have given. The Legate will declare the rest, wherefore I will bee no longer. Dated 20. yeare of Tenfci, 25. of the fewenth Moone. In the end was the Scale and Subscription. It was written in a leafe eight palmes long,

foure broad, painted with golden Flowers, and put in a red filke bagge wrought with Gold and filter; and that inclofed after the lapon manner in a Boxe, which for the price and workman20 flup was to admirable, that the subtilitie and excellence of the worke might amaze all Euro. Input more. peans. Within it was coursed and without, with Vrosci (made of Gold beaten into pow. minship.

der) diftinguished with Flowers of Gold and Siluer, so inserted in the Vrosci that none could different the conjunction, but he which knew the making of the Boxe. It had also Roses, and sold Chaines to tye the Boxe; which Boxe was put into another Bag, and that into another Boxe very artificiall. The gifts were Armours, Armes, and other things very precious.

He affembled his Lords about this China Warre, which durft not expresse any other opinion, Preparation hee having protested, that hee would not heare his Sonne distinade him, if he were alive againe, for invasion of and if any should hinder him, it should cost him his life. Thus for some moneths space nothing Corai. might be feene elfe, but prouision for Ships, Armes, Munitions, and necessaries for the Warre,

Hee made a Catalogue of all his Lords, exempting none from the expedition, and fetting every one his number of followers. To Augustine a Christian Lord hee gaue the fauour of first impression into Corai, other Lords staying still at Suscima eighteene lagues distant. Corai is ad- Corai descrisoyning to the Continent of China at one end, divided by a great River from China, and tribu. bed: fee my tarie to the King of China; it is in length about an hundred leagues, and fixtie broad: the people China Mip. while the Chinois in language and bodily strength, but following their lawes, customes, and gouernement. They are better Archers then at any other weapons: and not comparable to the I aponians, except in hipping, wherein they and the Chinois exceed. Yet at this time they were destitute of that defence, and Augustine gaue them a great ouerthrow. Before Quabacondono would goe, he made his Brothers Sonne by the Dairi to be entituled Quabacondono, as in Heire

and Successour, concenting himselfe with the title of Taicofama, that is, Great Lord. All the Japonian Princes were commanded to be present at the translation, to give him obedience; to whom the Dani gaue the Fortrest of Meaco, and the Palaces of Quabacondono, making him Lord of Tenfa. But his Vncle held the iway of all in his owne hands, and after having a * Sonne * This is that of his own, caused this his Nephew with some others to crosse himselfe (that is, to cut his breast Fresama of

acroffe, his bowels falling out, and some one of those which died with him, cutting off his head, whom you reade in Cape. Angustine with a Fleet of eight hundred sayles entred Corai, and tooke two Fortresses, the Saris, and Ma-Coraians being druen from the walls by the laponders Gunnes, viknowne to the other, and fue nerceste, dethousand of them slayne. This wanne him great credite with Taicosama, who promited him prived by Ogemuch, yet performed little. Hee defeated also an Armie of twenty thouland, and after another 100/2004.

10 of fourescore thousand, and the King fleeing into China tooke the Meace, or Royall Citie of Consi, Taicefame fent him a Horse, and a Sword, the honour that Nahunanga was wont after any great Victorie to doe to him. The Coraians feeing their King with his troops in fafety, fled with their prouitions into Woods and Hills , and would not thence bee brought by any promifes. The Japonian possessed of the Fortresses wanted men to till the ground, and therefore must needes want necessaries: the wayes also were by the Ceraians upon all occasions assaulted. There are two hundred thousand laponians at this present in Corai, and Augustine is in the extreme borders adioyning to China, separated notwithstanding by a River three leagues Wide River broad, abounding in thips, and the shores fortified with multitudes of men, so that the suc- betwies china

60 Froer in his Epifile, 1595, writeth that there were then an hundred and ninety lefuites in Ia- 190, ichite. pon and China: that Taicofama not succeeding in his Coraian expedition, returned to Meaco, and quarrelled the new Quabacondono out of his life, who with time others at Tateos command executed themselues after the Iaponian manner. Augustine meane while endeauoured on Embaffage to bee fent from the King of China, who thinking himfelfe Land of the World, tent to

without his

Iapenian Theo-

tainment of the Chinois,

Taicofama, that it was an vineet thing that He, whose industrie and valour had subdued threefore and fixe Kingdomes of lapon to his Empire, should permit the Dairi a private man, and Subject to the King of lapon to hold his former place of dignitie. And if hee would deprine Chint Emba . him thereof, hee promifed to fend him a Crowne, and the title of King, and by the same Legates to treate further about the Iaponians forfaking Coras. Two Embassadours were fent from Pegam to Augustine to Corai: who presently sent word to Taico, the Embassadours abiding with him, because of the solemne entertaynment which Taice intended for the renowne of his name to all posteritie. The Nobles exhaust in the former expedition were yet now enforced to new braueries and expences. Hee caused at Ozaca a Hall to bee crecked, with a thoufand Tatami (very elegant Mats) the timber coftly, and gilding incredible. Yet by flore of to raynes a great part thereof fell downe, which hee intended some to repaire, having an hundred thousand men at worke there both night and day in great miserie, standing with their feet in the water. If any runne away they are killed. Before this Hall hee erected a Theatrefor Comedies, exceeding stately and costly with artificiall paintings of Vrusci. Hee repaired the Tower of Ozaca seuen stories high. The gilded Plates or Tiles, the Bridge called, The Bridge of Paradife, the new Citie of Fuscimo which he builded, and other his immane expenses (the Offerings to his Idoll of Fame,) I cmit. Hee caused his little Sonne to goe with great State to Sandai to the Dairi, that is, to bow his head thrice before him downe to the Mats, who entertayned him with a folemne feast, with great lubilee in alteration of names and titles of Taico had settled peace thorow all Iapon from Warres, from Robbers by land, and from

Rouers by fea, which before continually infested all with Piracies (one of which Noximan-

forced a great part of the Coast to yeerely tribute vnto him, to bee freed from his Robberies)

onely the Dairi had higher title: and a Crowne and Scepter feemed wanting to his realitie of

Novimanano a laponian Pirat, dono is mentioned by the lessistes in this time to have had a great Fleet of ships, and to have

Prodigious

feldome fuffered to vifite their King-China Prefents

Regalitie and Soueraigntie already possessed. And now whiles hee intended to exceed himselfe in his entercaynment of the Embassadours, one of them hating this long detention or impriforment in Corai, fled; which newes Augustine sent to both Courts. From China the Legacy was renewed, the Delinquents kindred punished. Meane while the two and twentieth of July 1 (96, at Meaco it rayned ashes, wherewith the houses, hills, and trees were coursed as with 30 fnow, and a great myft accompanied it. At the same time at Ozaca and Sacaia it rayned sands. At Meaco after the showre of ashes came another of haires, long and white like the heary haires of an old womans head but fofter, and not fo fmelling when cast into the fire. In the Northerne Kingdomes of lechn, Ichingo , Scimano , and Nora, the land and houses were coured with them. A Comet appeared in August: on the thirtieth whereof followed an Earthquake as a warning to a greater on the fourth of September, which threw downe Taices magniheent Hall with a thouland Tatames, in which hee had purposed to entertayne the China Legates; and the Tower of feuen lofts, and another Tower, and almost all the buildings of the Fortresle, and the Store-houses, which were very large, and stored with Corne, and halfe the houses of Ozaca, all in halfe an houre, fixe hundred people being buried in the ruines. It made 40 a noise like Thunder, and like the waves beating on the shoare. The Earth opened in many places. A great new Temple and a Monastery fell downe, and the same day in which the Iessie had heard a Bonzs in the same Temple inuiting to call upon Amida, and much depredicating his mercies. The next day at Meace was a noise greater then of the greatest Cannons that ever were heard, dreadfull to man and heast, and wee faid the Letanies on our knees, but scarfely could keepe on our knees for the Earth-quake. Others forsooke their houses, lamented their dead (fine hundred being onerwhelmed; and fifteene or twenty Temples) called on their Amida: * laponies poli- and some ranne to Fuscimo (Taicos new Citie for him and his Nobles) whereof the best part was cyto keepe all ruined, and much harme happened in many other places. Taicos Palace at Fuscimo fell downe, bout the Court and oppressed seventy women, himselfe escaped into the Kitchin vntouched : and the relations 10 of that Earth-quake would yeeld a booke alone. Taico yet would seeme to dominere ouer Nature, and leuell a very huge Hill with the Valley, to erect new Palaces. And because hee could not entertayne at Fuscimo the China Embassadours, he received them at Ozaca. The solemne state and pompe I omit. They had audience the twentieth of October.

The Kings Letter was written in a plate of Gold very great and ponderous, inclosed in a golden Coffer, wherein also was the Vest, and royall Crowne for Tuico, and in another was a Crown for Mandocorasama his Wife with title of Queene. Hee sent also twenty Vests of Quingui with title and dignity of China for twenty Lords (the first of which was Augustine) by him named, and as many for those whom Taco should name. In the Epitle of the King were these words, chia an heth Futatabi cioscen vocasu cotonacure, that is, Thou shalt not returne againe into Corai, and if then re-60 turnest, thy dignitie hall no longer advantage thee, words importing their vasfallage to the Chinois. The Embaliadour and Taico were equal in fitting on the Tatamis; the chiefe Lords of Japon ments in Iapon were present; and after the taste of their * Chia, Taico received the Epittle or golden plate, and layd it on his head, and the Vests, going in to put them on. At his returne the Chinois adored

him, and a feast followed with pompous plenty: which was continued other dayes. But when the Legates moved him to pull downe his Forts in Corat, and to pardon the Coratans, hee brake into exceeding furie, and commanded them backe to Corai, and extruded them in great nafte out of the Countrey with inhumane viage.

About this time Peter Martines first Bishop of Iapon came thither. Taico died Sept. 16, 1598, Bish, of Iapon. haung taken politike order for the State, and as foolish for himselfe to be made a God, prescribing the forme of his Temple : One was crucified for speaking of his death. Word was sent by the Gouernours which Taico had appointed as protectors for his Sonne, to the Iaponian Lords in Corai, to returne, and so after seuen yeeres that warre had end. What events to lowed after in the P. Shee. Coras, to returne, and lo atter leuen yeeres that warre had end. What euents Followed atter in the Foundation of the Phylimsec, and fonewhat allo before in Captagne Sarva, and Matter that was the Cocky relations: This consistency polarities rooted out, and Ogasha Sama feezing the Souteriginite to P. I. in a Cheft and translated to that fumptions Temple, where he is worth pped as the principal of Time of all the Camis) with an Image crecked to him, (leene by Cap. Saria) then to be queatti long life to scalarimen, himselfe accomplishment to his Caraian delignes, or fure fuccession to his posteritie, in all which Cap. Saria hee fayled. But we will with our perfecuted lefuites leave lapon, and thip our felues for China, told mee hee

RVGGERIVS enters againe into China with RICIVS, and is forced backeto Amacao; thence fent for againe by the Vice-roy. Sande and Almeida are fent to them, and enter the Countrey as farre as Cequion, and returne to Sciauchin.

RT is a cultome in China, that of all Charters granted by the Magistrates a copie is kept in the Regultrie, and the execution, or what hath therein beene done, subscribed at the end. The faceceding Vice-roy finding the copie of that Charter granted to the Islant at their departure, without fach fubfeription (because nothing had beene done therein) wrote to Canton, to the Aitao; he (which then was absent) to the Ansam or Hiem-xan, the Gouernour of the Citie, and he being ignorant thereof, to the Port-gouernours at Amacao. They went to the Bishop, and by him were sent to our Colledge where they were shewed the sealed Went to the Donney being then Melebior Carners: Patriarch of Ethiopia (which expedition was Sup. 1.7, in fine) diffolued) Capralis, Gomez , Pafins, and other principall Isfutes, it was thought fit , that it should not be delivered to the Souldiers, but carried by two lefunes to the Airao: and Ruggerins with Recins were therein employed, the China Captaines also consenting that they should

goe to Anfan, thence by the Ci-bien or Governour, to be fent to Canton. This Ci-bien when they Ci-bien a Go-40 came thither would have fent it and not them, which they refused, whereupon he grew angry, we nour of a cast it on the ground, and commanded them to returne backe; saying, that a deposed Vice. Hieror Citic, roves grant could no way benefit them. They went to their Inne, and there confulted to goe without his leave, deceiuing a Ship-master with fight of the said Charter, who tooke them into his thip; but terrified by others, cast them out againe with their goods. At this time came a meffage to the (i-bien of his Fathers death , whereupon (according to the China Custome) he loft his office and returned home during his three yeere mourning. They by this occasion, and a weightier cause, (money given to the Successour) and the Notaries subtiltie in a feeming service to the Common-wealth, were fent in manner as prisoners to Canton, as strangers found there.

The Asse notwithstanding gaue them kinde entertayment. They petitioned, shewing that Visites supplies to the state of the their dayes: and defired nothing but a small piece of ground to raise thereon a little house to the Lord of Heauen, and they would be further burthen some to none, but procure linelihood of their owne mens beneuslence. They mentioned nothing of Christian Religion, less it might cause suspection, and bee a let to them; the Chinois thinking too well of themselves, that strangers should teach them any thing, which they have not already more complete in their owne Bookes. Rebellions have alio begunne under colour of new Sects. The Airao or high Admirall commended their defires, but faid, it belonged to higher Magistrates, and could onely bee granted by the Ciai-yuen (the Ciai-yuen or Vifitour of the Province) or the Vice-roy. They defired that hee would at least let them itay Chain, Province there in the Palace of the King of Siams Legates, till the Portugals Mart came, and in meane ciall Visitour.

60 time they would trye what they could doe with the Visitour or Vice-toy. This hee granted, but the same day repeated, professing that he feared the Visitor (if out of Mart-time he should finde ft angers there) whose censure is dreadfull to every Magnifrate. He therefore commanded them presently to packe for Amacao. They were comne backe to Anfan, and found things in worse case then before. For at the gates of the Citie they found an Ediet set up by Co the

new Vice-roy, blaming the China Interpreters which had put into the heads of Stranger-priefle Money brings to learne the China language and Characters, and to defire fome place for to credt a facred and private house, threatning those interpreters if they persisted. In this dispayre of proceeding, the cidation primate noute, threatning those interpreters it they pennited. In this suppayre or proceeding, they had not beene a weeke gone, when from Scisagain, the feate of the Vice-roy, one of his guard came to Imacao and brought the Ci-fu, (to they call the Gouernour of that Province) his Letters Patents by the Vice-royes authoritie, inuiting the Fathers to Scianguin, there to receive a piece of ground for a Church and dwelling house. The cause hereof was an offer made by the Fathers (when they were fent away from Sciauchin, by the deposed Vice-roy to Canton) of a fumme of money to any which should procure of the New Vice-roy license for their returne, One of the meaneth Souldiers in name of Interpreter to the Societie had put vpa Petition to the 10 Vice-roy, who fent it to the Gouernour of the Region called Guam-puon, of Cequion Province) to bee dispatched, who gaue the former Letters Patents to the Souldier, which brought them himselie to Macao. They with great ioy, as seeing the Diuine hand herein, made ready for the iourney, which the former expenses and late Ship-wrackes (especially of the Iapen Ship in the Pingai bountie. Ile Leuquiceo, which alone hath most of the wealth of the Citie in it) made difficult; but Gaspar Viegas charitably bestowed the expense, seconded also by others. Thus full of hope they fet fayle, and in Canton, both now and when before they were difmif-

fed from Scianguin, they found Spaniards. Then, a Ship which from the Philippinas was bound

their purpole, which hee doubted not to procure of the Vice-roy for them. At the same time at Sciauquin, they were creding by the common charge of the Eleven Cities of that Iurisdiction, a Tower (whereof one floore was now rayled, to which they intended 10. to adde nine others aboue it) in a pleasant place by the Riuers side, a myle and more from the Citie, the Suburbes continuing further then it. In the same place they set foorth a Temple, and therein erected a Statue to the Gouernour, whose sixe yeeres gouernment had well deserved of the learned, and of the vulgar. A piece of that field in which the flourilbing Tower (so they called it) was building, they defired, which hee liked well, and promifed to further them with the Vice-roy. The lesuies at their former departure, had left an Altar with one Cin Nice, who had placed the same in a convenient place, for want of Images inscribing above, it Thien Chu in Cubicall letters, that is, To the Lord of Heauen. Hee made also thereunto divers Incenses, and at fet times yeelded divine honors before it; which much reioyced the Fathers, feeing that there was one found which inuoked the true God. And this mangage them entertaynment, till they had 40 receited the Vice-royes aniwer, approxing their request; and the next day the Gouernour set foorth a plot of ground for them with straight caution to observe the Lawes of China, and to admit no Strangers companions to dwell with them; which they promifed. Much was the concourse and admiration of people, much the wonder at their triangle Glaffe, the Image of our Ladie, a wrought Handkerchiffe, with which they prefented the Governour; but hee returned all afterward, fearefull of Bribe-imputation. Much trouble arose about that place, and another was affigned them, where they began to build and were forced to pawne their precious triangle Glaffe, to fit it for their vie; they obtayned also an ample Charter from the Vice-roy, and two Patents from the Gouernour which protected them from wrongs. In these beginnings they made little mention of the Gospell, but imployed their spare time so

in learning the Language and Characters, by a Holy life feeking to infinuate themselves into the peoples good liking. Their habite was like the modeftest of the Chinois, a long Gowne with large sleeues: Their house had two Cells, and betwixt them a Hall with an Altar in the midst. D. wanting to on which they fet the Image of the Bleffed Virgin, carrying her Sonne. They called their God, Thien-cui, Lord of Heauen; for the Chinois want the D. which caused that they could not give any name more fit: and this name continueth to this day, although they vie others also, as Highest Ruler of all, First beginning of all, and the like. The blessed Virgin is called the Great Mother of God. This Image on the Altar, all which visited them both Magistrates, Students, Priests, and common people, did religiously worship, kneeling and (after their rite) knocking lightly the ground with their fore-heads. They admired the excellencie of the Picture and colours 60 without ceasing. But when it began to bee rumoured, that they worshipped a Woman for God, they tooke away that Picture and substituted the Image of Christ. After this, they painted the ten Commandements in the China language, which many approued. Some brought them Incense for holy vies, and some bestowed their Almes; others also Oyle for the Lampe which bur-

ned before the Altar; and the Fathers commended their Law, as agreeing to the light of Nature. ned before the Alica; and the Fathers Commented that are controlled the first which was Baptised, was a poore diseased man cast foorth by his parents, whom they First Baptisme Intructed, and a little before his death baptifed. The reliefe which they befowed on him before, caused a rumour amongst the vulgar, that those Strangers knew by the mans complexion, Fancies of the that hee had a precious stone in his head, the cause of all that benificence. The Chinois much ad, vulgar, mired the Bookes, of which the Fathers had flore, the artificiall binding, gilding, coft, goodlinesse of the Print, and their studiousnesse in the China bookes; and received with great applicuse a Booke of Christian learning which they printed. Yea, the Gouernour after the China rite would needs doe them publike honour, which is done by fending a goodly Table with Cubitall Tables of ho-

Ic letters in praise of them, with the Magistrates name, and the date inscribed in lesse letters. Two nour, of these with great pompehee sent vnto them, the one to bee set ouer the entrance with inscription, The boule of the flowre of Dinine men; the other to bee placed in the Hall, inferibed The boly Nation of the West : which wanne them great reputation, this Magistrate being much reputed for learning and vertue.

Our wants caused Ruggeriss to intreat leave to goe to Amecao for supply, which hee obtavned with a faire Ship and thirtie Rowers. The Gouernour requefted allo, that a Clocke might bee made for him. But the pouertie of the Amacaons, their Ship not being come from lapon, and the Colledge enjoying no Rents, caused him to send the workman to Scianquin, to make it there: which hee tooke in good part. Now the Chinois are a people suspicious of Strangers, especially 20 those ruder parts of the Pronince of Canton, and much muttered at the Portugals Commerce, fay- Chinesin Heeing, they made all things dearer, and the profit came but to few. They gaue an odious appella-pitall.

ing they made at time and the portion of the property of the p their famous Tower was the worke of Strangers, (which had no ground but that their house was building at the same time) and the Flurishing Tower, was stilled the Strangers Tower. They there-Tenderda ficebuilding at the same time; and the company I were, we make the consequent flower. I mey there I come fore in Regereim aboface of freed great abules by throwing flones, being angie that they keep ple, their houle thut, which they would have had made an Idoll Temple, alway open to all. One boy in throwing stones, was taken by the semant and brought in, but at others request soone dismissed. Hereupon two neighbours conspired, to set a fellow on worke to accuse these strangers for feducing Children, as they had done this youth his brother, (so they agreed) and kept Conspiracies 30 him three dayes, with intent to fell him for a Slave at Amacao. The two neighbours offered to bee witnesses hereof. The acculation was put vp in pittifull manner, and the Gouernour much moued, the Father fetched into Court by an Officer, before hee could have leafure to write his

aniwer. The Interpreter had filled his seeues with stones, which hee powred out in Court as witnesses of their abuses. The Judge smelt the businesse, and by examination of the Tower work. False accuses man which had feene it, found out the knauerie, and rewarded it with terrible whipping; and truely rewar-

Reim his skill in the Mathematickes which hee had learned, being an Auditor of Clasins at Mathematicks Rome, was no small helpe to them. They had a Cosmographical Map in European Characters, and Mapos Kome, was no man neither than the learned beheld with great pleasure, much defiring to see it in the world in-40 China characters, little knowing, as little having to doe with the reft of the world. They had troduction to Maps pretending a Description of the world, but prefented onely their fifteene Provinces, with the Sea and a few Ilands, and the names of fuch Kingdomes as they had heard of, all which Kingdomes scarcely equalled one Province of China. They now wondred much to fee themselves Chinas ignothraightned in an Easterne corner of the world, and Recise at the Governours request, published range the it in Chinacharacters: and inferted, as hee faw cause, the rites of the world and the Christian world. holies. They have a conceit, that the Heavens are round, the Earth square, and their Empire to Richards Map. bee feated in the midft thereof; hee therefore so projected his Description, that he presented China in the midft. The Linft aus

In the Philippinas the newes of the lefuites successe caused the Gouernour to fend the Treasurer Iobn Bapista Romanus to Amacao, with Father Alfonso Sancius a Spanish lesuite, with a Watch and other presents and letters to the lesuites, to procure an Ambassage from the King of Spaine to China. The lesuites had with petitioning brought the bulinesse to good forwardnesse, when ictiofone Crowner, with they received contrary mandates from Amacao, it being likely to prooue the destruction of the out feraration Citie, if the Spaniards with their plentic of Silver from Perm and New Spaine, should have trade office. Apply in China; neither did this belong to the Spaniards, but to the Portugals, according to the Compolition betwire the two Kings made by Alexander the fixth: and although they are both fubiect now to one Crowne, yet their priniledges remayne diffinct without confusion. Thus both the Magistrate aduited, and their superiour the Rector prohibited them to proceed. Yet the former working was not cealed by Silence, till the Amacaon Magistrates laboured with divers hereby you fee reasons to disert the Ambassage. Caprais the Rector was desirous to see their house, and they procured the Linstians leave, so that hee came thither, viewed all, and Baptifed both the youngframents of fecular affaires man before mentioned which kept the Altar, and a learned man which read the China Bookee to the Fathers, this called Paul, the other Iohn, the first China Converts. Valignams made Prouinciall of India, hearing of this successe, sent thither Father Edward Sande, and Father Antonie Almeida: and obtained of the Vice-roy Edward Menefe, an annual Ripend for this miffion. They came to Amacao in Iuly, 1585. At the fame time it featonably hapned, that Linfitan was commanded from the Court, to pro-

cure of the Strangers at Amacao, certaine goodly feathers for the King. He furnished a faire (hip F.Edw: Sande. and fent Ruggeriss thither, and brought with him Father Edward Sande, who went to falure Linstian, and gaue him no meane gift of our Commodities to procure abode, whereof nothing so pleased him as a triangle Glasse. Hee gives him leane to stay, on condition that they admit me other companion. In Linstians place had succeeded another of Cequion Province, a great friend of the Fathers, who being to goe to Pequin about some affayres of his Office every third yeere, was featled at our house (where the Magistrates were often solemnly entertayned) and then of fered to carrie one of ours with him in his journey, at least as farre as Ceguion his owne Coun-Antonie Almei- trey. They willing to erect some new seate, least some disaster might in a moment strip them 20 de, License for easily of one and all, agreed that Ruggerine and Sande should goe, and received license for entring the Prouinces of Cegusar and Huquan, and places adiopning. This was the Mart time whither Ruggerius went, and found Almeida come thither with the Portugals. Thither also a Brother of Lulitau was gone with much Merchandile of Silke, (the most whereof is made in the Ceanian Prouince) which the Portugals bought at his price by the Fathers intreatie, who therefore tooke the Fathers, his brothers friends, to his Citie in Cequian, called Scianbin, (a name fomewhat neere the other, but in China a little difference producth great) the native place of both the Gouernours.

The Chinois haue a custome to be called by many names, and no man calls them by their proper name, (but themselves in naming or writing themselves, or somtimes their superiours) with- 40 lessites change out injurie: they taking a greater name, which others give them for more honour. Now the Fatheir names. there had yet affumed no other name, but their feruants called them by their proper name, a thing among ft the Chinois reputed barbarous. They therfore (to become all things to all to winne all to Christ) then followed that fashion, and euer fince at their first entrance assume a new Name. Their lourney is thus written by Almeida.

On the eleventh of the Kalends of December, 1585, wee departed from Canton. The third day the ter to Ed. Sarde. Ship happened to bee on fire, some imputing that unluckinesse to us: but without much harme it was quenched. Whiles wee sayled through the Canton Prounce, wee seldome came in sight and nener went out of the Ship till wee came to Moylimpor. I can therefore relate nothing of that Province, but that there were very many Cities, and Townes very frequent, and steepe high Mountaines, betwixt which that \$0 River Sideth to divers trasts of the Province stored with waters, Wares and Shipping. Every where we beheld sumptuous Edisces dedicated to the worship of Deuils, and of Ships almost infinite multitude, and of water-Fowle innumerable store, and berds of Goats feeding by the Woods, to the seuenth of the Ides of December. Then wee arrived at Moilim a Citie, neere which is the beginning of that River, whose course being swift, wee were drawne by ropes and romed with Oares against it. Into this sitiewee Should hardly have found admission, the passage being by a Bridge with two Iron chaynes, opened onely and Inst at the will of the Gonernour. But our Conductor basing acquaintance with the Liniteiu, wee had present cutrance, hardly able to passe for the multitude of Shipt, there wayting. Wee were there well entertayned, and on Sunday and Munday Sayd Masse. On Tuesday wee went to a Citic eight miles distant, there regaining the commoditie of another Riner. All that way was paned with flones; in which we paffe 63 a Mountaine, on the top whereof was an arch with an inscription of his name, who had facilitated that way, otherwise difficult. The weather was unseasonable, rainie and cold perhaps because the whole was in manner was Mountainous. I doe not remember that ever I faw way fo frequented, not then when Merand populous. chants refort to publike Faires : for all the Merchandise from Nanquin, and the places adverting are

brought hither. Alfo the Merchants which inhabit the remotest Cities in that way, on both sides had Partners for the conveying of their Wares, very fully; for our Conductor bad nothing to doe but to deliver one hundred and liftie Packes of Wares with other prossitions for the way, to his Hoalf, which all hee finald Seats and Porhundred and fifthe ranges of traces with some of provide Horses for the Sermants and Seats ters in the find in his Inne in the next Towne. These Partners also provide Horses for the Sermants and Seats high-wayes, for the Mafters to be carried in by two Porters defended from the Raine by Sumbretos, or Shadowes which they carrie in their bands. When hee had paffed halfe the way, wee changed our Seats and Porters and had others to the Inne; to these nothing is due but some small gratuitie, the Hoast beeing paid for all: and a Seat is at as easie a rate bere, as a Horse in our Countrey, with great commoditie and frequencie of Times. In the Evening we came to the Towne Faquen, and flaid there two dayes, such concourse Faquen.

In of Citizens comming to fee vs, that we were almost oner-whelmed, and were glad to get a ship-board on Fridar. On Saturdar we failed downe the streame, fifteene dayes continuing our course, in which wee hired three Barkes, in one of which we only were carried. On both Bankes many and faire Townes walled about present themselves to the view of Paffengers, seeming as bigge as Canton, which made mee me- Great Cities ditate of the facilitie of conneying the Gofpell in thefe parts, we making all this way with as great tran- thicke, quilitie of bodie and minde, that wee might in the flip pray or fludie and doe other things as commo-

On the lixteenth of the Kalends of January, we came to a most frequent Citie far greater then Canton, where the Tutan or Vice-roy of the Province Chianfi resideth. It is buch walled divided into three Metropolitan parts, a River flowing thorow with a Bridge of Barkes, toyning two parts of the Citie. On this Bridge and customes are paid, but our Condust being the Lancitau. Brother passed without search. And although me feared to be examined by the Magistrate, yet no man troubled us, they being not so inquisitine in a

ther parts as in Canton Pronince, about frangers: yea, they entertayne them more honourably energwhere then your Worship at Xuchin. About halfe amile from this Bridge another River toyneth with this, which runneth by the other fide of the Citie, and makes the third part of the Citie. I wished the Fathers a Colledge in this place both for the fertilisie of the soyle and holsamnesse of the Aire. Having provided necessaries for the rest of our lourney in this (tite, wee went about and in the space of fixe or seuen daves going downe the streame, we beheld on both sides very goodly Woods, and many Peles of wood on the Bankes necessary for those cold Regions, and holding on our course passed by seuen Cities, or more. famons for greatnesse and Merchandise : and on Christmas Euen came to the greatest Citie of all 30 Chianli, where wee staid that night for that Solemnitie. But bee which then was borne exercised our patience with a grienous North-wind, whereby the River water (otherwise cleere) was so troubled that on Christmas day wee could not drinke it. For the Rivers course is North-ward, which therefore by a Allthis way is North-wind is fo moued.

North-wands to mouse. The which by the fight we indeed greaters then Lisbone, in one dayes paffige further, we came to the way which leads to Nanquin, where duters Ruers to young together make a New Ruer. kind of Crosse with great commoditie for Trade and passage. For a Barke well defended against wind and weather, consenient for two Gentlemen with their Servants and baggage, may here be bired for twentie or thirtie dares, at an easterrate then aman shall pay for Herses from Coimbra to Li bone. For from Canton to Moilin fifteene dayes tourney, for a Ship which carried two bundred Packet of Meran chandize of diners kinds, we paid but nine lacs, and senen for those three which wee bired for twentie Nine Tacis, dayes more. After that, leaving the Northerne way which goeth to Nanquin or Lanquin, wee turned

West ward against the streame, yet with benefit of the wind favoring vs, we went sisteens and sometimes ementie * miles aday: in which space sailing by very large sields we arrived at a Citie where saire Por- * These miles celane is made, thence carried into India and Europe. Wee paffed by many Woods also and some Cities, sceme to bee The cold meane-while was so great, that one day all was concred with Snow. The Riner decreased and intended spaon the third of the Nones of lanuarie, they unlided the Merchandise into ten lesse Boates, and failed Cold Resion. two dayes, wee came to a large Citie, to which wee had entry by a Bridge borne up with fiftie painted Barkes.

On the Nones of Ianuary wee came to Gouli, a Citie at the end of our Nauigation by that River. 10 Here in celebrating Maffe wee were thronged by the multitude. And a Priest of the Iduls insuted us, Papifts and which shen performed to his Idols Ceremonies at his Honse, Altars there erected & Priests innited, & P.nims Cere-Hymnes vied, where he and those Bonzi vied vs kindly. Here wee observed that the Deuill counterfeis monies alike, ted the Ceremonies of the Catholike Church. We went thence by the foot way carried in portable feath as before fixe or feuen miles : and then entred the Prosince of Ciquion, at the Sun-fet entring the Citie Ciarion. Cuixion. On the Ides of Ianuarie we againe went a stip-board bolding our course by another River Carrion. which in that Citie first beginneth to be Nauigable, the slow streame lingring with vi three dayes, in which yet we saw eight Cities, about which we found unmeasurable quantitie of Oranges, very high Hils abounding with Trees and under-woods, betwint which that pleasant River sweetly slides receiving from New River. enery place new Tributes of waters that it prooneth now as large as that of Canton Pronince. And

60 although China baue name of fertilitie, yet here appeared some prints of Iaponian sterilitie. For in fine dayes space we could get nothing but Rapes and Rice, and a little filb. On the eleuenth of the Kalends of February, we passed by a large Citie twice as great as Canton, as those which knew the Region Scollines affirmed : for we by reason of Snowes and Mists could see nothing but some high Towers. At Sunne going downe wee came to a Towne, against which a Bow-shot distant on the other side of the Riner, wee

33 E

were forced to take a new flop, and causing our ship to be drawne (a light banged ont at the Mass) the next marning we came to the Catie Ciquion, the end of our townsy. In this Catie, which as Father Rogers for Ruggerius) is mont to say, is a type and representation of Venice. Odd bash promided viring good House, on one said basing the Citie, on the other the Ruser for prospell, with consenient Research and a Gardin, and a six there for a Chappell. On both sides of or that deliations Prints, which yet and a yerrain, ann a ju pume jo in comprose of the decembers in great multitudes, that we cannot yet of our kindly, and daily come to heare our Dolvine, as doe others in great multitudes, that we cannot yet oje vi cinal, ana anij vome v came v camen je vi. To the chiefe of them we hened our Aliar credid about to the Immeriall God, which they beheld with great renerence, worfripping the Image of our Sation. And the greatest Magistrates were so affected with our Christian Ceremonies, that they faid they would ereater ranks then the Governour of the Citic, who then mourned for his Mother, and muited ve by his greater songe severall Solemnitie; whom we answered that our Prayers anasted not but to the wor. Steparatoper emeran overmonie; women we answere usons our exercise angues not one to the wor-forgors of the true God. He of ed the Father with very great reflect, giving him the higher place at ta-ble, and accompanying him at the parting to the otmost gate of his Palace, seeming much delighted with ble and accompanying unman set purious a voice views. False Brethren and others accusations detected, they are expelled Sciauchin : erect a 30 Seat at Xauceum. Monasterie of Nanhoa and other things of note in those parts. They alter their habit ; Voyage to Nanquin ; the Lake. Riners, Idols and other Rarities.

雷蒙 leius cals that Citie where they refided Sciaubin, and faith, it is a principall Citie, though not the Metropolitan of the Prouince, noble in commerce, in scituation (in the midft of a fresh water Lake) in wits and learned men. They baptized there Linguist Father of a fresh water Lake) in wits and learned men. and two or three Infants, which then dying they thrust into Heauen at vnwares. Sixtus the Pope granted a great Indulgence to the Societie, to further the Iaponian and Chinese businesse: 40 and Agnaviva the Generall fent them three Watches and an artificiall Clock, which was great. yet mooued by wheeles without waights, and strucke also the quarters to the great admiration of the Chinois. Others sent Pictures, one the worke of Gafpar Coelius who first taught the Isponians and Chinois the European Painting to the great good of both Churches, But the Kinimen of Linftan feeing fuch flocking to the Fathers grew sufpicious of danger, and caused them to bee recalled, and Linfiran also to be estranged from them. Also one Tansao-hu a great acquaintance of Linftian, with purpole to get somewhat from the Fathers, questioned Ruggerius why heelad not feene Mount Vu-tan in the Province of Hu-quam, a famous refort of Pilgrimes; who answe-Vates a hely not seen a Mount value in the Frounce of Fraquese, a tamous refort of Pilgrimes; who answered that hee durft not without the Magistrates sease: I will procure it suits hee, and did so. In by Pilgrimes. the way Ruggeriss went to the Mother Citie of Quam-fi, where hee visited one of the Royall 30 bloud, not knowing that fuch have nothing to doe with the State, and was not admitted, but bidden first to goe to the Vice-roy, to whom he went and had no injury, nor yet wonted humanitie, but was bidden to profecute his Pilgrimage and not to flay there. Limitan hearing of this, fought to shift his hands of them, and with much adoe they obtayned that two might bee permitted to flay in their house.

New Conuert,

Another danger happened by one Martin 2 new Conuert which had made two other Conafalle Knaue. uerts beleeue that the Fathers could by a certaine herbe turne Quick-filuer into filuer, and by that meanes maintayned themselues. Now the Chinois being exceedingly affected to that Alchymisticall vanitie, these gaue money to buy a Wife, and other costs to that false brother who vndetrook to learne of Father Reggerius and other costs to that falle brother who vn-detrook to learne of Father Reggerius and to teach the other two that Science. And having got-ten what he could of them, he also borrowed the Triangle Glasse of the Fathers with which hee ranne away. The Gouernour one day defiring to fee it, they told him who had ftolne it, and he fent an Officer which found him out and brought him bound. Hee , to bee reuenged of the Fathers, accused one of them of Adultery; and the Husband of the pretended Adulteresse (partner

CH AP. 5. S.4. Dieth of whipping. Strange Honours, Iesuites service.

in the Conspiracie) put wp a Petition against Ruggerius, who wpon inquisition was found at the time named to have beene in Quam-fi, two moneths journey thence. The Accuser hoped to get some-what, being poore, to stop his mouth, which they refused veterly, and hee for feare fled. together with his Wife. The Father was indicially cleered, and Martin in his presence received Martin white. ewentie cruell ftripes, and condemned to the Gallies, was fent to Linfitate who had first com-ped to death. mitted him to confirme the fentence; who added fixtie ftripes more, and being beggered and caft inbonds he was forfaken of all his Friends, and (the Fathers meane-while releeuing him) dyed within few dayes of the wounds. He which had gotten the Gliffe from Martin, another Con-uert. came and restored it to them, left it might breed him danger being found with him.

re, came and renores to the transfer of the Province of Hu-quam. To him the Citie Manner of her 10 had crected a Temple, and on the Altar had let his Statue; before the Altar a great Harth for nouring good burning incense: Candlestickes were also magnificently placed; and at his departure the whole Magistrate. Citie there visited him, and after their rite , palled off his old Boots (Bootes are the ensignes of Magistracy) and put on new, putting the old in a Chist, and locking them up to bee reserved for a monument of his worth. Ruggerius went to Amacao, and Matthew got leane for Father Edward the Superiour to returne to Scianguin. The new Converts which had loft their moneys by Martins death, deuiled new tumults against the Fathers; the River (which is a mile broad) ouerflowing, damnified the houles of the Citie, whence grew occasions of new abuses to Ours. The Vilitour endeauoured to procure Legation from the Pope to China, and Ruggerius was fent

to Europe on that bufineffe, which tooke little effect by the death of divers Popers hee fpending & gorthing 20 the rest of his life at Salerne in the Kingdome of Naples.

Ricins was alone a good while, till Almeida came to him. His Clocke, by the Diall to the eyes, and by selfe-striking to the eares, caused no little wonder. But a new calumnie much endangered them made to the Ciai-yuen. For certaine old men of Canton, which are honoured for that in their whole lives they never have accused any, nor beene accused of any, enjoying therefore a Priviledged veerely feast out of the publike treasure, a peculiar Vest, and divers other immunities, put vp a oldmen. Petition, admonishing of the danger of the Amecaous, and especially those Spies which had Their elegant builded houses of divers stories, and every day proceed with new arts, giving money toward Pcivion is the building of Scianquin Tower to get entrance into that Citie, fayling to and fro without im- whole in Ricing pediment, dangerous to the State. This is that which our Bookes fore-tell, Tee base fowen thornes this place.

on an attle as a gentle flyte, pe hane brought in Seppents and D ragons into pun books. That of Ama-wao is lice a fore on the bands or feet eafly cared as leafure, but this of Sciauquin, an view fixing on the breait and bear timels to be remadeed, &c. The Visitour reputed a feuere man committed it to the Haitu, and at last it came to the Gouernour of Sciauchin, who then being at Pequin to performe the customary trienniall vistation to the King, Phan his colleague (our friend, then Lieutenant) affifted vs with his Counsell, and they gave their Glasse to the new Linsitan, who ended the quarrell with the Vifitour, as being a falle calumnie.

The two Marts prouided them of exhibitions and European Presents from Canton, and their Clocke, Mathematike Instruments, Geographicall Maps, Pictures, and Bookes, with Musicall 40 Instruments, had procured them much visitation, and much estimation of Estrope, and some fruit thereof in Conucriions. Neither was this Station unprofitable to Amacao, helping their af- Iestites metic faires with the Magistrates, in businesses with the Vice-roy, in cases of shipwrackes, in redu-their cabibieing fugitive slaves. It happened at that time the Vice-roy dying, his Successour would not tion by service through superstition enter his Palace till hee had pulled it quite downe and built it anew at to the state. the Kings charge. Meanewhile spending his time in Canton Province, he was made against vs and banished vs. But the Magistrates being our friends, and order comne then from Pequin to Issuite banibuy Scarlets of the Portugals, F. Mat. Ricius was employed, and got their good liking, but not find. leaue by any meanes of the Vice-roy to stay at Sciauchin. Yea, hee forced upon the Governour the execution of his Mandate to packe them away, offering money for the house, which they refused to take, saying, a house built for Gods service might not be sold, and it were ill merchan-50 dife to take fixtie pieces of Gold for fixe hundred which it had coft them.

When they came at Canton the Admirall was absent, and whiles they waited for him the collegeopieces ice-roy sent a Barke for them to return an leben and whiles they waited for him the collegeopieces Vice-roy fent a Barke for them to returne, and then permitted them to chuse any other place of in changing residence. Ricius chose Nanbium in the Prouince of Quiauss (or Quamss, or Chianss) which hee great tumine, refuled not, but wished them first to trye at Nanhoa, or at Xauceum, commending them to the Nanhum. Affiliant of the Gouernour thereof, then present, and gaue Ricius a bundle of bookes of his Xinctum. owne acts in token of good will, who thanked him with his fore-head to the ground, after their fashion. They departed from Scianchin on the Assumption day, 1589. They came to the place called Sanceui, or Three-waters, where the Rivers of Xauceum from the North falls into a great River : there they wie to change ships, to have others fitted in other fashion to sayle against the

60 streame. In eight dayes sayling to the North, they came to the place where the Gouetnours feruant flayed for them to bring them to the Temple or Monasterie of Nanbon, part of which Nanbon Monaster of Which Nanbon Monaster of Which Nanbon Monaster of Nanbon, part of which Nanbon Monaster of Nanbon Monast the Vice-toy had given them if they liked it. This Monasterie they found in a goodly Plane, stone of 1000. enuironed with pleasant Hills , enriched with hand-fet fruit hearing trees, watered with a Markon

Nanbium,

Chintaise (the sonne of one of the second ranke of Magistrates called Scianscin, a man fa-Countails Scho-mous, as being the first named of the three hundred Doctors made enery third years, and Author of Learned Workes) had spent his Patrimony after his Fathers death with Prodigalitie and experiments of Alchymie : and now was forced to shift, with his Wife and Seruants wandering thorow the Kingdome to his Fathers Friends, and becomming a Sollicitor for other men to the 60 Magistrates of his acquaintance. Hee having obtayned of the Vice-roy a Roome in that Monasterie became Neighbour to the Fathers; and one day with set Pompe (after the China custome) and precious Gifts came to Father Matthew, and chose him for his Mafter. It was not safe for

Riveret in the midft; the goodlieft Hill, graced with a plentifull Fountaine, was the Seat of the Temple, a great pile; nigh which was the Monasterie wherein a thousand Priests (by the impions piety of the Ancestrie, Lords of that ground) had their abode.

The originall thereof was a man which lived about eight hundred yeeres fince, called Lufe. who is reported to have flourished in great reputation of holinesse. by reason of his austere come of life : with a chaine girded to his bare flesh, wonted to lift Rice, and to beate it lightly after their manner, as much as served for the daily food of a thouland Monasteries. With that chaine

his flesh patrified, so that wormes bred therein : of which if any happened to fall to the ground. he placed it there againe, faying, Haif thou nothing to cate? why doest thou runne away? There is his carkaffe preferred and that famous Templebuilt to his worship, to which is concourse of 10 Pilgrimes out of all the Kingdome, euery-where he and all his being much reputed. These Minifters of the Deuill are divided into twelve Stations, each having his Superiours, and overall an Abbot. When the Father came thither fent by the Vice-roy, they supposed hee had come to be their Abbot and to reforme their abuses; for they not only had their Concubines and Bastards. but robbed by the high-wayes. Now all the Idoll Priefts are as subject to the Magistrates as on ther men; perhaps because their Learned esteeme not Hols, nor account these their Priests. Yet

with China diffirmulation they gaue the Fathers faire entertainment with much pretended joy, and officiously offered all at their Seruice, making them alio a Solemne Feast, and then shewing them the chiefe places of their Monastery. They were full of great Idols of Brasse and other Metals, and of wood gilded. In one Station were told fine hundred. There were also many 20 Steeples and Bels of Metall caft, one such as they had never seene in Europe to their remem-

The bodie also of their Saint, Lufu, was shewed, all thining with that their China bituminum Vernish (so vulgarly thought, and preserved with incredible veneration, though many deny it to be his bodie:) In the midit of the Temple is an eminent place to which they afcend by neate steps, in which hang about fifty Lampes, but not all burning except on let dayes. The Chinais maruelled at the Fathers doing no worthip, a thing vivally performed by those Chinois, which

otherwise repose no confidence in those Idols. They both agreed; the Chinois Monkes to bee rid of their feare, and the Fathers to goe to the Citie. At their departure, Father Almeida went by water, and F. Matthew by Land with the Go- 20

uernours Servant, the Abbot bearing him companie. He there told the Magistrate that he liked not of the Temple, because the men had an ill report as vinate Neighbours, and hee worthipped one God, and not Idols. This amazed the Gouernour, perswaded before, that there was in the World no other Law nor Characters then theirs, till Father Matthew pulled forth his Prayerbooke. The Abbot also restified that hee had worshipped none of the Islols, no not Lusen icke. At last, the Governour was perswaded by him, that that of Idol-worship was a later Sectamongit them; yea, the Abbot affirmed, that they deferued no worship, but that former Magiitraces had observed that without Idols the vulgar would not keepe Religion, and therefore set up thefe to be worshipped. They visited all the Citie Magistra'es which wied them with more courtesse then those of Scianebin. They went also to another Temple or Monasterie called 40 Quambias, on the other Westerne side of the River, and carried their goods thither till they were prouided of a House.

The Citie Xangenm is feated betwixt two Nauigable Rivers which here met: the one which palleth by Nanhium on the East, the other running out of the Prounce of Vquam on the West. But the Citie wals and Houses are builded in the midit of the field, but they are forced by the ftraitnesse to build also on the other-side the River, joyned with a Bridge on Barkes. It contayneth five thousand Housholds is fertile but vnholsome, the third or fourth part of the Inhabitants being sicke of a Tertian from October to December, which takes away many, and leaves a pale Impression on the rest. Strangers also are no lesse arretted by it, when they come thither on businesse. And the lesuites had almost lost themselves in this new purchase, where being re- 50 couered they had a Charter from the Vice-roy to build their House in ground belonging to the Monasterie. Thither the Visitor sent them Sebastian Fernandus and Francis Martinez which had beene trayned up in the Schoole of Amacao, the first Probationers in China. They to auxid expense, built this House of one Storie after the China manner : and sooneliked better of this then their former Residence.

the Father to refuse (though he required his gifts, lest he should seeme to have beene brought this

ther by conetouinesse) and first taught him Arithmeticke. For that which the Chinois haue is with a Linnen Instrument whereon Beads are put by wires, and shifted hither and thirher to china Arithe reckon their numbers : certayne, but subiect to Error, and vnprofitable to high Sciences, He read meticke. to him also the Sphere of Clauins, and the first Booke of Enclides Elements, and taught him to make Sun-dials of many forts, and Geometricall Rules to measure Altitudes. He being of subtile wir. committed these things to writing in elegant title, and shewed them to Magistrates of his Acquaintance, fo procuring great opinion and admiration to the lefuits. His wit and exceeding industry brought him to great skill, that hee made Spheres, Astrolabes, Quadrants, Compasses, Dials and other like, very artificially, and some of filter : withall so fetting forth his Mafter 10 and the European Learning, that it proued of no small consequence. By his meanes the Fathers had acquaintance with Pimpithan a Military Commander, with the Gouernours of the Citie and divers other Magistrates. Almeida fell sicke and was sent to Macao, to see if Physicke

might recourt him, and there dyed. Recius fet forth a goodly Image hitherto vnseene, on the Altar adorned with Waxe Lights, An Image fens which brought fach concourse to see it, that their enuious Neighbours stoned the House and Ser- from New uants by night: whereat Chiutaife offended acquainted the Gouernour, which had before fet his Spaine, Decree ouer their doore prohibiting all wrongs. He called the Street Gouernours (as Conftables with vs) and was likely there to have foourged them, pretending their ignorance, and putting chaines about their neckes after the fashion, sent them to seeke out the wrong doers, and Scuere Iuffice. ting tradies about the tribunall. They fearing to anger their Parents, durft not name them, till he Fron. de Petrir commanded to whip the one and fend the other to Prison, whereupon they named two, whose punshment with much intreatie of the Father was pardoned. Father Francis de Petris, was lent Vice-roy de-(by the Magistrates License obtayned) to succeed in Almeidas place. The Vice-roy was then printed preferred by his Friends procurement and Bribes to a higher place, but the Prouinciall Vision had fo complained of his wrongs, that by the way hee was acquainted that hee was depriued of all Office, and fined at forty thousand pieces of Gold to the King. Befides, a filthy Vicer brake out of him, and soone after he miserably dyed. Thus did God panish his pride, which to cress a Temple to himselfe at Sciauchin, had deprined the Iesuits of their Houle. The fame at Sciauchin was that the Isluits were expelled for refusing to teach the Vice-roy the Arte of Al-30 chymie.

One Cosunboa a Merchant of the Citie Taicho in Chiansi, abode in Nanhium, and had some for- Taiche. tie persons in his Family, a very Superstitious Idol-worshipper, in whose service hee macerated his whole life in that China abstinence from Flesh, Fish, Egges, and Milke, living only of Pulse, china abstin Rice, Herbs, and certaine Cakes, industrious for his faluation in another life, but not fatisfied neace, with any of the China Sects. He had learned by Chinaifo of the Isluits, and came to Xancenn and acquainting Father Ricius with his purpose, he was instructed and baptized loseph. He stayed with them a moneth, and after Ricius went to Nanhium to him, and preached and baptized ten Nanhium, when the manufacture and the state of the st

40 manner is to adde excessively) and he put them to torture; and forced them to confesse one whose Their sentence Hat or head couering falling off had bewrayed him, he condemned in Capital sentence; the other to be fent to the Gallies, or amongst the Kings Slaues : which sentence was to passe to Superiour Gouernours, and fo to Scianchin, and Father Ricins must goe thither about it, which happened well for the new Conuerts which had for the most part growne wild. From thence he went to Amacao to speake with the Victor, and returned to Sciauchin, where the Parents of the theeues procured him their Aduocate which should have beene the Plaintiffe. Amongst the China Magistrates is one which hath his name of Pardoning punisments: Hee is sent in the Name of the Queene Mother, into each Prouince one. Their Office is to vilit Prilons, to exempt the smaller Queenes par-

offenders and to mitigate Sentences; for which the Magistrates hold them in great esteem. But doner. so hee would not succour these men, though the Father intreated. The Proxincial Visitor only remayned, who alone doth last of all reuse the Sentences, and they despaired that hee would reuoke the judgement of seuen or eight Magistrates. Hereupon they conspired fiftie of them conjoyning in an implous Sacrifice in a certayne Temple to expell ours from Xauceum. But none of the Magistrates of the Citie subscribing (except one, who did it, to offend the Fathers greatell friend) they better bethought themselves, and intreated Ricius to be their Intercessor; whereby the Visitor was perswaded to pronounce them Dicers and not Theeues, and to exchange their Rivers. fentence into twentie stripes apiece. For the name of Theeues would have beene an ignominious Thefe ignoral. brand to them and to their Kindred for euer. Yet would they have renewed their acculation to nious.

the Vilitor, but he would not heare them. About that time the President of the Court of Rites at Pequin President 60 Pequin, passed that way towards Hamam his Natiue Countrie, who hearing of Ours (which he dent. did not to the Visiters) visited them with gifts, and spent a whole day with them, promising at his returne to carry Father Matthew to Pequin with him to correct their Kalendars.

In Nouember 1594. Father Francis de Petris dyed, and Father Lazarus Cataneus succeeded, Ricing bethought him of another course: for how locuer they had shaken off the name of Bonzi.

Iefuites alter

336

vet because they shaued their beards like the Portugall Priests, and cut their hayre, and lined single, had their Temple and fet prayers, they could not free themselues of that infamous tirle which made them vnfit for greater Defignes. Hee aduited the Vifitor, that by this meanes they Ethnike priefts
like in thouing were accounted as the Idoll Priefts, and that it were fitter to let their hayre and beards grow. and to weare the habite of the Learned men, each of them having a garment of Silke to wift the Mazistrates, without which they might on equall tearmes amongst the Chinois, conferre with them: also that it was fit to remoue their residence from this vnwholsome ayre of Xaucens, or to divide it. To all these the Visitor yeelded, undertaking to acquaint the Generall of the Order and the Pope. For how soeuer for vertue and learning (wanting to their Bonzi) the Magistrates and the Pope. For nowneces to vices and the wilgar held them in that vulgar respect; neither might the Magistrates breake their custome, to give them equall entertaynment. Nor did

Sciles.

they now beare themselves for Learned men of Chima, but for European Learned, imitating the habite of that Countrey. The next yeere, 1595, the Chiefe Iudge of the Connell of Warre, by the Chinoic celled Scilai. which is farre about the dignitie of Vice-roy, (who before had after divers Dignities betaken himselfe to a private life) vpon occasion of the invasion of Corai, was by the King of China

(which fent in defence thereof an Armie of eightie thousand) called backe to the Royall Citie. Hee had a Sonne of twentie yeeres old, who for griefe that he had loft the first degree of their Students, loft his wits. Hee lent a Captayne for the Fathers, thinking they could recourt his Sonne which he had with him, and gaue them fuch entertaynment, that the Magistrates were 10 Mount Muslim amazed. He caufed a Charter to bee given to Rieiss for going to Nangan, chiefe Citie in Chian or Moilin: Sac where hee hoped to doe good on his Sonne. He passed Mount Moilin, which lyeth betwixt the two Prouinces and the two Rivers, a dayes journey, and the most notable thorow-fare in the whole Kingdome. For at the foot thereof to the South, the River of Nanchina becomes nauira. ble, which runneth into Canton and the South Sea. On the other fide of the Hill at the Citie Naugan, arifeth another great River, which visiteth the Provinces of Chianf and Nanquin, and many Cities before hee enters the Sea Eastward. Thus what comes from forraine Kingdomes to Canton, is this way conveyed to the in-land Kingdomes, as also from those hither: Horses and feates, or Chayres for carriage on mens shoulders, Beafts for carriage and Porters, being almost innumerable euery day, yet all in good order. The Mountayne is common to both Provinces, which are diffinguished by a Gate erected among the stonie precipices. All the way is set 30 with Trees, paued with stones, frequenc with Hostries, as secure by night as by day, bothby the guards of Souldiers, and frequencie of Trauellers : neither are their ouer-flowings by raynes. On the Hill top is a neate Temple, and therein a Garrison, both Provinces thence offered to the view. Naughan tignifieth the Southerne Inne. Hee went in one of the Presidents Ships, till hee came to the Citte Cancen; by the way often entring into his owne Ship and discoursing with him of European affayres, Sciences, and Religion. But so many visitations for Magistrates hindred all dealing with his Sonne in this journey, so that by his Father it In this Citie Cancen, refideth a Vice-roy greater then the Vice-roy of that Province, they to

call him the Vice-roy of foure Prounces, Chianfi, Fuchien, Canton and Vauam: not that all thole

Prouinces are subject to him, but because hee governeth two adjoyning Regions, or leffe Prouin-

ces out of each of them. The cause of appointing this Vice-roy extraordinarie was, the multi-

Stately enter-

tude of Theeues in those parts, which bordering on so many Prounces, could not easily by ordinarie course of Iustice bee apprehended; whence two Regions out of each were committed to one, who by Militarie forces repressed those infolences. And because the militarie Magistrates are fubiect to that Councell of Warre at Pequin, the Prefident was heere received with greater State : aboue three thousand men were sent to meete him a league off, with their Captaynes, Colours and Armes, many with Hand-gunnes mixed, shooting off as he passed, making a faire show on both fides the River, which there is not very large. When hee was come into the Citie, the 10 Vice-roy with other Magistrates visited him with Gifts, Prouisions, Banquets; and some com-

It feemes to

day for Ships passage which have payd their customes. After they were past this Citie, another River addes it selfe to this, whence they come into a place called Sciepathan, about thirtie miles long, in which are many Rockes differfed, on which the impetuous force of the water caufeth many ship-wrackes goods lost, and men drowned; and requireth expert Ship-men; a strange thing to see a River full of shelves and sharpe rockes, in the Lying vanities midit of the continent. In the entrance of this dangerous passage is an Idoll Temple, wherein the paffengers deuoutly commend the fafetie of their fortunes to thele vanities, which Scalan al- 60 so heere did in vaine : for although with multitude and industrie of Saylers his Ship anoyded the Rockes, yet was that broken in which his Wife and Children were carryed, though they escaped drowning, by reason of her high building, every one getting vp into the highest decke, which lifted vp it felfe aboue those shallower waters. They cryed pittifully, and Father Mat-

panies were fet to guard the Ships : which was also done every where, such is the China venera-

tion of such Magistrates by their inferiours. Heere was a Bridge of Boates, opened but once a

CHAP. S. 4. Nancian and Nan quin. Huiunfins Tale and Temple.

thew having then gotten a Boate for himfelfe came first and received them, going himfelfe into another leffe, which went before to conduct the way. Scilan fent for another Ship prefently to Cancen. Father Matthew was taken into another Ship of burthen, which was in a guit ouerthrowne, John Barradas his boy was drowned, and hee hardly recoursed : the Commodities by dving were gotten againe, though much hurt by the water. They came to a noble and populous Citie called Chiengan, where the winde by night was fo violent, that it difperfed all the

Fleet, which hardly elcaped wracke. Scilan terrified with this disastrous passige by water, purposed to goe by land to Pequin, which Kings Posses

is done at the Kings coft; in certayn places there being Horles, Lighters, Porters, proutions ready Ic provided. Now thinking to fend backe Ricius to Xanceum, least some might accuse him in a time of warre for bringing Strangers to the Court ; hee shewed some the wonders of his triangle Glaffe . which hee was willing to give the President if hee knew he should hold on with The Glassee . him in the lourney. They acquainted their Lord, and hee gaue him license to goe to Nan- fleemed a quin, and to enter those two Prouinces of Cequion or Cechien, and Nanchin or Nanquin. Hee great levell was carried thither with two of Seilans feruants, still having Souldiers from all places to guard Nation Me. him, they thinking that fome of his Sonnes were there carryed. When hee came to that tropolises Mother Citie (for before hee feldome went foorth, to preuent all lets) which is in twen tie chianfi. nine degrees, to the Northermost part of the Prouince, hee made shew of himselfe as one of Scilon: houshold feruants: and not knowing whither to goe to deliuer his Letters, hee first 20 went into a Temple of note, which beares name of the Iron Pillar. For they fable that one This seemess

Huminfin, had some hundreds of yeeres agoe, brought perfect Silver out of Quick-filler, and had agreewith delinered this Citie from a huge Dragon, whom hee ouer-whelmed in the ground, and ty- Pintes Muchied to that Iron Pillar, and then flew with his whole house, Mice and all, into Heauen. The Parent fur page building of this Temple is worthy the view, against which are perpetuall Faires, in which nothing is lacking to bee fold. The Priefts are those which they call Thansa, which let their havre and beards grow. When hee entred that Temple, much concourse of people came about him to fee a Stranger, a strange fight there, yea, reputed holy, for they had thought that the fame of that Idoll, had brought him thither from farre Countries. But when hee did no worship thereto, hee was admonished to doe that which the greatest Magistrates refused not a then threatned, after they would force him, till one of the Ship fayd, hee worshipped no Idols. But feeing the multitude fill flocking about him, he returned to the Ship, and fignified that hee came with the President, whom every man knew. The servants visited their Masters friends and

received gifts of fome, especially of the Vice-royes Physician.

Scarcely had they sayled out of the chiefe Citie, when they meete with a Lake admirable Admirable for the greatnesse and other things : on all the bankes as farre as a man can see, are innume- Labersee the rable Townes, Caffles, Villages, great Houses; thence they may passe into Fuchion, and thence new Map. to the Sea Eastward. Amongst other Townes there is one Citie called Nancan, at the foot of to the bea Eartward. Amongst come to the season in his owne Cell, macerating a Hill called Liss, in which Hill are divers Anchorites, each in his owne Cell, macerating Mount List. a hill called List, in which rain are under a many, as are dayes in the himselfe with afflicking his bodie. Those Houses are sayd to bee as many, as are dayes in the himselfe with afflicking his bodie. Those Houses are sayd to be as many, as are dayes in the himself with a hi 40 yeere : and they tell as a miracle, that the Sunne shining electeround about, that Hill is al- that cale way courred with Clouds and myfts; fo that that Hill (fo neere) cannot bee seene out of the in Passa da. or Lake. The course of the River is to Nanguin, but in that breadth the streame hath small force, somelike place and eafily may with the winde bee fayled any way. After you are out of the Lake, a great Riuerout of Vquam Prouince, runneth thither and therein lofeth his name and waters. For the greatnesse, it is thence-forward called Tamfu, which fignisseth, the Son of the Sea, being in many places two or three myles broad, dangerous also for tempelts like his Father, and they say River Familia or the waters are fo whirled therein, that swimming can little profit those which fall thereinto. The Chinois fayle it with great feare, and are there often wracked. Great Ships fayle yond the Lake, therein, and happely our Ships (not the greatest of all) and our Galleyes might sayle hitherto to from the Sea. Many orher Rivers pay their tributes to it. They fayle it not by night, but

betake themselues to some Pore, which they may readily doe also in a storme. To this Lake the Spring-tydes at Change and Full come, at other times not observable : at Nanquin enery day, but it is fresh water. When hee was come to Nanquin the Presidents seruants

Milerable

Anquin or Nanchim by the Portugals is called Lanchin : for they heard of it by the In-10 habitants of the Province Fuchian or Fuquian, which wie L for N. It is called also Intienfu, because the Gouernour of the Region there refideth. This is that Citie, which in the Chinois opinion excelleth all Civies of the world, both in greatheffe and goodli-

neffe : neither may many be compared to it. For it is full of very great Palacis, Temples, Towers, ter, at being Bridges, which all yet are exceeded by those of the same kinde in Europe. It excellent alloin the north temperature of the ayre, fertilenesse of the soyle, goodnesse of wits, gentlenesse a manners, elegance of speech, multitude of inhabitants of every ranke, of People, and Learnew, and Magistrates: gance or precommentation or innaments of early standards a copie and Deather, and International the fall of holding equal ranke with those of Peguin, in number and dignitie, however by the abfence of the King, that equalitie is made vn-equall. And so in all the Kingdome of China, and the bordering Kingdomes, it is commonly (all things confidered) judged the fift or chiefe Citie, 20 It is compassed with three Walls; the first, that of the Kings Palace exceeding stately. That is alfo compassed with a three-fold wall, in manner of a Tower, with ditches filled with water, It hath foure or fine Italian myles in circuit. And I dare boldly fay, that no King any where hath a more excellent Palace (not if you weigh particulars together, but) comparing all things. The fecond wall encompassed the Palace, and the principall part of the Citie, opened with twelue Gates, which are fortified with Iron plates, and Ordnance planted ouer against them within the Citie. This second Wall comprehendeth eighteene Italian myles compasse. The third Wall and ettermost is not enery where continued, but where need is, Art hath added sup-

The circuit thereof can hardly bee knowne. The Inhabitants say, that two Horse-men in a 30 dayes journey whole dayes tiding, having gone out of the same Gate, met together at night: whence the prodigious quantitie may bee observed, especially the forme of the Citie being Circular, and therefore most capable. Although within the walls are great spaces of Mountaynes, Lakes, Groves, Gardens, yet the greatest part is very frequently inhabited. Thegarrison Souldiers (which one would not beleeue, had not eye-witnesses confirmed it) which keepe the Citie alone, are 1032.org.1.de fortie thousand. The Pole is eleuated 32. degrees, and so it is seated in manner in the midfi of the Kingdome, from North to South. The River runneth by it at the Weit, exceedingly both enriching and beautifying it. Nor doth it onely passe by, but is in many places brought into the Citie by Channels (whereby greater veffels may enter the Citie) being enlarged by Art. In times past it was called the chiefe Citie of the Kingdome, and may feeme to have beene anci-40 ently more giorious.

Reins went a-land in the Suburbe, which is without the three Walls, and is so large and frequently inhabited, that it may feeme another great Citie. There a Physician of the Vice-toy of Schiauchin knew him, and hee vilited the Vice-royes sonne, and by his meanes grew acquainted with others. When he went into the Citie, hee vied to bee carryed in a close Chayre, to preuent noueltie, and for more authoritie, and because the length of the way to friends houses often required it. There hee thinking to fixe a residence, learned of one Sciutagia a Magistrate of his former acquaintance, to whom hee had before giuen a Globe and an Houre-glast, receiting promifes of much kindnesse. To him he went full of hope and not emptie handed: but hee being both miferably couctous, and ambitiously hunting after new places, was offen-50 ded with his presence (hee pretending that he came to see him) sent for his Hoast, and threatned him terribly, causing him to ship away his new Ghest; having also agreed with the Notarie of his Court to give enidence against him, as a troublesome and Jangerous man former-Iv expelled from Scianchin. Thus against the streame both of his affection and the River, is Rieiss forced (loath to displease Magistrates) to returne to Chiansi Province. In the way fall of thoughts, hee had a vision (as the Storie fayth) in which God appeared to him, and promise to bee propitious in both the Cities Royall to him.

In Nancian the chiefe Citie of Chiansi hee abode. This is as great in circuit, but not in Mirchandife as Canton, and though none of those portentuous great Cities, yet is it famous for the number of Learned men, which thence are advanced to divers parts: the people are thriftie and Fast from flesh, contented with little, and many of them observe that first aforesayd. Of the Learned men there fift, egges, and is also a Societie, in which on set dayes the more learned doe Lecture or discourse conclude vertues in very modest manner. The Physician aforesayd, famous for his Art and well respected by

CHAP.S.S.S. Ricius his Booke of Friendship. Princes of the Blond Royall.

the Vice-roy, was vitited by him. Hee now vied his Silken veil and Cap vied by the Learned. formewhat like but higher, then that which Priests in Spaine weare, (for he had learned to keepe flate and not to deject himselfe too much) and carryed two servants with him in long garments made of Callico, and his gestatorie Chayre: without which pompe a man cannot bee taken for a Learned man, the pooreit Students ving them, and otherwise contemned. The Physician entertayned him kindly, and after inuited him to a Feast, where were many Students, and some of the Royall bloud Royall bloud (of which that Citie hath very great store) which were glad of his acquaintance; at Nancian. and when he had once mentioned his flaving there, the Phylician was 10 eager in defire thereof that he feyned that the President Scilar had written to him, to procure him residence there, be- chine lying is

to cause in the former abode he had not his health. The Chinous esteeme such lyes to bee wisedome, prudence Hee soone got credit among st them by Mathematicall lectures and instruments, and by his artificiall memorie especially. For the Chinos about all others commit whole bookes to memorie Ricinghis artis with vnwearyed paynes, and in the first yeeres of their studies doe nothing else. He repeated the ficial memorie most confused and independent Characters in order, yea, backwards as well as forward. Many defired to learne it, and tome hee entertayned. Physicians being of no great authoritie, he fought to infinuate into fauour of the Magistrates ; but a certayne Student had counselled him to neglest their license, and thereupon enquirie being made by the Vice-roy, this his friend and landlord very friend-like, would needs throw him fuddenly out of doores, and hee was forced by Forumefriend force to defend himselfe. But the Vice-roy having received a Libell from him, tellifying who he 20 was, greatly reioyced (hauing heard of him) and when hee came to his Court, arose from the Tribunall to meete him, would not suffer him to kneele, and gaue him good viage and magnifi-

cent Titles, inuiting him also to reside there. Whose affections were after kindled into a greater

flame by his Physicians, magnifying his Mathematickes, Memorative, Bookes, three square Glasse and other nouelties. The Vice-roy would have him make him a Dyall, and teach his Sonnes, but for that admirable Glaffe, hee would by no kindle force accept the gift. And whereas time out of minde many of the Royall bloud are there, two of them having the chiengen and tytle of Kings, Chiengan, and Longan, fent their principall Servants or Courtiers, to invite Fa- Longen, Kings ther Marthew to the Palace, which is fitting to Royali Maiestie, both for Greatnesse, magnifi- titular,

cence of Building, pleasure of Garlens, and other furniture of houshold and attendance. Chees-30 gan first inuited and entertayned him, attyred with a Royall vesture and Diadem: Father Matthen gaue him a Dyall with the Signes of the Zodiacke, and a Globe with China characters, and other European commodities; which hee recompenced with Silkes, weight of Siluer, and divers viands. Nothing gaue him such content as two Bookes of Japon paper, smooth and hard bound in European manner : one contayning Maps and other Mathematicall representations, with an explication in their Language; the other was a tractate of Friendship, wherein Dialogue-wife Ricius his China (as Cicero in his Letins) hee bringeth in the King, questioning what the men of Europe thought books of Friendship, and set downe the sentences of Philosophers, Doctors, and other Authors; a friendship. worke to this day read there with great applause and admiration, Printed in divers Provinces. Chiengan continued his friendship and left it as a legacie to his Sonne, who yied when the Father

40 visited him, to pay the Porters, and to give money to his servants, a token with them of great Token of welwelcome. The Societie also of Learned men grew acquainted with him, and the chiefe of them, come. hearing him complayne of multirule of visitors, wished him to command his Seruants to say hee was not at home: which efficious lye he affirming to bee by our Law vnlawfull, bred in him and the rest much wonder. In the meane while at Xanceo they fuflayned abufes, and Sebaffian Fernandus was vied igno- Caulis.

miniously by the calumnies of their quarrelsome neighbours, and sentence of a partiall Judge,

which caused two Servants to bee whipped vnheard, and Fernandus to stand as in a Pillorie, with Pillorie board, his head in a board an ell and halfe square, therein a hole fitted for the necke, to bee opened and shut; so that a man cannot put his hand to his mouth: and this for footh for beating the Bachellors. 50 This was written as the cause of his punishment. Hee afterwards sought the lesjuites fauour, 2shamed of his fact, inuited them, and set up an Edict for their safetie. Fernandus was sent herevpon to Riem, and Catanem continued alone without any Father, till the yeere 1597, and tell ficke : then going to Amaeao (Father lobn Aroccia was fent in his place) hee returned with Fa- Aroccia and ther Nicholas Longobard a Sucilian. Father Matthew was appointed superiour of the China million by the Vittor Valignanus, without subjection to the Rector of Amacao. To him precious

Father Matthew minding to trie all meanes to peerce to the Court, assayed Chiengan in vaine, who feared to raile any fuspicion of himselfe. Hearing therefore that Guan (which had as you 60 heard) visited the house of Xaucee, in his way to Hainan, was thence called by the King to Nanheard) vilted the house of Xaucce, in his way to Hainan, was thence called by the King to Nan-quin to bee President of the first Connects, called Li Pa, that is, the Connects of Magnifestes: in his the Connects of the first Connects of the f way at Nancian they wilted him with a prefent, (in which nothing 10 pleased him as the trigone Glasse) and tooke opportunitie to signifie to him, their desire of presenting the King with Maichaut. some European rarities. Hee approued thereof and sayd, they should not onely goe with him to

"Such coniectures as this Pinto of this

crifice to the

Nanauin.but to Peanin also; whither within one moneth of his comming hee was to goe. Ricius with Cataness attend him (leaving two of the company at Nancian) with two brethrense the company, Seb. Fernandus, and Emanuel Pererius, of China parentage in Amacao: who of their God-fathers take vivally both Christian name and Sir-name, ving also their Ching name in dealing with Chinos. They fet foorth from Nancies on Midfummer day, 1598. and when they were come to Nanguin they found all full of feare, by reason of the Iaponian wave in Ca. rai, to that none durit give vs encertaynment, grieuous Proclamations having lately forbidden to receiue men any way suspicious, by occasion of Ispenian Spyes taken. Euen the President himfelfe, feared to bee author in fo troublefome time of bringing Strangers: and Ricius when he visited him, vied his Gestatorie seate. They gaue eight pieces of Gold to a cunning Clerketo in China brings write their Petition (fo deare doe Learned men there prize their labour) which when they game the Chancellour (which fends Petitions from Nanquin to the King) hee would not meddle with it, but put it off to the President, that heeshould carrie them with him to Pequin. He being to bee there to gratulate the King at his Birth day, in name of the fixe Tribunals or Counfels, fent his goods by water and the lefuites with them, but went himfelte by land, When this President came to Nanguin, other Magistrates visited him with presents after the

manner, and one the Vice-roy of that Prouince with a Map of Richa his invention, concealing the name of the Author in a new impression; which hee shewed to Ricius, who soone knew and challenged his owne. This the President intimated, that the Author was going with him to Peauin. Hee presently fends the Captayne of the Souldiers, to desire the President that he might to haue fight of a man whom hee fo mich admired; fending withall a Chayre, and Porters with Horses also. For the Vice-roy of Nanquin resideth not in Nanquin, because in that High Court are higher Magistrates, which would seeme to eclipse his Greatnesse. So Catanem went with the Ship, Ricius to the Vice-roy, whom hee falted with European gifts. He flaved with him ten dayes, fo great defire he had to conferre with him. And when hee shewed him the Image of Christ, he would not take view of it there, but would first ascend to a neate Chappell which he had on the top of his House, therein after the rites of their Learned, to worship Heauen; with three doores to it, from the South, East, and West : about it round was a Gallerie diffinguished and cancelled. There he caused an Altar to bee erected, and thereon Wax-lights and Incense to be fired; and then the Image being fet thereon, hee came in his most sumptuous attire and did worship foure times, after their accustomed rites : after which hee would not stand before it but besides it, to take view, which see did a good space. After him, his familie did likewise : and euery day they reiterated the fame, one also being appointed to keepe perpetual Odours burning before it. Hee brought other Magistrates also to fee the same : and when he might not detayne the Father longer, he fent him away with great weight of Siluer, which came fitting to their necessitie. Hee gaue aduise also touching their designe, and told them of that frustrate successe which followed. He went with him to the River, and fent one with him till he had overtaken his companion. The Chinon call that River langu-chian, Chian fignifying the greatest River : Qther Rivers they call Cho.

That River of Nanquin which I called (Yamfu or) I anfu, the some of the Sea, goeth Northward to Nanguin, and then returning fomewhat Southward, runneth into the Sea with great force : fortie myles from which it palleth by Nanquin. And that from hence to Peanin there might bee passage by Rivers, the Kings of China have derived a large Channell from this to another River, called the Tellow River, fuch being the colour of that troubled water. This is the other famous River of that Kingdome, in greatnesse and note, which ariseth without the Kingdome to the West, out of the Hill Cunlun, conjectured * to bee the same whence Ganges ariseth, or one neere to it. Where it first breakes foorth, it maketh a Lake which they call of the Con-Stellations : thence it pierceth into the borders of China in Sciens, the most Westerly Prouince, Lake feeme ill and goeth out againe out of the Northerne walls into the Tartars Countries; after which it returneth to the South, and that Prouince whence it had come, and washeth another Prouince na- 10 Lake of Conflet. med Sciansi, and another named Honan: then turneth into the East and entreth the Easterne Ocean, not farre from the Sonne of the Sea. This River against their lawes for Strangers, entreth China from Barbarous Regions, and as in reuenge of their malice to Strangers, often ouer-floweth great part of the Kingdome, and shifteth his Channell being full of Sands which it mooneth. . Certayne Off cers or Magistrates defigned doe sacrifice thereto, or to the Spirit of it (for they set Spirits ouer divers things) with many rites : and they fayne that it cleeres the troubled waters, but once in one thousand yeeres; whence it is properbiall of a fild-feene thing, When the yellow Riuer Shall bee cleered. They that sayle therein, must therefore keepe the water many dayes till it fetleth, the third pare prouing myre and fand. Before the ingrelle and egreffe of this River, are Channels which give passage to Ships that carry provision to Pequin. Those Ships are layd to 10000. Ships of bee ten thouland, fent onely out of five Provinces, Chanfe, Ceshian, Nanchin, Vanam, and Scianthe Kingstor tum. For these Prouinces pay their yeerly tribute in Rice and Corne, the other ten in Silver-Sue Provinces Belides thefe, there paffe innumerable Ships of Magifrates and of private Merchanis : but priuate men are forbidden to goe out of the Heanfu into those lette Rivers (those onely passe which

dwell within such Rivers to the North) left the multitude of Ships should hinder the passage, or bee able to doe harme to Pequin. Yet is there such store of Ships notwithstanding, that they are forced to flay sometimes divers dayes, one hindring another, especially at some seasons when water is learce, for remedie whereof, they have tockes and flood-gates, which opened make water from one to another of them, with great labour and tedious language. The croftoneffe of winder and labours of drawing with ropes, I need not mention. Some thips are our whelmed at the o- Cranes to pening of those lockes. They have woodden Engines on the bankes to draw the ships of Manie draw thins. strates, at the Kings cost, against the streame all the way. And in fitting this River to Naniga, Tempessions trates, at the names took against the feare of the Sea and Pyrats; have made them take this courfe rate on the In rather then that by Sea.

In all this way, many Cities most worthy note appeare, of the Protinces Naugnin, Scian- Pine, tum. Pequin, and besides the Cities there are so many Townes, Villages, Houses on the bankes that all the way may be fayd to bee inhabited; fo that the Saylers no where want to furnish themselues with Corne, Rice, Fish, Flesh, Fruits, Hearbs, Wine and the like, at a very cheape rate. By the same River, Wood, Timber, Boards, Pillars (for the Chinos make reckoning Timbers for onely of those of wood) are carryed for the Kings workes : especially, then when the Kings the Kings builonely of thole of wood) are carryed for the samps worked a specialty, their which the samps dings.

Palace had beene on fire, which confirmed two parts of three thereof. In all the Iourney, ours Two thirds of found great rankes of Timber-trees tyed together, and of other wood, which many thous the Kings fands of men drew with huge toyle, and fearcely could get forwards fine or fixe myles in a day, house burnt by 20 and from the Prouince Sufeum, which is furthest from the Court, such Timber-trees were in Lightning. going vp, two or sometimes three yeers space : whence every pillar made of them prodigiously arose each to three thousand pieces of Gold : and of those Timber-rankes they encountred one. feeming longer then the rest, which was esteemed to reach two myles in length. The Bricks alfo (which the Chinese preferre before Stone) for the Kings Palace, were carryed this way fifteen Bricks prefers hundred myles, and many Ships had no other vie, so many as might feeme sufficient, not for a red to fione. Palace but a great Citie. Out of the Southerne Provinces, are yearely fent those things which in the more barren Prouinces of Peguin are wanting ; as Fruits, Fish, Rice, Silkes, Cloather and other things : and a day is fet them, at which if they bee not there, they incurre grieuous penalties. Of the Ships called Horfer, the Kings Eunuches haue command. By this River Swiffer thips 30 they lay le almost onely when the Rivers swell ones their bankes, peraduenture by the melting called He fer. of the Snowes from the Hills whence they spring. By the heate in that lourney of a moneth, Heat and colds and fometimes two moneths, the viands which they carrie, are often corrupted before they

come to Pequin, for which cause they coole them with Ice, and in all those wayes much Ice is preserved for that purpose, and distributed to the passengers, and so all things are carried fresh

The Eunuches of those Ships, sell emptie roomes to the Passengers for their gayne : for the Chinois thinke it aglory to fend that which goeth to the King in many thips, & not to give them their full lading, which is also profitable for that sterilitie of Peguin, Merchants by these conuenient fraights making nothing to want there where nothing growes. Ours hared a roome in 40 like manner for their eafe. By reason of the great hear they all fell ticke, yet by Gods helpe recouered. When they were to passe out of the River, in the Province of Sciantum, they met with a hand-made River, which runnes out neere Pegain, to the Tower Tienfin. Another River Hand-made River, which runnes out neere Pegain, to the Tower Tienfin. from Pequin or rather from Tarteria, meetes it, and runnes together with it into the Sea, or into that Bay, betwix: Corai and China, after they have runne together one day. In this Tower there was a new Vice-roy extraordinary, by reason of that invasion of Coras from Japon. Hee They come to prouided a huge Fleet for defence of Coras, by which meanes that whole River was full of Ships Projuin. of warre and militarie tumult. Ours went thorow the thickest of them without let, and at length came to the Port or Banke rather of Pequin, which banke is a dayes journey from the walls of Pequin. And although by Artthey have made a huge Channell to the walls, yet left it 50 should bee filled with multitude of Ships, they suffer none but the Kings burthens to goe that way, the others being carryed by Carts, Beatls, and Porters. They came to Pegnin on a festivali day, the Eeuen of the Virgins Nativitie.

The chiefe Mart Townes in this way were lameben in Nanquin Pronince, in thirtie two loweled Hoofe. degrees thirtie minutes. Hosingen in thirtie foure not all io much; Sincen in thirtie foure degon, Sincen Hosingen, Sincen grees thirtie minutes. In Sciantum Prouince Zinim in thirtie flue degrees fortie minutes. Lincin Zinim livin, in thirtie feuen degrees fortie minutes. In Pequin Province Tiencin in thirtie nine degrees thirtie minutes. Pequin in fortie large. They are deceived which elevate it to fiftie. Now from Canton (which is two dayes from Amação) are of China furlongs (fine of which make a mile, and fifteene a league) by River to Nanbium, one thousand one hundred and seventie. Thence to Nan- Length of the 6C cian eleuen hundred and twentie. From that to Nanquin, one thousand foure hundred and fortie, way. And thence to Pequin three thousand three hundred thirtie fine, in all seven thousand fixtie fine:

which makes of miles, one thousand foure hundred and thirteene.

China Lan-

The gain is fituated in the Northerne border about one hundred miles from the wall against the Tartars. Nanquin exceeds it in greatnelle, composition of the Streets, hugeneffe of Bull. ned, compared with Nanquin. dungs, and Munitions: but Paquin exceedeth it in multitude of Inhabitants, and of Maguirates. To the South it is compassed with two walls high and strong, so broad that twelve Hories may eafily runne abreft oin the breadth without hindering one the other. They are made of Bricket fane that on the foot it stands all on huge stones, the midle of the wall is filled with Earth the height farre xceeds thole in Europe. To the North is but one wall. On these walls by niche is kept as vigilant watch as if it were time of warre: in the day Eunuches guard the gates in rather exact Tributes, which is not done in other Cities.

The Kings Palace rifeth within the inner Southerne wall, neere the City gates and extends to 10 the Northerne walls, feeming to take vp the whole Citie: the rest of the Citie running forthern both fides: It is forme-what narrower then the Palace of Nanquin, but more goodly and glorious that feeming by the Kings absence, as a carkaffe without soule. Few of the Streets are panel with Bricke or Stone, so that in Winter dirt, and dust in Summer, are very offensive; and because it raineth there seldome, the ground is all crumbled into dust, and if any windblow, itenters every Roome. To prevent which they have brought in accordance, that no man of whatfor euer ranke goeth on foot or rideth without a Veile or Bonnet hanging to his breft, of that fubtiltie that he may see, and yet the dust not annoy him: which also hath another commoditie that he may goe any whither vnfeene, fo freed from innumerable redious falorations, and also be foaresattendance and cost. For to ride is not magnificent enough with the Chinois, and to bee 10 carried in their Seats is coffly, with Attendants especially; and in that time of Warre it fixted with ours to paffe vnknowne, being Strangers,

Muletters flood at the Palace, and City gates, and in every Street to let Mules, themfelues alforattending the Hirers whether they would in the City; which leading the beafts by the bridle, in that frequencie made way, being also skilfull of the wayes, knowing most of the great mens Houses: all at a reasonable rate. There is a Booke also which truly relateth all the Streets, Lanes, Regions of the City: Porters alfo with Seats to carrie Men, and Horfes are every-where found, but dearer then at Nanquin, or other places.

All things are to bee had in abundance, but brought thither and therefore dearer. Wood is scarce, but supplied with Mine-coles (we call them Sea-cole) necessary to that Region, cold be- 10 yond what the Climate viually exacteth : their Beds are fo made with Brick-workes, that they by a new kind of Stones admit the heate of those Coles : a thing vivall in all those Northerne Regions. These Northerne Chinese are some-what more dull, but better Souldiers then theother. Here they learned that this Kingdome is Cataio, and the King of China the great Can, and Peaun Cambalu.

For the nine Kingdomes (of Mangi) are those Southerly Provinces which are under the great River lansuchian, and fixe vpon it make vp the fifteene, so great that some one of them is as great as all Italy. Anno 1608, whiles we write, it is fortie yeares fince two Turkes or Moores out of Arabia brought to China a Lion (a beaft feldome here feene) by Land, which had an Office given by the King to them and theirs, to keepe the Lion, and that they should carry no 49 Tales thence: They in conference called this Kingdome great Catan, and this City Cambalu the like we heard of others which had comne from Persia. The Chinois also have heard of that name, and still call the Tartars Lu, and the North parts Pa and Pe: to which Can the Tartarian Title added eafily makes Canpalu or Cambalu with others; for the Chinois seldome vse B. and Marco Polo comming in with the Tartars called it by their name. And at this time without the walls of China is found no Catay. The Portugals called it China, borrowing the name as may be supposed from the Stamites, and hence Cosmographers made them two Kingdomes. But Goez his lourney by Land to Catay flath taken away all scruple.

To returne to ours now come to Pequin, the Prefident gaue them entertainment, and procured an Eunuch to undertake the bufineffe for the Presents, which were a Clocke, two Pictures, two 50 Trigone-glasses and a Bell : all pleased the Eunuch, but his minde ranne more on making Silver of Quick-filter, which he had heard they could doe, and which would bee more gratefull to the King. And when he faw that would not be undertaken, neither would he undertake to acquaint the King, in this time of Corayan Wartes; and ours also were taken for laponians, or necre vnto them, they not knowing how by true names to distinguish Nations. The President also began to be fearefull and purposed to carry them backe with him to Nanquin. Yet they staid a moneth after him (he being at a certaine day by Law to depart) and when they had tryed all wayes in vaine, nonedaring to acknowledge Strangers, they returned to Nanquin. They had a Bill of Exchange from Amacao to take vp money at Pequin, but the Merchant had plaid the Merchant and Chinese too, none such there to be found. They hired a ship at an easie rate for their returne 60 (because they governoty) but not easie in this respect that the Owners pouertie made the lourney tedious for what of helpes. This benefit they made of this lourney to learne the Language guage and Ac- better, making a Dictionary, observing their Accents with Points deuted; (that speech constfting wholly of Monofyllables, the want of skill in those Accents had caused that they neither

did nor were vinleritood) Cataneus skill in Mulicke helping to diftinguish those founds. What courte Ricius and he inflitted, that the Company still observe in their Writing.

All the Rivers in China vie to be frozen in the beginning of Winter, that thips cannot palie Rivers frozen. by water, and Carts by Land are fafer. They agreed that Father Matthew should goe by Land Rice goeth by with two Seruants, to try if he could fettle at Nanquin, the rest and the burthens to stay till the Land. River were thawed. He purposed also to goe to Succe whither Chimaifu had often inuited him. being his Countrey. Pailing thorow Scianum, he villed Sincen and Tameen famous Marts, and Sincen and paffing the River Tameen, at Chinchiamfu, the chiefe City of that Province hee entred into a Tameen. hand made River, by which is failed to Suces and to the chiefe Citie of Cectian Hances. This to River being Southerly and neere frozen over, is to narrow that multitudes of thippes cloy it fo fomtimes that they cannot palle forward or backward. He was forced therefore to go by another way, which is a Coach or Wagon of one wheele, to builded that one fitting in the midft, and Coach of one two on the fides, the Coach-man behind with woodden Leauers or Barres drives it forwards wheele. both furely and twiftly; that in flort time he came to Sween,

This Noble Mart is one of them whereof is the Prouerbe, That which is in Heauen the Seat of Sucus describe the Bleffed, that in Earth is named Suceu, and Hamceu: in iplendour, wealth, frequencie remarkable. It is built in a calme fresh-water River, and quite thorow one may goe, as in Venice, by Another Ve-Land or Water, but herein it excelleth Venice that the water is fresh. The streets and buildings nice. stand upon piles of Timber, the Wares from Amacae and other parts are most fold here. It hath 20 one gave to the Land, the other are water-wayes. The Bridges are innumerable, & Magnificents Ancient, but of one Arch in those narrow Chanels. Butter and White-meates are plentie, Rice, and the best Wine, which thence is carryed to Pequin and other parts. It is scarlly two dayes from the Sea. It is well fortified, the chiefe City of the Region, which hach eight Cities. One Huge Tribute. of the Princes held this, when the Tartars were expelled, against this Royall Race; whereupon it still payeth a great Tribute, to wit, the halfe of . Il things growing, (fo that some two whole Provinces pay leffe then this one Region to the King against whom it had stood out) it is full alfo awed with a frequent Garrison. Chintaife was then absent at Tanian a Neighbour City, Tonian, who received him with great humanitie. He abode in a Monasterie, and resigned his bed to his Mafter, who tired by trauell fell ficke, and was likely there to have dyed. Recovered by his care, 20 he gaue him a Triangle Glasse, which he put in a Silver case with Gold Chaines at the ends, and adorned it further with a Writing that it was a fragment of that matter whereof the Heavens confift. Glaffe glazed; One was faid to offer him fine hundred pieces of Gold loone after for it, which till Father Matthew had presented his to the King hee would not fell : after that hee fet a higher price

At the beginning of the China yeare, all are busied in sending Presents to their friends, feasts New years and falutations. They went to Cinchian to the p. blike Solemnitie where Chiutaifo was well day. knowne, and by his speech Father Matthew and from thence they went to Nanguin, in February , 1499. Before wee come thither wee will looke backe to our Canton lefuits.

first Table, the Chinois, especially the learned are Atheists, little regarding Idols, whereof their

Houses and Temples are full; little minding the re wards or punishments of the life to come, or

the China splendor and politic. He writes for Labourers, Bookes, Images, and Pictures, for con-

Corai and Quabacondono was dead, which had so terrified that vowarlike Nation. He heard that

they had heard of his going to Pequin, and that the Corai warre was the frustrating of his de-

fignes in that vnfcasonable time. The Prefident was verie glad of his comming, and exhorted

him to buy a house there, and sends two of his followers to looke out for one. Scarlly had he

that which without wonder cannot be beholden, the Nanquiners herein exceeding as may be

When it was reported that the Prefident had vifited him, all the Maiestic of Magistrates did

the like, yes some whom he had not visited. The President of the Court of Criminall Canses, and

and their number; the fixed poliure of the Starres, the Planets wandrings, the eleuation and

daies, without the Tropikes Geographicall Maps in plano, and Globes, Meridians, Parallels,

Degrees, the Line, Tropikes, Poles, Zones, Spheres, Sun-dialls, they had not at all vinderstood,

with other points of European learning. A Doctor of theirs confessed himselfe ashamed; For,

laid hee, you may thinke of me as wee doe of the Tattars and barbarous out-lawes; for you begin where

mee end (which hee spake of the studie of eloquence, which takes up our childhood, their

whole life.) They numbred flue Elements, Metall, Wood, Fire, Water, Earlb, one of which they

whole me.) any number and entertains, overall, recon, e new mer, for one, because they see

and Chiutaifo gotten home to their lodging, when the Prefident followeth to vifit them, which

the foules immortalitie, which yet are easily found in their bookes touching the punishments

at least of Holy Pao (so they call God) in Hell. Of rewards of bleffednesse there is not such euidence, as Thus o affirmed. And although many difficulties happened to ours in the Bonzian habite, yet is it now fare otherwise. As for Canton Province, the Mandarines which come this Cantoning way, aske vs why we stay amongst these Mangines, that is, Rusticks and Barbarians: We must, Mangines, fav they, leave the Barke and pierce to the pith and marrow of the Kingdome, if we would fee

folation of new Connects: the Ethnicks worship that of the Virgin, and call her Sein mm nian Bleffed Virgin nian, that is, holy Mother, and Queene of Queenes: and ends with imploring the patronage honoured,

and intercession of all the heavenly Quire, specially of the blessed Virgin, the Apostles, the An-20 gels guardians of China, to obtaine of the holy Trinitie happy successet to their endeuours. &c. But wee will return to our best acquainted in China, Ricius, whom we left newly arrived

The case was now altered at Nanquin, they went on soot without impediment to their lodg- Hanquin. ing, which was in a huge Monastery, called Cingbenfu, in which is great refort of guests which Cingos a there hire lodgings, being built in the centre of the Citie. The Inponians were now beaten from Breat Abbie.

hee did with the folemnest Rites. And when they were fet in the Hall, the Abbot came to offer The President

hee did with the folement Rues. And when they were teen the crain, the Abbot came to but a the atoms them the worted potion, kneeling to all three (to the Prefident hee was bound as fupreme go. (apreme go urmour of Temples) and the Prefident invited the Father to fpend two or three dates in his urmour of Temples). house, to see the Fire-workes, which that full Moone, the first of the yeere would be to bee Full Moone feene, which strange deuces of lights that and the following nights; which he did and beheld freeworkes.

the Prefident of the Treasury (which is the second Tribunall) came with rices & gifts, as also did others ; yea hee which a little after was the High Colao at Pequin, which all viged him to buy a house; and he now went thorow all Streets and Palaces without gainefaying (which he knew from a vision hee before had had thereof) and procured a house which the President helped to furnish. So much admiration and respect had the opinion of European science acquired to him, these being to the China wits baits for the Gospels fishing. Now first did they he are that the Earth was round (for they conceited the Heauen round and the Earth square) that the Centre drew all heavie things to it, that the Vniverse was inhabited round, that there were Antipodes, that the Earths interpolition caused the Moones eclipse (some saying that the Moon Mathemaukes Antipotes, that the Europe and azeled or amazed; others that there was a hole in the Sunne, againft bins to the Sunne was dazeled or amazed; others that there was a hole in the Sunne, againft Cop. II. so which the Moone opposed loft her light) that the Sunne was greater then the Earth; and that the Starres alfo, this was out of measure paradoxicall: the like was the foliditie of the Orbes,

depression of the Pole according to the various Climates; and likewise the inequalitie of the

it not, placing awacuum or emptinesse where wee place the sire : as incredible it was that the first, practing and the highest, and that Comers and Exhalations were therewith fired. Father Harrin Col-Matthew writ a booke of the Elements in their language much applauded, and often by ledge in them reprinted. Divers became his Schollars; one sent from his Master in Hanlin Colledge in Legin.

I tely runne thorow two of their Bookes, which they efteene as their Metaphyfikes, or fifth Legyranne chorow (wo of their books, which may proficence; whenas I found therein no more difficulty then in Tully, or Titus Lining. They lay, none but the Chinois can understand them, Father Ricci vieth to adde none better then the Europeans. A Letter of Taifs to Revi them, rather neer viern to adde tome better the bush fand at the " fide to learne, de fid. · Thaifes Lethee audent thus interioed. I dated Jounger Drouge method in our place to interior, ase fub-mus my bead to the ground, and exhibite bonour and restrence to the clair Brother, Mafter and Father mit my useas is the ground, and a course something of the most chaif flowers of the groat Law, and caster Matthew Ricci, a famous Peere, and Master of the most chaif flowers of the groat Law, and cast

topersours and downe my selfe at the feet of his Seat and Chaire. The Letter followeth. wite not in After our departing (it being foure yeeres fince fight of each other) there hash not beene a derin After our departing (it being four e peeres junes pipes of cases over sever severe a any m which I have not fet before unine eyes the excellent vertue of your Worship. I game two sever fince to to but the name Sciauchin, my (ountreyman, a Merchant, Letter: to your Worthp, thereby to learne where and whee it for the pro-SCHROTTIN, my construence of the control of the control to your magnificent hands, Go. Prime I west noune (I). " This (as to fit This (at 16 ft on your Worldon) faid it must goe into the North parts, if it would behald the filendour and magniatthe feat with freeze of this Kingdome, that my Country bad nothing fingular, that Nanquin Court was transfer the level lig. I seeme of two any more than this Promine was it may for dwelling, because there were leaned men in it of excellent vertue, and of a true and folid spirit to receive the Law gathering together those things which your Worship taught mee, I made a Booke, and exhibited it to the their firring or Society of learned men, of which there was none which did not admire and subscribe, saying, your time the fide in Lefor ma Scingm, that is, a Saint of these times. Those things which I have added happ may be errore. jup was Scingus, tons us, a source of surfer sounder and higher learning: and therefore have fent my feruen 20 ons, and I fewe left they court addit its founder and higher learning: and therefore have fent my feruen 20 Secto. Out, and 1 per cuts very sources of the section of the sect to blot out the falle, to illustrate the observe, writing all in another Booke, and sending it by the same fernant in few dayes , because I would presently commit it to the Press, that your Worston searning greateft title ferson in fam agres, seemye i woma presents; commit a to the Freye, that your writing tearning might be known thought be World. In these places are of greatest recomming the Books of Hothu, Co-scut, Pequa, Queuscieu, Thaiquitu, and other like, which have written of a Point, Line, Extremite, of honour aand Thicknesse. All these learned make of a Line a Circle : but according to your Worthips teaching, of a

ting a noty birth, greatest Line is made the termination of a Circle, and a Circle confifts therein. From which principles the conbirth, greatest clusions brought of Thaiquu, that is, of God, doe farre exceed the Commentaries of all our learned teaming uses the men. And they are enough to illustrate a thousand observation of antiquatio, which hitherto have not beaue pierced. This one thing affeilts mee, that my writing and file is meane and abielt, and most onfit to to illustrace and cularge the most excellent concests of its mind. Means while I much long, and as it

Bonzi-dreames. Bad Mathematicians. Quocum Nobles. LIB. II 346 Pequin (the chiefe place for China learning, to be admitted into, which is a great dignitie,) Hee was very wittie, and without any Mafter attained the first booke of Euclide, and exacted of Witofa Father Matthew Geometricall demonstrations. And when hee added some things of Christian Chief. nitie, you need not laith he, confute that Idolatrous Sect, it is enough to teach the Mathema. Bonzis datages tikes. For these Bonzis would also be Philosophers and Mathematicians. They faid the Sunne hid himselfe by night behinde a Hill called Siumi, rooted in the Sea foure and twentie miles deere. And for the eclipses, they faid that the God Holochan caused that of the Sun courting Eclipies. it with his right hand, and that of the Moone with his left, Not at Pegain alone, but at Nanguin also is a Colledge of China Mathematicians of hetter Colledge of building then Aftrologicall Science. They do nothing but bring their Almanacks to the rules to of the ancients, when they mif-reckoned, they afcribed it to irregularitie of nature, not theirs. deuising some prodigious euent to follow. These at first were afraide that Father Matthew would have deprined them of their dignitie; and freed of that feare, they visited him friendly, and he them, where hee faw a strange fight. There is an high Mountaine, on the top whereof is an open Plaine or Floore fit to contemplate the Starres. In this open space one enery night is appointed to watch, and obserue if any Comets or other alterations be in the skie, thereof to Mathematicall give the King notice, and what it portends. In this place, of cast mettallarc Mathematicall Intiruments, admirable for their greatnesse and neatnesse, the like whereof wee have not feenein huge Instruments. Europe. They have continued there in all chance and change of weather necret wo hundred and A Globe. fiftie yeeres without demage. Of them were foure greater, the one a huge Globe diffinguished 20 by degrees with Meridians and Parallels, as great as three men can fadome; it flood on a huge Cube of braffe likewise, vpon his Axel-tree : in the Cube was a little doore, sufficient for it to paffe when need was. On the vtter superficies was nothing grauen, neither Stars, nor Regions, whereby it appeares that it was either unfinished, or purposely so left that it might serue both for a Celestiall and a Terrestriall Globe. The second was a huge Sphere, the Diameter where-A Sphere. of was a fadome; with Horizon and Poles, and in stead of Circles, certaine double chaines, the space betwirt them representing the Circles in our Spheres : all these were divided into three hundred and fixtie degrees, and a few minutes. In the middeft was a Globe of the Earth, but a certaine pipe hollowed like the barrell of a Peece, which might bee turned any way, and fet in A Diall any degree and cleuation for triall of the Starres very ar ificially. The third was a Diall two 30 fadoms high in a huge &long Marble fet to the North, with a channell about the table to hold water, whereby to trie if it flood plaine or no: the flile placed perpendicular, both it and the stone distributed into degrees : it seemes, for exact trials of the shadowes of Solstices and Equinoctialls. The fourth and greatest was an engine or instrument of three or foure huge Aftrolabes set one by another, each containing a Geometricall pace in a Diameter, with their Fiduciall line, or Halbilada, and Dioptra: one of them represented the aguator inclined to the South. another (which made a croffe with the former) to the North; another flood erected to the South perhaps for knowledge of the Verticall Circle, but turned about to flew any Verticall; all had the degrees marked with iron knots flanding forth, that they might bee knowne by feeling in the night. This Worke of Astrolabes was fet in a plaine floore of Marble alfo, with channels # The Chinais about. In cuery of these Instruments was expressed in China Characters what every thing figninumber 24. conficilations fied; the foure and twentie Constellations of the Zodiake, answering in the number doubled to our twelue Signes. There was in them this one errour, that they were fet in the fixe and thirtieth degree of the Pole elevated, whereas Nanguin Stands without all doubt in two and thirtie Thelike Inftruand a quarter of a degree. They seeme to have beene made to be placed somewhere else, and ments at Peplaced here by fome voskilfull Mathematician. Afterwards Father Matthew faw the like, or This time 2the fame Inftruments rather at Pequin, cast with the fame hand, at that time when the * Tartars ruled ouer the Chinois, by some expert of our sciences. The greatest Magistrate defired Father Matthew to reuise the Vniuerfall Map, which he had made in Canton Province, and make larger Commentaries, and hee would print it at publike 10 rity to Albacons cost, which he did, and with an elegant Proeme commended the Author of the worke. This

greeth with the time of Tamerlane; which giueth au boformer flory of him : belides the Chinois call the laft Tartar which ruled them Temor. Quecum, the Nobilitie of

mentarie in a booke, adorning the Authoralio with his praifes. Befides, the Prefidents of the fixe Tribunalls (equal except for the Kings prefence, in the government of their Province, to thefe of Pequin) hee had three other friends, yet vomentioned. There is a certaine hereditarie dignitie derived to the eldeft fonnes, from those Captaines which expelled the Tatters: they are called Quocum ; their posteritie are honoured by the King , most of all the eldest, which in processe of time haue growne into a numerous Family; and although they beare no publike office, except some militarie commands, yet haue they great dignitie and wealth and these onely doe truely relemble the Nobilitie of Europe. One head of this Family is at Nanquin, liuing in great pompe, with Palace, Furniture, Gardens, all I ke a King. He one day inuited Fa-Artificial rock, ther Matthem, and entertained him in the beit Garden in the Citie : in which , befides other pleasing rarities, he saw an artificiall Mount or Rocke of divers repolished Marbles, hollowed

was published and carried into all parts, and in other places reprinted. The Vice-Roy of

Cnicen Province printed it with another methode, making to every Kingdome a proper Com-

into Caues; it contained Chambers, Halls, Staires, Fish-ponds, Trees, and other things. Are wantoniling with Nature to engender pleasure; of pecially in time of heate to coole themselves in their studies or feasts with this Caue-retiring; which although it comprehended no great space of ground, yet would it aske the space of two or three houres time to wift all the parts, the egreffe being by another gate. This Nobleman was yong, and defired to fee fome things of Europe.

Another which became familiar with Father Matthew, was the Commander of all the Non- Captaine of quin Souldiers, which had also another great Office, salled Hen, who often vitted him, and be-the Cine Garcame his great friend, whole friendship gaue vs tecurity, to whom the watch and ward, and fecurity of the Citie belongeth. Befides, I will name the chiefe Eunuch, which hath great au- Chiefe Eu-

currity of the Little Betongetti. Denues, I will man the Chips and thoulands, who is Roler our much. To thority ouer the Nanquin Ednucks, whereof are numbred forms thoulands, who is Roler our much. thority ouer the military Mufters Anothendse the Kings Palace, and lath command of all the Citie gates, and oner the military Mufters Enunched together with the former Captaine, with other parts of authority, and expressent the same Nanagan. with great pompe. He was almost decrepit, and after the Eunichs fashion there, not so gender and when Ricins came to him, his Courtiers commanded him to give him a title which and wereth to Highneffe with vs. I explane it thus; when they i peake to the King, they wish to him ten Van, ven, file, thousand thousand yeeres of life in these three syllables, Van van sin, which is all one with the title 35 to the Ea.

to Mainfrie: to others in the Palace, the Queenes, or Children of the King, they with inferiour by ones Moof reasigne: coolings many and the Eunuchs are fo arrogant that they expect this then fand ever Danillo veres with, and to bee faluted on the knee. Father Matthew could not doe this fafely, left hee 20 should doe more to him then to the chiefe Magistrates; but hee had learned not to neglect in China their rites; and he being deafe, one that hollowed in his eare made up what the Father wanted. Hee gaue him a great gift, which he refuied, and denyed him the trigone Glaffe: yes this caused the other Eunuchs to honour him.

At that time lived in Nanguin one which had obtayned the first place in the declaration of A principal Doctors (which is a very great dignity) who lived here in this Country private, but an area Doctor, a efteeme of all. He had degenerated to become a Preacher of the three Chua Sects, and properly fed great knowledge of them, Hee had at his house a famous Votarie, or Boszi-Monke, who A Mandarine renouncing the publike Offices which he had borne, had flaured his head, and (which is rice, v. becomes a fuall in China) of a Learned Man, had become a Minister of the Idols, And because heavy as Bonni.

30 both learned in the China Sciences, and growne feasibly yeares old, he had acquired much farmed and many Disciples, professor of that new Sect which he dentied. These vinted Father Marthen, to the wonder of all ; that Literate-apostata confessed, the fruth of our Law, and preferated the Father with a Fanne with two elegant Epigrams therein. Two other vilited hims, was Epigrams, of which counterfeited himfelfe to have fixed three hundred yeares, whom the China Cristisles much followed, as doting on the studie of long life, the precepts whereof he read to his Scholers, Hee also boasted of Geomancy. The other was a Physician, and companion to the other reach blazing the others Science : and whiles both preferred the Father, some suspected that hee had lived some Ages (which they ye to affirme of Strangers, differing in countenance from them) and would not let it be knowne.

40 The Chinois have one day tolemne to Confusion the Prince of the Learned, in which they make confusion his a kind of Sacrifice to him, not as to their God, but their Master. They call it a Sacrifice, hoiday. but in larger extent of the word. Mulike was prepared against that day, at the triall whereof Father Result was present. The Priefts of the Learned salled Tanfus ordered the Mulike and Mulke of in the Kings Hall (or Temple rather) dedicated to the Lord of Heaven, this triall was made, China. The Priests came forth in precious vestures, as if they would facrifice, who after their wonted rites to the Prefilent, fell to their Musike; in which were small brasse Bells, Basons, other as it were Tabors, others of stone, stringed Instruments, Papes ; Organs blowed with the mouth, not with Bellowes; others refembled Beafts out of the hollow bellie yeclaing a found all thefe founded together with fuch discording discord as you may imagine; the Chinois themselves con-50 felling the concord and harmoniacall confent to bee lost; onely the Inftruments remayning from

That Temple was great and magnificent , built neere the Citie in a Pine-groue, companied Templeroyail, with walls twelue miles about. The wall of the Temple was of bricke, the other parts of time and magnin. ber: it is disided into fine Iles; the Pillars were round of huge timbers as great as two men could fathome, the height proportionable to that thicknesse; the roofe is excellently carried, and all gilded: and although it be two hundred yeerestince it was built, and the King relides not at Nanquin, nor facrificeth there, yet is is little decayed from the first iplendour. In the midst of the Temple is a more eminent place of most precious marble, in which is a double Throne,

both of marble; the one for the King when he fitteth to facrifice, the other is left for him to be 60 by, to whom the factifice is made. The Clouters without are beautified with most elegant windings, and left the Birds should defile all, the windowes are all netted with Iron wyers (which is vitiall thorow all the Palace :) all the gazes of the Temple are covered with Praile plates gilded, and wrought with neat Vilages of the same metall. Without the Temple were many Altars of red marble, which represented the Summe , Moone, Stattes , and Hills of Cines.

Lakes and Seas, intimating that that God which is there worshipped made the rest, which are placed without, left they might be worshipped for Deities. It is prohibited by grieuous penale ties, to cut the trees of that Groue, or any bough thereof, whence they are great and old. In the circuit of the Temple are many Cells, which are faid to have beene Baths for the Kings to wash in when they were to facrifice.

Iefuite habit.

The Father vied the Habit of the Learned (as is faid) of those especially which profess them. felues Preachers of the Law; the Habit modest, and the Cap not wnlike ours in Crosse fashional. fo. He confuted both the Sects of Idolaters, and commended that of the Learned, praying Confatius, which was rather filent, then would deutle any thing touching the next life, and taught good Rules for the Life, Family, and Republike. A great man flourished at Nangmin then (which in had some thousands of Disciples) in opinion of Vertue and Learning, and had set dayes in which to heare and to be heard enery moneth. Chintaife brought the Father, and this Father together, and in some reasoning Ricins wrung from him that some corruptions were in the Idoll Sects, which he followed not, holding that only (he fayd) which was good. It being a fathion that Learned men met in their Societies to conferre of Morall Vertues, in one of those meetings this man learnedly confuted Confuius, which another Magistrate tooke haynously, and creed out, it was intolerable that the Sect of Idols brought out of other Countreyes should bee preferred before Confining, whom the Learned Ricins also admireth, refelling the Idol-follies. Heap-

fwered, he had fooken with the man, but he was not yet well acquainted with China bufineffe. and he would instruct him better. Soone after he inuited him to a Feast (for the Chinois vivally 10 Conference or in fuel meetings determine Controuersies) and there hee met Sanboia famous Idol-Prieft. Learned Philosopher, Orator, Poet, and well skilled in others Sects also. When they were fet this Priest and the Father together, the Priest began shewing his desire to conferre of Religion, Ricins first asked what he thought of the first beginning of Heaven and Earth, and the Creatour of things whom we call the Lord of Heanen. Ideny not, fayd he, that there is fach an one be he hath no Majesty nor Deity, but I am equall to him, and so are all others. Canst thou (faith Ricins) make those things which he hath dones he granted. Make then such a Chaffing dish some flood before him) this, fayd the other, was an vinworthy demand. Thou (fayth he) art an Aftronomer, and makeft new Sunnes in thy minde when thou reasonest thereof. That, fayth Ricing, is but an Image or likenesse which the minde from things seene conceineth, as in resexion of a m Glaffe whereon the Sunne shineth, yet doth not the Glaffe created Sunne. The Hoast for feare of further quarrell parted them. At Dinner the Chinois disputed of a Question of bumanens ture, how it came bad (they want Logicke and cannot well diffinguish betwixe morall and neturall good, and neuer heard of originall finne) they discourfed thereof a whole houre : after which Ricius repeating what had beene fayd, entred into diffoute with Samboi, who laughed at his and their Reasons and answered all with a Fale of I know not what Floud, according to his Sect but he straitned him with Arguments, so that he and this Disputation grew famous. They conceine that God and the Creatures are all of one fubftance, and that God is as a great Soule of the Vniuerle; which opinion from the Idol-fects hath infected the Learned, Ricins writ a fummary of that point, which gaue men good fatisfaction, and his Law feemed not fo batharous as & they imagined.

Oppreffien. ftopped by anbe opened to preuent rob-

The Kings Treasure was exhault by the Corayan Warre, whereupon contrary to the Lawes Mines of Gold he caused the ancient Mines which were sayd to be stopped, to bee sought, and opened, and imposed new Tributes, that in all Provinces, Merchandizes should pay two of a hundreth: which had beene tolerable if gathered by Magnifrates; but his Eunuches, fent to every Province, without shame or mercie exacted on the people, and rayled a worse combustion then that of Coray. So many Impostors, Counterfeits, Theenes were enery-where : if a man dwelt in a good Houle, they would digge it up to fearch for a Myne, to force composition from the owner. Some whole Cities and Prouinces compounded with these Caterpillers to free themselves from their vexations; the money to gotten they gaue the King as taken out of their Mynes. This caused Dearth, 50 and in some, Commotion. The Magistrates petitioned the King against these abuses, but sweetnesse of gaine had not only stopped that eare, but procured grieuous penalties to those which withstood his Catch-poll-Eunuches, which by those punishments grew more insolent. Ours which wintered at Linein, happily escaped these Harpy-clutches, who with their Presents arriuing at Nanquin rejoyced to fee a Residence so prepared there. These Presents intended for the King, bred fuch an amazement in the beholders that others were ready to offer force to fee them. They still minding to present the King, (the weather now more cleare and peaceable) Cataneus went to Amacao; where was much rejoycing for these hopes, but soone quenched with forrow for loffe of their fhip which tradeth to Iapon, men and goods loft, on which ship all their Commerce dependeth. They found themselves therefore vnable to maintayne three Refs. 60 dences : the Iesuites Rector scraped all hee could for that purpose, and added a Watch and Image of the bleffed Virgin, and Trigone Glaffes; Houre-g affes and other Rarities to their

Father Diego Pantoia a Spanish Priestalso accompanyed Catanene to Nanguin, and thence

went with Ricius to Peguin, with Sebastian and Emanuell. Father John was called from Nancian to relide with Cataness at Nanquin. They went with an Bunuch then going to Pequin with fix Zinin. thips, who flewed them much kindnesse. In Zmin a City of the Prounce of Sciantum is a Viceroy which is at High Admirall ouer all the thips, whether they carry prouision or other things. toy wongstage, ring rammanage an normally, water tay, carry promote or other tinings, which gave kind entertay morn to Reigns, telling him at parting, Subai (that was Reigns his China name) Tallo defire to goe to Paradil; intimating that all his Heaten was not in earthly honours, but that the middled allo which the chine reached. Prefently with great pompe and ftate hee followed him en his thip and there viveed him with vivall Rites of Vrbanity and a rate net contowed mental up any investigate the contour and a first of violating and a Prefent, and won-fred made at the fight coft folder (effects they carryed for the King He feet as I go Officer allo to make him a readier way? Office Lees had made way to this Vice-toyes friendflip, who foone after killed himselse, hearing that voon some complaint of his Books, the King had Liciwkilleth commanded him to bee imprisoned and his Books to bee burned; preventing fo the study of his himselfe. Adversaries to put him to some shamefull death,

Amongst those Eunuches which the King had sent to oppresse the people, was one Mathan, Mathana great which dwelt at Linein, whale exactions had rayled the people and Souldiers into mutiny, which and bale Euburnthis Palace and killed his Servants, himfelte efcaping difguifed, but the Captine and Slave nuch of Conetouinesse no lesse then before. Our Eunuch addressed himselfe to him, but could not till Treacherie, the third time be admitted, because his Gitts were not answerable to the others appetite. Hee to make way for himselfe betrayed Ours to this Harpy, they not knowing it, faying, that in

20 one of his thips were thrangers with precious Gifts for the King, which he thewed closely to his Officers with their he might get the Kings fauour. The Gouernour which in that and the Neighbour Cities had great command was his great friend, of whom Ricins asked counfell ; he told him that now the Ennuches reigned, and they almost only were the Kings Counsellors, nor could the greate() Mag ifrates withfland their injuries. Yet the countenance of this Mag ifrate was a great helpe to him, this being the man whom of all the Gouernours he most feared; a man fowell deserving that his Cirizens erected to him a Temple, Image, and Inscription; who now al to both countenanced Ricins what he might, and game him the best aduice how to carry himfelie to this Eunuch, and perhaps but for him they had loft all and themfelies to. This Capon had Green and

felleto this municipal and perhaps our toginal tree man our alkana themisures to a une capon may creat and erected Palaces and Temples, and had built a dugs ship in which the King himselfe might have glorious ship, 30 styled; so many were the Cels, Chambers, Hals, and other commodious Buildings thereof; the Bytes; to many we to be carry, where keeping wood carryed with many Meanders, all filming with Vernish and gittering with Gold. In this ship was hee carryed to ours, where keeping meet him. He viewed and liked all, and downe on his knees to the Virgins Picture, promifed to procure her a place in the Balace. Ricins modefully refusing his feruice for them to the King, faying, fanny Magistraces of best ranke had violertaken that kindnesse; he smiled, faying, none of them could doe to much as he with the King : the King answeres my Petitions the same day, to them or late, or nothing. The Eunucla which brought ours was fent away, and all the Prefents put a board his thip, Hee carryed the letites with him to the Towre of Thienfin; whither hee went to fend Thienfin, thence the fix moneths Tribute to the King : he feafted them, Comedies, Rope-runners, Tum-

40 blers, Vaulters, and Mimicke Ape-men attending the cheare with such disports as they had nener seene in Europe. One cast three great Knines into the Ayre one after another, and catched china Players. them agains in their sheather: another lay on the ground, raysing his feete over his shoulders, and Feat worwith which hee toffed up and tumbled too and fro an Earthen Pitcher in such fort, as hardly kers. could bee done with the hands; the like hee did with a Drumme on a Table. A Comedie was acted only with gestures, of disguised Gyants in glorious habits; one from the Theatre pronouncing all their parts, A Boy danced admirably, and then as it were falling, layd his hands on the ground, and another Boy of Clay came forth, which ving his hands for feete, imitated all the prankes of the other, and fell to wreitle with the living Boy, as if both had beene alue.

prantees on the units, and the conviction with the thing thoy, as it does not need occur and over the while the will leave you special or steep, and now bring you for to another Alter, which basing to little while so transluted much, and tearned more of his Fellowers, feddenly fent into Europe thefe Relations not onworthy your view: which I base therefore examined with the Original Spanish, and the Latine Translation, and cut off some superstanties to give you more sull content and to prevent Repetitions, the rather because bee descenderb to many particularities which Ricius looking higher and knowing more, hath omitted.

*This Booke I A Letter of Father DIEGO DE PANTOIA, * one of the Company of IESVS, to Father LVYS DE GVZMAN, Pronincial in the Prouince of Toledo; written in Paquin, which is the Court of the King of China, the ninth of March. the yeare 1602.

ð. IIII. "

Difficulties of entring China, their dwelling as Nanquin, going from thence to Paquin, with Presents for the King, troubles in the way by an Ennuch.

Ight Reserved Father in Christ, the peace of Christ bee with you. I thinke I doe not fatisfie the dutie which I owe vnto your Worship, for the love which you have 30 alway shewed vnto mee, and the Obligation wherein I am bound to so many most dearely beloued Fathers and Brethren of this Prouince, if being as I amin this great Kingdome of China, procuring the good of these Pagans, (whereumo it pleased our Lord to choose mee) I should not give you some briefe Relation of the things that concerne this our new Mission, and of some things also concerning the greatnesse of this Kindome, the Customes, Government and Policy thereof.

Colledge of

Being come, as heretofore I wrote to your Worthip, to Macao a City of the Portugals, adiovning to the firme Land of China, where there is a Colledge of our Company ; and there attending till the Perfecution, Tumults, and Warres of lapen, would permit ten or twelve Fathers of vs to passe thither, which stayed expecting sit oportunitie : when we were readie to de- 10 part, within few monether, it pleased our God to change my Lot, and Enterprize which I had before myne eyes, and to fend mee to enter into China, whereinto I entred in the end of the yeare of our Lord 1 coo. There were in this Miffion at this time, only five Fathers divided into three Houses. For though it be twentie yeeres since they first began to enter, yet the entrance of Strangers is so hard and so ftraitly forbidden, and their flate and persenterance is so difficult, that in all this time there never passed aboue five or fixe Fathers, and those which succeeded fince. though by little and little, did discouer the Country; But their entrance was by Realth and fecretly. Confidering that all passages were shut up, and that in all forme there was no man that could or durst presume to gue licence to preach the Gospell; we alwayes sought to get some ac-Meanes fought ceffe vato the King, either by way of Embaffage, or by way of Present, and Gifes, and to seeke so to carer thing, to obtay ne this in part, or in the whole, to this end and purpose.

Entrance into

Embaffage.

The Fathers alwayes fought to obtayne some Ambasage of the Pope, or of the Catholike King. But perceiuing they could not obtayne this, they procured it by way of gining a Prefent, not so much of precious things, for they had none of that kind, as of ftrange things never sene before in China. And having procured this for many yeares space, without having any means to obtayne it; the Diuine Prouidence ordayned one in the yeare of our Lord 1590. which was this : The Fathers being in Xauebeo, (a Residencie of the Prouince of Canton) there passed that way a great Mandarin, called by the King, to give him an Office in the Court, which among vis like vnto a President of one of the chiefest Councels, which had known the Fathers long time; and now feeing themselves with him, and signifying vnto him the desire which they had to got 50 to Paguin, to give a Prefent to the King, and that if hee would doe them the courtefie to carrie them along with him under his shadow and protection, they would alwayes remaune thankefull, and exceedingly bound to ferue him. After this and other motives which they prefented vnto him, did that follow which wrought most effect, which was a good Prefent, with hope of other things afterward, whereupon he shewed himselfe very tractable to grant their request, and to take them with him to Pagnin.

Being glad of this refolution, they prepared themselues for the Voyage, and tooke the things which they defined to give the King, which thereafter I will mention. It pleased God to bring them to Paquin, in the company of fo great a Mandarin, without the hinderance of any bodie. Being come to Pagnin they began fecretly to negotiate their bufineffe : because they durft not, 60 neither was the Mandarin that brought them willing that they should shew themselves abroad. But though they attempted all possible meanes, neither with gifts, nor any thing elfe, there was not any man that would meddle with this businesse, because it was a matter that concerned Strangers , confidering what might hereof happen vnto them. After they had spent certayne

CH AP. 6. S. I. Hage Garrison. Mandarins Houses. Deuils disturbe not Tesuis. 351

moneths, and faw they profited nothing, and fearing fome innovation, they determined to returne to their Relidencies from whence they came,

Having returned three hundred leagues, they came to the great Citie of Nanquin, which was the ancient Seat and Court of the Kings of China: and now (though the King reside not there) vet is it the most noble, great, strong, and beautifull of all this whole Kingdome, and retayneth her being the Royall Court, with all the same Offices which the Citie hath where the King refileth. They defired greatly to get an entrance into this City, because, as I haue faid, it is a fa-100000, Gare mous place, and hath fuch store of graue persons in it, thereby to make themselves knowne, and rison souldiers here to procure with more facilitie an entrance or accesse vnto the King. But it seemed a thing in Manquin. 10 impossible, because it is a City straitly guarded, especially for Strangers, for whose guard and Ritius Suth Watch it hath ordinarily aboue one hundred thouland Souldiers. And if they went about to the other get licence, it seemed impossible to obtayne the same of so many great Mandarins, as governed 60000 are so the same. But our Lord (to whom enery thing is abke possible) vouchsafed to comfort the Father Country thers for their travell and small fruit which they had reaped of their journey to Paquin: and by adiovning, or ther sor their traces and man rate was a superior the counfell of fome friends which they had there, and with the protection of the Manie and Sea guide the comments.

And carryed them to Paquin, which at that scason came vinto this City, they dwelt in Nanquin, and occupants or kinus might without the contradiction of any Mandarin, although all of them knew thereof: howbeit, as speak of the a very great mansaid, which afterward became our great friend, hee was readie to send to ap. or hary ato-

20 time abode in China.

a very great manners, which had long preliment the Fathers, which had long temperature preliment the Fathers, which had long temperature in the present the fathers. After they were purposed to remayne there, there was another difficulty to get leave to dwell some time and have an Hou'e within the wals. But the Divine Providence gave them a very sweet and while the Iseasse meane for all this, as here I will declare. The Mandarins line in this City in houses which Position warre are not their owns, but belonging to the Offices which they beare : and when one hath ended Continued. his Office, hee that succeedeth him, succeedeth him in his Hosses, which are all builded at the bouse are his Office, nee that inaccreacin man more contention in its course; within a set an number at the bouter are Kings coft. At this time a great Mandarus had builded one of these, wherein by his Office hee public, was to dwell! But when he had finished it, it pleased God, that he enjoyed it not: and hee sent House position. many Deuils to enter into it, as they did in deed, which with fearefull shapes did terrific those fessed. which dwelt in it, especially by night: and this continued so long a time, that all men left it, and none would dwell in it. As Father Matthew Riccio (who was the party which negotiated

this businesse, as the Procurator of all this Mission) went about to seeke to buy an House, by way of jest they asked him, whether he would buy an house fill of Deuils. The Father answered, that hee tooke it not for a jeft, but that if the house liked him, hee would not vary for that, for he ferued a God whom the Deuils feared and dreaded, and that trufting in his helpe he was nothing at all afraid of them, but that they did rather much feare him, because he was the Servant of fuch a Lord. They went to see the House, which presently liked him: and as they fold or men a Lord. They went to recture frome, which presently fixed minitand as they some if good cheepe becarle of the bad report that is had, in two words they agreed together; and the Mandaris that fold it was foglad, that he gave vs Patents to possesse the perpetually in China; testing Patent. a thing which in no place could be obtay ned of any other Manderin. Forth-with they went to forthese habi-

t, and at their comming in they bleffed it according to the Rite of the Holy Mother Charch; tation. and by the grace of God there was neuer dreame of any euill thing that troubled the same. All men looked what would become of this, and what successe they should have with the Deuils. And when they faw the great quietnesse, without any shew of Spirits, they were greatly alto-And when they say the great questions, without any niew or opines, they were greatly auto-nied, faying, that without doubt this was a great God, and that hee fought to dwell in that Fame of Ie-Houle, and that therefore he had commanded the Deuils to dwell there, and not to fuffer others function.

to enter therein; and that when he came they went their way. To this fo good beginning the progrelle from thence forward was answerable; for the grave Fame of their Mandarius valerifanding, together with the fame that they were Learned men, that they had Learning many Bookes, that they were men of a good life, and that they had fome things of their Countrey, which were neuer feene in China (as certayne Clocks with Wheeles, and Images in Oyle, Warches adand other prette things) all of them fetting feare apart, and other respects, came to wint the Faand outer precie times) and tourn recomb state apart, and outer respects, came to vincin a there in great efface, because they were the greatest Mandarines of all China, but with much have manitie, respect and courtess, with Presents of things to eate, and Banquets as they viewith

their equals. They were fo well pleafed with all that they faw and heard, that all of them became their great Friends and Patrones: and gaue fo good report of them, that all men fought to doe the like: and for continuance of their amity they came oftentimes to vific them, and oftentimes inuited them to their Palaces: and with this fame and honour of the grazell fort of people, times induced them to their Palaces; and with the rame and nonour of the grades of the part of the inferiour and bafer fort yield them with much reuerence, no man daring to doe; good vig.

This was the flate of things when it pleafed God to choose me for this Miffion, and when I annual true had three Refidences, one in the Province of Caston, another in the Province of Quasci, which is somewhat more within the Land, another in the Citie of Nangain, which is in the midit of the Kingdome, and three hundred leagues from Macco. I entred fectetly, as all is at the inner of the Angelong and a Licence of any Mandarm.) But my fectione continued

There letters.

but a while, as hereafter I will declare. I came at the first, without staying in any other House to Nanquin, where three Farhers of vs were foure moneths; Father Matthew Riccio our Superiour, Father Lazarus Catanio, and my felfe, and a Brother a Chinoss, one of the two which are received into this Mission, and every thing goeth well. But as in matter of strangers the Chinar

neaue for P4-quin granted. whom by right this matter appertayned, who frankly and freely offered vs Patents, Difpatches.

are exceeding ferupulous, more then your Worship can beleeve, so there were many which frake of our abiding in Nanquin, confidering that now wee had three Houses in China. Wee beganne with much more earnestnesse to procure another better foundation, and to returne to Pagein more openly, and seeke accesse vnto the King. And because in Nangum there bee Mandaines to whom this belongeth, and some of them were our Friends, wee beganne to speake of this But it was not needfull to spend many words; for straight way we met with a Mandarin, to and whatfoeuer was needfull to accomplish this bufinesse. The promises of this Mandarin were not vaine : for when the time came that the River was vnfrozen, (which all the Winter is frozen ouer) and Barkes began to goe for Paquin, he performed his word faithfully, giving vs Patents and Paffe-ports needfull for the money; and befides,

Nanquin ouer- hee sent vs a Barke of the Kings to carry our Present and our owne things. Beeing glad of these good newes and dispatch, we consulted how we shoul I deale in certaine things which offered themselves in this businesse, and who should goe: There was no question but Father Marthen Riccio should be one, but who should be his companion : for whom they choose me, and the 20 Brother. We set our things in order, particularly those which were of the Kings Present, Which lars or me Kings Present, were two Clockes with Wheeles, one great one of Iron, in a very great Case made faire with a thousand mere used works, fall of child Dragons, which are the Armes and Signes of this King, as the Eagle is the Empercars: another little Clocks very faire, aboue an handful high, all of golden Metall, of the best Worke which is made in our Countrey, which our Father Generall had sent us for this purpose; colsthem) the which was fet in a gilded Case, as the other was : and in both of them in stead of our Letters were graum Pinto faith a the Letters of China, and an hand that came forth did point at them. Besides these there were three l-Lion, perhaps mages in Oyle, two great ones of an Ellbigh, and one little one. The greatest was the figures and pertrature of Our Lady of the Poplar, of Saint Lucar : The second was of our Lady with the Babe lefus, and Saint Iohn : the third, was a Picture of Christ, which was the least; all of them were of excel 30 Serpents fince, fairely bound, with an inscription, That that was the Doctrine of the True God, whole Images ther the Royall En- did present him mithall. A very faire Monocord, because it is an Instrument whereat the Chimit figne Besides a doe wonder much, and other pretie things of lesse importance.

All which things beeing fet in order, and imbarqued, we tooke our leave of the Christians of Nanquin, (which at our departure came to our House with a Banquet with great joy) and and perhaps of of the Mandarins our friends, which with great forrow, and shewes of loue tooke their lea-40 ues of vs , and ient vs Presents for our Journey , and many Letters of fauour to the great Mandarins of Pagnin.

We departed with this good dispatch from Nanquin in the yeare 1600, the twentieth day of May, And knowing not how the King, and the Mandarins of Paquin, and those of the Kings Court, would take this our Iourney, because wee were Strangers, wee sought to prepare our selues for that which might fall out : in great hope that we should find ayde eyther in all or in from Nanquin part to obtay neour defire, which we had for the establishment of our Company in this King-1600-the 20.0f dome, and to procure the opening of an entrance thereunto for the preaching of the holy Gofpell.

We began to fayle vpa very great Riuer, whereof hereafter I will speake somewhat; and 30 when we had fayled certayne leagues, wee entred into another small River made by hand about two hundred leagues, only to carry in Barges the Tribute which the Prouinces of the parts of Nanguin pay vnto the King, and other things which these Countries yeeld (which are the belt, and most plentifull of all things which are in China) because it seemeth impossible to carry it by 300 leagues as Land with Millions of people, being in Rice, Wheate, Silner, and a thousand other things very great : And the Veffels which are employed about this businesse are so many, that without doubt it is no Hyperbole to fay that from Nanquin to Paquin, which is three hundred leagues, all the Summer time it seemeth to be a path way of the Kings Barges. We were all aswell Mandarins as particular men very well intreated all the way, whither many Mandarins came out of the Villages and Cities, defiring to fee the Present which wee carried, and our selues; bringing vs 60 many Presents for our Journey. Having travelled two hundred and thirty leagues in forty dayes, wee came to a very famous place and Mare Towne in China, which is in the Prouince of Xantun, which is next vnto the Territories of Paquin, called Lincin. Where, because of the great Trafficke of Vessels and Merchants, which goe and come from the Court, who

pay to the King a very great tribute, he hath placed one of his chiefest Eunuchs , which serueth pay to the Aning a very great which lived there in great efface, and much attendance. Whenfo- Mathew the togaries v pins candon de la alwaies carried in a Charre, vpon eight mens shoulders, which is a Kings Eunuch, very great honour in China, with great store of Horsemen before and behind, with certaine Ba- his sompe. fons of Copper, which make a great found when they bee playd vpon, to fignifie to the people that he commeth that way, that all may goe out of the way; as the custome is with all the great Mandarines in the Cities of their iuridiction. Which Eunuch understanding of vs, and of the things which wee brought for the King, and of many other things which they put in his head that wee brought, to wit, precious flones, and others of that kind : hee fent vs word, that hee knew what we had brought for the King, and that he defired much to fee it, and that the fame day or the next he would come, praying vs that we would make it ready.

He came at the appointed time, and having seene the things which wee brought for the King. and making account of them to be precious, and that the King would greatly delight in them, he fought meanes to cause them to be presented to the King by all meanes, as things that he had dealt with vs to bring, to please him, and thereby to obtayne some sute for himselfe: and befides this, with defire and hopethat wee would give him some precious stones (whereof the Chinou are very greedy) he determined wholly to meddle in this businesse. Hee sent vs a Prefent of things to eate, and a very courteous message, that wee should passe in one of his Barges, that shortly he would fend vs to Paquin, with Souldiers of his house, a Petition made with his 20 owne hand to the king; that we should consult together, and bethinke our selues what we defired to obtaying of the King, whether it were to be Mandarines, or to have lands or houses, or all together, because there should be no difficulty in any thing. The message came with all this courtefie. And we made an wer with the like, returning him a Present for his answer with generall words. For though hee came with fo great offers, yet wee knew that these Eunuchs, for the most part, are base and couctous people.

It happened at this time that the chiefest Mandarine of this Citie, which was our great friend was come from Nanquin, from whence they had fetched him for that Office. Wee determined that Father Matthew Riccio should visite him with a small Present, according to the vie of the Countrey, to relate vnto him this businesse, and to aske his counsell what wee were best to doe. Hee received the Father with much courtefie and loue, and kept him two dayes in his houfe: which, after he had heard the whole matter, answered, that he was very forrie that we had met with this Eunuch, because we could looke for no goodnesse of his basenesse, conetousnesse, and bad meanes of proceeding; and that he could performe nothing that he had promifed, and that his intent was nothing but couetoulnesse; that hee would adulte vs to take as little as we could of him : but for all this, that wee should not refuse that which hee offered, but rather to make a vertue of necessicie, and to thanke him with a very good continuance for that which hee promifed, because we were in his power, and he might and would hinder our passage, if wee did not fo, and take away our Prelent from vs, and give it himselfe with his owne hand to the King. Norfabled to without making any account of vs, without controlment of any man, because he was not subject ordinary Man to any Mandarine

This feemed vnto vs to be very found counfell, and a forcible enducement to follow it. So we followed the Jame, and applied our felues vnto him in euery thing, answering the Eunuch according to his defire, and paffed in a Barke of his. He defired much forthwith to carrie the Kings Prefent to his houle, laying, that he would trimme them to give them to the King, and this we courteoully denyed him, taying, that we durft not depart with them till we had delinered them to the King, neither that it feemed reasonable, that when wee did give them, another should trimme them; especially, that these pieces were not such as had need of more trimming, since in themselues they were so precious : with which answer hee seemed to remayne satisfied. At the first he made vs great banquets, sport, and cheere: but as in very deed his purpose was nothing but to doe himlesse, and to looke for his owne profit, and not for our, shee beganne guickly to discouer himselfe: for hee stayed certaine dayes, looking that wee should gue him Conceices fome precious stones, which some body had told him that we had brought with vsto please him, Semmes, for some things that they looked for at his hands; and when he saw the dayes were passed, within which he thought we would have given him them, he began to be out of hope, and to grow coll in our entertaynment : yet for all this, he came to vilite vs with great pompe at our embarking; and after fifteene dayes he dispatched vs for our iourney to Paquin with men of his He difinification owne houle, and with a Pecition to the King, fignifying vnto him how hee had met vs on, the

way, and what our intent was, and what things we brought. We were very honourably entertayned in his journey, and in all the Townes and Cities of 6c his lurisliction whereby we pailed, he commanded them to give vs without delay refreshing of Floh-meate, Fish, much Fruit, and Wine. Wee tracelled eight dayes and came to the last place of his Juriduction: which is three dayes journey from the Court of the King. We flayed there with company that did waite spon vs, watching day and right about the Barke with their Centinels and Bells, as they are wont to doe with the great Mandarines, and especially because

there were there things belonging to the King, and the rest of the servants of the Eunuch went to Pagun, to deliner the Petition to the King, and to know his pleasure. They delinered the Pe tition, and we looked for an answer thereof within three or four dayes, as he had told vs. Bue God had disposed otherwise for the exercise of our patience and hope in him: and that was, that the King made no answer as we looked for : whereupon he was somewhat ashamed of the great brags that he had made to vs without performance of any thing: and hee and wee were all in suspense, when we saw the King returned no answer, which is wont to bee a token than he liketh not the Petition that is made vnto him.

Ennuch a granged.

They ftayed

Fifteene daves after wee arrived in this place, the Bunuch came thither; to fend from thence to the King a third part of the tribute which he had gathered. He came accompanied with great to ftore of Veffels, and that wherein he was, was fuch, as affuredly your Worthip hath not feene Eunuchs pom- the like in all your life. The forme is very much different from ours : for it is like vnto an high House, wholly divided into chambers and halls very high, full of carued workes round about. with hangings of Silke, of many figures, and round about full of galleries to walke vp and downe without being driven to enter in. And on the outfide it was all covered over with a kind of Oyle like Varnith, which runneth out of certaine trees, which they make with tempering of all forts of colours, (whereof in lapon and here there is great abundance) and the Portugals call it Charan; it is a very faire, shining, and durable thing : and the things that are coloured with it. doe shine like Classes, if it be of the finest: and besides, though it be not cofly, yet it is as faire and fairer, because it is more naturall, and very neate and fine, wherewith they paint divers f. ** gures, trees, and flowers; and if it be of the right, it doth not decay, and lofeth no whit of his luftre. Herewith was the Barge trimmed without, with divers figures painted on the hull of the Barge: from the hull vpward the windowes and the walls of the Halls and Chambers was full of carued workes, knots, and carued flowers, some gilded, others of divers colours, agreeablem their natures, which made a very pleafant shew : within it was of the same worke with more excellency, and the most part was gilded, and the floore of boords was painted with very shiming Charan or Oyle. It was as long as a good Gallie, little more or leffe, and somewhat brosder, but farre higher , and in fuch fore, that when wind fayleth they vie very great Oares after the manner of China, which ferue, and are managed as Fishes vse their tayle to swimme. And because they bee of this fashion they wie them with much facilitie in every Vessell how high for 10 euer it be. This was the fashion of the Vesseil wherein the Ennuch came with much Mulike of Trumpets, Drummes, and Fifes, and other Instruments which I omit for breuities fake.

When he was come to this place, feeing the King fent no answere to his first petition, he fent another to put him in remembrance, and to folicite an answere to the first : wherein hee answered nothing to this point, although he answered to other things. And though it bee true, that fometimes the King maketh no answer, through forgetfulneffe and confusion, because the petitions be infinite which are daily given him from all the Kingdome : yet most ordinarily when he giveth no answer it serueth for an answer, either that hee will not doe, or liketh not of that fut that is made vnto him. And therefore because there came no answer, the Euruch was much grieued that he had meddled in this matter, out of which he could not withdraw his hand be- 4 caule he had given a Petition to the King, vntill he had feene fome answer of his, fearing some damage, or displeasure of the King, that hereof might ensue: and hereupon hee beganne to estrange himselfe from vs, and sought not to see vs, nor to have to doe with vs, and sent sixe men alwaies to stay in our Barge, vnder colour to serue vs , but in very truth to watch vs day

In this suspence wee continued three moneths in the extreme heate in a Barge, not knowing what would become of vs. At the end thereof newes was brought vs, that the King had fent to the Eunuch, that he should see what things they were (for vntill then he had not written to him but in generall) and fignifie it vnto him, and if he thought them worthie, he should fend him a Petition touching that matter. Wee were somwhat more joyfull with this message, which 50 was fo indeed. And Father Matthew Riccio went to the Eunuchs lodging to receive the Kings answer, with such ceremonies and reverences as they are wont to receive the messages that come from the King. And to put this commandement in execution, he came to our Barge accompanied with many inferiour Mandarines, as witnesses, and in the Kings name hee tooke all these things into his hands: which he fent vnto his house. There he fell to reason with vs, perswading vs that wee should conceale none of the precious things that wee had brought (whereof his minde did fo greatly runne) because the King would be greatly displeased, if hee knew that wee had any good things and would not give them him. Wee told him plainely the truth, putting him in plaine words out of that imagination which we knew he had conceived. And after many complements on both parts he returned to his lodging.

He wrote to the King what things they were which we had brought, looking that he would straight haue sent for them. But it fell out as it did at the first, that he returned no answer, and the cause thereof seemed to be, that they were things that he made none account of. Wee were now the second time in like case as wee were at the first, not being able to goe backe nor forward: for they would not fuffer vs to goe to Paquin, nor to returne backe. The Eunuch being readie to returne to the Citie of Linein, where we first met him, having need of the Barge where- Linein. in wee were, commanded vs to bee remoued vnto an houle in the Citie, there to flay vntill fome meffage came from the King, either good or bad. We removed with great pleafure, for the defire that we had to say Masse, whereof wee were deprived many moneths. After we were come on This was the

thore, we fet vp our Altar whereon we faid Maffe euery day, preparing our felues for that which thirecenthof October. This Eunuch could not bee diffwaded from that which couetousnesse had perswaded him, to Couetousnesse

wit, that we had brought some precious thing with vs. And seeing it seemed vnto him that he iniurious, so could not get vs by another way, to give that which hee defired, and wee had not; hee became shamelesse, and two dayes before his departure, he came with a great companie to our house, as though it had beene to vilite vs in friendship, we thinking nothing of any such thing : and when he was come in he began to speake vnto vs, and put vs in great feare, asking vs, how wee durst come so farre into the Kingdome without leave of the King and that other Eunuchs had adpertiled him from the Court, that wee had many other things, and that wee would not flew them, nor give them to the King. While he was thus talking and dealing, hee commanded his men to fesze voon all our stuffe, which we had in foure or fine Hampers, and to lay them all out vpon a banke, which with great celeritie aboue an hundred Officers which came with him performed, and in two words, they undid and opened all, and with his owne hands he opened as many papers as he found, to feeke that which he defired : and feeing he could finde nothing that Images.

hee looked for, he tooke that which hee found, which was an Image of our Ladie . being one of the two small ones which wee had referred, that which hee left was better without comparifon, and very excellent, on which also hee had cast his eye : hee tooke also certaine Glasses, and other small things, of small importance, because there were no better : but that which grieved A Crosse and vs much was, that he tooke from vs a Croffe of very good and great Reliques, and a Cafe of Re- Reliques. liques likewife, and the Chalice wherein we faid Maste, which because it was of Silver and gilt A Chalice (which that yeere they had fent vs of Almes from Maaco) did pleafe him; and when we praved him not to touch it, because it was a thing consecrated to God, which the Kings of our Countrey durst not presume to touch, hee made a lest of it; and the more it was told him that hee

20 should not touch it, hee handled it the more with scorne, saying, that though wee told him he might not touch it, yet we faw he held it in his hands without any difficulty or danger. By the intercession of a Mandarine that favoured vs, he gave vs the Chalice againe; but wee . could neuer get the Reliques againe out of his fingers, as wee defired, for of all things elle hee

would depart with none. As he and those that ayded him so willingly were fearthing with much curiofitie, and energy

one catched what he could, because all things lay tumbled on the ground: at last they met with a Case wherein was a carued Crucifixe, which was mine. He began to looke voon our Lord Ie- A Crucifixe, fin Christ being bloudy and wounded, being a very faire and plealant fight to our eyes and heart.

but very strange, foule and offensive to his right. He vsed certaine gestures not saying any word, 40 vntill he was assonished, and turned his head, and asked what it was? Wee told him, that that was the true God which made Heauen and Earth, whom all the World ought to worship, who died for our finnes, and to give vs life, and afterward rose againe by his owne power, and ascended into Heaven. He would not heare many reasons; for it seemed vnto him that we were deceited in worshipping a God that in his eyes was dead : againe, he looked wistly vpon it; and the finall conclusion that hee made was, that that which hee suspected was true, that wee were suspicions very lewde fellowes, because wee had the shape of a man misused with so great inhumanitie , nayled on a Crosse, and all besprinkled with blood, as that was , and that it was nothing elle but some wrecherafe to kill the King; And though in this second point hee was deceived; yet in the first he had great reason, though hee knew not wherefore, since our sinnes and cuill deeds made Christ to be vied on that fort.

50 That which the Eunuch said in our house, he vttered also abroad: in so much that certaine grave Mandarines which favoured vs, retired themtelues from vs , and fent vs word , that from henceforth wee should leave that crucifixed man, and that seeing now wee remayned in China, we should wholly conforme our selues vnto them, for as long as we kept it they durst not speake in fauour of vs, because the report went that it was a deuce to kill the King. But our China Boy which was a Christian before he brought ws the message, answered before the Mandarine, faying, That this was the true God: wherefore not onely wee, but himfelfe that was a Chinois would rather die then denye him one jot: whereat the Mandaine was amazed, feeing him Dring dreadspeake resolutely of dying; a thing so much abhorred of the Chinois, even to speake of it : and soll

so he sent vs a moderate message, bidding vs to hide that Figure, that no bodie should see it, for 60 the report that went of it. The Eunuch gaue out many threatnings against vs , faying , that whether the King received the Present, or not , the least dipleasure that hee would doe vs was. to thrust vs out of the Kingdome, as wicked fellowes, writing a Petition to the King against vs. Befiles this we remay ned thrust into an exceeding bad and naughty house in the greatest force

The force of Winter. This was till

1601.

of the Winter, alwaies with many Souldiers within and without doores, the gates being flut with hanging Lockes, without fuffering our Boy to goe forth to buy any thing, without two Souldiers to goe with him. In which kinde of living (though still with some remission of the This was ring the biginning rigour that we were kept in at the first) were continued about two moneths and an halfe with. out any kinde of comfort or reft at any time of the day to fay Maffe.

At the end of which time, the Eunuch returned to the same place. Wee verily thought that our comming out of that place should not be such as it was, at the least we thought we should be thruft into a perpetuall Trunke or Prison, or in some worse place, as the same went, and the

ð. I I.

The King fends for them, is delighted with their Clockes and Pictures; they are four up, after take a house, are admired for learning; Christianitie of China.

ARCAS the cause of our trouble was the Kings not dispatching of our businesse, and our conceiuing that hee misliked of our comming, to all was ended by his remembring by chance to aske where the strangers were, which certains moneths past they had told 18 him had brought him certaine Images, and certaine small Bells which strike of themfelius (for fo they call Clocks) and wherefore they brought him not those things, and that they fends for them should fetch them quickly; and he game the charge of dispatching our bulinesse to a great Man-

> Wee were lodged all the way in the Palaces of the Mandarins very honourably. Hauing travelled fouredayes, we came to the walls of Paquin, and they lodged vs in an house without the

walls. And because the King had referred the businesse to the Mandarin, which I spoke of the

Eunuch feared that hee should lose the thankes, which he thought to receive of the King for that

prefent, if another Mandarin should meddle with it. That day hee caused all things to be made

readie of the Petition and remembrance, which therewithall he was to give vnto the King, and

earely in the morning with other things and much Silver of the revenues which he prefented,

being all guarded with many Horse-men and Foot-men, hee carryed it to the Kings Palaces.

of thing those Clockes were, and what thing was needfull, for to have them to goe well. Wee

answered to the point. And from the place where we were on horsebacke, by poste on two Hor-

fes which we mounted, and with the like speed we came to the Court. At the same of our com-

ming, and for to see vs an infinite multitude of people assembled, (because Strangers are no

ordinarie thing in China:) and when wee came to the Court, those which had the charge of

vs. were enforced to make roome with staues. When we were come to a certayne place, a

vs what the King commanded him, and to fee how wee did handle those Clockes : They

faw how we yied them; but wee answered to the question, that it was needfull to ap-

great Eunuch accompanied with about two hundred small ones, came downe to demand of 10

darin of Paquin, to whom it belongeth to deale with Strangers.

These newes were brought to the Eunuch and vs, who for the executing of the Kings commandement (whose Letter they obey without reply) sent vs word that wee must goe to Paque, because the King sent for vs, and sent vs eft-soones all the Pieces which hee had in his possession and the most part of those things which he had taken from vs, that wee our selues should not them in order that they should receive no hurt by the way, and gave vs many men to carrie all

Their journey our stuffe on their shoulders, and Horses for all our companie, and a Mandarin to accompanie vs.

Paqnin, in 4. dayes trauell.

The present is Who having the memoriall de livered vnto him, commanded his men to receive all things. They received the fame: and when hee had feene all those strange things, the like whereof, or of so questions and great excellencie, he had neuer seene before; they say that he rejoyced greatly, considering and the King. viewing all things a very long while, with great shew of admiration, especially of the Pictures

Clockes and Pictures admia and Clockes. Hee commanded them to bring vs to his Palaces, and to enquire of vs what kinde

They are fent for to the Court.

Eunuches are raught to vic

The Pictures.

point some bodie of good capacitie to learne, which in two or three dayes would learne how When they had returned the answer, the King appointed foure Eunuches of his principall Mathematicians, to learne it, and command them to receive vs in the meane while in his house with n his owne Palace. They received vs with much respect and good entertaynment. A great multitude of Eunuches came to see vs, and euery one to enquire what came in his minde. But the King, which all those dayes was occupied in rejoycing for those new things, commanded the Images to bee placed in a principall Hall, whether, as the Euruches told vs, the chiefe Queene 60 went to doe them reuerence : and they told vs of the King, that hee durft not keepe them neere him, being afrayd, because they seemed vinto him to bee alive. Often times he fent Eunuches vnto vs, to enquire divers things concerning our Countrey, whether it had any King, what manner of Apparell he wore, and what kinde of Hat? (for in China they make great difference of

CHAP.6.S. 2. Pictures, Chinois ill Picturers, Kings closenelle, Icluites requell. 257

the apparell of the King, from the foot to the head, and of other men) and if wee had any Pichire of him that we should shew it. We had a picture wherein was the Pope with his triple Crowne, and the Emperour, and the King with their Enfignes, kneeling beforethe name of God, and we gave them it for a show, declaring that those were three kinde of Kings, and that all of them did worthip the true God, which made Heauen and Earth, whose Image we had giuen him. They carryed it vnto him, and because it seemed to bee small, he commanded them to ot Kings, draw another greater, in colours by it.

Afterward hee sent another to demand questions of the things of our Country, particularly

of the Kings Houses. Wee had a Map of the Escurial, newly cut in Copper, and a picture of the The Escurial 10 Place of Saint Marke in Venice, both which wee gave them. Though we suspect that they delivered but the second, saying, that they durst not give the other, because straight in haste hee would command them to paint them great, and there was none that durft take it vpon him, though wee know not whither they delivered it afterward. Hee willed them further to enquire; after what manner wee buryed our Kings: because in the matter of Burials and Sepul- Sepulchers, chers, the Chinois are great South-sayers, and put a great part of their felicitie in a good manner and place of their Burials. At that time wee receined a Map of the Death of his Majeftie, (who Death of King liueth with God in glorie) and of the manner of his Funerall, and fo we answered him, as it was Philipthes. in the Map, to wit, that they made him a Coffin within of Lead (which continueth long) and without of excellent Wood, and put these coffins in a Sepulcher of itone, and for this purpose,

20 there was a Church builded of purpose. They enquired many things of vs of this kinde these few dayes, where vnto wee answered, advancing the things that belonged to the service of our Lord God, as much as we might, and concerned our Europe, as farre as the truth would permit vs, because that we deemed it to bee convenient for the service of our Lord. They told the King fo many things, that it feemed hee greatly defired to feevs : But on the other part, he thought The King ne. it would bee too great a courtesse, and much beyond his custome, who never suffereth himselfe to ver suffereth be seene of his owne people, but of his Eunuchs, and Wines that serue him, and somtime very seldome of some one of the greatest Mandarins: yet, though he would not suffer himselfe altogether common peoto bee ouercome of this temptation, yet he suffered himselfe in part, and hee sent to take our Pipele. to becourt out in the Carlot of them by themselues as well as they could. Yet in truth Bad Pictures: which two Painters did, each of them by themselues as well as they could.

30 I neither knew my felfe nor my companion in that picture, but as it was they carryed it away, drawers. It was not after such figure and manner, as your Worship hath knowne mee, but with a Beard an handfull long, and a garment of a Learned honourable Chineis, though downe to the foote. and very modelt: but from the head to the footfarre differing from our fashion.

After the Eunuches had beene instructed three dayes, the King in haste sent for the Clockes, Eunuches prewhich they carryed, and fet in order before him ; whereat hee tooke fuch pleafure, that he in-ferred, creased their Dignitie, aduancing those foure which had learned this skill, to a greater place of their Order. The King asked them many questions of vs, what wee did eate, and how much, and many other trifles. Whereunto the Eunuches answered (as they told vs afterward) as wee could defire.

They game vs all the welcomes of humanitie which the King did shew vs, appointing vs all Infaites offered to bee Mandarins (which is the reward and felicitie of the Chinois) which wee alwayes refue to be Manda fed, faying, that we came not for that purpole, but onely to dilate the Law of God, neither rins. could wee take that office vpon vs: But we were so neere to bee made Mandarins, that they told vs the King would bellow Dignitie vpon vs, that wee were enforced to befeech the Eunuches, that when occasion was offered, that his Majestie did aske them any thing, they would tell him plainely that we fought no kinde of Dignitie, nor could become Mandarins: who told him fo much ; whereby our Lord God delinered vs out of much trouble, which wee should have endured in refusing the same, if the King had bestowed it upon vs. Wee continued in these demands, questions and answers, goings and commings to the Kings Court: for now we had lived a whole

50 moneth abroad: in which time every day I at leaft was there, when wee could not goe both, because Father Masthew Riccio was occupied with other Ghests and visitations. They enquired and asked vs, what we would demand of the King : Wee told them, that we fought no A Monethprofit at all; but if the King would give vs under his hand, some certayne place and a House to dwell in, we would bee very glad; because wee had none other intent, but to slay in some certayne place, and to seeke to dilate the Law of God. For though it bee true, that our purpose did ftretch it selfe further (as I haue sayd in the beginnning) yet wee found things in so different a disposition from that which we imagined, that it seemed an exceeding great errour, to make any motion to give an entrance for more companie and Fathers : for it was certayne that we

should doe no good, nor should finde any, which by any meanes durst presume to moone it to the 60 King, and affuredly should lose all that we had done, and at last should cast our selues wholly out of the Kingdome : and therefore it was not convenient that we should bee knowne, that we had any companions. And many of our friends gaue vs counfell, that wee should not seeme to feeke to dwell heere ; for in that very point, they would have vs in sufpition. Yet neuertheleffe, we went as farre as we could, and as we thought might bee brought to paffe, which

358

was, that we might have the Kings license, that no Mandain might (if hee would) cast vs out. The Mandarin, to whom the King at the first had referred our businesse, seeing the Euroch had wholly medled in the fame without him, being much offended therewith, did frowne alto-Mand:rivof. gether vpon vs, and made a warrant out, to take vs wherefoeuer they found vs, vttering certaine grieuous words against vs, because that being Strangers, and remayning in the Court, wee preiented not our felues vnto him, to whom of right belonged all the businesse of Strangers. They were at the lodging where wee lay, and they that vp our Boyes; for they neuer durit offer any discourtefie to Father Matthew Ricero, (which at that time was there.) At that time I was an the Kings Court, whither they fought to fend me word to speake with the Eunuches, and the they, if they could, should aduertife the King thereof, that they had apprehended vs. But they to hindred with exceeding great care and diligence the going foorth of any bodie, and they flaved for me till I came home, (which came home thinking no harme at all) and when I was come in. they flut the doore without. Wee rode the next day very honourably on Horsebacke to the audience of the Mandarin, and

They are shut

fignified vnto him, that in that we did not prefent our selues, was not our fault; hee vied vs w.ll, and honourably; but they put vs in an house with a Guard, where wee continued some three moneths, yet fo that certayne Mandarins came to fee vs. This Mandarin gaue the King 2 Manainms Pe- remembrance that hee held vs there : But that as our purpose was good to serve him with that prefent, it was reason to give vs some reward, setting downe that it would doe well to give vs the Ensience of the Mandarins, and to pay vs for that which wee had given him Royally; but that it was fit to feed to us away freedily into our Countrey, or to Canton (where untill then wee had dwelt:) for it feemed not well, that Strangers should dwell and that in the Kings Court, entring into the Palice of the King euerie day, being a thing fo unufuall. And in very deed hee had reason : for to suffer vs to enter into the Palace, or to flay and lye there, they did vs fuch a fauour, that of long time the King of Chema hath neuer done to any Stranger. Wee feared some trouble by this Petition. But our Lord which had given ve this bitter morfell, afterwards made it fweet to ve againe, because the King made none account of it. And albeit divers times afterward, the faid Mandarin delivered foure Petitions concerning this point, hee made as small account of the last as of the first. And divers times the Euruches told vs, that the Kings meaning was of all likelihood, that wee should stay heere, For feare lest wee Bould returne into our Country, to give newes and knowledge of hie Kingdome; as they delt with a Turke, which hath beene heere aboue fortie yeeres. True it is, that he answered as little, in performing nothing that was in the Petition : But wee tooke it for good fatisfaction, that hee did not yeeld to that, that we might not lofe the other thing, which was the principall.

When three moneths almost were spent, seeing the businesse would bee prolonged if wee attended the Kings answer, and being that vp we could doe nothing, nor negotiate any thing that we intended, nor deale in Gods matters, as we defired; wee fought to get out of this place, and They byer an to get a license to take a House, and there to stay wayting till the King would give some order: and wee handled the matter fo well, by meanes of certaine Mandarins which favoured vs, and principally by the grace of our Lord, that wee obtained our whole defire : And we tooke an 40 house in the chiefe situation of this Citie : all that which they gave vs at the Kings coft in that place, which was fufficient for our fustentation, after wee were gotten out they gave vs the same allowance in like manner.

Visited by

China igno-

rance of the

Vic of Maps.

Many Mandarins of this Court, heard great fame of vs and of our things : and vnderstanding that we were come out of that place, b. gan to come in great numbers and concourse with much honour and respect, courteste and presents to visite vs, and to enquire divers things which they defired to know. For the same that went of vs, that wee knew all Countries, and the things and customes of the World, and the materiall and spirituall things of Heaven, was great : and theretore every one came to enquire that which hee defired. And though our knowledge be but little, in comparison of the knowledge which is in our Countrey : yet being compared with 50 theirs of China, which knoweth nothing of the world, faue their owne Kingdome, which by a common name thy call, The World : of God, and of the things of Heaven nothing, and of other things little, it was somewhat, and was sufficient to fend them home amazed, and alwayes with

Ill Colmogra-

gance.

They faw a very faire and great Map of the world which wee brought with vs. and we showed them how bigge the world was, which they thought to bee fo little, that they imagined that there was not to much more in all the fame, as their Kingdome : And they looked one your another, and fayd, wee are not fogreat as we imagined, feeing heere they shew vs, that our Kingdome, compared with the world, is like a grayne of Rice, in comparison of a great heape. They also thought, that there was no other Writing, nor no other Bookes in the world but them: and when they faw ours, which at the leaft they faw in outward appearance, to bee much better then their owne, they were attonied, and put out of their errour, doing vs alwayes more and more honour : and chiefly they were aftonied, when wee shewed vnto them certaine things in Mathematicks the Mathematickes which they knew not, gitting Clockes to certayne perfons, which for this

end we made of purpose ; and by these and other meanes, and principally by discourring with them of Morall vertues, (whereof they write, speake; and have many Bookes) and of Gods matters, there ranne lo great a fame, that the greateft Mandarins of all this Kingdome fwhich are the greatest persons never ahe King) sought to converse with vs, and to treke our friendship; and to many fent vs prelimits, and others came to visite vs, with great numbers of people ; others with much courtefie insited ve to their houses : so that in foure moneths space, were had gotten Foure months the greatest Mandarine of Pegnin to be our friends, and readie to fauour vs in all things : And he which at this time particularly doth favour and honour vs, is the President of that Andrewer. which hath the charge of vs, and at the first approound vs : fo that wer remayne Inhabitors of to this Citie, with all libertie that wee can defire, to deale with all fuch as are willing so heare the things that belong to our holy Law, and their faluation. And by this good fuccesse, our Lord hath made ye forget all that is past. And though it bee true, that hitherto wee have gotten no dispatch, nor resolution of the King, yet were content our felues in that hee letters wafter heere. although he neuer grant vs more. For albeit by this our Journey, we have not obtavired all that wee delived, yet we hope that this our firme abode heere, shall tend greatly to the feruice of our

Lord, and the good of this Miffion. and and the good or that numbers.

They bee commonly of good understandings, so that easily they fall into reason, and are capa-Hopes of ble : they have not in the government of this Kingdome, any thing that forbiddeth them to tol- Christianite. low what Law they lift, nor any Law nor Obligation, which is contrarie to our holy Law,

20 They have none which effectually and with authoritie doth exhort them vnto other Lawes and with-draw them from the truth. For the Bones (which are dedicated for this purpose to Idols) The basenesse are in the common concert of all men, the most base, contemptible, and worst people in all Chi. of the Benti. ms, whole leaft care is, to exhort them to any thing more then no give them fomewhite i and thus they doe not onely not exhort them to follow adole; but also with their bad manner of liuing, peri wade them (as wee haue often heard of men of good sudgement) that it is not good to ferue them, fince their Ministers bee such. And so in this matter of worshipping of Idols, though there be many that worthin them, and have many of them, and wie their Ministers for their Funerals, and other things, yet with very small affection, and denotion thereunto, we eafily make them fay that they are naught, and that it is mot fit to worthip them.

30 Yet, though these things and others which I conseque helpe them with case to follow the Law of Go.', the counterpois is great, and commonly it weighted downe the ballance on that fide. For first because the matter of Strangers is soddiens in China, and the dealing with them so fuspicious, one fort because they disdayne it, as the Princes, who albeit they now conceine better of vs, yet to learne of Strangers, and to receive a Law which is not of their owne meanes, they hardly perswade themicines : others for feare, as the base people,

ey hardly personne encurements a constant a second difficultie, and perhaps the greaters, is a natural lobition, that all this Nation Indenotion hath of another life, and of immortalitie, and of faltation or condemnation of the Soule : and not onely an oblinion, har also an auerfion from all these things, wherein wee have likewife

found them to differ from all other Nations. And it is a thing to be noted, that fince it is a thing 40 so naturall to Man to reuerence some God, either false or true, and to feare or loue him, and to conceine or imagine what shall follow after this life : Thole Chinese, (which on the other side are of so good capacities in humane things, and so wittie therein) bee as though they were deprinted thereof is for they are almost all estability, not knowing not worthipping neither falle nor true God, nor neuerthinking what shall follow after this lite: And those which a man would thinke are most bound bereunto, which are the Learned men, acethey, which have least knowledge hereof : yea, rather one of the chiefest things that they commend, is, not to believe any thing that concerneth another life, Hell, nor Paradile, which they wholly place in this life. The Bookes of Phi-Bookes which they studie from their Child-hood, doe them much hurt, which are of certayne losophers, a-Philosophers about two thousand yeeres old, whom they efteeme little leffe, then if they avere bout 2000. their God, to whom curry yeers they offer Sacrifices: of whom they hold fo great an appairing, yeers old.

50 that they thinke not that any thing more may be knowne, then They knew. And offenciates they have asked vs, whether wee had not thefe Bookes in our Countrey ? What other Bookes might we have, that might compare with them ? And as these Philosophers, as Gentiles, spake nothing of the other life, but onely of good Gouernment, and Morall vertues, they thought they might attayne so faree, without beleeuing that there could bee another life. By reason hereof, and of the common vices which Paganifme draweth with it, which in this Countrey increase exceedingly, by reason of the fatnesse, abundance, and fruitfullnesse thereof, they feele great difficulties to vndergoe the yoke of Christ, (though it be so sweet) so contrarie to their appetite, which taketh from them the libertie which they have, in keeping as many Wives as they are able, and in a thousand other things.

These later yeeres in the residencies of Canton, Nanquin, and heere in Paquin, were made some Some Christians true Christians, which ouercame all these difficulties, and goe on forward with great integritic, made there. constancie and feruour. In the Prouince of Canton, in a residencie which were haue in Xaucheo, a principall Citie, have beene Baptifed within this two yeeres, about three hundred perions, which

The descripsion of the Kingdome of China : of Catay and Musk , the diaision into Provinces's Crites and Townes described, Rivers, Shipping, Commodities, Diet, and feeding.

寒 Ow by the helpe of our Lord I will fay fomewhat that I remember, touching the Ca ftomes, Policie, and Gouernment of this Kingdome, but not in fuch order as were re- 50 quifite, because I haue no leasure, and therefore I will onely write as things come vnto my minde, though things bee not lincked well together, because I cannot first write one Copie, and afterward dispose it in order, with such distinction as were needfull; referring

China foure fquare. The Description. that (as I fayd in the beginning) vntill our Lord grant me a better opportunitie. This great Kingdome of China, is almost foure square, as the Chinais themselves describe the Tame : it runneth North and South from the Province of Canton, which is the most Southerly part of it, beginning feuenteene or eighteene degrees under the burnt Zone, unto fotrie two degrees, which is the most Northerly part of it is contayneth from Canton by water, about fixe hundred leagues: but in a right line it is four hundred and fiftie, on the Eath it confined with Corea, which isyneth with the fame, and with Iapon, and with the Ocean Sea, by which they 69 come from Pern, and Nucua Espana, to Manilla: On the West with certayne small Kingdomes, which lye betweene Bengala, the Lands of Mogor and Persian; On the South, with the Iles called Philippinas, and the Malucae, and others, and more South-westerly, it hath Sion, Pegu, and other Kingdomes. On the North part, it hath those people which in our Countries wee

26£

262

that it was not a feuerall Kingdome. After wee were come to this Citie of Paguin Weemen with two Cafilas or Carauans, one of Moores of certaine small Kingdomes bordering voon Chima, another of Turker with their Turbanes of the Countries of Moger, and of the great //. mael Sophi, (for with this very name they call him) and of other parts , which had knowledge by fame of Spaine, Italie, Venice, India, and Persugall.

Very Mer-

ofeat mer-

handife.

These Turkes and Moores are wont to come hither every five yeeres by Land, in the name of their King, to acknowledge and pay Tribute to the King of China: for which purpose they counterfeit certaine Letters, wherewith they easily deceme the Chinois, which thinke and hold that all the Kings of the World doe acknowledge obedience vnto theirs. But the trueth is, that they come to vie their trafficke and merchandile, and therefore the Chineis admit them to willingly: howbeit many now doe know, that their paying of Tribute is a fayned thing: In It is so in Mese which their trafficke they speed very well. For the King doth maintayne them very plentiful. Which their tramese ency local very veril.

If from the time that they come into his Kingdome, writh their departure; and they code all their Chilts of them, whereof this yeere they brought a thousand. The King tooke of them at an easie price a great part of the merchandise which they brought, and afterward hee gave them rewards. The thing of greatest bulke of merchandise are a kindt of stones, which themfelues call lasper stones; which is white, yet somewhat duskish, so that it enclined to grey (which seemeth to bee that lasper which so often times in the holy Scriptures is called Prelafper flone a cious flone.) It commeth in pieces vnhewen, but whole like peeble flones; which stone for many ornaments the Chinois efteeme much; especially the King: and they buy every pound 20 of the best at eightie Duckets: and of that which is worse, at fiftie or sixtie Duckets, whereby they gaine greatly. I have feene thefe flones of other colours in our Countrey, but not of this which the Chinois esteeme.

When these men come to this Citie of Paguin, they put them into a great house, which there is for this purpose; (wherein wee were two moneths) and suffer them not to come forth. Wee asked these men certaine questions: and one was this of Catayo, enquiring of them. How they called this Kingdome of China in their Countrey ! They answered , Catago, and that in all the Countries of Mogor, Persia, and other parts, it had none other name, and that they knew none other Kingdome that was called fo. Wee asked them how they called this Citie of Paquin? They faid Cambala, which, as I have faid, is that which our men fet downe for the 30 head Citie of Catayo. Whereby it appeareth, that there can no doubt bee made, but that wee are heere resident in the Countrey which must bee Catago, if there were no fault in the Maps; and wee know that there is no fuch Countrey, nor Cities, but a few contemptible Mores

though not of this Kingdome. I had read when I departed out of Spaine, a Booke which is

printed of the things of China, which writeth of this Ciuet, and of other things, which I haue teene with mine eyes : it reporteth many errours by halfe informations, which hee which 40

wrote it should have beene better informed in , although in many things hee tell the trueth.

the fields are full. These men say, That there is a Sea of sand (which our Maps doe place in

Arabia) neere vnto China, which divideth it from Mogor, and other Kingdomes: And this

should seeme to bee the cause, why these Kings, which heare great same of this Kingdome, of

the greatnesse thereof, and of the weakenesse of the people, doe not feeke to inuade the same,

being not very farre off; because it would beevery difficult to passe ouer the same sandie Sea,

and Gentilee. Wee understood also of their . Ciuet or Muske, whereof they brought some, which is, as

with a great Armie.

Rhubarb, See They brought also great store of very good Rhubarbe, which heere wee bought of them of the before inxobeg choice, at ten Marauedis the pound : it is a wilde root like vnto Nauewes, whereof, they say,

Diminon.

Chorographi-

The Chinois divide this Kingdome into thirteene Provinces, and two Courts, which are, as 50 it were, two Prouinces. Every one of them have their Metropolitane Citie; and every Citie her division of so many Townes. It is knowne very particularly by Chinish Bookes which are written of this argument, how many Cities, Townes, and places there are in all the Kingdome, how many houses every one hath, and commonly what numbers of people, what every Countrey seuerally yeeldeth, and how much Tribute it payeth to the King, and many other things: but I doe not fet it downe here : because I could not get those Bookes these few dayes past, to take a view thereof: At some other time, God granting mee life, I will doe it more at large. Chine populous Onely I fay in generall, that all the way which wee trauelled, wee met with fo many Cities, Townes, and Villages, that to beleeue their greatnesse, it was necessarie to see them. For your Worship will hardly beleeve, that wee spent two or three houres in sayling still by the walls 60 of one Citie. After which there still followed many Townes and Villages, one within fight of another. And after this manner all this way continueth, even to Paguin. Yea, the Villages are very great, and full of recople, and of much trafficke. For though wee give them this name (which among vs tignifieth some small matter) The Chmois doe not distinguish

them by great or small, and so their Villages are bigger then others which wee call Townes. All the Cities and Townes are very well enclosed with high walls. And because, as I faid. I deferre this vntill another time, I will only speake of Nanguin, whereof I had some fight,

This Citie standeth in two and thirtie degrees and an halfe, eight or ten leagues from the Walls. Sea, vnto which it hath a mouth, and a mightie Riuer. It hath three walls of Bricke very high Nanquin in 32. and faire, with very great and beautifull gates, which they shut vp very timely before night, degrees and and faire, with very great and deautiful gates, which they must be habitation of the Kings of China; an halfe.

This Citie, of old time, two hundred yeeres part, was the habitation of the Kings of China; an halfe.

There walls, and so it continueth in very good condition: The streets are very broad, and all paued with very great square stones, or set with brickes. It hath exceeding long streets of two leagues, Streets long, and two leagues and an halfe, and in the middeft of the Citie are the Kings Palaces, which are Palaces, very great.

The Chinois declare the circuit of this Citie, that two Horsemen going in the morning both Circuit. out of the same gate, and one going on the one side, and the other on the other, going all the day they meet at night in the gate opposite to that which they went out at. The very truth is, that it is at least elemen or twelve leagues in circuit, and seemeth to have above two hundred thoufand housesof people. It seemed to all of vs that were there, that Nanquin and this Citie of 200000.houses Paguin, each of them have as many people or more, then foure of the most famous and populous Cities of all our Europe, as Rome, Lifton, and others of the greater fort. For whereas these two whereof I speake are in themselves so great Cities, not one nor two streets, but the grea-

20 ter part of the Citie every day doth swarme with people,

There are about this Citie many others within one or two dayes journey, and very famous Hanches and for greatnesse and trafficke; among which there are two, one named Hancheo, the other Sucheo; Sucheo. and this is very great and like to Venice, whose streets are halfe water and halfe land. The Chinois call these Cities * Paradise, to expresse the goodnesse, abundance, and cheapnesse of all Quintay, cinithings that are in this Kingdome, and come from other places. And Sucheo is fo full of people, Install merchandile, and trafficke, that a Booke which is printed (wherein all things are fet downe which the Prouinces and Cities pay to the King) faith, that this only payeth one yeere with Reuenus, another in Siluer, Gold, Rice, and Silke, and other things, wherewith it doth greatly abound, twelue millions : so that there be whole Prouinces that amount not to so much by a great deale: 30 which though it seeme an incredible thing, yet they write it for a certaintie; and hee which knoweth what these Cities are, will beleeue it.

Yet for all this, these Cities have no notable things, neither sumptuous Temples nor buil- Building nor dings, which are wont to be those things which doe beautifie a Citie: for the houses are not beautifull beautifull outwardly; nor they vie no great Porches, as they doe in our Countrey. And he that compared with hath feene the things of our Countrey, and is skilffull in architecture (helf said in And he that European. hath seene the things of our Countrey, and is skilfull in architecture, shal find it here very little. For the houses are low, and without galleries, lofts, windowes, or fight into the firet; yet they haue faire yards, and are very neate within , and painted with divers colours, with that Charan, or liquid Gumme, whereof I made mention before. And that which I speake of Naugum touching the abundance of people, trafficke, and manner of houses, is after the same manner in the 40 other Cities which we law. For the Chinois are fo like, and fo vniforme in all naturall and arti-

ficiall things, that he that hath feene one of the principall Cities, findeth no new thing to bee Vinformitie in feene in the others. And albeit that other Cities are not comparable to these in bignesse, yet in multitude of people proportionally there is little difference.

This Kingdome is commonly very fertile of all things that are necessarie for the vse of man : Fertilitie. and a great cause of the fertilitie and abundance thereof proceedeth of the great number of exceeding great Rivers which it hath; which befides the profit that the Rivers yeeld by the fi- Commodious fhing, and besides the profit in watering of the grounds, wherein they stand the Chinosi in great Rivers. stead, they are occasion of great trafficke and communication of one Province with another with great case by water, which is an enriching to them that vie it, and of great plentie in Infooleagues 50 every Citie of all things that are in the Kingdome. From our departure from Macao, till with-butone day by

in a little of Paquin, which is, as I faid, fixe hundred leagues, wee trauelled not past one day lind. by Land (because wee would not fetch too great a compasse about by water) wee trauelled. This is more a great part of this way not Nanquin by the greatest Ruler that ever I saw in my life.

South motion from parts is about three leagues broad, and vary deeper, which the Chinois, for the

a more exact

a more exact

a more exact greatnesse thereof doe call, The little Sea; and that with good reason. For though it were and maure an hundred leagues from the Sea where I entred into it; yet there is great abundance of fish observer of a!! of those kindes which breed in the Sea; as Porposies, sishes with sharpe beakes, and others things, sea 8.5.

I faw in this River peere the bankes thereof men fills with certaine Fowless slige as small prints 2nan prints 2nan 60 Geefe, like vnto Rauens, with a long beake, and bending downeward like a crooked hooke, mentioned by which the Chinese teach to fish: They have a very long necke, which they binde in such fort Phothat the fifthes cannot goe downe into their fromacke, but they fill their throat with them, if I do not with a they be small filtes, and when they come out of the water, they make them call tilen out; sindeo Ra and if the fifth be great, hee sight thin and barrier him with being and barrier him with being and barrier him with the side of the s and if the fifth bee great, hee fighteeth with him, and heateth him with pecking affaulting him more to

with his bill, vntill hee drine him up that the Fisher may see him; which commeth quickly with a small Net like a Wheele vpon a staffe, and hee taketh him under the water. And after this fort wee faw this Fowle take Fishes sometimes of a pound, and a pound and halfe weight: and they fay they take bigger. And because this fishing is so gainfull and so certaine, they pay a certaine Tribute to the King for enery one of these Rauens (or Cormorants.)

Muddy River. Alume vied in

clarifying of water.

Wee met with another River as great as this , which feemed to bee rather of mudde then water, because the water was alwaies mingled with earth, which whence it should come for fo many yeeres, I wot not. They cannot drinke the water without they clarifie it, which they doe with Alume. Befides these two Rivers all the reft is made by hand for veffels to passe The Vettels which we faw in all the Cities which we paffed, is one of the greatest things that

Shipping. . 5h p-houses.

belong to this Kingdome. For in every Citie there are two forts of them, one fort of vellels for burden, and another fort for houses. Some of them are very faire, and as fit to dwell in a shoules themselues : and many of them also serue for houses for poore people, wherein they have their whole houshold, and bring up Hens and Hogs, and gayne their living in them. I remember that the fame morning that wee entred into Nanquin there went 500. Veffels or more before our Barke, to enter at the same houre, with their sayles vp most pleasantly to behold; many of them being laden with divers things, all for the provision of that great Citie : and on this manner. they continued all day long in going and comming. The Barges of the Mandarines (which are all made at the Kings coft) are the most costly, and

Multitude of

are most for the fight, and very great. They would much reioyce in our Europe to see them; be-The excellent cause it seemeth that there is nothing comparable to these in beauty. Most commonly these beauty of the haue Trumpets, and Drummes, which they play vpon when they paffe by the Citie, and when Mandarines they meet with others, that all may give them place. They are commonly as long as Gallies, Barges. and as broad or more, but very high, to that to get vp into one of them is aboue a fathome high

Tributes in money and in

And because I spake before of those which carrie the Kings Tribute, I will here speake more particularly. Many Prouinces from whence they cannot carrie Rice and other like things with eafe to Paquin; because they are farre off, pay their Tribute in Silver : but those Provinces from whence they may passe by water, pay a great part in Rice. For which occasion all the Cities have great and strong Vessels made of purpose for this service. And when the time of their departure is come, euery Cafila or Companie departeth from their Citie with a Mandarine that hath the charge of them.

from the water, and therefore they carrie a great burthen.

10000. Veffels at Nanquin for Tribute of Victuals, and 1000 for other I know not certainly how many they be; but this onely I know, that all this way from News Tributes : and others many Path-way of hips.

hike Sluces, where with it keepeth in all the current uncoor route of a substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces, where with it keepeth in all the current uncoor route of substitution of the Sluces of Sl

Besides these Vessels of victuals, they carrie to the King every yeere many others, which bring him particular things, and dainties, whereof this Countrey of Nangain yeeldeth great ftore, and allo for the leruice of the Kings houle. Some Cafilas or Caravans of these are of pieces of Silke for the Kings house, which may be some dozen of Vessels; others carrie many things to eate : and with one of these Canlas we passed. They were nine great and faire Vessels, which Silkes and per- carried pieces of Silke, and other things which they are wont to burne in the Sacrifices which they make vinto the dead, and before their Idols. They fay, that these Vessels for particu- 50 far things are a thousand : and as soone as they come within the Kings house, the Eunuches take the charge of them. From Nanquin vnto the middeft of the Kings Palaces, Veffels may paffe by this River: to come to the place which they goe voto, they paffe thorow the middelt of the Palaces. In all these Rivers, when they want winde, the Mariners draw the · Barkes with great facilitie, and fixe or feuen are fufficient eatily and merrily to draw one of the

And they fay that those Vessels which goe from this part of Nauquin, in all amount to

Wee met likewise upon this way a very great number of Vessels which came from farre, hden with Brickes for the Kings workes, and greater store this yeere to build a great piece of an house which fire from Heaven had burned : for this purpose they carried great store of timber for beames, and boords, and other leffer timber which are carried from the parts of Nanquin vn- 60 to Paguin, some an hundred and two hundred paces long, and one log fastened eport another, so that thefe rafts grow high and great : they carrie upon them frames of dwelling houses ready made, wherewich there goeth an inferiour Mandarine, which hath the care of it, and sometimes the Marmers goe with all their houshold, and breed of Hogs, Hens and Duckes : for fometimes

CHAP.6. \$.3. China merchandise, cheape food, buee Plaines, spare diet. they flay about a Summer in going to Paquin. These seuen or eight yeeres this prouision of timber, Brickes, and lime, and other things bath continued.

The fertilitie of this Kingdome is great, of all things that feeme to be needfull for the vie of mans life, And if there bee any other Nation which liveth commodiously without needing trafficke with forraine Kingdomes, they are the Chinou. And though it bee true that some things come vnto them from forraine Countries, yet are they not the necessary things for the life, and which all men vie. The most that commeth out of forraine parts, and they deare, is Siluer: Silveringree. And that which all men carrie from thence is very much, and very good merchandife: as Silke, teft request in

Gold, Muske, Porcelanes, pieces of wrought Silke, raw Silke, cloth of Cotton wooll, all kinde China to of works in Copper, Iron, and Latten, Quickfilter, Sugar, Honey, Waxe, Cinnamon, works the greatifier made of fine wood, and gilded, as Bedfeads, Ink-horns, Cabinets, and an infinite number of other of metchan. thines, whereof there is so great abundance, that although they send out many ships laden for dise in china. Lapon, India, Manila, and other parts : yet without doubt they might prouide ten times more: and if more would come to buy, they would alwaies have the more to fell. All things are very Chespness. cheape, without all comparison cheaper then in our Countrey. A pound of Sugar is worth eight or ten Marauedis, and sometimes fixe: and if they buy any quantitie at once, an hundred pounds weight are worth nine or ten Rials of Plate: And here at the Court (where all things are dearest) a pound is worth twenty, or sourceand twenty Marauedis. There is great store of Waxe and that very good, which wee buy heere in Paquin for the feruice of our Altar, a pound for a 20 Riall and a Quartill: and the pounds here are greater then ours; for every one of them weigh fixteene Duckets of Silver weight. Honey likewise is very good cheape. Of Copper and Latten thete is exceeding great abundance: and Latten made and wrought into any worke that

a man would have, with the fashion and all is worth a Riall and a Quartill the pound. Needles an hundred a quarto, and if they buy many together, better cheape. And I have fet downe for example their small things to know the particular price, and of other things (though they bee not so cheape) after the same proportion. Howbeit those which come from forraine Countries Acaution for to trafficke with them, had need to be very heedfull: for the Chinois lose not opportunities to frange Merraife the price of them, when they may.

The abundance of things for food is likewife great, to wit of Oxen, Weathers, Sheepe, Vidual flore 20 Goats, and more then of all others of Hogs, because they are the common food that they line and sheape. of, Deere, Hares, which they catch with Hawkes, whereof here and in other parts there are many. And when they are dearest here, one of them is worth foure or fixe Quartos: they be as great as they bee in our Countrey, and they are found at all times. Hens, Geele, Duckes, and fundry forts of wilde Fowles, and all other fielh is exceeding good cheape. Wee came to a very great Citie, where Beefe, Mutton, Hennes, all was of one price a pound, which was foure Marauedis. And in Nanquin (though the Court be there) a pound of Hens fielh was fold for three halfpence. Fishes after the same manner, or better cheape, because it stands vpon the River. And I faw a Fish of ten pound weight sold for a Riall of Plate, and we bought great Trouts at Size pence. three Marauedis a pound weight. Egges ten, twelue, fixteene, eighteene for one Conduren. One halfpeny,

40 which in our Countrey is a penie halfpenie farthing. Fruits are of the like cheapnesse. In our iourney, which was when Abricockes beganne to bee ripe, which are here very good, they gaue vs two hundred for ten Marauedis. They are very much giuen to eate fresh Herbs and Sa-Herbs. lads, and Pulse. At every banquet and good feast, there is alwaies Fleth or Fish. There are many Nuts, Chestnuts, Filberds, and Pine-nuts though but few, Figs, though not of our kinde, and yet as good or better, and many. And although they have all these things, yet euery Province and Countrey doth not yeeld them all : but that which one wanteth another supplyeth.

Their common food in stead of Bread is Rice solden only in water, whereof wee all did feed, although at the first wee had much adoe with it. Commonly they have every yeere two Har- Two and three 50 uefts, and in some places three. And the Land hath great Plaines with Rivers to water the Harvestin grounds: for the fields of Rice doe much defire to be covered with water.

From our entrance into Canton vnto this Citie of Paquin, wee met with few Hills, and efpe- Plaine Councially from Nanguin hither very few. Wee passed by a Plane aboue an hundred leagues, farther trey, then wee could kenne. I faw likewise much Wheat, whereof they make rolls without leaven, Plaine of folden in the reeke or vapour of feething water, and fo without crust, good for old folkes that 100. leagues. want their teeth. Although that it bee true that the fruitfulnesse or this Countrey is very great, yet without doubt other things, faue Rice would not be fufficient, if the Chinois were as Spare feeding, great feeders as our people, and did not feed fo sparingly as they doe. They all eate commonly thrice a day; once, betimes in the morning; the second time, at two in the afternoone; the third time, very moderatly at night. And befides, the rich Mandarines, few others which are of good abilitie, doe commonly eate either Flesh or Fish, but Pulse, Salads, and Herbs which cost Herb-caters,

almost nothing, and their chiefest food is Rice, or Millet, and hereof they fill their bellies. They have many Hories, Mares, and Mules, whose fielh they eare, though I have not heard Horserseen report that the greater fort doe feed voon them. They have much Wine of divers forts; all Winerdivers.

. C

266

made of Rice: but herein they may not compare with the Wine of our Countrey: Whatfoe ner they drinke, be it Wine or Water they drinke it alwaies hot. They are neate in feeding, for they touch none of their meate with their hands, therefore they vie neither Table Napkins, nor Table-clothes. All their meat is ferued to the Table finely minced. They vie to feed with two fmall flickes of Juorie, Eborne Wood, or fuch like, wherewith they take vp all their meate verie hansomely. And herein, I confesse, they have a great advantage of vs. because this manner of feeding is very commodious, and such as euerie man that hath triall thereof will much delight in it : and therefore our Fathers and Brethren in Lapon and Macas vie it. Their alwaies drinking Benefit of bot their drinke hot, and eating little fruit (for they are not so greedie of to as our men are) doth their drinke nor, and caring interesting the state of the no Oliues, yet haue they abundance of Oile. The best is of a kind of Herbe, which they call in Oilemade of Spaine, Aleoria, which fignifieth Ioy or Mirth. I fay not that it is as good as ours, but Nav. I find no fault in it. nor I doe not defire it, nor much leffe the Chinese, which can eate nor finell no kind an herbe. of Oile, because the smell thereof pleaseth them not, as sometimes were prooued by a little of ours which we had : and they call their flinking Oile odoriferous, fo great a force eliere is in cuftome. As the Chinois are diverse in divers Provinces, fo are their Fruits; and those which grow in the Province of Canton, are not in all these colder Provinces. There are the best sweete O. ranges which hitherto we have knowne, which are eaten with the skinne.

Timber plenty

Here is in this Kingdome great flore of Timber; for proofe whereof wee netd no more but to be the shallistude of Barges laden therewith fo good cheape as it is. And therewith Good cheape as it is. And therewith Good to the shall be fore I thinke a man may build a thip with all things necessary thereunto, three parts of 10 foure better cheape then in our Countrey. They vie not Gold, though therebe much to be bought; but all is Silver, which they doe not coyne in Money, but cast it in Barres, and when they would buy any thing, they cut it and weigh it in certayne fine Weights like the Romane Weights in our Countrey : and therefore every body that will buy or fell, carryeth one of thole Weights with them. Great store of Silver commeth out of forreine Countreyes, But the chiefe Maffe of it is out of the Mynes of the Kingdome it selfe, as also the Gold. When they buy or fell, they try the Siluer of how many Kiliates it is : and one is worth more; another leffe. according to the goodnesse thereof. It was very necessary for the Chinois to weigh and try their

Silver, and not to coyne it into money : for otherwife there would have beene a thousand deceits, wherein the Chinois are very cunning. They vie Braffe Money, wherein also they try that 40 which is true or falle : for in all forts there is deceit and mixture. They have the best Porcelane that hitherto hath beene found, which is exceeding good cheape, and in fuch plentie, that befides

they will.

For their Apparell, though they have great abundance and cheapnesse, yet in goodnesse they may not compare with our Countrey. There is much Silke and that very good, but they know not how to dreffe it. They make good Damaskes, razed Veluets, Taffataes, and other forts ; but the colours, though at the first tight they seeme reasonable, are quickly lost and fade away. The ordinary apparell of the common people is of blacke cloth made of Cotton, or of certains shags of Silke, which are very great, farre greater then a flocke, which only serue for this pur- so pole, and are very warme. Persons of Honour weare commonly an outward Garment of Silke which they vie in Vilitations, and other like Actions: And there are many which alwayes goe abroad apparelled in Silke, but not in fuch great number as that Booke fetteth downe, whereof I made mention before. All men, even to the very Souldiers, weare their apparell long downe to the in-step of the foot, with very broad sleeues, open before, and fastened to the sides beneath the arme. They be so well contented and pleased with their manner of apparell, that they think there is none in the World comparable to theirs. And in very truth they bee graue and modelt, and especially those of the Mandarins, which differeth from all others, saving the Bonzi, which shaue their Beards and Heads. All the men and women let their Hayre grow long, and the men truffe it vp, and wind it on a knot on the top of their crowne. They weare certayne Netson 60 their heads like Coyffes, made very cunningly of Horse-hayre : and in the Summer time many weare Caps and Hats of the same. There are many forts of Caps or Hats (for I know not what their feuerall names are) according to the state of euery one. The bafest fort which the common people wie ordinarily is round. Their shooes, are of the same stuffe that their Garments are

all the Kingdome of China doth turnish it selfe thereof, they fend forthas many ships ladines as

CHAP.6.S.4. The Persons, Trades, Riches, Nobitie, Marriage, Heires.

of, very commonly of Silke made with many faire borders and knots. It is a discouragife for a man to be seene (especially before any man of Worship) without a Cap on his head. They greatly effective for the most part things of our Countrey, and they are very deare. And some pieces of Silke which the Portugal Merchants brings, especially Veluets of three Piles, are far more dearer then their owne. All woollen cloth is much effeetned and very deare, likewise Chamblers, and fine Linnen-cloth, which they bring from India are very deare. Looking-glaffes, and all things made of Glaffe, and many other things, which in our Countrey are very good cheape. are here deare, and in great estimation.

The Chineses hause commonly little Beards, small Eyes, and Noses, and all of them have black To Eves, so that they much maruelled at the colour of mine, which are of Gray or Iron colour - Sarca let. (which they never faw) and they find matty fecrets in them, and very commonly they fay, that foruming, thefe eves of mine know where stones and precious things are, with a thousand other Myste. ries, so that they thinke they have Letters in them. To paint an cuil-favoured man, they paint him in short apparell, with a great Beard, Eyes, and Nole. They are commonly all white, yet not fo white as those of Europe: and cherefore to them we feeme very white. The Learned men are very graue, of very good capacitie, and appeare outwardly very modest and graue.

There are Arificers of all Arts that are in our Countrey, and very many with the felfe-same Trades. manner forme of Instruments. Every man is free to follow what Trade he will, without being bound to follow his Fathers Trades, 4s divers times I have heard it spoken when I was in Europe : and those which will may study, fortake, or change that course of life. They worke vorte ood cheape : but in cunning and excellencie ours most commonly excell them much, though in some things they be very skilfull.

The service of young men and maydes is easie and good cheape, because there is great store of people, so that a yeares wages is not aboue two Duckets, and meate and drinke, without appar people, to that a yeares wages is not about two orderes, and interest and Daughters, it is avery ordischape, rell. As there are many poore people that have many Sonnes and Daughters, it is avery ordischape, rell. As there are many poore people that have many Sonnes and Daughters, it is avery ordischape. nary thing to fell them, and this the cheapest thing in China. For a youth of twelve or fifteene dien vic. veares without any naturall blemish will cost not past twelve or fifteene Rials of Plate, and in time of Dearth much leffe, and it is a common thing to buy them for service; though they vie them well, and marry them at their time.

Although the abun lance and riches of this Kingdome be very great, as the people alfris: yet Nonevery there is no body that is very rich, newther in any state of people may they compare in this point rich. with our Countrey, Youfhall not find in China, which is able to fread twenty thoufand Duokets of Rent how neere of Kinne focuer he be to the King, and very few, and those case to be numbred that can found ten thouland Duckers, and the ordinary is no more which they poffesses then that which their Lands and Offices yeeld them, which is not great. But though it bee true Yet astich as that those of our Countries pollelle much more Silvery considering the cheapnelle of things in ours very tich their Countrey, all commeth to one account.

There are very few of the poore people idle, because all of them commonly cake paties, and Fewidle. earne their living. Though the multitude of the Nation be fo many, and the Kingdome fo great, Surnames, 40 yet the lurnames of all the Kingdome are not aboue three hundred, and all of one fyllable.

There are fome, though very few, which may be called Knights, which for feruice-to the Knights. Kings in some necessities have given them Offices in succession: but the common vie is not to haue any Nobilitie by Descent in China; neyther can any man say, I am of a better Nouse then Nobilitie on you. But the honour and Nobilitie dependeth wholly vpon Learning, and to obtayine degrees ly in Learning. and Offices of Mandarins. And therefore an House which now is in Office, and his Father bee one, if he haue a Sonne a Doctor, which is made a Mandarin, he is honourable, and the honour No Lordbut continueth as long as the Learned men and Mandarins doe line. There is no man, neyther Kiniman nor not Kiniman of the King which hath ever a Village of his owne that payeth him Tribute : but all men pay it to the King; and hee gineth stipends and wages to the Mandarins, 50 fo that they receive nothing of particular men by right, though they extort much continually Extortion.

Commonly the Chinois doe marry from fifteene to eighteene and twentie yeares, and all of them doe marrie one Wife that is chiefe; and this is their lawfull Marriage. On the day of their Marriage, when the Bride doth passe to the House of her Husband, shee carrieth openly before her through the ffreets all the things which she bringeth with her, and all her house-hold stuffe: But besides her they may marrie (I say they may keepe and doe keepe as many as they areable) as many Wiues as they will, which for the most part they buy : and afterward when they will, fell them away againe. They may not only not marrie with any Kinfwomen of their Wines, but with none of that furname, though they have no shew of Alliance. The sonnes of the Concu-

With none of that turning, though they have no mew of Annance. The following to be the Inheritance:

60 bines doe likewife inherit, and there is little or no difference in their flate and honour, to be the Inheritance. Sonne of the lawfull Wife or of the other, neyther make they any question of it. The thing wherein the Chinois are most observant, Ceremonious and Superstitious is in their Functals and

Burials, Funerals, and Mournings: for herein they shew their obedience and loue to their Pa-mournings. rents, whereof their bookes are full. It is a very ordinary thing to have great respect to their F1-

ther and Mother, and the disobedient are grieuously punished, Many graue men and Manda. rins begge leane of the King to leave their Offices which they have, and to goehome to keepe their Father and Mother company, yeelding for a reason that they be old, and that they would goe to ferue them. And it is a Petition in the fight of all men fo just, that they grant it very ve fuelly. When the Father or the Mother dieth, all the Sonnes and Daughters (from the King to white Linnen, the meaneft Pealant) doe mourne for three yeares. The mourning colour, which among vsis blacke Baves, among them is white Linnen, whereof they make all their apparell euen to the Cap. The first monethes they weare a very rough Sack-cloth, girded with a Coard, like the bare-footed Friers. And though he be neuer fo great a Mandarm, withoutany exception (fane only the Mandarins of the Warre) affoone as hee heareth newes of the death of any of his Pa- 10 rents, he is to leaue his Office and Dignitie, and all other Employment what focuer of Gonemment and Examinations of obtayning his degree, and is to goe home for three yeares to burie

his Father or Mother(and to mourne and bewaile them. The graue men which haue an house for this purpose, doe not straitway burie their dead, but keepe them two or three yeares in the house, in a Chamber which they keepe for this Office, and it is not the worst in the house : and very viually or enery day they go thither to make them a thouland Ceremonies and Renerences. and to burne Incense, and other sweet sauours, and to set ouer the place where they be laid, meate to eate; and at severall times, many of those Bonza doe meet, and with great Ceremonies begin their Seruice and Prayers, and their Sonnes, Kinsefolkes and Wives make lamentation. The Mandanus do not only leave their Offices, and change their Weeds, but also all the things which 20 they did vie. Many fit not in Chaires, but vpon low Stooles : they visit, or fuffer themselves to be feene very seldome: they change euen the very Paper wherein they write, wherein they haue a piece of another colour, in token of mourning : when they name themselues in their

Letters, they vie not the name which they did at other times, but others proper to the partie, as

when he nameth himfelte, hee calleth himfelfe disbedient, fignifying, that by his disobedience

They wie no kind of Mulikce, and many change their ordinarie Diet into courier food. You

the Funerall day they prouide great company : many Kinsfolkes and Friends meete together all

clad in white, with many Bonzs, (according to every mans abilitie) which fing with dolefull In-

into a very great Coffin. This Nation holdeth a great part of their felicitie, for them and their

Other Fone.

ffruments. And by their apparell which they weare, and their time in finging, hee that knew 10 them not, would take them for Clerkes reuested, singing plaine Song; for they much resemble them. They make many Beeres with men, of Paper or of white Silke, many Banners and other Ensignes. The place whither the Corps goeth is adorned with many figures: the Corps is put

Coffin.

wherein the Corps is to be layed, and the place of their buriall. The stuffe to make the Coffin of, wherein themselues are to bee buried, and the making of the Coffin, they leave not to others to doe after their deathes, neither then may the body looke for much cost to make one of these Coffins, neither in this (as a thing of great importance) will they truft, no not their owne Sons: but they themselues at leisure seeke some kind of Wood that is least corruptible, and Plankes 40 which are commonly foure, fixe, or eight fingers thicke : which because they bee so thicke, and the Chifts or Coffins very closely thut they can keepe their Corps in their Houses without any euill smell. Some spend in making their Coffin seuenty, eighty, and an hundred Duckets. They hold it for a felicity to be able to get one of these that is good; on the contrary for a great disgrace, not to haue a Coffin to burie himselfe in , and they are very few which faile in that one

Vnluckie ro buric in the Cirie.

The Sepulchre and place thereof is the thing for chooling whereof they vie great Sorcerie or casting of Lots, and doe it with great heedfulnesse, and with the helpe of some that are skilfull in this Art. For they hold opinion, that in making a good choice of the place dependeth agreat part of their owne good fortune and of their Posteritie. And oftentimes they are a yeare in re- 50 foluing whether it shall looke toward the North, or to any other part. And therefore the greatest and most contentious Sutes which are in China, are about places of Burials. These places of Burials are alwayes without the wals in the fields, or Mountaynes wherein they build Vaults very well made and strong of Bricke, stone, or other matter, wherein they lay the Coffin, and then close it vp very furely : And afterward now and then they come thither to performe certain Ceremonies, & to bring things to eat. They hold it very valuckie to burie a dead man in the Citie: and if they know it, though he were the greatest man that is in China, they will not fufhim to bewaile his dead Friends much, especially those which are women. There are many which believe the paffing of the foules from one bodie into another; and therefore after the death of their Father and Mother, they will neuer kill any living beaft, yeelding for a reason 60 why they will not doe fo , left fome of them should be their Mother or Father, or some other other person. And likewise many of them fast, because, that whereas some of them bee poore; they defire afterward to be borne againe in a rich and honourable Family.

Although it bee true that the most part of them believe not in Idols, and it offendeth them

CHAP. 6. S. S. Hell portraied. Lots, Dininations ; Long life, Alchimie.

not to speake euill of them, yet commonly all of them at a certaine time of the yeare doe them fome reverence, because it is the custome, though in no fort they worship them as Gods; and those Idolarie. which put most confidence in them, burne Paper, Incense, and sweet smels vnto them, and kill beaits before them. Their Bookes of these Idols speake of Hell, and in many places, or in a manner in all the Cities there is fet vp a portraiture of Hell made with bodily shapes, and many Denils, as velie as wee paint them. It is very well fet foorth, but badly beleeued : for it ferueth only there for a bugbeare. And if any beleeue that which the Idols fay of Hell, that it is a place Of Hell. of torments, they fay, that after fo many yeeres be paffed, all men come out againe, and are trans-Seein Pinte. formed into some beatt. Those which beleeue in the Idols, come before them to cast lots to know Lots. what things shall come to passe: howbeit I have not heard in all China, that there was any anfwer of a Diuell in an Idoll, as is in other parts, in regard of the small beliefe that they have in them, and the lewdnesse of the Bonza that serue them. Their houses wherein they set them, Wicked Benzi.

whereof as yet I neuer faw any good one, are commonly verie filthy and stinking, And besides this consulting of Idols, the Chinois are much given to Divinations to know things Diviners and to come, and whether they shall have good or bad fortune; whether they shall have that which disinations. they defire or no : and there bee an infinite number of these South-sayers, and all of them pratlers, mumblers, and coofeners, whereby they deceive many. And though the Chinois be of good understanding, and know that these fellowes know nothing, and every foot doe take them in lves : yet for all this, there are verie few that when any occasion is offered, doe not confult with 20 them. And though they seeme to bee but few, yet some of them are in league with the Deuill.

as oftentimes wee gather by certaine things.

Many of these grave men of China, have commonly two follies, wherein they doe erre more then in other things. The first is, that they perswade themselves that they can much prolong Studies to pretheir Lines ; and for this purpose they vie a thousand inventions, and take many medicines, which long life. indeed rather doe shorten their dayes. There are many Masters and Bookes of this follie, which wfuallie are graue and rich men. There are many that make themselues very old folks, whom the people follow like Saints to learne tome rule of life of them, wherein they put all their felicitie. Many doe not beleeue that we are so old, as we say we be, and that we doe dissemble : but that in deed we bee an hundred yeeres old, and that we know this rule to live for ever, and that we doe 30 not Marrie because wee would line long. The other follie is, that they perswade themselves that they are able, and goe about to make Silver, whereof likewife there are many Bookes. They vie Rooker of Ale for this purpose many Hearbs, and Quick-siluer, wherein they spend that little Siluer which chimie, they have, and remaine beggers, but not perswaded but that it is feeible, but that it was not their good lucke, and good fortune : and to obtains this, many of them fast many yeeres.

Their bad Souldierie and Artillerie; Degrees, Priviledges, Honours and promotions of Learning. Their Authors and Bookes, and Printing, The Mandarins commended.

Here are many Souldiers in many Prouinces of this Kingdome: and though they have Souldiers man had Peace these many yeeres, yet they still entertaine them : but because they bee lo- ny and iew. uers of peace and quietnesse, the most contemptible state, except the state of the Bonzs, is the Souldier. And indeed it is a most base people, which hath no valour nor

worthinesse, much lesse any fortitude in them. Many of them are Porters, which beare on their thoulders, the Chaires wherein the Mandarins and honourable persons are carried. And at the 50 time of Musters, which are made from time to time, they repaire thither, to obtaine wages, and thus they have no worth, nor jot of honour in them. The punishment wherewith their Captaines punish them, is the same wherewith they punish all other people : they whip them Basenesse. as wee doe Children in Schooles. According to the worthineffe and valour of the Souldiers, the Armour and beautie of their Armour, offensiue and defensiue is answerable, which is sitter to bee laughed at, Armes, then to be reported. They have no Harquebusses that are worth any thing; and all those which Thebarrels of I faw (and I faw many Souldiers with them) had their barrels but a pannel long: fo that it fee-but a foan long meth that they beare it and the rest of their Armour for fashions take. And I maruell not : for by reason of the exceeding great Peace which they have so long enjoyed, they have none occa. The cartesof fion to become valiant: but they are able men when occasion serueth, and it seemeth they will bad Souldies, 60 eafilie become val:ant.

The Mandarms of Souldiers, is also a thing of small estimation, and they are nothing compaction of choice from rable with those which they call the Mandarns of Learning, which are those, which take De theronomy grees. The Mandarius or Captaines of Souldiers, obtaine not the same for Heroicall arts or proweffe, but they make a Discourse or an Oration, upon some matter concerning warre, and they

make choife of certaine of those which had done it best. Likewise they shoote two or three Ar. Exercifes Mirowes, to fee if they bee skilfull in shooting. They have no vie of great Ordnance. Albeit I fam litarie.
No Ordannee in the Gates of some Cities, certaine small short Pieces, as broad at the mouth as at the nether end, which I know not whether they shot off sometimes or no : I saw about fixe or eight of them woon the Walls. The defence of their Walls is their height, without any other Artillerie The greatest force and number of Souldiers, resideth in the confines of the Tartage

Terration com-Feare of Tar-

Mahometons.

No weapons

in houses.

It is foure hundred yeeres fince a King of the Tartars wonne all China, (whereof Paulu, Ve. netus writeth, which was in that Countrey) and they did also possesse it two hundred years at the end whereof, a Bonzo a very prudent and valiant man rebelled, and cast the Tarray out, and at the end whereof, a Dorse's very product and the day. They always keepe great Watch and the semanned King, whole islue continueth whill this day. They always keepe great Watch and the semanned with the semann ward upon this frontier. Many youthes of these Tartars remayned in China, and namely in these parts of Paquin, there are many which keepe and maintayne their Law of Mahomet, and haue Mezquitas or Turkill Temples, and are much different in shapes and countenances from the Chinois. Except the Souldiers, there is none that keepe Weapons in their houses : not become it is forbidden, but because there is no need of them: but rather the Learned and grate people, count it a dishonest thing to keeps Armour : there is no vie of them but in the time of warre. For you shall never see them fight with weapons one with another as wee doe. But their figh.

Not bloudie.

ting is to buffet one another, to pull them by the hayre of the head, and to draw them by the coller, and in two words to become friends againe. Our men make no great matter of giving buffets and fuch like, for they kill one another. Studious. The Chinois are greatly given to Learning and studie; for all their honour and riches depen-

Many Chara.

deth thereupon. They have aboue fortie thousand fundry Letters : though many of them bee made one of another. They have no A,B,C, nor any thing like thereunto, as among vs. But to fignific euerie thing they have one Letter, and all diverse. Their words are of one syllable, and no Monofyllable more, though their Letters bee so many. Those which are commonly vsed every day, are eight or ten thousand. They begin to learne to write and reade commonly, when they be seuen yestes old : they write with Penfils. They have many little Bookes which encourage Children to ftu-Penfil-writing. die, exhorting them to take paines, with the reward that they shall grow to bee Mandarius. Rhetorike fole such thing, but onely Rhetoricke : for all the substance of their knowledge and fame of Learned

grees which is Trigantius, and from it. therefore here omitted. Glory of Do.

They know not, nor studie any Science, neither Mathematickes, nor Philosophie, nor any men, confisteth in nothing elfe, but to know how to make a very elegant Difcourse and Oration 3 vpona theame, like as in our Europe the Oratours vied anciently. And as the Chinese have good wits, and by hope of reward are verie appliable hereunto, they doe it with great excellenmore exact in cie, and occupie themselues with nothing elfe, and haue no other knowledge to distract them Euery Doctor (after hee hath obtained his degree) setteth up in his Countrey before the doores of his House a Title of verie great letters, which faith : Thu is the House of a Doller:

which all men haue in regard. And before the doore, they fet vp many high Poles like mafts, which euerie Mandarm of that Citie where hee dwelleth fendeth him, with a Banner hanged vp, and alwaies they remaine there. They make a verie excellent Arch triumphall, to him that hath the first degree, at the gate of his House. The Chinois esteeme more then we doe, the skill to bee able to write well, and Print euerie yeere a great number of Bookes, whereof there is no floreof bookes examination nor choife, and euerie man Printeth what hee lift, good or bad, and so they make booke of nothing. The best which come foorth are of no Science; for as I have faid, they know none: but they are onely of Morall sentences, to the advancement of good Customes and Gouernment. Their manner of Printing is not like ours : for they joyne not their Letters, but for euerie leafe they make a table which hath letters on both fides, it would feeme to beevery hard, Easte Printing. but with the custome which they have gotten, they doe it with great ease, speed and cheapenesse. I will fend you some Booke well printed, that your Worship may see it. They also print Letters in white, I say white letters, and the ground blacke. And though in the former they 10 come not neare vs, yet in this they goe far beyond vs. They vsually print these letters in Stones, and the letters stand not in the Stone voward to touch the Paper directly, but in the paper and Printing white the stone they stand all one way : and this is the order whereby they doe this : They werthe Paper, and laying it vpon the toppe of the Stone, they gently beate it with some veriegentle thing, wherby the Paper which lyeth vpon the Stone finketh into the hollownesse of the Letter, and resteth lower then the other, then with a kind of Inke which they have for this purpose, they finely lay it ouer, whereby the Letters remaine white, because they bee deeper, and the rest remaineth blacke. I fend you with this Letter certaine papers thereof, that your Worship may rejoyce in beholding the excellencie wherewith it is done. One of our Bookes of equall volume Most can write with one of theirs, containeth much more : for our letter is leffer then theirs. Though in China it 60 be harder to learne to reade and write, then in our Country, yet there be few but know ordinarie

and reade.

Poetrie.

Letters to deale betweene man and man. Likewise they make great account of Poetrie, and also the graver fort give themselves much vnto it. It is verie ordinarie with them to fend vs fome Poche in praise of vs, when wee enter

into friendship with any. Also they make much account of Paintings, and playing upon Instru- Painting and ments. And albeit they know but little in the first, because they have no Art, nor paint the Musicke. things with shadowes, and know not how to paint in Oile : yet in the second they are verie readie on their Instruments, and play gravely and leafurely. I heard certaine forts of Musicke. especially in the Palace of the King : to welcome me, the Eunuches his Musicians played vnto me awaile, and they pleafed me : although in this, little it feemeth vnto me they may compare with our Countrey, yet it is certaine, that they thinke they doe farre excell vs. They have not aboue one kinde of Instrument, which the graver fore vse and make much account of, which is like vnto our Harpe, although the fashion and manner of playing voon it differeth from ours and to from all our other Instruments.

As in China there is no fort of people more honourable then the Learned men, and Doctors: Noble Spirit fo there is no people of better condition, and of more Honourable and more Noble manner of of the Mandaproceeding. And albeit before they were Doctors and Mandarins, they were verie poore and vint. base people, and many of their Fathers officers of vile Offices, (as it is verie ordinarie) neuentheleffe, after they have obtayned the Degrees, they put upon themselves a more honourable spirit. And therefore albeit in China, wee indured much trouble at the base peoples hand, yet the Mandowns did alwaies wie vs honourably and with much respect : especially now, for which cause now no man dare trouble vs. And if there bee any, which in title are like our Lords, Knights, and Courtiers, they are thele. There are among them, men of much excellencie and finceritie in their 20 Office, which doe feeke the common good : And without doubt they make vs wonder, that fee- Sinceritie of

ing they bee but Gentiles, which doe nothing for the zeale of Gods honour, nor for his fake, they fome. be of fuch finceritie, which they shewed of late more then at other times, in having to doe with this wicked, vicious, and couetous King, which they now have : who though hee be so absolute The present a Lord, that with the same libertie, and in a manner with the same facilitie, liee doth what he Kings dispose lift with the greatest Mandarins of his Kingdome, as well as with the basest people thereof. Yet for all this, of late yeeres there were many, who with great libertie and courage reprehended his faults by writing (which is the manner of speaking most publikely with him) that all men might read it. And though they might feare some grieuous punishment (besides the losing of their Offices, for that was certayn) neuertheleffe, there were many men of courage which wroce 30 vnto him: among whom there was one very renowned : The letter which he wrote to the King. began thus. That although bee were affered, that he were so be hanged, and that the Fire were kindled

to burne him, yet bee would reprehend his vices and lemduesses, and the enil example that bee gave to all Hetoike zeale. bis Kingdome : And so hee did, and spake verie freely, and put him in great feare. And it seemeth that for his finceritie and courage, the King had fome regard of him, and though hee punithed him, yet it was verie moderately.

There fell out another accident in this kinde within these few yeeres, which because it is notable I will heere fet it downe. This King hath many women besides his lawfull wife, which among themselues keepe the order of first and second. Hee hath no Sonnes by his lawfull Wife, but he hath one which is the eldeft of the third or fourth, and others youger of the fecond. The 40 Eldest by the custome or lawes of the Kingdome, is the lawfull infleritour, although he bee of the fourth wife : but hee bare more affection to the other and to her Sonne, and defired, by her Outling of perswasion, to aduance him to bee Prince, and would not have aduanced the lawfull Heire. The the Successor time being passed to performe the same, many Mandarus lost their Offices, for reprehending him of this diforder, and for feeking to make him advance the Eldeft. But the principall Mandaries of the Court perceiuing that hee proceeded on, and would not doe that which they requested, and which was reason, consulted together, and published a Proclamation, which commanded all the Mandarius which are in the Court (which are aboue some thoulands) that vn. Thousands of der paine of losing their Office, they should all meete at such a day, and such an houre, in such a Court Manda. place of the Kings Palaces. When they were all affembled at the day appointed, with their

to Enlignes of Mandarins, they put vp a Petition vnto the King, faying, That fince fo often they Enlignes of Creanarins, they put by a rection rule the Airy, styling, a the pine popier tory bad admirld him of a bing of a list, and that her made some account of them, not feeling to admare the true Prince, that her floudd feele those that would ferue him, that all of them would there give oner their Ensignes of Mandarins, and would no longer serne. It seemeth the King was afraid of to great a resolution of the chiefest men of his Kingdome : And so hee commanded an Eunuch to goe foorth vnto them, and answer them, that they should returne their Offices in Gods name, and that hee would fulfill their request. Finally, they did effect so much, that they caused him to doe that which was reason; and so this yeere 1602. hee advanced the true Prince, of whom hereafter I will speake somewhat.

of the Gouernment of China: Of the Mandarins; the China Complements and manifold nicities.

Ow I have touched the flate of the Mandarins, it offereth it felfe to speake of the manner of Gouernment in particular; But I confesse vnto-your Worlhip, that the multitude of Offices which they have is so great a frame, that I was not able to ynderstand it, to reduce it into order. Onely I will say in generall, that they have many good things belonging vnto Gouetnment, but not the execution: finally, it is a Gouttnment of to

Gouernment good if well executed. Lawes lawleffe

Bubes. Dance in a

good trings occurring you continuent or Generals, with a thouland faults. There are no great flore of Lawes, but commonly they decide Controuersies of their owne heads, and make Lawes in their Iurishietton after their pleasarc, eucry one dinerie. And heere your Worthip may imagine, that the Gouernment in the practic cannot bee very suft, fince every one that can tell how to make a good theame or exercise, are not sufficient to bee Law-makers: And it is very ordinarie among them to direct all things to their owne profit, whereby of necessitie, they commit many absurdities and wrongs, and take all that they can get: Bribes are vitall, and men vie these more then any thing else: And though one of them know this fault in another, they all diffemble as being in the fame fault, that others may winke at them. And though they feeke to hide it one from another, yet it is like the fe-

State and

The Mandarius are many in all Cities, but very extraordinarie in the Courts of Nanquin, and Pagnin. For in this Citie of Pagnin, befiles the Mandarins of Armes, whereof no great account is made, and are more in number then the rest; and besides those which alwayes repaire thinther, vpon the business. or all the Provinces: Those that properly belong to this Citie and Court, ate about two thousand and five hundred: who all, or the most part heare Causes ordinarily twice a day; so that wee cannot imagine what businesses occupie so many Mandains, nor what is the luritdiction of euericone. The most principall which are in all the Kingdome and heere, are fixe, Prefixents of fixe Councels, being the chiefeft of the Kingdome. There is one, which is the greatest, to whom belongeth the government of all the Mandarins of the Kingdome, to advance them to higher Offices that doe deferue it, and as much as they deferue, to chastife and to de- 30 grade those which badly performe their Office: which because it is a place so great and honourable, the Chinois call him, The Mandarm of Heauen : who proposeth all these things to the King, as to promote, to advance, to difgrade the Mandarins, and the King confirmeth them: So that all the Mandarins how small societ they bee; that are in all the Kingdome, are appointed by the King. The second hath the charge of all things belonging vnto Ceremonies, as well humane of Courtefies, and ceremonies in all royall Acts, as in making the King, the Prince, and in marrying of them, &c. And all that which belongeth to the worship of the Sacrifices of the Dead, and others which the Kings offer to Heaven and Earth. There is another chiefe of the Councell of Warre : another of the Kings Treasure, which taketh the account of the Kings rents: another Councell is of the Workes, as of the Kings houses, prouision for all things needfarie, for the Walls of the Cities, &c. There is another of Chastisement, whereunto causes criminall and sentences of Death doe belong. About these (fixe) there is onely one Degree, which are absolutely the greatest, before whom whatsouer the King doth in any thing is consulted of. Although it bee true, that these be rich and opulent in the conceit of the Chinois, yet none of them in any thing may compare with any of the meanest Lord of title, of our Countrey. The wages which they have of the King is small: the attendance which they have, is of base people, and of small countenance, yet they are much respected and obeyed : And the common people kneeleth vnto them, as to the Manuarins. The common chastisement which all the Mandarins doe give, is to whip them with peeces of Canes, of foure or fixe fingers broad and thicke, wherewith oftentimes they dye, when it is layd on foundly. Whipping is as common as it is to 50 whip Children in the Schoole : And sometimes for nothing they give a dozen stripes, as well to the Plaintiffe as to the Defendant, and therewith they end the Suites, and they stay to give none other fentence, but fay : Gine him twentie stripes.

Vivally when the Mandarms of any State goe through the fireets, men goe before them crying, or making a noise with Infiruments, for the people to give place. And in particular Cities, when a great Mandarin palieth through the streets, all men hide themselves and goe into houses, and the Handicrafts-men cease from their worke, and that in such fort, that I saw once in a Citie in a street of great trafficke, a Mandarin appeare, and in a moment enery bodie got away, even the very Dogges, with exceeding great filence : so greatly they bee reuerenced of all men. And many carrie Chaines trayling them before them, and other Instruments. But in the Courts 60 (though the Mandarins bee greater) the people runne not away, they doe no more but give way that thy may passe. In the Courts many Mandarins, though they be great, ride on Horibacke, and others in Chaires: but besides them, all goe in Chaires carried on mens shoulders, which according to their Offices are two, or foure, or eight.

CHAP.6.S.7. Vifitors, punishments, Apish humanitie, or tedious salutations. Euery Prouince hath a Visitor, which publikely visiteth the same energy yeere, and taketh in-Visitors. formation of the Man darines. There are fecret and prime Visitors. Sometime one is fent : But

it is no viuall thing, and as I have heard, it is long fince it was left off. I speake this, because I alwaies heard when I was in Spaine, that the Chinois vied this manner of Vilitation.

The Visitor onely may give sentence of death. They be not cruell in punishments by death. Punishment by Onely the King vieth iome cruell execution: and namely this King that now raigneth, which deathrare. is a very wicked man. One of them is that which lately hee caused here to bee executed voon eight men, by the great frofts of Winter, for no great offence for fo cruell a punishment, and as The great they fay, fallely imputed : And this it was : Hee cauted their neckes to be put through a thicke from of Win-

10 planke, which taketh a great part of the head, and they fet the plankes to stand voon Formes. tet in Paquine to that the man standeth upon his feet day and night in the middest of the street, with men to watch him. Hee condemned them to this punishment for three moneths : but they died before fifteene dayes, with their legs all rotted, and burit with standing alwaies on foot : I my selfe faw them stand on this fashion, which pitied me extremely. I neuer faw nor heard of any other cruell punishments; though, as I have faid, often times the Mandarines kill them with whinping, which is a very cruell thing.

The Chinois are very curious in writing of newes, which viually they fet out in Print, and Booker of in a very thort space disperse them through all the Provinces. There are alwaies Bookes where- news. in all the Mandarines of the Kingdome are written, as well their names as their Countries : 20 And because they be changed every foot from one place to another, they blot out and put in the

names as foone as they know them, with great facilitie.

One thing among the reft is (wherein they bee very dutifull and prolixe) in their manifold courtefies, which are of many forts, according to the estate of him with whom they have to Complements doe. The vitall fashion is when they visite one another, the stranger is set on the most honourable hand (which in some places is the right hand, and in the Northerne Proxinces the left) and ment. That putting one hand in the sleeue of the contrarie arme, which is very long and wide, they lift vp which is in a their hands fo fastned together, then bending their (bead and) body downe to the ground, fay- little letter is ing, Zin zin, which is of no signification but an interiection of vrbanitie, their bowing veneration they added out of ing Zin zin, which is of no figurification but an interaction of ordering interaction continuous and interaction in the seal Zove is they change function to the will and the continuous co

Guest hath, and each of them setteth them in their due place, which is the strangers Chaire in the street, they highest place, distant from the wall, and the Chaire of the Master of the house is set in the midst turne to the of the lowest place, one ouer against another. After this (when they have ended their salurations) Bdc: at home they straightway cause a drinke to be brought, which they call Cha, which is water boyled with to the head of a certaine herbe, which they much esteeme, for this is a want of civilitie and courtesie: and at the thebouse, least they must drinke of it twice or thrice. He bringeth forth some Fruit or Sweet-meat, and a which is a-Spoone to take it vp. It the Gueft stay any time, straight without faile they will bring out some gainst the thing to eate, but with some preparation, answerable to the occasion and person: whereon they ward also their eate very little, vnleffe it be at the ordinary houres of feeding, and then they cate somwhat more. Temples and

When they visite one another (vnlesse they be very great friends and familiars) a Boy goeth Halls for enalway before, which carrieth a Libell or Booke of visitation, which they call Paytre, which is as terraynment much as, A Paper of visitation: And this name neuer faileth, for alwaies they vie it: wherein being made much as, a raper of visionance continues of the desired of the second of the quality is with the doors to the South. of them that visite, and those that are visited; so is the manner most different whereafter they Che or Chie a write the fame : to wit, with more humility, either as our better, or as an equall, or as an infe-dinke made riour, as a scholer, or as a master: for as the relations are many and particular, so the fashions and with a certaine manners which they yie are divers. Of thele things, and of all that hereafter I shall say touching here, this point. I will send you the examples in their owners are any wiscolar with the payment with the payme this point, I will fend you the examples in their owne parers of visitations, which great Man-tingpaper. davins, and ordinary men brought vnto vs, fetting down in our tongue vpon euery letter the de- Thefe Libels

50 claration thereof. And I doubt not but your Worthip, our most deare Fathers, and Brethren, and confist of 12. as many others as shall see the same will rejoyce thereat. And when that Paper is brought, they Pages of white as many others as shall fee the fame w.ll retoyce thereat. And when that Paper is brought, they reper a palme carrie newes into the house to him that is wifited, which prepareth himselfe to receive his Guest, Paper a palme that is not become the carrie newes into the house to him that is wifited, which prepareth himselfe to receive his Guest, Paper a palme to the carrier of the paper as a support of the p which commeth within a wirile after. When they be not people which they fee euery day, they &c. fee Ric. vie not ordinary appareil in their vilitations, but they have garment, proper for this purpole, of pages. a farre different fashion. And if by chance one come so apparelled, and another be not, he sayth, Salutation or that he durst not salute him, nor receive him before he had put on his apparell, so he getteth him visitationaway in great hafte to put on his apparell, and then they begin to performe their complements.

When the Guest departeth, hee alwaies goeth before, and at their going out of the doores they wie falutations, and offers of courtefie; according to the qualitie of the Guelt, and the Ma- Taking leave. 60 fter of the house, so he bringeth him more or leffe way, or vnto the street : or it he goe so farie, he stayeth till he take his Chaire, or his Hotle, and then lifting up their armes and ilceues unto their heads they take their leaves and depart one from the other. When they are departed, the Visitor and hee that is visited, each of them send a Boy to give one another thankes, one for his visitation, the other for his good entertaynment and friendly viage. If hee that is visited be not

Head place of

at home, they leave the Paytre at his house, which is a token that hee came to visite him. Hee that is vilited is bound to requite his vilitation prefently, or the next day, if he bee a man of Worthip, or if they be e equals, within three or foure dayes: which payment is performed after the felte fame manner; and it hee finde him not at home, it suffices to leaue the Payne there. If hee that requiteth the vilitation bee a farre greater person then the first which visited him, saif he be some great Mandarin) hee which first visited him, returneth the next day in person with he be tome great Namany nee who a far the came to his house: and if they see one another, he gueth him thankes that he came to his house: and if they see one another, he gueth him thankes by word of mouth. When the man which visiteth is of great Worthin hee fendeth word a good space before with a Pagire : and the Master of the house commeth forth hee fendeth word a good space perior with 1879.

to receive him, and to bring him into the house. All their Houses and Lodgings, have alwayse 10 an head and more honourable place (which is the highest part) where alwayes they place the Gueft. Likewise in their writing they wse a great difference, according to the estates, Dignitie and Age : and in their Letter, the greater the Mandarm is, they vie the greater Letter : those that are equall, or inferiour vie a very small letter : likewise they observe the same order in speaking to energy one according to his qualitie. When they meet in the streets, the ordinary courtese. is, to put their hands into their fleeues, & closing them together to hold them vp, & to vie a com-First acquain. mon speech, which they have for this purpose. When a couple enter into new acquaintance, they doe yet more, and that is, they kneele downe, and touch the ground with their head io often, and

Sending Pre-

with so great ceremonies, that I dare not speake of them, left I should neuer make an end. When they fend Presents, they write downe all things which they fend in a paper, as they 20 doe their speeches, with words of Honour : whereof I send likewise examples to see, of very grave persons which sent vs Presents. And whether the partie receive the Present or not, or only a part, he alwayes fendeth backe another paper with certaine red lines (as herewith is to bee frene) with a Letter which fayth: I shanke you much : And when he receiveth the Present, hee alwayes gineth fome money to the youths that bring it : and hereby he remayneth bound to anfwer him, with another Presentas great at the least: And herein they be very precise, especially persons that are not of the greatest account. A thing which I finde very strange, and which doth put vs to much trouble, to be driven equally to answer those Presents which the greater Mande. rins doe fend vs, for they alwayes defire some thing of our Countrey, and here we are very poore,

They lend vs fomtimes from Macao some Clockes of fand, or Houre-glasses, some Kniues, some 30 cases of tooles for Surgeans, and other things: for they much esteeme all things that come from our parts : and with these things, which in our Countries are little or nothing worth, heere wee procure friends, which stand vs in exceeding great stead to conferre with them of our holy Faith. and of the faluation of our Soules.

Inuitations.

Besides their Presents and visitations, they have Gossippings and Banquets, whereunto very vitally they inuite one another. When there be very folerane, they fet every Gueff two tables for himselfe one of Flesh and Fish, &c. another of Fruits and sweet Meats. When they be not so so lemne.one table for every man, or two at every Table; they provide for these Guests great diverfitie of meates well dressed and seasoned, which they bring foft and fayre one after another, that they may be hot. When they inuite one to a Banquet, they fend fixe or feuen dayes before a pa-40 per, wherein they isuite him against such a day. If hee cannot come, he sendeth another paper, wherein he faith, l'excuse my selfe: If he excuse not himselfe, he is resolued to come. This paperis fent with many words of courtefie, & with much honour. On the day appointed in the morning, hee sendeth another to inuite him againe for the selfe same day : and at the appointed houre, hee fendeth another to pray him to come : and then hee goeth : If any of these messages should fayle hee would not goe. When he is gone to the Banquer, they vie many other ceremonies: But the most adoe is, about their places, so that it is long before you can place them, and allot out the roomes how they shall fit, because they ever feeke, or at least make shew that they feeke to give the chiefest roome to others. They feed not as men vie to doe in our Countrey : neither feemeth it that the Feaft is made to feed, but onely they taile of some small thing for fashion sake; and 50 they drinke very sippingly in small Cups of Porcelane, each of which will contayne fine or fixe Thimbels-full of Wine; and heerein and in deuiting, they spend five or sixe houres at a Banquet, and goe home an hungred. And thus it happeneth vnto vs ; although wee feeke to excuse our selves from them as much as we can, because wee lose much time, vnlesse it bee some great Mandarin, who we feare would take it cuill, if wee should deny his request. When the Banquet is ended, the next day enery one of the Guefts fends his Boy with a paper, wherein hee thanketh his Hoaft for his good cheare.

Chineis Com-

Complement, New-yeere.

Heere your Worship may see, wherein the Chinois spend the one halfe of their life. For the greatest businesse they have, and that wasteth most of their time, is in Visitations, Banquets, and fending of Presents. And the time wherein they most of all vie the same, is their New-yeere, 69 which lasteth fifteene dayes: their Birth day, which all of them keepe with great iolemnitie: or when they goe foorth, or come home on a Journey. And to end the whole yeere, I fend you fome Papers of vilitation of all these things (whereof they have sent many vinto vs) that your Worthip may fee (though you understand not the outward Letter) the manner and fashion of

this people, how farre different Salutations, manners and fashions, we fend you from the plaineneffer of our Europe, and especially of our Companie, But for the prefent, wee all thinks it necesfarie to eate after this fathion, and to vie their customes, to obtayine more free accesse vinto them. and to winne them to Christ.

CHAP.6. S.7. Papacie applauded : hypocriticall Excuses : China Women.

There is a Turke heere, a dweller in this Citie, which aboue fortie yeeres agoe, brought one or A Turke differen two Lions to the Father of this King : who, partly because hee knoweth no Learning nor Sci- spected. ences, and partly because hee fought not to apply himselfe to the habite, customes, and manner of China, there is none that will deale with him, nor come neere his house : And through the grace which God hath given vs, and because they see vs apply our selves to their Apparell. Fa-10 shion, and Courtefies, all the grauest Mandarius come home to our house to visite vs. and doe vs the fauour, to hold vs publikely for their Friends : which they vie not to doe, to their owne

Countrey-men, of our qualitie and condition : prayfed bee our Lord alwayes, Amen. I will not omit to declare the great pleafure, wherewith thefe learned Chinos heare the great confent of the things and ceremonies, of our holy Faith in Europe, and that wee have Bishops, and as we call them heere, Mandarins, and superiours in Spirituall things: and about all, they The Historichy rejoyce exceedingly to heare of our Pope, that being fo great a personage they preferre a Lear-applauded by ned and Holy man by way of Election, and not by Succession, and likewise the obedience and chineu. fubiection which other Kings doe yeeld vnto him; and that there have beene many (as wee told them) who being chosen Popes, refute it in good earnest, and by no meanes will accept the 20 same : and that we have all things which concerne the Law of God and good manners, let downe in writing, with all other Bookes concerning him, or his Ministers.

And although that which I have spoken hitherto of our high Priest, is a thing very apparent and true, and wee delivered it for fuch, and they fo vinderstand it : yet oftentimes they have giuen vs occasions of laughter. The first was, That when wee told them, that some refused so great an Office : ftraight-way they aske, where you lay that they refuse it, is it not euident that their excuse will not bee accepted : As who should say, of they would accept of it, who is there that would make an excuse? And thus they say, because they doe so themselves : for when great Of- Ridiculous nis fices are bestowed voon them, eftsoone they offer up a Petition, making a thousand excuses to cette. the King not to receive them: and they define nothing leffer, neither can any thing happen so grieuous vnto them, as to accept their excule. But viually they be not admitted: though some-

times they bee, to their great griefe of heart, as I my telfe have feene : But to excuse themselves, or to refule with some danger, is the vie to common, that they will not fayle to doe so : for if they should not doe so, it were more certayne that they should goe without the Office. The fecond thing that made vs more to laugh, is, that many of them tell vs, that if wee would returne into our Conntrey, without doubt they would make vs Popes: The reason (though not openly) which they yeeld, is, that wee haue a great advantage aboue other men of our Countrey, to wit, that wee haue seene, and studied, and understand their Bookes; because that they onely, in their opinion, can make a man perfect, and generally seene in all things. Such is the high conceit and 40 reputation which they hold of their Bookes.

ð. VII.

Of their Women: Of the Tartars Conquest, Acts and Expalsion. The greatnesse of the King, and neighbouring States. Of the Queenes Eunuches.

Will conclude this Letter with two points : the one concerning the Women, whereof I haue little to fay : and the last is of the King, and of his Palaces and Seruices.

Euery man (as I faid before) may keepe as many Wiues as lee will, and so they doe: which is the cause of many tumults, quarrels, and disorders in their houses as Polygamie limong their wines, and among the Sonnes of diners Mothers: and therefore when weetell them, rigious, 50 that in our Countrey no man marryeth but one Wife, they neuer are fatisfied in praifing it in words, though nevertheleffe they doe not follow it, nor put it in practife. And the difcontentment which the Women haue among themselues, and with their Husbands for this occasion, is like to prooue a great encouragement vnto them, to make them defirous to receive our holy Faith, and to perswade their Husbands to embrace the same, seeing that it doth not permit any more but one lawfull Wife onely.

Of their other Conversation, Customes, and other things, weeknow nothing, neither is any Closenesse of thing to bee learned : for they keepe house all their life time, and goe out of doores exceeding Women. seldome to visite either their Mother or Sisters, or nearest kinswomen, for they goe not to any 60 clie, no not in thought: And therefore as they have no convertation, (but alwayes to keepe home) I can speake nothing of their behaviour. Their Apparell seemeth wroto mee honest and comely : (for sometimes I have seene the Wives of Officers, and of the poore people, for many of Apparell. them doe goe abroad.) In some parts of the Countrey wee haue met many women upon the high way, in short garments, like to the men of our Countrey, without any difference, san on

Smallfcer.

their heads, and their feete : for all the rest is all one kinde of Apparell ; but these are the common people onely : One of the greatest ornaments that the Women haue, is, to have verie little non people out; . One of the great state goe verie badly, and alway they feeme to goe as though they would fall. I could not know the cause, nor the Chinois themselves know not the original occasion, why chis is counted for a beautie: albeit some say, it began not for a comelinesse, but onely with a purpose to cut off all occasion from them of going abroad.

Histories of tha Kings. Knowledgeof the Flood.

The Chinose haue beene very carefull in their Histories, and therefore they have histories of their Kings of aboue foure thousand yeeres. And if credit bee to be given to that which their Bookes report, touching those times, and is gathered by divers of their Histories; There are ma-Bookes report, couning those times, and is generated by also have form knowledge in their ny more yeeres from the Flood to our dayes (whereof they also have form knowledge in their 10 Bookes) then the most followed and allowed Calculation among vs, which trate of that matter, doc allow of : for they fay, it is fixe thousand yeeres at the least. They fay that they have continued Histories. But I leave this, because I have not well conferred the truth and foundation of the Chinish histories. At the least it is certaine, that they have knowledge of their matters, and certaine Kings within a little after the Flood, whenfoeuer it was. They had many ancient Kings, which were verie good men, which it may bee were faued in the law of Nature. because the heroicall workes of Vertue, which they report of them were great, and there is no record that they worshipped Idols, but some, that they worshipped the Lord of Heauen and darine contrary Earth. There were some that sought not to leave their lawfull Sonnes to bee their Heires, because they thought them not fit for Gouernment, but choose the wifest and best man, that they could finde, and left the Kingdome vnto him.

made a King, and Name midea Man. ble Scripture,

Moralirie

This Kingdome in old time was divided into many small Kingdomes, untill by little and little it was vnited. It is some soure hundred yeeres (25 I faid before) since a Tariar King posfessed it whollie, and two hundred, since a Bonzo or Religious man of China recoursed it. This Mahametan Tartar King, left some tokens of himselse in things that he did. Hee left in Non-Mathematicall quin, certaine Mathematicall inftruments of Copper, the like whereof for goodnesse peraduenture are not in all Europe, at least not better.

The China vin-

The Chinese Bonzo which expelled him out of the Kingdome, was a very valiant and wife man, and there bee many Histories of his wisedome, and sentencious sayings, and judgement in man, and unercose many sintenses of its witesome, and retrieval on any property of the hard matters: and the manner and forme of Gouernment, which hee ordayined in this King-jo-dome, which continueth inuicibile, doth greatly declare the fame. Hee make new Offices and New Lords, gaue new Names to all of them: An viual thing when one house beginneth to Raigne, to change all, euen the name of the King, as also of all Offices, and also of many Cities. I omit the diuffion of the Gouernment into so many heads, and so good distribution, that it seemeth (and so the Chmois (ay) it is like to continue thousands of yeeres, so that no man of the same Kingdome is

able, nor hath any power to make any Rebellion of importance. For those which in former time revolted, were the Vice-royes of the Provinces, and other great Mandarins, in whole Rebellion pre- power were the Gouernment, the Souldiers, and the treasure. But hee divided it in such fort. uented by the that those which had power ouer the Souldiers, should have no money at all, neither should the pay of the Souldiers depend upon them : and thole which keepe the Treasure mult have no superintendencie and dominion ouer the Souldiers. Others which were mightie and rich, hee impouerished and divided their Authoritie and Revenues among many; and so there is no man that can call himselse Great. I remember that I had read in a Booke, set out in the Spanish tongue, of the great power of certayne Captaynes, and because the King did not trust them, hee fent one of his house to will them to come voto him.

All which relation, with many other things which hee reporteth of the prouidence of the King, how hee divideth his Authoritie among divers Princes, is not so in truth, neitherin truth, neither is there any apparence thereof, neither haue the Captaynes much authoritie, neither are they very rich : for though they have many people, yet the government of them is divided into divers heads, so that they can hardly affemble to raile any Robellion, especially, be- 30 cause they remaine alwayes in the Kingdome, and neere about the King.

Reuenue,

The Reuenue of this King, without doubt, is exceeding great, and vntill wee have gotten it out of their Bookes (wherein every thing is fet downe very particularly) I will not prefume to publish the same, not as though I knew not that it is so, since whilest a man knoweth more of thus Kinedome, he doubteth leffe: Yet because I feare for all this that it will bee hard to make one beleeue the same, which knoweth it not of a certainty; making the Accounts not very large, his 200. Millions Reuennes are one yeare with another an hundred Millions in Silver, Gold, Rice, and an infinite others fay 150. number of other things; although the greatest part is Silver. And he that confidereth the greatnesse of the Kingdome, and that every man payeth Tribute to the King of their Persons, Lands, Trees, and other things (without carrying any Tribate out of the same) that which I speake wil 60 not feeme excessive. But as his Revenue is very great, so his Expenses are many. For those which in this Kingdome doe line at the Kings charge are many, to wit, all the Mandarins to whom the King giueth Wages, all the Souldiers, all the Kinstolkes of the King, his Euroches, and an infinite number of people, whereby his charges are exceeding great, although alwayes there re-

Expences.

mayneth a good deale for him to lay up; and there is no doubt but hee hath it in flore in exceeding great quantitie.

Many small Kingdomes round about acknowledge the King of China, and pay him Tribute. N ighbour as Corea, and others, whole names I know not, on this Northerne part; and on the fiele of Ma- Kingdomes. laca and Macao, many others. And sometimes on these Northerne parts they trouble him Corca or Corais somewhat, in robbing and killing of people. It may be that your Worlhip, or some bodie elie may demand, why the King of China being to great, subdueth not these small Kingdomes that lye about him to deliner himfelfe of trouble? I answere, that he wantch no abilitie: but I will A Paradoxe. Jye about him to deliner himselte et troubte: 1 answere, that he wanteen no author the Chinois, fay one fure thing, a Paradoxe to the people of our Earney, which is, That neither the Chinois, the content of the conte nor their King doe feeke, nor dreame of dilating their Empire more then it is. And this their

refolution is fuch, that although they would give them all thefe Kingdomes, they would not take them, & much leffe if they were farther off. For they hold it for one of the greatest mileries (especially the Mandarins & grave fort of people) to go out of their Kingdome to any other part. There is one of the best Examples hereof that may be given: which fell out of late, and that was, that as by the danger which might grow to his Kingdome, if the people of lapon should near of Chrac.

winne the Kingdome of Corea, which is joyned to China by the mayne Land, as they began to doe; the Chinois ayded the Coreans with many men : and the people of lapon by the death of their King called Quabacondono, did wholly aband n it. The Kingdome remayned in the power of the Chinois, and is continued two or three yeares. After which they whol-20 ly gaue it ouer, without any other greater respect, then that there were none that were willing to goe thither to gouerne it, nor that the King had any need to annexe it vnto his Estate. And without doubt, it seemeth that he would doe the like with any other, although they would put it into his hands, And touching those Kingdomes which pay him Tribute, there

is no great account made, whether they come or no : and their continuall comming, is more for

the profit of those which come, then that the King doth desire it. And therefore the Philippine Ilands which in former times paid Tribute to the Kings of China, were made none account of

when they ceased to pay it. This King hath one lawfull Wife (as other men haue) in choice whereof they haue regard to nothing elfe but to her good qualities and externall beautie, for there is no Nobilitie to be 20 fought for. Besides her hee hath a great number of Concubines chosen after the same manner. whose Sonnes (if the lawfull Wines Children faile) inherit the Kingdome, which commonly Ogenes fallethour, and fuch is he which now is King, and he which is to fucceed him. When any of their cloientife, women be once entred into the Kings Palace to bee his Wife, there is no name which may bee compared vnto her in being kept close; for they may not only not goe abroad, no nor bee seene of their Father, Mother, or Brethren. They have little or none authoritie, but such as they obtaine of the King. Also the feruice of the King, of the Queene, and of his Concubines, is all by Eunuches, a service doubtlesse vnworthy of a King. All these Eunuches (without any excepti- Eunuches. on) are of the most base people which are in all the Kingdome, whose Fathers (because they cannot keepethem when they were young) doe make them Eunuches, in hope that one day they

40 shall get into the Court to serue the King : the manner is farre different from some which are in Europe : for these bee like those which the Twies vie, Because their Fathers doe this for po- The yard and uertie, it followeth that they have no excellencie, for they have no meanes to learne it, and they all cut away. are little or nothing Learned.

They elect and choose these Eunuches from time to time to supply such as die, and this first yeare that I was here, they chose aboue three thousand, for which purpose there assembled aboue twentie thousaind (as they say) out of which number they made their choice. The Ele- Their numbers Ctors were a verie great Mandarin (to whom, as I faid before, the Kings private bufineffe belongs) and above. and another Eunush of the eldest and most private. The Examination and Election consistent in two things, which are a good Countenance and a good Tongue : for proofe whereof, they

50 make them pronounce two words, wherein those that have not a readie Tongue doe flemble. When they are chosen, and gone to the Court, they divide them in divers Offices: yet at their Service, first comming, they are appointed to waite vpon the old Eunuches as Boyes, which make good triall of their patience, and obedience : and he that after certaine yeares sheweth himselfe towardly, they begin to employ in greater matters.

Of these Eunuches, the King hath his Musicians and Mathematicians, who, to be e briefe, I Ignorance. fay, have no found understanding in these things at all, but only for complement or superficially: yet some of them are bound to watch all night, and to looke whether any Comet doe appeare, or any fuch like thing in the Skie, to enforme the King thereof : and to performe other like Offices. They are visually versecouetous, and as they are base, if they rise to bee private with the Courtourse.

60 King, some of them be proud and vincourteous. They serue the King as slaves, obeying his will which way toeuer he inclineth. The King chastifeth them verie sharp; y for every light offence: especially the King that now is, which is a very wicked man. He hash caused many tobe whipped to death, for some small matter wherein they have offended him. Yet there are some of them good and difer et, which the King wieth for dispatching of his businesse, and other matters

CHAP.6.S.7. King a home Prisoner. His Children of little esteeme.

of weight. Though the ordinarie wages which they have of the King bee small, yet it servesh them well to liue of, and therefore they goe verie well apparelled in many Robes of Silke verie finely wrought of divers colours, and the manner of their Capand Apparell differeth from alloeher peoples. There are of them in number, as they fay, aboue fixteene thousand of them in the Kings palaces, Hereby your Worship may see what Examples and Education the King of China observeth, which spendeth all his time with these and with women,

The common people neuer fee nor focake with the King. Law of Nations contem-

Emb-affager,

Although it be the custome of these Kings, to shew themselves from time to time to certain of the greatest Mandarins : yet they never luffer the rest of the people to see them, nor to speake with them; and when he speaketh with any bodie, they enter not into the place where hee is but the King commeth forth to a certaine place. If there be any Nation among whom the Law to of Nations hath no place in many things it is this: for as they have no commerce with other Nations, fo they have not the Law which is common to all men. And therefore they admit no Ambassadour in China, volesse it be by the way of giuing some Present, the King not acknow. ledging anymeither doe they thinke that there is any in the World, which is able to deale with their King by way of an Embassadour. And if they bring any Message (as the Iapons brought within thefe few yeares, who came to intreate of certaine agreements , by no meanes they are admitted to the fight of the King, neither doth he give them audience : but some Mandarin doth accompany them : and the entertaynment which they give them, and honour which they frew to all strangers which come vnto them is verie small. But as for the most part they have no great conceit of strangers, so their entertaynment is like to their conceit. Whosoever he be that 20 commeth into their Countrey, they shut him vp in a verie homely house, not suffering him to

The Kings Palaces are verie great; and albeit in the excellencie of Architecture they bee not comparable to thole of our Europe, yet they much exceed in the hugenesse of Building. They have three wals foure square, the circuit of the first may be as bigge as the wall of a good Citie, Betweene the first and the second wall, there is a wall which enuironeth the greatest part of the House, and here are many Houses of the Eunuches of the lowest fort, which exercise Mechanicall Arts, or the like, as Porters, &c.

Betweene the second and the third wall there are many pieces of the Kings House, which is not joyned altogether, but in divers parts there be divers Roomes, built for divers purposes, one 30 answering to another. These parcels of Buildings which are here (which are enerie one aslong as the Careere of an Horse, and very high) have no under Roome, but a great Building raised up with foundations of great Brickes, as broad and long as all the Building, wherein there are Gates of Marble itone very wel wrought to palle from one place to another. This house or Foundation is about eight fathomes high little more or leffe. Aboue these are guilded Galleries, Taraffes, Hals, and Chambers, which on the out-fide flew verie gallant (which is as much as can be feene; for no man can get in to fee them.) The greatest part of them is of Timber, with many gilded Embossements, and many other pleasant Pictures. The Roofes are verie well made. The Tiles are of a farre better fashion, in mine opinion, then ours, and so even joyned together that that they seeme to be all one piece : they are all anneled with yellow, which is the Kings Co-40 lour. To conclude, I say, that it seemed wnto me in multitude of Houses and greatnessea stately thing. Also betweene these wals the River runneth which I spake of: and to passe from one to another there are many faire Bridges of Marble made of very great stones: betweene these wals was one of the two fourth parts of the House, on which the fire from Heauen fell downe within these few yeares, and contumed it : and with the blowes of the stones which fell downe many verie great Houses were broken downe to the ground (as sometimes I beheld my selfe) and they remayned with many fignes of fire on them. They fay, that when this fire fell from Heauen, the King commanded his Sonne to kneele downe, and beseech The Heasen to be mercifull vato him, for he himselse was too wicked, and that the Heanen would not beare him. Within these wals are many Lodgings of the grauest Eunuches, who like Fellowes of Colledges line many in one 50 House, exerie one having his private Chamber. Heere betweene these wals are Mounts and Groues and other recreations whither the King repaireth to recreate himselfe. And the space of these wals is very great, for when I went to the Palace to teach the Eunuches which were in that place to trimme the Clocke, I passed before I came to their Lodging eight great Palaces, and on the other fide there were many more. The Lodgings of the Eunuches viually are low and bad, for the Kings Seruants, yet very necessarie.

Third parti- -

wicked.

Next after this followeth the third wal, where the King dwelleth, with his Wiues and Children, and those which where his neerest feruants, whereinto no man entreth but they. And therfore albeit I have heard that it is a very beautiful thing & very muchworth the feeing, as in very deed it sheweth to be : yet I cannot give any Relation of any thing concerning the same in par- 60 ticular. Only this I fay, that when I was in the House of the Eunuches that were the Mathematicians, I went fometimes vp into a Towre, from whence I might fee the tops of the Houses, the Groues, and Orchards, and me thought that I never in my life saw so great a frame of Building, although I have feene many in mine owne Countrie. And therefore there are alwaies

a great number of Officers of all Offices, some making new Buildings, and others repayring the old. The King neuer goeth abroad, especially this King, and his Ancestors some one time and King a home no more, vnto 2 Temple which they have builded to The Heaven, and the Earth, where everie Priloner, yeare they offer Sacrifics. And therefore I know not with what pompe hee goeth abroad: But Temple of these in his femice he hash no men of qualities it cannot hee fish as on Wines with its different Heasen and like as in his feruice he hath no men of qualitie, it cannot bee fuch as our Kings vie in their going Earth. to Church:

There is a barbarous custome among the Kings, that when the Prince is aduanced to the Kings. dome, within a short time after, all the rest of the old Kings Sonnes are to depart out of the

Houle to certaine places appointed for them, which vnto the third Generation are ferued like Barbarous v. To Kings, but they neuer come more in the presence of their Father, Mother, nor elder Brother; and fige of the therefore there is great lamentations of their Mothers at their departure. The Posteritie of these Kings Childoe alwaies remayne as Kinsmen, and with the name of the Kings Kinsmen. To all these (which dreng are very many) the King giveth fufficient mayntenance, which is no great matter. They never beare Office ; and deale with other people, and marrie with them , without doing themselues much good or none at all in being the Kings Kinfmen, nor purchase any speciall authoritie thereby. Other Kinsfolkes of the King, married with the Sifters, Daughters, or Coulins of the King, or Queene, although they have fufficient to live vpon, yet have they exceeding small authoritie, and haughtineffe. And herein, nor in any thing may they compare with the Mandarins.

Here came to visit vs one married with the Sister of this King that is now, in a Chaire with

20 three or foure Boyes to wait on him. Another came oftentimes married with the Sifter of the Wife of the Prince that is to inherit, on Horse-backe with one Boy only attending on him; and hee entreth into the Examinations that hee may proceed Doctor and become a Mandarin : So litle is the benefit that groweth vnto them by the Confanguinity or Affinity of the King which are joyned vnto him thereby.

Here the time faileth me, though neither matter, nor defire to give contentment to your King Afficie Worship, and the rest of my most deare Fathers and Brethren, neither doth nor shall euer faile and Confer me. And therefore if I shall understand, that they take this in good worth, I will give Relati- guinitie, little on of that which shall fall out here by the helpe and grace of our Lord , to whom I humbly befeech all of them to commend mee.

I fend here withall two Maps of this Kingdome of China, which came to my hand after I Maps of China. had written this Letter, and Relation. I fought to translate all that which is contayned in the China Letters; which is all the Rent which every one of these Provinces payeth to the King of China; and to make a description of all the Houses which enerie Prouince hath, and how many people, and many things elfe: But your Worthip may believe that by no meanes I had leyfure s and therefore I lend you only the figure, and another yeare (if it please our Lord God) I will fend you the same with the declaration thereof.

All the rundles and squares which are therein are Cities, or Fortresses of many Inhabitants, both of them walled about. There is no Towne here fee downe that it is not walled : the others

The Rivers are well diffinguished. The great lines are the limits of the Provinces : the other small lines, and of little circuit are the Iuridisdictions of some one principall Citie.

We print here another Map of all the World of our manner with Conif Letters, which bepuse wee want time to declare the Letters, I send not till the next yeare, which then we will fend if our Lord grant vs life.

I fend you many other Papers, that your Worthips may fee the fa hion of the Letters of these people of Chime, and what Characters wee committed to memorie. From Paquin, beeing the Court and Royall Citie of the King of China, the ninth of March, 1602.

CHAP. VII.

A Discourse of the Kingdome of China, taken out of RICIVS and TRIGAVTIVS. contayning the Countrey, People, Government. Religion, Rites, Setts, Charatters, Studies, Arts, Atts: and a Map of China added, drawne out of one. there made with Annotations for the understanding thereof.

Of the Name, Scite, and Greatnesse; the Tributaries, Commoditie, Arts , Printing , Seales , Inke , Pencill-pennes and Fanner

cap. 2. the nrft being a place; The duers names of this Kingdome.

Hier in the au. His vtmost Empire in the East, hath beene made knowne to Europe by divers appellations, as that of Ptolemer, Sina; that later of CMarcin Panism the Pensism, Cathay; and that most visual received from the Portugals, which call it China. I doubt not allo that this is the Region of the Hippophag, o.Horf-saters, a meat there as common as Beefe here: a salfo that this is the Region Series or Sides; foral-much as there is no Kingdome of the East where Silke is found in that quantitie:

and the Portugals ship it thence for I apon, and all India; the Spaniards also of the Philippina I. lands, fraight their ships therewith for all the American World. Moreover, I find in the Chima Chronicles that this Silke-worke was there two thousand fix hundred thirtie iix yeares before the Birth of Chrift: whence it paided to the reft of Affa, to our Europe and to Africa. But in on this varietie nothing feemes so firing to me, as that all these names are softmage to them, not knowne or once heard of, although the change of names be not strange to that Countrey, For as often as the Empire passeth from one Family to another, according to the vicifitude of humane Affaires : He which attayneth the Throne, imposeth a name at his pleasure. So hath it beene The thirty is a superior at the principle of the principl Sing names & Oc. And fince this Family, called Cin, which now holdeth the Sourreigntie, hath reigned, it is yestini name called Min, which intimateth Splendour, and by vivall addition of one lyllable Tamin, that is, the Kingdome of Great Splendowr, Brightnesse or Glory. Yet doe few of their Neighbour Nations observe these changes of Names, whereby each of them almost, stile it by severall appella-40 tions. Those of Cocin, Cauchin-china, and the Stamites call it Cin; the lapanders Than; the Tartars, Han; the Westerne Saracens, Catas. Also amongst the Chinois themselves, besides that arbi rary name fo imposed by their Kings, it hath some common to all Ages. Such are Counge, Conceitof the that is, the Kingdome; and Chiumboa, which fignifieth a Garden, a name arifing from their Geo-Earthsforme. graphy, beleeuing indeed the roundnesse of the Heauen, but a squarenesse of the Earth, and their Kingdome in the midft thereof, a conceit growne out of conceit now, by better instru-Ction of the Icfaits.

The Kings

Calling, VIII

knowne:0

Their King is called Lord of the World, and they supposed accordingly that their Kingdome contained the principall part thereof; not deeming the Neighbour Kingdomes worthy to bee called Kingdomes, which yet before their Commerce with Europeans were all they knew. And 50 not vinworthily is the name Great prefixed to their Kingdomes appellation, beeing the greatest Kingdome in the World, which at this day carrieth One Name, or hath done in former times. For Southward it beginneth in the nineteenth degree, at the lle which they call Hainam, that is, the South-Sea; and runneth into the North to the two & foreieth, even to those wals which dithe Kingdome unde the Chinois from the Tartary. The longitude beginnesh from the one hundred and twelfth (reckoning from the Canaries) in the Province Tunan, and extends East-ward to the Sea in one hundred thirtie two. These Dimensions wee have observed in divers places of the Kingdome where we have passed, by Astrolabes and other Mathematicall Instruments; adding also the obfernation of Eclipfes in their Almanacks, where the Moones Change and Full are justly deferibed, and specially by authoritie of Cosmographicall Plaines. Year others which shall come of 69 ter vs shall more exactly observe the longitude (which I dare say will be no great matter) I shall not viwillingly yeeld. Hence may be observed that this ample Kingdome is for the most part The temperate Within the temperate Zone; neither doth it extend fo farre North-ward as some Maps mand deferibed by many degrees. And left any should thinke that some great parts of to large a Domi-

CHAP.7. S. I. Prosinces, Regions, Cheu, Hien, numbers, Souldiers &c.

nion be detert, I will here translate out of a China booke entituled, The Description of that King. done, there printed, 1579. that which followeth.

In the Kingdome (of China) there are two Prouinces Royall, Nanquin the Southerne Court, and Pequin the Northerne, and thirteene others. In these fifteene Prounces (you might call them King. domes) by another durision are numbred one hundred fiftie eight Regions or lesse Provinces, called by them Fu; the most of which be the twelve or sisteene Cities of reasonable quartitie, besides Villages, Hamlets, Castles and Townes. In these Prouinces we two bundred sortie seven greater Cities, called Chew bowbeit sometimes distinguished from other Cities rather in dientite then largenesse) of vulgar Cities, which they call Hien, 1152. Of men growne to ripe age, which pay tribute or poll money to the King, were then fiftie and eight millions, fine hundred fiftie thou fand, 801. In all which the female fexe is not reckoned. and of the Masculine are omitted, Boyes, Youth's, Eunuchs, Souldiers, the Royallkindred, Magistrates, Students, and very many others. And of the Souldiers, although there be a Supine Deace (except fome Tattatian affault (ometimes) there are maintained in the Kings pay, and in perpenual Armes, aboue ten "hundred thousand. For the three Northern Proninces are almost halfe in pay. In that booke are num- "Somelay mabred Kingdomes adiopning to that of China and tributarie; to the East three, to the West siftie three, to my more tee the South liftie five, to the North three. Tet I observe that nothing so many doe in these dayes pay tribute, the Map and and thole which doe, carry more from China, then they bring thather: and therefore the Chinois care not neces. much whether they continue loyall or no.

To the worth of this Kingdome, may bee added, the fortification by Nature or Art round about it. To the South and East, the Sea washethir, and so many Ilands guard it, thet hardly can a Fleet of Ships approach the Continent. To the North, fleepe presipiees are joyned together, with a continued Tract of 405, leagues, and exclude the Tartars affaults. To the Northwest is a sandy desert of many dayes iourney, which prohibite passage of an Armie, or minace their burialis. The South-west hath great Mountaines and little Kingdomes to preuent sear on

From this largenesse of Territories proceeds such diversified varietie of things growing in that Kingdome, some in the tortid, others in the colder or in the temperate Zones: whatsoeuer The commois required to the necessitie or delicacie of food or raiment being there naturall; nothing being dises of china. here in Europe but either is there, or a better supply : Wheat, Barley, Panike, and other Corne; nere in zarroge out entire, is court, on a percent improve ventire and Apples of the beft(Nuts Fruitsofall and Almonds excepted) Figs and others viknowne in our world, as the Liegar and the Longa- forts, mas in Canton Province onely ; the Sucufina or China Figge, or Apple to called, because they may dre it as they do Figs, & liker to a Peach red, without hoarinesse or stone : in Oranges, Citrons, Limons they exceed all places. So doe they in goodnesse and varietie of Gardens, Herbs, as being there much vied, some for religion, others for pouertie eating nothing else. Flowers have there taken vp their bowers , admirably varied, more respected for fight then sent ; the Art of diffuling fweet-waters being there vuheard of. In the foure Southerne Provinces grow Betre or Betele leafe, and the tree Arequa or Arequeira, so much vied in India, and chewed all day long for their flomacke and teeth. Sefame Oile is both odoriferous and plentifull. Wine is not there fo good as in Europe (the Grape being neither plefant nor frequent) made of Rice and o-

ter unitys. Hogs-fieth is common food : they have Buffails, Muttons, Goats-fieth; Hennes, Duckes, Fieth for food-Geefe, innumerable: Horfes alfo, Affes, Mules, and Dogs-fleth are food, and fhamble commodities. In some places superstition abstaineth from Beefe and Buffalls, Venison, especially red Decre, Harc, and divers domestick creatures are common; all cheape. Their Horses and Beasts of labour are not lo goodly as in Europe, but more in number, and therefore in cheapneffe. The whole Kingdome is very commodious for passage by Ruters both naturall and hand-made: Passages by whence the number and kindes of shipping is incredible; infomuch that a moderne Writer water

hath sucreed, that there are as many which keepe on the waters as on the land; an Hyperbole, 50 yet not fo exceeding the truth to fuch as faile their Rivers, as may bee feene to others. I am of opinion, that there are as many Ships in this Kingdome, a sare in all the world befide in freshing and ware opinion, trust treet areas many any a min removance, as a cent an me wond bettue in near waters : for their Sea-fhipping is fewer and not comparable with ours. But to returne to their dwellers. Hories, the Chinos know not how to manage and breake them but by gelding ; fo that their Horses for service are innumerable, but so viscourceable, that they will not induce the neighing Horses. of the Tartarian Hotle without flight. They snoot them not with Iron, so that in rockie and

Befides the Seas plentie of Fish and Rivers, they are stored also in Lakes, seeming for their Fish. depths and largeneife perie Seas. They have more flore of Fish-ponds also, then in these parts, whence the Market is daily furnished. Their Woods have no Lious, but store of Tigers, Beares, Wildeberts. 66 Woolues, Foxes. Elephants there are not, but for pompe some kept at the Court in Pequin, Woolacs, Foxes. Elephants there are not, but for pomperoine applied with abundance of Cotton, brought from other places. Flaxe they have not, but are implied with abundance of Cotton. the feed whereof was brought thither foure hundred yeares fince, and hath fo liked the foyle, that the whole world, as may feeme thence might have fufficient. Of Silke-workes weefly Sile efcloth. no more. Of Henpe, and of fome other Herbs, they make many clothes, especially for Summer

Iq

this Table they lightly glue on a whole leafe written, and then cunningly shaue the drie paper. this rate they make very little transparence; after which they cut the wood, that onely the prints or lineaments of the Characters are eminent: which done, with great facilitie and coleritie they print off leaues at pleafure, one Printer often 1500, in one day; fo ready also in cutting, that to mee Ours feeme to spend as much time in composing and correcting. This course is more accommodated to their great Characters then to ours, whose little letters are not easily out in woodden Tables. They have this commoditie also, that keeping these Tables by them, they may with little labour adde or take away words or fentences: and need not at once print off any more Copies then present vse or sale requireth. Wee doe this with Bookes of our Religion

In or European Sciences, printing them at home by our China feruants. They have another way of Another way. printing Characters or Pictures printed before in Marble or Wood, laying on a leafe of Paper moift, and on that a woollen Cloth, whereon they beate with a Hammer till the Paper infinuates it selfe into the voide spaces and lineaments of the Characters or Picture : after which they lightly colour that leafe with Inke or other colour, those delineations onely remayning white, and retayning the Prototype-figure. But this is for groffer Pourtraitures,

They are much addicted to pictures, but nothing so cunning in painting, founding, grauing, Painting, graas Europeans. They make magnificent Arches with figures of men and beafts, and adorne their uing tounding,

Temples with Idols and Bells, but their Genius otherwife generous and ingenious enough, for want of commerce with other Nations, is herein rudely artificiall. Shadowes and Oyle in picturies are to them vaknowne, and their Pictures therefore have no more life of Art then Nature. In Statues, themselves seeme Statues for all rules of Symmetry any further then by the eve, and yet will be doing in huge (indeed) Monsters of this kinde, in Earth, Brasse, and Marble. Their Bells haue all woodden Hammers, which yeeld a woodden found, not comparable Bells.

to ours, nor feeming capable of those of Iron. They have variety and plenty of Musicall In- Musicall In-Aruments, yet want Organs and all that haue Keyes. Their Strings are made of raw Silke, and Aruments, know not that any can be made of Guts. The Symmetrie of their Instruments is answerable to ours. All their Musike is simple and single-toned, veterly ignorant of consort in discord-concord: yet much applaud they themselues in their owne Harmonie, howsoeuer dissonant to our eares. But this pride feemes to grow (as vitally it doth) from ignorance, and it is likely they would 30 preferre ours if they knew it.

They have scarcely any Instruments for measuring of (that which measures all things) Time; Want of House fuch as they have, mediate by water or fire, but very imperfeedly, as its allot their Sun-diall, which they know not to fit to differing places. They are much addicted to Comedia and them, and Dislin. they know not to fit to differing places. They are much addicted to Comedies, and therein exceed ours; some practising the same in principall Townes, others trauelling thorow the Kingdome (or roguing, if you will) being the dregs of the Kingdome, buying Boyes whom they frame to this faigning facultie. Their Commedies are commonly antient, whether Histories or Comedies. deuces, and few new written. They are vsed in publike and in private Solemnities; as also in Feaths, whereto being called, they offer to the Inniter a Booke, in which to take his choise, the Guests looking, eating, drinking together; and sometimes after ten houres feasting, they will

40 fpend as much succeeding time in a succession of Interludes one after another. Their pronuncia- Scales. tion is with finging accent, and not with the yulgar tone. Seales are of great vie with them, not onely for Letters, but for their Poems also, Pictures, Bookes, and many other things. These contayne the name, fur-name, dignitie, and degree : neither content they themselves with one, but have many, inscribing sometimes the beginning and end of their workes; not imprinting them in Waxe, or such like substance, but onely colour them red. The chiefe men haue on the Table a Box efull of Seales , which contains their divers names (for every Chinese hath many names) and those of Wood, Marble, Juorie, Brasie, Crystall, Corall, and better stones. There Various subnames and workers of that Scale occupation, their Characters differing from the vulgar, and flunce effective many workers of the vulgar, and flunce effective from the vulgar and flunce effective f

During of Antoquate and State of making Inke for all writing, made into little Cakes or Inke-stating. There is another are not vinine, on meaning line tot all virining, made into more cases of Balls of the fmoke of Oyle. For their effirmation of exact writing makes the making of Inhe also to be holden an Art not illiberall. They vse it on a Marble smooth stone; with a tew drops of water rubbing those Balls, and colouring the stone, thence taking it with a Penfill of Heres Penfils in

Fannes also are in much vse by both Sexes for the causing of winde to coole them in Summer. Fannes. No man may goe abroad without a Fanne, although the weather be cold, and the winde already bee importunate: the vse being rather for ornament then necessitie. They are made of Reeds, Wood, Juorie, Ebonie, together with Paper or Silke, and a certaine odoriterous Straw, in round, ouall, or square forme. The chiefe men wse them of Paper gilded with plaits to be let in or out,

60 and therein inf. ribe some pithie sentence or Poeme. These are the most common gifts or prefents (as Gloues in Europe) and we have a Chift full of them fent vs by our friends. In other things the Chmois are liker ours, vling Tables, Stooles, and Beds (which the adioyning Nations dee not, but fit on Carpets on the floore) to eate or fleepe.

vie. They milke not their Sheepe; they sheare them, yet make no cloth of the Wooll (notwith-Randing, woollen-clothes brought thither by Merchants is well fold; but light Summer clothes for blankets and other fleight vies. The North parts, though neerer the Sunne then some Re. gions in Europe, are colder, the great rivers and lakes frozen ouer, of which we can give no reafon, but the neighbouring Mountaines of Tartaria: against which they are furnished with choice Furres.

All forts of metalls are there found. They make befides Braffe and Copper, another shining like Siluer, as cheape as the yellow Braffe. Of molten Iron they make Kettles. Caldrons Relie Mortars, Ordnance, and other things. Their Gold is cheaper then with vs. Silucr they yee for money, diffinguished not by stampe but weight, in all bargaining ving the ballance, which is to made the more incommodious for the differing goodnesse of the Silver, and frequent alley and fraud. In some places are Braffe farthings. Place and Gold vessells are vied by the greater, but nothing so much as in these parts. The women spend much Gold and Siluer in heir head-tires. The vulgar vie earthen dishes, called, I now not why, porcellane; the best whereof is made in the Kiamfin Province of a yellow carth. It endureth without riving hot meates, yea as woodden diffes here with a wyre, they fowe the rifts and make them hold liquor. They make Glaffe, bur therein are short of the Europeans.

Their houles are of Timber commonly, even the Kings Palaces, the walls which ferue for parritions of roomes being sometimes of Bricke, but the roofe sustained by Timbers : which together wish their shipping argues their plentie of trees. Oakes are rare, but supplied with a hard 20 and eur talking wood with them yied for coffins, in which their curiofitie will fometimes frend a thousand Duckers. There is also store of a kinde of reed, which the Portugalls call Bambu, of almo! Iron harmeffe, the roundnesse scarcely compassed with both hands, and serves for smaller posts; the lesser of them for Launces and other vies, For fire they vie Wood, Coles, Reede. Straw, and a bituminous substance called Mai (a kinde of Mine-cole or Sea-cole) which is

most and best in the North, digged out of the earth.

Of medicinable herbs they have divers, specially Rhubarbe, sold for tenne halfe pence the pound : China Wood, or holy Wood growing in defatts naturally, and thence taken for no other price but the labour : Muske : Salt both made of Sea-waters, and of others cafily in the Continent; Sugar more common there then Hony, though both plentifull : Waxe both of Bees, and 30 another whiter and burning better made by certaine wormes, which therefore are nourished in trees; another also made of a certaine fruit: Their paper is not so during as ours, nor can endure the proffe on both fides.

I omit their parti-coloured Marbles, their gems, colours for paintings, odoriferous Woods, &c. I cannot paffe by fome rarities; as their thrub whence they make their drinke (id. They Cha, Chia, or Cia. gather the leaves in the Spring, and dry them in the shadow, and keepe it for daily decocition, ving it at meates, and as often as any guest comes to their house, yea twice or thrice, if hee make any tarrying. They sup it hot, bitterish to the palate, but wholesome : not of ancient vie, for they have no ancient Character in their bookes for it. The lapanders pay deare for it, ten or twelue Duckets a pound for the beit, and vieit otherwife, putting the poulder of the leafe 40 to hor water, as much as two or three spoonefulls : the Chinois put the leaves themselves into the hot water, which they drinke, leaving the leaves behinde. They have also a bituminous subflance like milke, thrained out of the barke of a tree, of pitchy cleaning, whence they make Sandaracha, a varnish for their houses and houshold, ships, and other things : veelding a smooth touch to the hand and glaffie splendour to the eye with long continuance. Thus can they more then counterfeit the colours of any wood, and hereby are prouided against prouisions of Napery, this feruing for Table linnen; they recourring any greafie contagion with a little rinfing of water. They have an Oyle also pressed from an apple not valike it in vie, but not fore-

> They have Cinamon and Ginger growing, Pepper and other Spices are brought from other 50 parts. They have flore of Gun-powder, not fo much for Artillerie (which they can vie but meantly) as for Fire-works in pompous spectacles, thereby representing, Trees, Fruits, Battels, and other things with great Art and coft. We faw at Nanquin, in the first moneth of the vere, as much this way fpent as would have ferued a continued fight two yeares.

> For Mechanicall Arts, they are not comparable to our mens Architecture, whether recregard the beautie or continuance of their buildings, they not fo much as conceiuing or crediting the stately magnificence or long durance of some in these parts. They either make no foundation, or verie ficight, and thinke a mans age to be age enough for a house, and that scarcely without reparations: their houses being also of Timber, and where the walls are Stone, they have Time bers to beare up the roofe, that the wall may eafily be repaired or renewed without meddling 60 with the supporters.

Printing is ancienter there then here; fomethinke before the Incarnation, and most certaine Antiquitie and about five hundred yeares old: much differing from ours because of the multitude of their Chamanner of it. racters. They graue or cut their Characters in a table of Peare-tree, Apple-tree or Zizaphus, In

Chap. 4. Of their Arts in China. This is not to be understood ot Temples, &c. 25 may appeare by Nanquin Temple, Penting.

ð. I I.

Ow, for their more liberall Arts, and Literate-degrees, this Kingdome differs from all

others: in which their Learned beare principall fway. The China words are Money

ned into one Diphthone, to speake after our manner; for they have not Confenents

fyllables, not one otherwise, howsoener two or three Vowels sometimes are conjug. To

Of their Characters and writing downward: their studies, Ethikes, Astrologie. Phylike, Authentike Authors, Degrees how taken both Philosophicall and Militarie.

is a feuerall word. And although the number of things and Characters feeme the fame, yet doe

they fo compound them together, that they exceed not feuenty or eighty thousand; and hee

which knoweth ten thousand of them, hath the most necessary: to know all is in manner for

any one man impossible. Of these Characters the found is often the same, the figure and signi-

fication differing : 10 that no Language is fo equiuocall; nor can any Speech bee written from

their eares cannot. Yea, in speaking accuratly, the Hearer often understands not without repe-

tition and writing either with Inke, or water on the Table, or forming the Characters in the

aire; and this most happens in the most elegant and polite discourses (the stile of Bookes and

tion and paucity of founds is in some fort exfed be Accents, which are five, and not easie to di-

ftinguish; by which of one Syllable (as wee account it) they make it with differing tones five fold in differing fignification; and there is no Word which is not pronounced with one of these

Accents. Hence is the Language fo difficult as none elfe in the World for Strangers to learne to speake and understand; which importunate labour of ours hath yet attayned. The reason I con- 10

ceine to be that they alway have laboured to adorne their writing more then their speech, their

eloquence ftill confifting in writing and not in pronunciation, as I forater is commended as

dity, the commerce with divers Nations of different Linguages by community of writing; la-

pon, Corai, Cauchinchina, the Leubices, vnderstanding and reading the Characters, each into his

owne Language, which the other understand nothing at all. Each Province also hath its owne.

and all haue one common Tongue besides, which they call Quonboa, or the Court Language (the

Magistrates being all forrainers, and none bearing Office in his Countrey Prouince) vied in their

learneder in conference, except priua ly by Countrey-men: yea, children and women learne

this Court-speech. I heare that the Iaponians have an Alphabet also of Letters after our fa-

shion, besides these Characters; but in China they have none, so that from their Cradle to the

extremest age they are learning their Characters, as many as professe Learning: which how-

foeuer it takes up time from better Sciences, it doth it also from idle youthfull vanities. Hence

also riseth a kinde of writing with them, in few Characters expressing that which would

Of all the noblest Sciences they are best skilled in morall Philosophie (naturall, they have ra-

ther obscured) and being ignorant of Logicke, they deliver those Ethicke precepts in confused 59

fentences and discourses without order by meere naturall wit. Their greatest Philosopher is

called Confutius, whom I finde to have beene borne \$51, yeeres before the comming of Christ,

and to have lived above 70. yeeres, by example as well as precept exciting to vertue, accounted

a very holy man. And if wee marke his fayings and doings, wee must contesse few of our Eth-

nike Philosophers before him , and many behinde. But with the Chinois, his word is authori-

tie, and no speech of his is called in question; the Learned, year the Kings also, ever since wor-

shipping him, not as a God, but as a Man; and his posteritie are much esteemed, the head

of that familie inheriting by grant of Kings a title of great honour, with immunities and re-

Courts, and by the Learned: this onely did ours learne, nor is the other yied by the civiller or \$

This multitude of Characters, as it is burthenfome to the memory, so it hath this commo-

They have some knowledge also of Astrologie, and the Mathematikes: In Arithmetike and 60 Geometry antiently more excellent, but in learning and teaching confused. They reckon foure hundred Starres more then our Aftrologers have mentioned, numbring certaine smaller which doe not alway appeare. Of the heavenly Apparances they have no rules : they are much builed about foretelling Eclipses, and the courses of Planets, but therein very erroneous; and all their

CHAP. 7. S. 2. Astrologie, Eclipses, Physicians; Confutius and bis three degrees. 285

skill of Starres is in manner that which wee call Indiciall Aftrology, imagining these things helow to depend on the Starres. Somewhat they have received of the Westerne Saracens, but they confirme nothing by Demonstration, only haue left to them Tables, by which they reckon the Eclipses and Motions:

The first of this Royall Family forbad any to learne this Iudiciall Astrologie, but those which by Hereditary right are thereto deligned, to preuent Innouations. But he which now reigneth mayntayneth divers Mathematicians, both Eunyches within the Palace, and Magistrates without, of which there are in Pegnin two Tribunals, one of Chinois, which follow their owne Authors, another of Saracens which reforme the fame by their Rules, and by conference together. 10 Both haue in a small Hill a Plaine for Contemplation where are the huge Mathematicall Instruments of Braffebefore mentioned: One of the Colledge nightly watcheth thereon as is before observed. That of Nanquin exceeds this of Pequin, as being then the Seat Royall. When the Pequin Astrologers foretell Eclipses, the Magistrates and Idoll Ministers are commanded to asfemble in their Officiary Habits to helpe the labouring Planets, which they think they do with beating brazen Bels, and often kneelinge, all the time that they thinke the Eclipse lafteth, left Eclipses,

they should then bee denoured (as I have heard) by I know not what Serpent Their Physicke Rules differ much from ours; they examine the Pulse alike, They succeed Physicians well in their Prescriptions, which viually are Simples, Herbs, Rootes, and the like. They have for it no publike Schoole, but each learnes it of his owne Mafter, yet in the two Royall Cities so Degrees of this Art are given after Examination, but curforily and without any respect acquired by his Degree, because all may practise which will. Neyther doth any study Mathematickes or Physicke, which is in any hope of the Ethikeglory, but such as want of wit or meanes hath deterred from studies more sublime. Contrariwise, that Ethike Science is the Ladder of China felicity. Confutius brought into order the Bookes of foure former Philosophers, and wrote a fift confutius his himselfe, which five Bookes hee called Dollrines: in which are contayned Morall and Politike five Bookes, Rules, Examples of the Ancients, Rites and Sacrifices, divers Poems also and the like. Besides Tetrabiblions these fine Volumes, out of Confusion and his Disciples are brought into one Volume, divers Precepts without order, Similes, Sentences Ethike, Oeconomike, Politike: this Booke for the foure parts is called the Foure Booker. These nine are the ancientest China Bookes, whence the 30 others most what are taken, and contayne most of their Characters. And the ancient Kings en-

acted that they which professe Learning , should take the foundations of their Learning from those Bookes, not only to learne the proper sense of the Text, but to bee able on the sudden to write fitly of any sentence, for which cause that Tetrabiblion is learned without Booke, Neyther is there any Vinnerstie or publike Schoole (as some of ours have affirmed, the Masters or Profesfors whereof haue undertaken to read and expound those Bookes; but every one gets a Master at home at his owne choice and coft (of which there is a huge multitude.) In this Science are three Degrees bestowed on them which offer themselues to be examined and are judged meete. That Degrees, Examination is almost wholly in Writing. The first Degree is conferred in every City in that Tibiothe Proplace which is called the Schoole, by some learned man defigned to that Office by the King, who poler.

40 is by that place called Tibis; the Degree is termed Siencai. A threefold Examination is premited. Siencai a Bi-

First, at his comming to any City of his Province, all that stand for that degree in that City, and chelors dethe confining limits thereof refort thither and are examined by those Masters which are set ouer steep of Art the Bachelours till they have attayned further Degree, mayntayned by the Kings stipend. In with vathis Examination every one is admitted, perhaps foure or 5000. affembled to that purpole. The fecond is by the foure Gouernours of the City (for none are admitted to Gouernment but the Learned) which present our of all that number 200. of the better Writers to the Tibio, and he in a third Examination chuseth 20.or 30.of the beft, which he entituleth Bachelors: their Enfignes are

a long Gowne, a Cap, and Boots, which none else may weare, & in all places they are much respected Ornsments. as in a ranke aboue the vulgar Citizens, and enjoy also divers Priviledges, being in manner subject Their Privi-50 only to the Masters aforelaid and the Tibio, other Magistrates scarsly medling with them. This ledges.

made before to re-examine them ; and these according to their writing hee divideth into five rankes; the first he rewardeth with some publike Office in the City, the second with some inferiour honour, the third he neyther rewards nor punisheth, the fourth he causeth to be publikely whipped, the last he degradeth and maketh againe Plebeians. The second Degree is called Kingin, and may be compared with our Licentiates, and is conferred but once in three yeares, and that in the Metropolitane City about the eight Moone with greater Majesty. And the degree is not Thesecond conferred to all, but to a certayne number of the worthieft, according to the dignity of each Pro- degree, Kinuince : Pequin and Nanquin haue each 150. Cequian, Quamfi, and Faquian 95. others fewer. Only \$10, 25 Licen-Bachelors, but not all are admitted to this Examination, the Tabia fending out of each City or thates or Ba-Schoole 30. or at most 40. of the best, which number yet ariseth in some Province to 4000. of unnite, if we those Examinates or Probationers for this second degree. A little before the eighth Moon (which compare them

Tibio not only hath authority ouer these new created Bachelors, but cuer those which were

often fals in September, the Pequin Magistrates present to the King 100. of the most esteemed withours. Philosophers in the Kingdome, who thence pricketh or nameth thirty, for each Prouince two, to Examin. 154

Palace of ex-

take charge of the Examination of these Candidates. One of these two must bee of the Hanks Colledge, the Collegians whereof are most famous thorow the Kingdome. The King doth not name them till that nicke of time when they must presently packe to their Province, dilgently guarded alfo that they fpeake with none of that Province till the Aff or Commencement be path. In the fame Prouince allo are cholen the best Philosophers to affift these two Examiners. In tuery Mother City is a huge Palace built for this purpose, compassed with high wals, with many sign tions for the Examiners separate from noyse; and foure thousand Cels or Studies besides in the midft of the Palace, wherein is a stoole and table for one man, that none may see or confer with

y others. When the Examiners sent by the King, and those of the Province are come thither, they are 10 presently shut up in their stations before they can speake with other men, or with each other. during all the Examination time. Night and day, meane-whiles the Magifrates and Souldiers guard the Palace from Colloquies. Three dayes (the same thorow the Kingdome) the ninth, twelfth and fifteenth of the eighth Moone, from morning to night are appointed for their winting, the doores being shur. A light refection prouided the day before is given to the Writersat publike cost. When the Bachelors come to the Palace, they are thorowly searched whether they haue any Booke or Writing with them, and are admitted only with the Penfils which they vie in writing, their Plate, Paper and Inke; these also and their Garments searched to preuent all fraud, which found caufeth the twofold punishment both of losse and sence. When they are admitted, the doores shut and sealed, the two Royall Examiners out of the Tetrabiblium propound to three Sentences for fo many Theames to every of them; and foure out of the five Bookes of De-Seaco writings drives for so many other Theames. These seven Writings must bee made for elegance of words and weight of Septences according to the Precepts of China Rhetoricke; neyther must any Writing contayne aboue 500. Characters. Two dayes being passed for the Examinationn of

Theames si-

thele; the next day out of the Chronicles, or other three Cales of Politic are propounded, wherein each which three Theames or Writing express their minde, or Libel-wise admonth the King what were fittest to be done. The third day three Law Cases, such as happen in the Maguitrates, Offices are propounded, for each thereof to expresse his Sentence. These in great filence, each in his appointed Cell, having written their Theames, subscribed with their owne, their Fathers, Grand-fathers and great Grand-fathers names, and sealed so that none but men appointed may reade them, offer them to certayne Officers, which before the Examiners fee them ; cause them to bee transcribed by certayne thereto appointed : which Copies to be distinguished from the Originals are written in Red Inke, without the Authors names the Originals laid vp (afely) that none might by the hand or name know the Authour. In this Examination the Assistants first roiest the worst & present vnto the two Examiners twice so many as are to be chosen Licentiates; as if one hundred and fifty are to bee chosen, three hundred are tendered to paffe their last scrutinie: who first lay by the best, so many as are to bee elected (and thence take the first, second, and third, and set them accurately in order, and then conferre them with the Originals, thence taking the names which they cause to bee written in great Cubitall Letters, in a luge Table, which they expose about the end of the eighth Moone in great 40 Detects, in a mage Laure, winten mey captor about the time of the communication of magnitates, and appliant of the new Blefts Friends and Kindred. The Printledges and Ornaments of this Degree are more then of the former, and it they intend to printledges and Ornaments of this Degree are more then of the former, and it they intend to printledges.

Third degree

Theames were best liked. The Bachelors of other Prouinces may not here be admitted slome only except of the Kings Schoole in Pequin and Nanquin. The third Degree is like our Doctorship, called Cin. su, which is conferred enery third yeare also, but onely at Pequin, and alway is the next year after that Commencement of Licentiates. Only three hundred chosen ou of the whole Kingdome obtayne it, although the Li- 10 centiates of enery Prouince are admitted to the Examination.

ceed no further, they are hereby capable of very good Magistracies. After the Act, the Kings Examines publish a Book of their proceedings, the names of the Graduates and their principal Writings, especially his which is as the Elder Brother (they call him Quagan) and whole

Co'as

This Act is in the second Moone on the same dayes that the former and in like forme, saving that the diligence is greater, as for a greater degree, and the Colai, the chiefe Magistrates of the that the unigence a greater, as to, a poster segre, and the same Palace, where the Li-kingdome are Examiners. The Dockors being pronounced in the fame Palace, where the Li-centiates whe to bee; all of them in the Kings Palace, before the chiefe Magistrates of the Court (yea anciently the King was wont to bee present) make a Theame, according to the judgement whereof, the order of the Magistracies which they are to beare, is declared, being distributed in three Rankes.

Hee that in Examination of Doctors had the first place, hath in this second Examination the third place without question : but hee which hath the first or second enjoyeth a great dignitie 60 during his life, besides the greatest Offices in the Common-wealth; and might (compared with ours) bee as a Duke or Marqueffe, if it were Hereditary. These Doctours presently haue their peculiar Vest, Cap, Bootes, and other Enfignes of Magistrates, and are preferred to the best Offices, fuch as the Licentiates may not attayne, and are as the prime men of

Those Licentiates which are rejected from the Doctorship, if they meane to proceed no fur- Ambition will ther, are preferred to Magistracie, but if they list still to stand for that degree they betake them be highest or felius home to their Bookes atresh, till the third-yeare-examination returnes, fo that fome stand nothing. ten times, continuing follong private to become more publike. A Booke is also published of them and of their fuccesse. Another is yearely set forth contayining the Names, Countrey, Parents, O fices of all the Dostors; and where they governe, whereby a man may know how any hath rilen or descended all his life, as is there vivall after their merits. It is remarkable also how the Licentiates and Doctors of the same yeare respect one the other as Brethren euer after, and

loue the Friends also of their Colleagues, and honour their Examiners as Fathers. They vie to grant at the fame times and places the fame Titles (in the Moone following) to give, Military Professors, but with lesse pompe, because Souldierie is of no such reckoning with them. and few fland for them. This Military tryall is three-fold, in the first they shoot nine Arrowes on Horse-backe running; in the second they shoot as many at the same marke standing and hee which hath hit the Marke with foure on Horke-backe and two Arrowes on foot, is admitted to Threefold

the third tryall wherein they have fome Theame of Military matters propounded, and the tryall

Indges examining this Triple tryall out of the whole number pronounce about fifty Licentiates in enery Pronince, And when the Doctorall Act is at Pequin, one hundred of the choice of these after a Triple Examination are made Military Doctors. These Doctors are more easily admitted to Military Prefectures (but scarcely without Bribes) then the Licen-20 tiates. Both the Philosophicall and Military, ouer their doores, set vp in great Letters this their new attayned dignity. All the Examiners, whether of Mathematicall, or Military, or Philotophicall degrees, are of those Pulosophers, without affiftance or any Captaine, Mathematician, or Physician, as if thereby they were inabled to all things.

liuerance of the Kingdome; which being shewne to the King, is priniledged with pardon of any penaltie, though mortall, three times, except for Treason which forfeiteth presently all Priniledges. Euery time it obtaynes any pardon, it is engrauen in the Plate. The Sonnes in Law. and Fathers in Law of the King, and some which have extraordinarily merited of the State, enjoy like Honours and Reuenues with the fame diminution of time, as before,

Magiffrates. Dumfu and

Lau Ye or Lau Mandarin 2 Pertugal name.

Healfo ordained that all Magistracie and Gouernment should belong to those Licentiates and Doctors, whereto neyther the fauour of the King or other Magistrates are necessary, but their owne merits, except where corruption frustrates Law. All Magistrates are called Quonfu, and for honours fake they are stiled Lan je or Lan sie, that is , Lord , or Father. The Poringale call for honours take they are trued Law je or Lawy, and Arillocraite, in that Gouernment: for 10 them Mandarias. These have some representation of Arillocraite, in that Gouernment: for 10 though they doe nothing but first peritioning the King, hee also determines nothing without their follicitation. And if a private man petitions (which is feldome, because Officers areappointed to examine Petitions before the King fees them) the King, if hee will grant it, fends it to the Tribunall proper for that businesse, to aduise him what is fit to bee done. I have found for certaine, that the King cannot giue Money or Magistracie to any, except hee bee folicited by fome Magistrate : I meane this of publike Reuenues; which doubtlesse doe exceed one hundred and fiftie Millions yearely, & are not brought into the Palace Treasurie, nor may the King frend them at his pleasure : but all whether Money or Rice and other things in kinde, are layed vo in

the publike Treasuries and Store-houses, in all the Kingdome. Thence the expenses of the King his Wiues, Children, Eunuches, Family, and of all his Kindred are in Royall fort disburfed, but 18 How dispensed according to the ancient Lawes, neither more nor leffe. Thence the Stipends of Magistrates and Souldiers and all Officers thorow the Kingdome are paid: the publike Buildings, the Kings Palace, Cities, Walls, Towres, Fortresseand all prouision of War are thence sustained, which cause new Tributes sometimes to be imposed, this huge Revenue notwithstanding.

Bookes of

Of Magistrates are two forts, one of the Court which rule there, and thence rule the Kingdome; and other Provinciall, which gouerne particular Cities or Provinces. Of both forts are fine or fix Bookes to be fold enery where, printed twice each moneth at Pequin, as by their course of printing (you have seene) is easie; contaying nothing else but the name, Countrey, and degree of the Magistrates; and therefore printed so often because of the exaltings, shiftings, fetting lower, death of Parents (which suspends three yeares to mourning in private) their owne : deaths or deprivations.

I. Li pa, or Court of Magiftrates.

Of the Court Tribunals are reckoned fixe; the first, Lips (Ps is a smuch as Tribunal) or Court. and Li, as (Magistrates) to which it belongeth to name the chiefe Magistrates of the Kine. dome, bringing vp from the lower to the higher according to the Lawes prescribed, or if they deserue it, abasing or quite deprining them. For those Licentiates and Doctors continually afcend, except their owne faults deject them, wherein a deprination makes for euer vncapable. The fecond is called Ho-ps, that is, the Exchequer Court, or that of the Treasury; which exacts and disburfeth the Kings Revenues. The third is the Li-pu, or Court of Rites, which ordereth the publike Sacrifices, Temples, Priests, Kings, Marriages, Schooles, Examinations, Festiuall Dayes, common Gratulations to the King, Titles given to the wel-deferring, Physicians, 48 Colledges of Mathematicians, entertayning and fending Embassages, with their Rites, Presents, Letters; the King holding it abasing to his Majesty to write to any. The fourth, is the Pimpu, or Military Court, which rewards the meriting, and takes from the fluggish Souldier; ordereth their Multers and giues Military degrees. The fifth is Campa, which hath care of the publike Buildings, Palaces for the King or his Kindred, and the Magistrates; Shippes for publike burthens or Armadas, Bridges, Walls of Cities and all like prouitions. The fixth Court is Himpu, which inquireth into Criminall Causes and sentenceth them; also all the publike Prisonsare

4. Pimpu. c. Cumon.

2. Ho-gu.

6, Him;u.

The Prefident

or Clam Ciu.

All the affaires of the Kingdom depend on these Courts, which therefore have Magistrates and Notaries in euery City and Province, to admonish them faithully of all things, the multitude and so order facilitating this so weighty a Designe. For first, in every Court is a Lord Chiefe Insticeor Prefident called Ciam Ciu, who hath two Affiftants, one fitting at his right hand, the other at his left, called Cilam : their dignity in the Royall Cities is accounted principall. After thefeeuery Tribunall hath diuers Offices, each of which hath diuers Colleagues, besides Notaries, Courtiers, Apparitors, and other Servants. Besides these Tribunals there is another the greatest colsi, or Coun. in the Court and Kingdome; they call them Colsos, which are three or foure, fometimes fixe fell of State. which have no peculiar businesses, but take care of the whole Re-publike, and are the Kings Priny-Counfell in all Affaires. These are daily admitted into the Kings Palace, and there abide whole dayes, and answere as they see cause to the Petitions which are put up to the King (who was wont to define matters with these Colas in publike) and shewing their answere to the King, 60 hee alters or approoueth the same, and sets his hand thereto for the execution.

Choli and Zauli Befides thefe Orders of Magistrates and others not mentioned (as like to our owne) there are Magistrates two forts not vsuall with vs, the one Chois, the other called Zauli. In each of these Orders are extraordinary. aboue fixty choice Philosophers, men approved for their wissome and courage before experien-

CHAP. 7. S. 2. Hanlin College, Yunlo remoues the Court, Symmetry of Magistrates, 280

ced. These two Rankes are vied by the King in Court or Province businesses of greater weight, with great and Royall power, which caufeth to them great respect and veneration. These by Libell admonish the King if any thing be done contrary to the Lawes in any parts of the King. dome, not sparing any of the Magistrates, nor the Kings Houle, nor the King himselfe; to the wonder of other Nations. And although the King sometimes bee touched to the quicke, and toucheth them to the quicke againe, yet ceafe they not still to rip the fore till it be cured. Other Magistrates may doe it, yea any private man, but these mens Libels or Petitions are of most worth, as proceeding from their peculiar Office. The Copies of them and of the Kings answers are printed by many, fo that the Court and State Affaires flye thorow the Kingdome, and are by Io some written in Bookes, and those of most moment transcribed into the Annals of the Kingdome. Of late when the King would for love of a fecond Sonne have excluded the eldeft, fo many by Libels reprehended the King, that he in anger depaided or abased one hundred of the Magistrates. They yet ceased not but one day went together into the Kings Palace, and offered vp their Magistracies if he persisted to breake the Law. Lately also when the chiefe of the Colss did not observe the Law, in two moneths space about one hundred Libels were put vp, notwithstanding they knew him a great Fauourite; and hee dyed within a while after, as was thought, of griefe.

There are also besides Magistrates, not a few Colledges instituted for divers purposes, but the Colledge. most eminent is that called Han lin Tuen, into which none are chosen but choice Doctors after Han in Tuen. 20 due Examinations. They which line in that Royall Colledge, meddle not with Gouernment, yet are of higher dignitie then the Gouernours. Their Office is to order the Kings Writing, to make Annals of the Kingdome, to write Lawes and Statutes. Of these are chosen the Malters of the Kings and Princes. They wholly addict themselues to their studies, and in the Colledge haue their degrees of honours, which they actayne by writing. Thence they are preferred to great dignities but not out of the Court. Neither is any chosen to bee a Colao , but out of this Colledge. They gaine much also by Writings for their Friends, Epitaphs, Inscriptions and the like; which all leeke to have of them, their name giving credit and reputation of Elegance. Thefe are the chiefe for Examinations of Licentiates and Doctors, who hold them for Maffers and fend them Presents.

All thele Pequin Magistrates are found also at Nanquin, but obscured by the Kings absence. Cause of the Hum on had fixed his Seat at Nanquin, but after his death Tun lo one of his Nephewes, who in remouin the Northerne Prounces defended with an Armie thole Borders against the Tarkers, perceining Sear Royal Humanus Sonne but weake, thought to denrine him of the Kingdome, which has established from Nesquin Hum-vas Sonne but weake, thought to deprine him of the Kingdome , which her effected by helpe of the Mortherne Prounces, and with force, fraud and largeffe obtayned his Vncles Throne. And because he was strongest in the North parts, and most seare was from the Tartars there, he there fixed his Refidence, where the Tartar Kings had swonted to abide and called that Citie Pequin, that is, the Northerne Court, as Nanquin fignifieth the Somberne, leaving to this the former Offices and Immunities.

The Government of the other thirteene Provinces depends on two Magistrates, the one Pn- Provincial 40 cinfu, the other Naganzafu: the former judging Civill Caufes, the later Criminall; both refiding Gournment with great Pompe in the Mother Citie of the Province. In both Courts are divers Colleagues Pucin-fu. and they also chiefe Magistrates called Tauli, which governing other Cities often reside in them. Hagangele-The Prouinces are all distributed into diners Regions, which they call Fu, each of which hach a Dinifion of peculiar Gouernour called Cifin. These Regions are subdivided into Cen, and Hien, that is the Provinces. greater or more eminent Townes, and those which are more vulgar, which are not lesse then our Regions or Cities, if you except our greatest. These have their special Governours called Cices and Cibies. Shires. The Gouernours of Cities and Regions have their foure Affiltants and Colleagues as Auditors, and Iudges to helpe them. As for the opinion of some that thinke those only to bee Cities, Title sumitswhich are called Fu, and Cen, and Hien to bee Townes; it is an errour: for the City wherein the ken

50 Gouernour of the Region resides, is also called Hien, and hath its peculiar Gouernour called Cabien, Cifu, Cibien and and Affiliants; and the Cifu hath no more power there then in other places of his Luridiction; Cicu. which is the first Appeale to him as Superiour from the Cibien or Cicen. The second Appeale is to the Pucumfu and Naganzosu and their Colleagues in the Metropolitane Cities, which Cities likewise have their Cibien and Cifu, aswell as the Subordinate; all in incrediale

And because the whole Prouinciall Gouernment hath reference to Pequin, therefore in energy Prouince besides these, are other two superiour to them sent from the Royall Citie, the one fixing his Refidence in the Province, called Tutam, which may be compared to our Vice-197, ha- Tutam.

uing command ouer other Magistrates, and in Martiall affaires: the other is yearely sent farom Cis jumor 60 the Court, and is called Cea-juen, as a Commissioner or Visitor, which reviewes all the Causes of the Province, the Cities alloand Caffles, inquireth of the Magistrates, and punished fome of the meaner fort, acquainting the King touching the reft, how every one demeaneth himfelfe; and he onely executeth Capitall punishments. Besides these, are many others in Cities, Townes and Villages : and befole them, many which have command of Souldiers, especially in the Con-

Magistraces

fines and on the Coasts in supinest Peace, watching and warding in Ports, Walls, Bridges, Co. Militrie com- files, as in the hottest Warres, with Musters and Martrall exercites. All the Magistrates of the Kingdome, are reduced to nine Orders, whether you respect the Philosophicall or Militarie Se. nate: to all which out of the Treatury is proportionably distributed monethly pay, Money or Rice : vet little answerable to that their Magnificence (the highest Order not having one thousand Duckets yeerely) and equall to all of the same ranke, the supresme in matters of Warre hauing as much as the supreame in the literate Order, if you looke to that which the Lawale Rebes and Or. loweth. But much more accrueth extraordinarie then this fee or flipend, besides what any mane industrie, couetife, fortune, bribing addeth, by which they oft attayne to great wealth.

aultrie, courtile, fortune, or a mag Caps, both Mercuriall and Martiall, of blacke Cloath with 18 two Eares or wings, of Quall figure, which may eafily fall off, which being a difference, cauferh the more modestie and steadinesse in carriage of their heads. They all weare like Vest, and like blacke leather Bootes of peculiar fashion ; also a Girdle wider then the body, about foure fingers broad, adorned with circular and square Figures : On the breast and backe, they weare two Ignare Clouber Embroidered : in which and the Girdles is great varietie, according to their diuers Degrees; by which the skilfull know their ranke and place. The cloathes intimate it by the figures of Flowers, Fowles, Beafts; the girdles by the matter, of Wood, Horne, Sweet wood Gold or Silver; and the bett of all of that lafter before mentioned, called Tree, brought from Cafear. Their shadowes or Sumbreros, by their Colours and numbers intimate like difference. They have other Ornaments, Banners, Chapnes, Cenfors, Guards with Cryes to make way, to that in most frequent streetes no man appeareth, more or lesse, according to the Magistrates

Strangers.

The Chinois having plentie of all things, care not for fubduing the neighbour-Nations, better keeping their owne, leffe caring for others Countries, then our Enropeans : their Chronicles of foure thousand yeeres not mentioning any care of enlarging their Empire. And if any China imprefions or foot-prints bee, it is from men voluntarily going to other Countries, not from the Kings ambition fending them. It is also remarkeable that Philosopers beare all the sway, the Souldiers and Captaynes being subject to them, and sometimes beaten of them as Schoole-boyes by their Master : euen in Militarie matters, the King more vsing the adulfe of Philosoppersthen Captaynes; whereupon euery haughtie fpirit rather affects meane places in the Literate Order, 10 then great in the Martiall. Yea these Literate are more magnanimous, and more contemne their Beautie of Or- lives in zeale of the publike then the Souldierie, No leffe admirable 1s the Symmetrie and Order of Magistrates in their subordinate Orders, in Obedience, Reuerence, Vilitations and Presents; the Inferiour giving honourable Titles to the Superiour and kneeling to them. None beares any Office about three yeeres, except the King confirme it. And the chiefe Magistrates of Prouincces. Cities and Regions, every third yeere must appeare at Pequin, and doe their Rites to the King, at which time feuere inquirie is made of the Magistrates, and they thereupon rewarded or punished. I have also observed, that the King dares not alter any of those things, which in this publike Disquisition are ordered by the Judges. Armo 1607. we reade foure thousand Magistrates condemned, that being the Search-yeere, and a Booke published thereof.

These Condemned are of fine forts ; First, Couetous which have taken Bribes to perpert Inflice, or have viurped the publike or private mens fortunes : thefe are wholly deprived of all Offices for euer. The fecond are the Cruell, which have too feuerely punished, which are also deprived of their Places and Enfignes : The third are the Old and fickly, and the Remiffe and neeligent; these are deprived, but permitted the Immunities and Enfignes. The fourth fort, are the rash, headdie, and vnaduised, which are put in lower Offices, or sent to more easie places of Go-5. Vngouerned uernment. The last are luch, as have not governed themselves or theirs, worthy of that place of Gouernment; thele are wholly depriued. The like Inquifition is made euery fifth yeere of the Court Magistrates, and the same time also, of Militarie Commanders.

None may beare Office in his native Province, except Militarie. The Sonnes also or Dome- 50 flike feruants of Magistrates, may not goe out of the house left they should bec Factors for bribes but all feruices without doores is done by Officers, defigned to his place : and when hee goeth out of his House hee fealeth the doores, whether private or publike, that none of his Servants may goe out vnwitting to him.

They permit no Stranger to line with them that mindes to returne to his Countrey, or is knowne to have Commerce with forraigne Nations : and no Stranger although of a friendly Nation and Tributarie, may have accesse to the inward parts of the Kingdome, a thing whereof I haue feene no Law, but Custome : neither haue I euer feene any of Core in China, except some Slaues which a Captayne brought thence, although a tributarie Nation which vieth in manner the China Lawes. And if a Stranger steale into the Countrey, they punish him not with Death 60 nor Slaverie, but permit him not to returne. They most severely punish those, which without the Kingsleaue haue commerce with Strangers : and hardly can any bee perfwaded to be fent abroad with Mandates; and fuch are rewarded with some Dignitie at their returne, None beare Weapon in Cities, not the Souldiers or Captaynes, but in their Traynings; nor haue any men

weapons in their Houles, except some rustic blade which they vie when they trauell for feare Weapons. of Theenes. Their greatest Brawles goe no further, then scratching or pulling by the hayre; hee of Theenes. I neir greatest blawies goe no totalets, the state of the larger, the layer, the which flees or abstaines from wrong is esteemed both Wise and Valiant. When the King dy-Succession and eth, none of his Sonnes are permitted to remayne in the Royall Citie, but the Heyre; and it is royall kindred, Capitall for them, being dispersed in divers Cities to stirre thence. Some principall amonest them, compounds their firifes and rules them; in Cases with others, they are subject to the Magistrates.

ð. IIII.

Their manifold rites in Salutations, Entertaynments, and other Civilitie: to the King and Magistates : Of Buryals and Marriages, Birthdayes; their Men, Women, Names and Games, Habites,

Ourtesse or Civilitie, is reckoned one of their fine Cardinall vertues, much commeded in Courtesse in their Books, (Their common Rues pee base bad largely in Pannia,) When greater to fpect is vied, as after long absence, or on a Solemne day, after the common bowing, both fall on their knees with the forehead to the ground, and then rife and downe a completible.

gaine in like fort three or foure times. When they doe this reuerence to a Superiour, hee flands hautour to oat the head of the Hall, or fits, and at all those prostations ioyning his hands, bowes a little and sometime for greater modestie hee goeth to the side of the Hall, whose head is Northwards as the doore is Southwards. The same rites they performe to their Idols; and sometimes as the Sido teue-Scruants to their Mafter, or the meanest of the people to honourable persons, which is presently rence, to kneele and knock the ground thrice with their forehead; they stand at his side when their Mafter speakes, and kneele at euery answer. When one speakes to another, they wie not the second Respect of perperson, nor the first person when they mention themselves, except to their inferiour, and have sons. as many formes of depressing themselves, as of exalting others, the lowliest of which is to call a SeeThange Emans selfe by his proper name, in stead of (I,) When they speake any thing of another mans, piste, up. 344 they vie a more honourable forme; Of their owne, or theirs, a more modest: which a man must

learne both for manners fake, and to vnderstand their meaning.

The Vilitors fend their Libels or papers of vilitation, fo many that the Porter is faine to keepe Viling one anote of their names, and where they dwell, left wee should forget; and if the partie to be will-another, ted be not at home or at leasure, that libell is left with the Porter for a testimonie. The more honourable the Vilitor, the larger hee writes his name. In fending Presents they vie like libelling; fetting downe also each gitt in a line by it selfe, part of which may bee sent backe without offence, which is done with a like libell of thankes. They often fend money or pieces of Gold for 40 presents. They have Garments proper for visitations. The chiefe place in both Royall Courts. is ginen to Strangers, most remote especially, which made vs commonly to bee preferred. The fernant, when they are fet, brings as many little Cups of Cis as are Guefts. When they part, Tedious cour-Tenants, which are a case of the second seco Seruant is fent after in his Mafters name, to falute them, and they fend their feruants like-

Their Banquets are not so much commessations as Composations; for although their Cups be as China banques. little as Nut-shels, yet they drinke often. Their Civill and Religious affayres are therein han-ing. dled, befides the demonstration of kindnesse. In eating they have neither Forkes, nor Spoones, 50 nor Kniues; but vie small smooth stickes, a palme and a halfe long, wherewith they put all meats Feeding. to their mouthes, without touching them with their fingers. They bring all things to the Table cut in little pieces, except it bee of lofter condition, as Egges, Fifth, and fuch things as their ftickes will diuide. They vie to drinke hot, euen in hottest weather, whether their Cia-decoction, or Wine, or Water : which it feemeth is profitable to the Stomacke ; for they line long, and are strong at seventie or eightie yeeres : Neither is any of them troubled with the Stone, The Stone vawhich I suppose is occasioned by our cold drinke. When any is Inuited, a Libell is sent a day or knowne in the more dayes (if it beeto a solemne Banquet) before, fignifying, that the Inuiter bath prepared a me, which so more cayes (it it neers a losemine Danquet) before, inguitying, that the Inuiter bato prepared a manager barous of night) bee may beare and learne somewhat of him : At the day they send another like Libell (on in the Kidney, 60 the out-fide of thefe Libels, there is a red paper added with the more honourable Name of the in Vreter, Blad-

uited, which the Chinois vie besides their proper name) in the morning to each Guest, and der inhalast my honorable Patron and befi friend, B. King, Anno 1611. and Anno 1613. Mafter Bifeld my neighbour, the paineful Minister at Toi-Blownis dyed of a Stone, which I weighed, and found (a miracle in Nature) much about 31 Ouncer, whiles these our client of Junos are in the Preffe; therefore here mentioned. My felic slio basing flour paffions, am therefore not flouis in compaffion.

third at the houre. Their furniture is not Hangings (whereof they have no vie) but Pictures. Flowers, Vessels; to each Guest his Table, and sometimes two to one, the one before the other. These Tables are some Cubits long and broad, but more in length, and couered with a cloath as our Altars. The Seats shine with their Varnish, adorned also with Pictures and Gold. The fift entertainment is with Cia in the Hall: and thence they goe to the Feafting-roome, Before they fit downe, the Inuiter falutes the principall Gueft with a low courtefie, and holding a cup of Wine: then goeth to the doore or porch, and first making a low courtesse, turning his face to the South, powres out that cup on the ground, offering it to the Lord of Heaven, and bowing downe againe, returneth, and filling another cup goeth to that principall Guest, and bowing falutes him in the place in which the rites of falutation are vied: and then they goe together to 10 the Table where the chiefe Guest must fit. The midst of it is the chiefe place; there with both his hands he fets a dish with great veneration, and taking the two stickes (which visually are of Ebonie, or Iuorie tipped with Gold or Siluer, where they touch the meate) layer them by, and taking a feat, brusheth it with his sleenes lightly, and sets it in the middest; after which both goe backe and bow themselues in the middest of the Roome. Thus hee doth to every one. placing the second on the left hand, the third on the right, Lastly, hee which shall have the chiefe roome receiueth of his feruant the Inuiters Dish and Cup, and bids Wine to be filled, and together with the other Guests and the Inuiter, boweth downe and placeth the Dish on his Ta-

The Guefts courtefie to the Hoft.

Sipping oft, one draught.

ble (which is placed in the lower part of the Hall, with his backe to the South, and face to the chiefe Table) with the flickes and feat, as he had done before to him; and then all goe agains to 20 their place, with great ceremonie, to fit them better with both hands, he to whome the rice is done, standing by the fide of the doer with his hands in his sleeues, and modestly bowing with thanks. They wash neither before nor after. After all this, they performe the last rite of inclina. tion to the Inuiter together, and then each to other, and then fit downe. When they drinke the Inuiter with both hands takes the Cup in the Dish, and lightly lifting it vp, and then letting it down inuites them to drinke, all turning to him at the same time, and beginning to drinke, or to fip rather, foure or fine times fetting it to his mouth, not as we vie with one continued draught, After the first Cup the Dishes are brought in, of which the Inuiter beginning, all with their flickes apply a bit or two to their mouthes, diligently observing, not to lay downe their flickes before the principall Gueft hath layd downe his : and then the feruants fill his , and after every 30 mans Cup, with hot Wine: and the same rite is againe and againe repeated, but more sipping then eating. Mean-while some discourse, or Comedie, or Musike continue. The grace of their Feaft is variety, a little of each, Flesh also and Fish mixed, taking off nothing, but setting one Dift on another like Castles and Towers. Bread, and Rice (which there supplyes our Bread) comes not in solemne Banquets. They have games also, in which the loser is fined to drinke, with others disport. None is compelled to drinke about his strength. Their drinke is tiple boyled like our Beere. Their folemne Banquets last all night, the remainders given to the Guess feruants. Neere the end of the Feast they change Cups. In eating they are more moderate.

The King is observed with more Rites then any other in the World. None speakes to him

but his Euruches, and those which line in his Palace, Sonnes and daughters. None of the Magi-40

firates without the Palace (the Eunuches alio haue their degrees) speake to the Ring butby

Petition, and those with so many formes of veneration that none can make them, which is not

well exercifed, though he be learned. Euery new yeere which beginnes with that New Moone

which next precedeth or followeth the Nones of February, out of enery Prouince a Legate is

fent to vilite the King , which is done more folemnely every third yeere. Alfo in every Citie

on euery Change day, all the Magistrates assemble to one place in their Citie, where the Kings

cofts. The Magistrates of the Kings Citie goe abroad with leffe pompe, on horsebackes and few of the principall in Seats, and those carried but by foure Porters; all in reverence of the King. Foure times in the yeere, once a quarter, all the Court Magistrates assemble at the Sepulchres of the antient Kings and Queenes, and make there their offerings: giuing the princi- Funerals of pall honour to Humvu. They prepare to this folemnitie certaine dayes falting at home and fur- Kings:

ceaning of faits.

Next to the King they honour their Magistrates, both in formes of words and visitations, to Honour of which none aspire but Magistrates; and they which have beene deprised lose not all horiour in Magistrates. this kind, but sometimes come forth in their habits, and are respected by their Citie Magistrates. If one bee preferred to another dignity, which hath well executed his Office, they honour him with publike gitts, and referue his Boots in a publike Chift, with Verses in his praise. To fome they erect Temples also, and Altars with Images, and some are deputed to keepe lights there burning, and odours, at publike Rent charge perpetually, with huge Centers of Bell-metall, as they doe to their Idols. Yet doe they diffinguish betwixt this and Diuine worship, of their Gods asking many things, whereas these Rites are onely memorials, though many of of their Gous assing many causes, which the suggest of fuch Temples, by friends often ere. As in the day the vulgar confound them together. Cities are full of such Temples, by friends often ere. As in the day in the suggest of the the vinger contours the source of the state of the vinworthing and bowing Saints worthing the state of the vinworthing saints worthing the state of the vinworthing saints worthing the state of the vinworthing saints worthing the vinworthing saints worthing the vinworthing saints with the vinworthing saints wi Rites, and offer Meats. Their Bookes are full of precepts for objetting Parents with due honour, and that of 20 and in outward fliew no Nation performes to much. They will not fit ouer against them but God

on the fide, speake to them with great reverence, they suffaine their poorer Parents with their Honour of palabour in best manner they are able, and in nothing are more curious then their funerals.

The mourning colour is white, and all their habite from the Shooes to the Cap of a ftrange Seein Pantaia and miserable fathion. The cause of three yeeres mourning for Parents, is because so long they of Funeralls carried them in armes with fo much labour of education : for others as they please, a yeere, or and mourthree moneths, as they are in neereneffe : For the King they mourne three yeeres thorowall the nings. Kingdome, and for the Lawfull Queene. Their funerall Rites are written in a Booke which they consult on that occasion, all the parcels of the habite there pictured. When a man of ranke is Mourningby dead, the Sonne or next Kiniman fends Libels to the friends within three or foure dayes: all the books.

40 Roome is white, with an Altar in the midit, on which they place the Coffin and Image of the dead. Thither all the friends come in mourning one after another, & offer Odors and two Waxcandles on the Altar; whiles they burne, making foure bendings and kneelings, having first cented against the Image. The Sonnes stand at the lide, and the women behinde, coursed with a Curtaine, mourning the while: the Priests also borne Papers and Silkes, with certaine rites to minister Clothes to the deceasted. They abstayne from wonted Beds (sleeping on Straw-beds on the ground neere the Corps) from flesh and other daintier food, Wine, Bathes, companie with their Wines, Bankets, not going out for certaine moneths, remitting by degrees as the three yeeres expire. On the funerall day the friends are by another Libell inuited, to which Burisll. they goe in Procession forme, in mourning; many Statues of Men, Women, Elephants, Tigres, Lions, of Paper all going before, diversified in colour and gilding, which are all burnt before the

50 Graue: a long ranke of Idoll Priests, Prayers, and Players on diners Instruments obseruing diuers rites in the way; huge Bell-cenfers also carried on mens shoulders; after which followes the Herse under a huge caraed Canopie adorned with Silkes, carried with forty or fifty men. Next the children on foot with staues, and then the women enclosed within a white gestatory Curtaine, that they may not be seene: followed by women of the kindred in mourning Seats. The Graues are all in the Suburbs. If the Sonnes bee absent, the Funerall pompe is deferred till their comming. They bring (if it may bee) the deceaffed in another Countrey to lie by his friends. The Graues are adorned with Epitaphs in Marble magnificently. Thither on certaine dayes yeerely the kindred refort to cense and offer, and make a funerall banquet.

Their Marriages and Spoulals are with many rites, done in their youth; the Contracts com- Marriages. Their Marriages and Spoulais are with many rices, once in their young.

pounded by the Parents without their confent; they obferts equalitie in yeeres and degree in pounded by the Parents without their confents they observe the power allo but their the lawfull Wife. In their Concubines, luit, beauty, price beare Iway. The poorer also buy their Wiues, and when they lift fell them. The King and his kindred respect onely beauty, Magistrates appointed to make the choife. One is his lawfull Wife; the King and his Heire having

on-ting periors as a gut to hear to that purpose. Euery mans Birth-day is fethually celebrated with Preferrs, Banquets and iollity: effecially after the fiftieth yeare explice (at which time they are reckoned among it old men) and then euery tenth yeere. The Children then procure Emblemes of their friends, and Epigrams, and fome write Bookes. That day is also fefficiall in which they are of age to take the Montap. which is about twenty yeeres, till that time wearing their haire loofe. But the first New and water is about eventy yeers, in that the vertically each man then having ingemoully desifed Lights or Lamps made of Paper, Glasse, or other matter, the house terming by the discribed 20 Lights to bee on a light fire. They runne vp and downe allo with great stirres in the night with Fire workes. Drigon-famioned Lights, and make great thewes of Powder-fire-workes.

The Chinois are white (but nearer the South more browne) with thinne beards (fome hacomes persons using none) with staring haires, and late growing; their haire wholly blacke; eyes narrow, of Egge forme, blacke and standing out: the nose very little, and scarcely standing forth; eares meane: in some Proninces they are square faced. Many of Canton and Quams Proninces on their little toes haue two nailes, as they have generally in Cachin-china. Their women are all low, and account great beauty in little feet, for which cause from their infancy they bind them firaight with clothes, that one would sudge them sump-sooted: this, as is thought, desided to make them house-wives. The men and women both alike let their haire grow without cutting: 30 but Boyes and Gitles till they are fifteene yeere old, are cut round, leauing a locke onely on the crowne: after which they let it graw loofe over their shoulders till twenty. The most of the Priests shaue head and beard every eighth day. When they are men they binde up their hire in a Cap or Coife made of horse or mans haire, or in a filken Cawle; and in Winter of woollen: on the top it hath a hole, where the haire comes forth, and is tyed in a neate knot. The women weare not this Cap, but binde up their haire in a knot, and make it up with a dreffe of Gokl, Siluer, Stones, and Flowers. They weare Rings on their cares, but not on their fingers.

The men and women weare long garments. The men double them on their breaft, and raften them under both the arme-holes; the women on the midst of the breast. They weare wide long secues; but the womens wider, the mans straighter, at the wrists. Their Caps are artificially 40 wrought. Their Shooes are much differing from ours; the men weare them of Silke with diuers workes and flowers, exceeding the elegance of our Matrons. Shooes of Leather none but the meaner fort weare; and scarcely admit they Leather soles, but of Cloth. The Caps of their Learned are square, of others, round. Euery one spends halfe an houre at least in combing and trimming his haire. They winde also long clouts about their feet and legs, and therefore weare their Breeches loofe. They weare no Shirts, but a white Coat next the skinne, and wash often. They have a feruant to carrie a Shadow or great Sumbrero over their heads against the raine and Sunne; the poore carrie one for themselues.

For Names, befides the fur-name of which is spoken, the Father gives one to the Sonne (for females have no name but the Fathers sur-name, and called as they are borne, first, second, third, 50 in order of the Sisters:) by this name they are called by the Father and Elders; others call Fathers name: them like wife from that order amongst the Brethren, as is faid of Sisters. They in their writings call themselues by that which their Father gaue them ; but if others either equall or superiour should so call them, it were both vacinill and injurious. When a Boy goeth to Schoole his Schoolename. Mafter giveth him another name, which is called his Schoole-name, whereby onely his Mafter and Schoole-fellowes may still him. When he hath his Mans cap put on, and marrieth a Wife, fome more honourable person giue h him a more honourable name, which they call, the Letter: by this any man may call him, but those which are subject to him. And when he is now at the full growth, he receiveth of some grave person his most honourable name, which they call Great, whereby any may call him present or absence but his Parents and Elders still vie the Letter-62 name. If any professe a new Sect, his Instructer calls him by a new name, which they call, of Religion. And when one vilites another, he will aske what is his Honourable name, to shie him thereby : and we were therefore fayne to take a Greater name then that which we received in chriftian nome. Baptilme, for them to call vs by.

They are studious of Antiquities: much value old Triuets of Bell metall, Pictures in blacke and white Characters and writings, feeled with the Authors feele (for there are many Counterfeiters.) The Officers have all a Seale proper to their place given by Humpu, which they vicon- Seales of Ma. ly fealing with red colour : and if they lole the Seale they lofe the Office, and are befides feuerely gifteates. punished; and therefore they carry it with them, in a sealed and locked Boxe, and neuer leave it out of fight, at night keeping it under their Pillow. Graue men goe not on foote thorow the Areets, but are carryed in a leate closed, except they list to open the fore-part, whereas Magiftrates feates are enery way open. Matrons feates are altogether closed, but easily knowne from Seats in which mens by the fashion. The Law forbids Coaches and Litters. Some Cities are in the midst of Ri- they are carryto uers and Lake, in which they have very neate Boares to palle the firets. And because they go doolners ners and Lancs, in which they had been shipping is more convenient and elegant. But the Boates kinipa Magistrates, built by publike cost are as commodious as Houses, with divers Lodgings, a Hall, Kitchin, Cells, so neate as seeming Great mens houses, rather then Ships; and therefore they make their folemne Banquets a Ship-board, passing along the Rivers and Lakes for further pleafure. All within shines with Clarane or shining Vernish in divers colours, and the Carued workers gilded in places, with combined (weeters to the Eyes and Nofe. They honour their Masters more then with vs. fo that if a man have beene anothers Scholler but one day in a medicate of the second sec ny Art, hee calls him Master euer after, and neuer sits in any meeting but at his side, and doth

Dice-play and Cards are common with them: Cheffe also with the graver persons, not alto- Game, gether valike ours: but their King neuer remoues but to the foure next roomes, and the Bishops Cheffe. haue their Queenes. They have also which they call Poulder pannes, which goe before the Knights and follow the Paunes. They have a grave Game in a table of three hundred roomes with two hundred men white and blacke, in which Magistrates spend much time, and the cunning skill whereof gets much credit to a man, although hee can doe nothing else; and some ning same whereon goes much actors to a many chule fuch their Mafters with wonted rites. Theft is not punished with Death : the fecond fault Theft punishtherein, is branded with an hot Iron and Inke in the Arme, with two Characters, the third time menin the Face, after with their terrible W hipping or condemning to the Gallies, for a time limitted for hat there are abundance of Theeues. Euery night in Cities, many Watchmen at cer-30 tayne times beate Balons as they walke the iltreets, the fireets also enclosed and shut, yet many thefts are committed, the Foxe being the Goofeherd, and the Watch partners with the Theefe. The Cities in greatest Peace in the midst of the Kingdome, are shut every Night, and the Keyes

Of their Superstitions, Cruelties, feares of Magistrates, of the Kings kindred, of Strangers and Souldiers. Their Deities and three Sects: Priests, Nunnes, Monasteries, Legends, Lyes.

(C) Of the operation is for generall in the Kingdome, as the observation of luckie and valuekie chaps. Dayer and Hower, for which purpose yeerely is Printed a two-fold Table of dayes by Obscruzion the Kings Aftrologers, in fach plentie that every house is full of them. In them is of times. written on enerty day, what may bee done or not, or to what houre yee must forbeare businesse, which may in that yeer lappen. There are others more dangerous Masters, which building which may in that yeer mappen. A neer are others more unngrous matters, which make a lining by this Wizarally profession of felling lyes, or prescribing fit houres; wherby many different beginning of building or Journeying till their appointed day or houre come: & then Impoflors how whitting focuse that products with croffe weather, they fee on neuertheleffe, though it be now viniting joint that products with the workernight thence appears to take beginning. The like superfitious observation they have of the moment of the Natioitie, which they precisely set downer. divers professing by Astrologie, or by superstitious numbers, or by Physiognomic, or Palmessine, Divinations or Dreames, or words in Speech, or politure of the body & by innumerable other wayes to force and elling of tell future Fortunes, many Griffe-juglings vied to fuch impostures, as by a stalking Knaue which Fortunes, shall professe his Fortunes exactly told him by the professor, or by learning out of printed Bookes that protein in Fortunes exactly total min by the proteins, or by teathing out of principles which describe energy Citie, Street and Familie, what hath happing as an argument of the truth orthat which they fay shall happen. Yea, their credulitie breeds such strong imagination, that Strengthof 60 Same being foretold of a Sickneffe such a day, will then fall sicke of conceit.

Many also consult with Deuils and familiar Spirits, and receive Oracles from the mouth of Deuils consul-Infants, or of Bealts, not without fraud. They are superstitious in chasing a plot of ground, toe-ted. rect a dwelling Houle, or Sepulcher, conferring ir with the head, tayle and feete of disers Dras Dreamer of gess, which like (forlooth) valer our earth, whence depends all good or bad Fortune. Dixers Dragon.

71:3

Learned men busie their wits in this abstruse Science, and are consulted when any publike Buil. dings are rayled. And as Aftrologers by the Starres, fo thefe Geologers by inspection of Rivers Fields, Mountaines and feite of Regions, foretell Destinies ; dreaming by fetting a Doore or Window this or that way, conceying the rayne to the right or left hand, by a higher or lower roofe, honour and wealth shall accrue to the House. Of these Impostors the Streets, Cities. Courts, Shops, Markets are full, which fell that which themselves want, good Fortune to all Foole-fortunate buyers : yea, Women and blinde folkes professe it, and some find such Chapmen of the Learned Noble, King and all, that they grow to great riches by others little wits. Alldif. afters publike or private are attributed to Fate, and ill scite of some Citie, House or Palace. The

noile of Burds, the first meeting in the Morning, Shadowes caused by the Sunne in the house, are 16 Auguric.

Cruell vices

For other vices, some will make themselves Servants to rich men, to have one of the handand vanaturall maydes become his Wife, so multiplying iffue to bondage. Others buy a Wife, but finding their family become too numerous fell their Sonnes and Daughters as Beafts, for two or three pieces of Gold (although no dearth prouoke him) to everlafting separation and bondage, some to the Portugals. Hence is the Kingdome full of Slaves, not captived in warre, but of their owne free-Child-felling. borne. Yet is seruice there more tollerable then else-where ; for euery man may redeeme himfelfe at the price payd for him, when hee is able ; and there are many poore which with hard Child-killing, labour fuftayne themselves. A worse euill in some Provinces is theirs, which finding themselves Pittileffe pitie. poore, smother their new-borne Babes, specially Females, by an impious pietie and pittileffe pitie 20 preventing that fale to Slauerie, by taking away that life which even now they had given. They pretend hereunto also their Mesempfichofis, dreaming that the Soule of that Infant shall the foo ner paffe into some more fortunate body : and are not therefore ashamed to doe this in others prefence, yea not the meanest of the communaltie. Many more inhumanely kill themselves ei-Selfe flavers. ther wearse of a miferable life, or willing after death to bee reuenged of fome enemy, whiles to the Enemy of mankind many thousands yeerely Sacrifice themselues, by Halter, Drowning and Povson. Another immanitie in the Northerne Provinces is vsed vpon Male Infants, whomfor hope of Palace preferments their Parents make Eunuches; of which in the Kings house are ten

thousand, a dull and blockith kinde of vnkind vnmanly men. Their Whippings also take away moreliues, then the executions of fentences to Death ; their Reedes flit two ells long, a fin- 30 ger thicke and foure broad, at the first blow breaking the skinne and flesh on the hinder part of the thighes : to preuent which many bribe the Magistrates, of whose domineering fulnesse of power they live in perpetual feare, where calumnies and lyes are so rife : which Chi-84 perfidiousnesse made the Kings come so guarded abroad and vnknowne, and now not to come

The Kings kindred are now growne to fixtie thousand, and daily increasing become a but-

then to the publike, and daily increase in idlenesse, impotence, numbers, the King being very jetalous of them, and setting Guards, besides their perpetuall exile from Pagnin and Nanguin. No Strangers con- maruell if Strangers be no better trufted in China, where the Natiues and Bloud are suspected: out of whose Bookes they scorne to learne, and repute them little better then Beafts: and the 40 Characters whereby they expresse them are taken from Beasts. How Legats are held as prisoners in publike houses is else-where delivered. Commanders of Souldiers, which guard places are guarded and watched, and not trufted with the pay of their Companies : neither is there any more bale then the Souldiery, most Slaves or condemned persons, for their owne or their Aucestors cuils : and when they are free from exercises of warre, they become Muletters, Porters, and of other base Offices. The Captaynes onely have some authoritie. Their armes are worthleffe for offence or defence, and onely make a shew, the Captaynes being also subject to the Magiffrates whippings. Their Alchimifticall vanitie, and study of long Life, with precepts and huge bookes of both, I omit. The founders for footh of these Sciences have gone body and soule to Heauen. The making of Siluer hath made many spend their siluer, wits and credit, cheated 50 by professing Artists; and the great Magistrates (few in Pegnin free) are taken up with the ther Study; fome shortning their life to make it longer. They write of one of their Kings which had procured fuch a potion of immortalitie, whom a friend of his was not able to diffwade from that conceit, enraged, by his fudden fratching & drinking his prepared potion; which he feeking

Studies of Al-

and if I may, then have I freed thee of this errour. Touching the China Sects, I read in their Bookes, that the Chinois from the beginning worshipped one God, which they call the King of Heanen, or by another Name Heanen and Earth. What pitte is it Beneath this Deitie, they worshipped divers tutelare Spirits of Mountaynes, Rivers, and of the that Intherans four parts of the world. In all actions they held Reason to bee obeyed, which light of Reason 60 and Caluarifs, they confessed they had from Heauen. Of that supreame Deitie and his administring Spirits, my not swell they neuer had such monstrous conceits as the Romans, Greekes, Agyptians, whence the lesures be faued with hope that many of them in the law of Nature were faued. Their Seets are reckoned three: The out the Pope, nope that many of them in the law of Matthe were laured. I neit be desire received the safe feeled by all as these Idola- first of the Learned, the second of Seiequia, the third Laure. One of these is professed by all ters without God and Christ and worshipping that, which by Nature is not God?

by death to reuenge, the other answered, how can I be killed, if this draught cause immortalitie?

CHAP.7.S.. 5. Confutian Temples, Opinions, Rites. Sicquia Sect from India. 397

which wie their Characters. That of the Learned, is most proper to China and most account and all their Learned learne it in the course of their studies. Confusion is the Prince therof. This Sect hath no Idols, worships one God, beleeuing all things to bee conserued by his prouidence. They worhip in inferiour fort the Spirits. The best of them teach nothing of the Creation : rewards and input interiors for contract spaces. I more controlling to the controlling of the control of Hell they make no mention. The later Learned deny both, with the foules immortalitie : yet fome fay, that the foules of good men are corroborated with vertue and made able to hold out, others dying with the body.

thers dying with the poets.

The principall opinion feemeth borrowed of the Idoll Sect, fine hundred yeeres agoe; which Godfuppo ed. The principal option recine and toward at the control of the Creatures are as forming the foliation that this whole Vinierie conflits of one matter, and that the Creatures are as forming the found the members of this huge body, fo that every one may attayne to the similitude of God being one world members of this nuge poor; to trace every one may accept to the minimum the Literate asknow with him; which we confute out of their owne ancient Authors. Though the Literate asknow Pefin had no ledge one supreame Deitie, yet they erect no Temple to him, nor any other place proper to his Temples, Worthip, nor any Priests, persons or rites peculiar, nor haue precepts thereof, nor any which preferibeth, or punisheth detect of Holies; nor any which privately or publikely recite or ing ought to him. Yea they affirme, that the Office of Sacrificing to the King of Heauen and his worship belongs to the King: and if any should take on him that Office, hee should vsurpe the

Kings, and be thereby a Traytor. For this purpose, the King hath two stately Temples in both Two Temples 20 Royall Cities, one dedicated to the Heasen, the other to the Earth sin which formerime hee vied King high Koyait Cities, one dedicated to the Island, the College have forceded, which there factified ma King high to Sacrifie, but now in his place certayne Mag illrates have forceded, which there factified ma Pried Migs ny Oxen and Sheepe, with many Rites. To the Spirits of Mountaynes, Rivers, and of the foure first sinfar-Regions of the world, onely the chiefe Magistrates Sacrifice, nor are the people admitted our. thereto. The precepts of this Law are contayned in the Tetrabiblion and fine Bookes of Dollrines; nor are any other Bookes allowed, but onely some Commentaries thereon. Nothing in this Obite, Sect is more of note then their yeerely Obits, or parentations to their deceased Parents, common to all from the King to the meanest, observing their dead Ancestre as if they were living. Neither yet doe they suppose that they eate of the meate which is set them, or need it, but they haue no better meane to expresse their loue.

The Literate have a coffly Temple to Confusion in every Citie, by Law appointed, in that Confusion Temp place where the Schoole is, and adjoyning to the Magistrates Palace, which is let ouer the Ba- ple and Rites chelors or Graduates of the first degree. In a principall place of that Temple his Image is erected, or elle his Name in golden Cubitall letters, written in a curious Table. Hither the Magistrates assemble enery New-moone, and Full, also the Bachelors, with wonted kneelings, Odours and Wax-lights, to acknowledge their Master. On his Birth-day and on other see times, they offer feitiuall Diffies, thankefully confessing his learned workes, whence they have attayned their Degrees and Offices, but pray not to him nor looke for ought from him ; but as is observed of their dead Parents. Other Temples also are seene of the same Sect to the Tute. Temple of tu-

House under the trace of the state of each Tribunall, wherein they foleranly telea Sprites for each Citie, and to the Magiltacie of each Tribunall, wherein they foleranly telea Sprites, binder homelows by folerance Carloss, to oblive a low and todays when the Carloss in the Magiltacie of the Carloss in th 40 binde themielues by folemne Oathes, to observe Law and Institute, when they first enter into their Temple Office, In these they ofer Dishes and Odours, but in differing Worship: for in these they acknowledge, there is a Dinine power to punnih the perjurious, and reward the good. The kope fleater. of this Laterate Sect, is the peace and good of the Commonwealth, and of Families, and of each persons; their precepts agreeing with Nature and Christianitie. Fine Relations or Societies are Fine combinations. persons the present and present and the person of the pers Wife, of Matter and Servant, of elder and younger Brethren, of Fellowes and Equals. They condemne Single life, permit Polygamie, and in their Bookes largely explaine that precept of Charitie, to doe to another as a man would be done to. They deny this to be a Sect, but a certayne Acadamie instruted for the gouernment of the Common-wealth; and because it prescribes not, nor

30 prohibiteth any thing touching the Life to come, many adjoyne the other two Scels to this. The second Sect is called Sequia or Omittele, and by the Important, Sciacea and Amilabu. Second Sect Both have the same Characters, and the same Totagus or Law. It came to the Chinos from the begun AD.65. Weft, brought from the Kingdome of Thienfeis or Scints, now called Indofan, betwixe India and Ganger, about the yeere of Christ 65. It is written that the King of China, warned in a Dreame, fent Legars thither, which brought Bookes and Interpreters from thence, the Authors of them being dead. And therefore I fee not how truely the Japonians affirme that Seisece and Amidaba pierced thirber, and were Natine of Saam. The Authors of this Sect, have taken tome things out Dimentium of our Philosophers. For they hold foure Elements, and manifold Worlds and transmigration of System ass.

Soules, and other things. Somewhat it teemes to acknowledge the Trimue fabling of three 60 Gods becoming one at acknowledgeth suff rewards to the good in Hessen, to the bad in Hell. Reactols Single life, so as it may seeme to reject Mariage. They leave house and friends and Librardies. trauell into duery places Begging. The Retes of this prophane Sect, haue great affinitie with our (Asma) Eccleiafficall: the Singings of men faviors that Green was the machine and address and disease. Ramijh Ecclessificall: the Singings of men faying their fernice may leave mothing to differ every non-from our Gregorian; they have Images also in their Churches; their Presty Garments are also—non-negative.

gether like ours, which with an Ecclefiasticall terme wee call, Piumalia. In their Service they often recite the name Tolome, which themselves confesse to be ignorant of. But they denie eternitie in their Heaven and Hell, afcribing a new birth after I know not what revolutions of time. in some other of their conceited Worlds, then and there to be penitentially purged; with other fooleties. They prohibite to eate of living creatures, but few impose on themselves this abilinence, and they finde easie absolution from this and other sinnes, it they give to the Priests who professe to deliver from Hell by their Prayers or Recitations, whom they will.

This Sect came in at first with great applause, as clearely professing the Soules immortalitie; but nothing more disgraced it, then that that King and these Princes which first embraced it (which the Literate often object) died miferably with violent death, and publike loffe and miffortune followed. By writing of many Bookes they have entangled it in inextricable Labyrinths. The notes of Antiquity appeare in the multitude of their Temples, and most of them fumptions : in which have Monfters of Idols of Braffe, Marble, Wood, and Earth are feene; with ples Steeples, Steeples adjoyned of Stone or Bricke, and in them huge Bells, and other ornaments of great price.

Many and coilly Tem-Bells, Images. Their Priefts many and mi-

The Priefts of this Sect are called Ofciami, they shaue their head and beard, against the fashion of the Countrey: fome trauell, as is faid, some leade a very austere life in Mountaines and Caues. but the greatest part which amount to two or three millions, line in Monasteries, sustayined with their antiently-giuen Reuenues, and Almes, and also by their owne industry. These Priests are accounted and justly, the most vile and vicious in the whole Kingdome, frrung of the basest plebeians, fold in their childhood to the elder Ofciami, and of Slaues made Difciples, fucceed their Masters in Office and Benefice, a course which they have found for their propagation. For, sew are found which voluntarily by defire of fanctitie doe adjoyne themfelues to those Monkes, Isnorance also and illiberall education makes them liker their Masters, sew of them learning Letters or civill rites; and daily growing worfe. And although they have no wives, they are much addicted to women, and cannot but by grieuous penalties be kept from them. The Colledges of the Ofciami are divided into divers Stations, in every of which is one per-

petuall Administrator, to whom his feruants or as many as he brings up, succeed. They acknowledge no Superior in those Cells, but every one in his owne Station builds as many Lodgingsas he can (most of all places, in the Court) which after they let to strangers, so that they are rather Innes then Monasteries, as full of tumults as empty of deuotion. Although they bee of base e-steeme, yet are they employed to Funerals and other Rites, by which wilde beasts, and sowles, of wide erea. and fishes are set at liberty, by the professors of this Sect with opinion of great merit. In this tures, See P.m. Our age this Sect hath much remined, and many Temples are built and repaired, by Eunuches, As River faire. Women, and the rude vulgar, and especially by the Ciaicum, or Fasters, which all their lives abflayne from Flesh, Fish, (Egges, and Milke) and worship a multitude of Idols with fet prayers at home, and are by hire to be called to any other mans. Nunnes also observe the same Monasti-Nice, or Nuns, call rules, being fingle and fhaued; they call them Nunnes, nothing fo many as the Monkes.

Monafteries,

Lyc of Lauzu,

Way to fooles

The third Sect is called, Lanza, derived from a Philosopher which lived at the same time with Confutius, whom they fable to have beene carried 80. yeeres in his parents wom be before he was borne, and therefore called, Laures, that is, the Old Philosopher. He left no Bookes of his Opinion, nor feemes to have intended any new Sect, but certaine Sectaries, called Taula, made him the lead of their Scot after his death, and wrote divers elegant Bookes gathered out of divers Sects. Thef alfoliue fingle in their Monasteries, and buy disciples, base and wicked as the former. They weare their haire as the Lay-men, differing herein, that where they weare their haire tyed on a knot, these haue a Cap on the crowne of Wood. Some also are married, and say our their Holies in their owne houses. They fay, that with other Idols they worship also the Lord of Heasen, whom yet they imagine Corporeall, and to have suffered many things. They tell, that the King of Heauen which now raigneth, is called Ciam, and he which before ruled was named Len. This Len came one day to the Earth riding on a white Dragon, and Ciam a Wizard entertayned him with a Feast, where whiles Len was eating, Ciam gat up on the white Dragon, and 10 Lim Hill, noter was carried to Heaven, and excluded Leu from that fourraignty; only he obtayned of this new the great Lake. King, that he might rule ouer a certaine Mountaine in his Kingdome, where they fay he fill lineth: thus confesting (as the Greeker of lone) themselves to worship an Vsurper and Traitor. Befides this Deity of Heaven, they acknowledge three others, one of which they fay, Laurn is, having some dreame also, as the former of the Trinicie.

They also speake of places of rewards and punishments, but differing from the former: for they promise a Paradise for scule and body together, and have Images of some in their Temples which have fo gone thither. To obtayne this, they prescribe certaine exercises of fitting in diuers poltures, fer Prayers, Medicines by which the life is lengthned, if not made immortall. Their Priests exorcise Deuils, and drive them out of houses, by painting herrible shapes of them 60 in yellow Paper on the walls, and making horrible cryes as it themselves were become Devils. They arrogate also to bring downe or to stay Rames, and other publike and private fortunes, most impudent importors, either Lyars or Magicians. They affift the Kings facrifices in thole Temples of Heaven and Earth (thereby acquiring much authority) being Matters of the Mutike therein:

CH AP.7. S.6. Sects multiplied, omnified, nullified. Strangenesse to strangers. 399

and are called to Funerals, to which they goe in precious veftments with divers musicall Inftruments, making a pompous-procession showe thorow the fireets. The like pompes they wie at the streets ends on cercaine times, hired by the dwellers,

They have a Prelate called Ciam; which dignity he transmitted to his posterity 1000, yeeres ciam Prelate. fince by hereditary fuccessions, and seemeth to have taken beginning from a Magician which laued in a Caue of Quiamsi Prouince, where his posterity still continueth. Their Prelate liueth most commonly at Pequin, observed by the King, and admitted into the inmost Palace to confecrate and hallow the Roomes suspected to bee hanted by ill spirits. Hee is carried in an open Chaire, and with other pompe competent to the chiefe Magistrates, and is allowed by the King

to a great Renenue. But I have learned of a Convert that their Prelates now are fo ignorant that they know not their owne Charmes and Rites. Hee hath no power ouer the people, but the Tanfiu (Priests) and their Monasteries, many of which are also Alchimists. These three Sects Multiplication haue divertified themselves into 300 in seeming, daily encreasing and growing worse and worse, of Sects. Humun ordayned that these three Lawes should be kept for the good of the Kingdome, onely the Literate to rule; whence it comes that they feeke not to ruine each other. The Kings make vie of them all for their purposes, often repairing the old, and building new Temples. The Kings wives are more prone to the Idoll Sect, and maintayne whole Monasteries without the Palace, and buy their Prayers with Almes. The Idols are not onely in Temples in this Kingdome, but in primate houses in peculiar places, in streets, ships, Palaces, they are the first things you see, and 20 yet put they little confidence in them. Their wifeft men feeke to mixe all three Sees together. and to whiles they embrace all, are of none, and proue Atheifts.

ð. V I.

Of Strangers, and forraine Religions in China.

Ow inhospitall the Chinow are to S:rangers, we have in part heard, neither permitting egreffe to the Natiues, not ingreffe to Alten accept in three refpects. The first flow as come to pay their annual Tributes. The fecond, fich as percenting honour and tribute.come (as wee haue heard) from the West with seeming tribute, a colour to their gaine by merchandise. The third, such as in admiration of the Chinicar vertues and learning, come thither (as the Queene of Sheba to Salomon) to learne the same, which is the lesantes pretence : but these must here fixe their habitation , nor may be suffered to returne ; such is their realousie, of discouering their mysteries to others. And this made the lessites, after so long stay, free from feare of expulsion, which yet fince complaine of perfecution. But it may not be known, that they have any intelligence or commerce with stranger .: & therfore the lessues, which have obtayined two fo great priviledges, the Eurisches Palace for their refidence, and the imployment in correcting the China Kalender, both by Royall approbation; yet could not obtayne leave to 40 goe into the Prounce of Conton, though with Mathematicall pretexts for that Kalender-busines, to observe longitudes and latitudes of places, because they were laid to be Countrymen to those of Macao. Yea, a Colas, or Counfellor of State, was deprived, for fending a mellage to a bordering King; a tempest of libelling complaints thundring and showring against him therefore. In the bordering Promuces they fet narrow watch at Cuitom-houses, Bridges, and in the very Rivers, by thips of warre thereto appointed. But if they be once gotten into the inner parts of the Kingdome, there are no such Officers, nor fearches. Neither may any stranger pass out of the Kingdome, after once entring, without the Kings licence. The lesates fteale their ingreffe and egreffe by meanes of the Portugals, which had the Towne of Macas affigned them by the Chunes, for trafficke. The from evially twice a yeare to the chiefe Citie of the Prouince of Canton, which is not called Quantum, or Canten, (the name of the Province) but Quantum. All the day time Thin allo te-Is not carried entering, or thereon, the mains of the product of the most lie on flipboord at night. Affiddly May, In the midft of the Ruser there is a little Hand, and therein a Temple, in which they are allowed & Marjan.

their Catholike denotions. There by Boat did they prounde to fleale in or out of the Country. The Mahumetans that come in by land, if they flay time yeeres (as is observed) may never return Many Mehrahome againe. Of these there are now many thousand Families in China, dispersed into the most measure than of the Prouinces and chiefe Cities. They have there their Temples very fumptuous, and their Circumcifion. But as farre as I could euer loarne, they neither teach, nor care to teach, others their

denotions, but are vnskilfull of the Saraceus Tenents, and are contemned of the Chinois. It feems, that their comming in was in the time that the Tartars reigned here, which fince have increased,

their former superstition, retayning nothing thereof, but abstinence from Swines field, which Мm 2

60 and after fo long continuance, are not held in suspicion, as other strangers. Some say, after the

rather by Nature, then for Religion, they abhorre.

fourth generation they are reputed as Natives: yea, they are admitted to the studies of Learning,

Degrees, and Magistracy, as well as the Chinose. But most of these, thus dignisted, relinquish

Chriffians,

Sec fup. in

Pinto.261.

Touching Christians in China, there is not fo great certainty. Certaine Mogores told Ricing of some in the Xensian Prouince, in the North parts of China, at a place called Xucheo, which were white, bearded, vied Bells, worshipped Ifa, that is, Iefus, and Marie, and honoured the Crucifixe ; their Priefts married , which cured difeafes without medicines. A lew at Pegnin gape more full intelligence, that at Caifumfu, and at Linem, in the Province of Sciantum, and in the Prounce of Scianfi, there lived certaine Strangers, whose Ancestours had come out of forraine parts, which worshipped the Crosse which the Chinois expresse by the Character of Ten) and made the figne thereof with the finger on their meate and drinke. They also made the fame figne with Inke on the foreheads of their children, to preferue them from misfortunes. A lefinte alfo faw. in the hands of an Antiquarie, a Bell, with a Church and Crosse thereon grauen, circum-jo fcribed with Greeke letters. The Iew also reported that those Croffe-worshippers had the same doarine in their prayers which the lewes held: this the lesmites interpreted of the Plater common to them both. Hee affirmed that there were many of them in the Northerne Provinces. which to Hourished in Letters and Armes, that they grew fuspicious to the Chinais, which hee thought was caused by the Saracens some fixty yeeres before. The Magistrates were so incenfed hereby, that they for teare were dispersed, some turning lewes; some Saracens; others Ide. laters: and their Temples were also converted into Idolatrous Temples, one of which he menfioned in his Countrey. Euer fince they hade their profession, and when the lesaites fent one of their Converts to make enquirie, he could learne of none : which they thought proceeded from

their feare, taking him for a Spie fent from the Magistrates.

All these Sects the Chinois call, Hoei, the Iewes distinguished by their refusing to eate the finew or leg; the Saracens, Swines fielh; the Christians, by retuling to feed on round-hoofed beafts. Affes, Horles, Mules which all both Chinois, Saracens, and lewes doe there feed on. The Sara cens called the Christians also Isai, as before; and Terzai, which is a name given in Persia to the Armenian Christians (as an Armenian affirmed to Ricius) whence hee coniectured , that these Christians came out of Armenia. And by the report of Haston the Armenian, which fayth, their Scefuppagatts King came to the Great Can of Cathay (which wee have before observed, at haft the best rarts thereof, to be the North parts of China) to perswade him and his to become Christians; which in great part also hee affected , besides other Christians there reported to bee , by Pauliu; and those of Sarnan, subject to the Great Can, mentioned by Vertomannus, which seeme to be neere 30 these in China. The Malabar Christians have Chaldes memorials of China, converted by Saint Thomas ; and their Metropolitan hath his ftyle of all India and China.

A certaine lew at Pequin hearing of the lesuites there, came to them to fee and conferre with

chafamfu. Iew at Pequin

Sian.

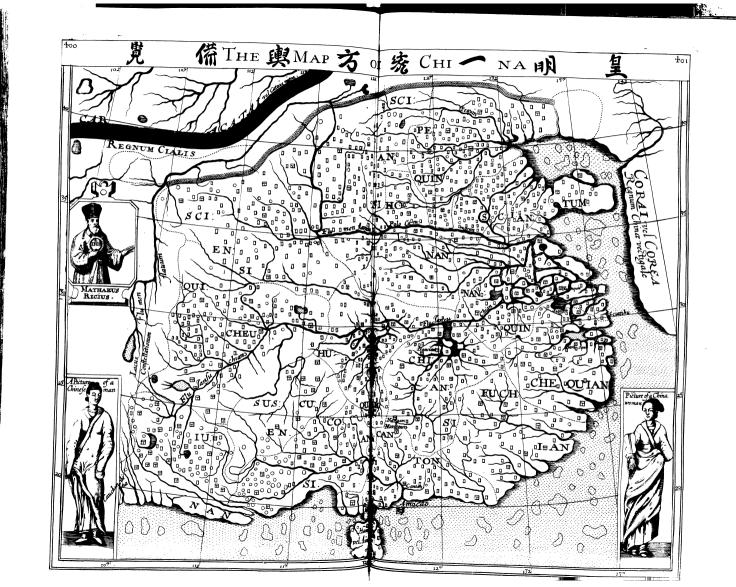

them, imagining them to be Ienes. This Ien was borne at Charfamfa, the Mother-citie of the Prouince Honan, his name was Ngai, his countenance not refembling the Chinois; hee neels-Eting Indaifme, had addicted himtelte to the China fludies, and now came to Pequin to theexamination, in hope of proceeding Doctor. There did hee enter the lesates House, professing that he was of their Law and Religion. Rices leads him into the Chappell, where on the Altar flood the Image of the Virgin, lefus, and Iohn Baptist, kneeling; which he taking to be the Images of Rebecca and her Twins, did worthip vnto them, contrary (he faid) to their custome. The Ima- 40 ges of the Euangelists he supposed to be so many of lacobs sonnes. But youn further question ming, the leswite perceived that he was a professor of the Law of Moses: he confessed himselfe an Ifrachte, and knew not the name of Iem; fo that it feemed, the dispersion of the ten Tribes had pierced thus farre. Seeing the Hebrew Bible, hee knew the Letters, but could not reade them. He told them that in Chaifamfu were ten or twelve Families of Israelites, and a faire Synagogue, which had lately cost them ten thousand Crownes; therein the Pentateuch in Rolls, Which had bin with great veneration preserved five or fix hundred yeers. In Hamchen the chiefe Citie of Chequian, hee affirmed, were many more Families with their Synagegue; many also in other places but without Synagogues, and by degrees wearing out: his pronunciation of Hebren names differed from ours, as Herusoloim, Moscia; for Messia, Ierusalem. His Brother, hee faid, 50 was skilfull in the Hebrew; which he in affection to the China preferment had neglected; and therefore was hardly centured by the Ruler of the Synagogue.

lewes at Han-

Ifraelites di-

To this Citie did Ricci fend one of his to enquire, who found those reports true, which also cobied the beginnings and endings of their Bookes, which they compared, and found to agree with their owne Pentatench, fauing that they wanted prickes or points. He wrote also in Chie Want of pricks no Characters to the Ruler of their Synagogue, that hee had the rest of the Bookes of the Old Testament, and other Bookes of the New, which contayned the acts of the Messia, being already come. The Ruler doubted, faying, that he would not come till ten thousand yeeres were expired. Hee also promised, that because hee had heard much good of him, if hee would come thither, and abitaine from Swines flesh, they would make him Ruler of their Synagogue. Af- 60

ter this, three Iewes came from thence to Pequin, and were almost perswaded to become Chriflians. These complayned, that through ignorance of the Hebrew, their Religion decayed, and that they were likely all of them in a short time to become Saracens or Ethnikes. The old Arshifynagogue, was now dead, his fonne a young man succeeded in place, but ignorant of their

Law. And that their lewish Religion was indeed languishing, appeared by this, that they both worshipped the Popish Images, and complayned that in their Synagogue and private houses they had none. They were offended that they were forbidden the eating of any creature, which themselues had not killed, which had they observed in this Journey had cost them their lives. Their wines and neighbours esteemed Circumcision of their Infants on the eighth day a cruell thing, which they could be willing to alter, with acceptation of the Christian Law, nor would much standabout Swines flesh.

As for the Christian Religion thither carried by the Iesuites, you have heard the whole subflance of their owne large Histories; I meane not of Miracles, and other like stuffe and stuffings, to but the meanes of conuaying the Gospel to the Chinois, which are merchandile, money, & gifts, Mathematiks, Memorative-art, Morality, which to Chisa Couetousnes and Curiosity with their conforming to Confutius Ethikes , and China Literature , Habite , Names and officious Rites, were good Orators, and made way with much adoe to that little which is done; a mutuall exchange in many things, of Romifo for Chinois Beades , Shauing , Vefts, Songs , Murasimus , Ta. pers, Cenfers , Images , Legends, Monkes, Nunnes, Processions, Pilgrimages , Monasteries , Al. tars, hee and shee Saints, and other things innumerable pertayning rather to bodily exercise which 1.Tim.4.2.

tars, hee and thee saints, and other things inhumerable percaying faints to volve men to world profite hitle, then to Godlinesse, or God-likenesse, who being a Sprit, requires men to world plants; the men so world profit and truth; and by fools in significant fair than that before, not by wisedowe of the teat. words, in elegant writings, and those more of Arts then Christianty. The great Doctor of the 20 Gentiles tooke another course, not with excellency of words, sayth he, or wisedome; yea, bee eftermed to know nothing among the learned Corinthians but Iefus Christ and him crucified: neither flood 1.Co. 11.111 his word in the entifing speech of mans wisedome, but in playme enidence of the Spirit; not the wisedome of the World, but the wifedome of God in a mysterie, &c. Which I speake not as denying the

feruice of Arts to Diginity, but of Diginity in manner to Arts, where the profession is not as of a Tent-maker to live that he may preach, but as of an European Philosopher, where Hager domineereth, and Sara at some times whispers a little, and except in Images and Shewes scarcely thewes her felfe, as more fully appeareth in the fore-going Hittory. But would God any Arts Haiton, c. 1. or any Preachers may occasion the opening of their eyes, which were wont to bragge of two eyes, and fay Europeans had but one, when as they have but this one naturall eye, and in spiri-20 tuall things are blinde: and would God the Chinois might as generally acknowledge themfelues thankfull to Iesuicall labours in professing the Gospell, as I doe here my selfe for this Historicall light of China.

≬. VII.

The Map of China, taken out of a China Map, printed with China Charatters; illustrated with Notes, for the understanding thereof.

Some (whole industrie and acts have both here and contracted), was by Captaine Some (whole industrie and acts have both here and elsewhere enriched this worke) Town, Lie. E. gotten at Bantam of a Chinese, in taking a diffress for debts owing to the English 63.63. Merchants; who seeing him carefull to conuay away a Boxe, was the more carefull to apprehend it, and therein found this Map, which another Chinese lodged at his house, lately

come from China, had brought with him. The greatnesse of the danger at home (if knowne) The China made him earnestly begge for that which was on the other side as earnestly defired and kept, jestous of Maller Hakluge procured it of the Captaine, professing his intent to give it to Prince Henry of Strangers. glorious memory, who being juddenly aduanced to a higher view in Heauen, and Master Haklast following, this Map came to my hand, who fought to expresse my loue to the publike in any tottowing, this peap same comy mand, who toggie to expend my more to the passaccion communicating what I could thereof. For it being in China Characters (which I thinke none in England, if any in Europe, vn.lerstands) I could not wholly give it, when I give it; no man being able to receive, what he can no way conceive.

And as in greatest things our little understandings easier apprehend negations then affirma-

tions, and can better tell what they are not, then what they are; so this Map easily tells at first, Benesit of this euen wishout Commencaries, the comments and conceits of our Geographers, Ortelms, Mar. Map us only cator, Hondits, and whatfocuer other our Authors of Maps, and Globes, who all haue heerein tingothers. fayled, gining nothing leffe then China in their China; whether wee regard the generall figure and shape thereof, or the particular Rivers, Hills, Provinces, Wall, Latitude, and if wee beleeve the lefuter) Longitude alfo. They prefent it in forme fomewhat like a Harpe, whereas it is al. most foure square; they make Hills, Rivers, Lakes, Hands, (Coray also for one, which is part of Coray no lland,

the Continent) Cities, Prouinces, every thing out of due place. Whose industry I commend; but industry guided by ransie, and without light, is but the blind leading the blind, or like a seeled vamanaged Horse, the more spurred, the more ready to carrie his Rider into precipices, or out of the way at least. Our Geographers haue indeed payd the Chinois in their owne Coine:

for they, as before yee have read, knew nothing in manner of the other parts of the World, and expressed them as fanfifully in their Maps; and wee likewise knowing nothing of them, have entertayined, and beene entertayined with Fansi-maps, in stead of those of China. As therefore by Sir Thomas Roes honourable industry wee have given you Indus and India before, which no Geographer before had done (they all bringing Indus thorow Cambaia, and some seeking for Ganger at Canton in China) fo here we give you a true China, the Chinois themselves being our Guides, and the Jesuites their both Examiners and Interpreters.

The Originall is about four foot one way, and almost fine foot the other, whereof a ward and some foure inches square is the Map it selfe; the rest are China Discourses touching the say Map in their Characters and Lines (running downward, and beginning at the right hand to bee read, after their manner) which are heere omitted, as not vinderstood. Yet haue wee some vinderstanding (as where wee see a man farre off, whom we know to bee a man, and can observe his habit, gefture, motion, though wee fee not the proper complexion of his face) by that which Pantons hath told vs before; namely, that those China Characters contayine all the Tributes of each Prouince, yea the number of Houses and perions in the same. And in the Map (of which wee have given an extract) hee fayth the Rounds and Squares are Cities and Townes of princip pall note all walled; adding that the Rivers are diffirefly delineated; and the great Lines are boundaries of Prounces, (wee haue heere ex pressed them after our manner in little prickes,) the leffer expresse the chiefe Cities Iurisdiction. Ours hath no such leffe Lines, but those mentioned Rounds and Squares, which perhaps hee meaneth; for therein are many others in Character, 20 without fuch lines round or square, and therefore as I suppose without Juridiction; and in this extract wee haue left them out, because we exactly knew not their meaning, and perhaps some. times are Cities, sometimes Castles or Townes, or Hills, or some other thing : and filence see med better, then labour to expresse an vnknowne Character, or boldnesse to expresse our owne folly or to occasion others, deceiuing and being deceiued. These Rounds and Squares also have their Characters in them, and those greater Squares with Crosses, haue, some three others force

Besides Pastogia, another hath helped further to the particular understanding, namely our famous Countryman Malter Candifb, who in his voyage about the Globe, brought home certaine references taken out of the Map of China, neere which hee fayled, and it feemes by fome skilful 20 of the Languages both of China and Portugall, had the fame interpreted to him. That the Prouinces beare other names then in our Map or discourse is no wonder; for both the Chineis themfelues in divers Provinces speake divers languages, and in all have the Court language besides the peculiar : and the China Characters are the same to many Nations, each of which reades them into his owne language, dialect and appellation. Thus what one Prouince calleth Language (wanting the N.) by divertitie of Dial Ct, is elfe-where called Nanquin ; Pequin, Paquin, and Puching yea, by other language Taybin, and Cambalu, and Suntien, or Citie of Heauen. I durft not interpret all, thu fing rather to give an vincertayine truth, then to hazard a certayine errour. Mafter Candiller

" Perhaps this is Scienfi. nThefe leagues feeme doubt-Pequin.

1 He Province of Canfas * hath 4. great Cities, and 20. fmall Cities, and 77. Townes and Caftles : it contayeth in length 45. leagues a it hath 262000. Houses of great men that pay Tribute and 12900, men of Warre, and hath 47000. Horses which are the Kines.

2 The great City of Paquin where the King doth lye, hath belonging to it 8. great Cities, and 18. small Cities, with 118. Townes and Castles, it hath 418789. Houses of great men which pay Tribute : it hath Horsemen for the War, 258100 this City is in the latitude of ogo. degrees to the North-wards, being there as cold as it is vivally in Flanders.

The Province of Sorebin hath 7. great Cities, and 16. imall, with 12. Townes and Caffles, and one great Citie, to which many repayre to fight against the Tartars; it hath () leagues in 50 length, and hath 164118, great Houses which pay Tribute, and 96000 men of War. The Province of Santo P hath 6. great Cities, and 14. small, with 90. Townes and Caltles; it is 82. leagues long, and hath 77555, great Houles which pay Tribute: 62808, horie-

men, and 21000, footmen of War.

The Prouince of Oyman 9 hath 7. great Cities, and 14. small, with 90. Townes and Callles; being 470. leagues long, and 132958. great Houses that pay Tribute, 82800. men of For the Chiness Warre. Out of this Prouince commeth Copper, Quick-illuer, and Black-lead.

6 The Province of . Cutchen hath 8. great Cities, and 12. fmall; and 82. Townes which make Armour to fight with the lewes which do inhabit beyond Cauchin-ching; it is 100.leagues broad, and hath 32920. Horsemen and Footmen with 405670. great Houses which pay Tribute 63 whereof the men of War are paved.

7 The Pronince of Languyn hath 14. great Cities, and 17. fmall, and 95. Townes and Ca-Or Quichen, files: it is 1 20. leagues over, and hath 962818. great Houl s which pay Tribute : it hath in it 208900. men of Warre. Whereof there are 52500. Tartar Horlemen that take wages.

R The Prouince of Vquam hath 14. great Cities and 19. fmail, 150. Townes and Caffles, and

is 210, leagues broad; and 53161. Houses that pay Tribute: and 71600. men of Warre. o. The Prouince of Som hath 7. great Cities, and 11. small, and 105. Townes and Castles: and is 200. leagues broad : and hath Houses that pay Tribute 139567. and men of Warre 345632.

10 The Prouince of Essiram hath 12. great Cities, and 75. small, and 80. Townes and Cafles, and is 440. leagues broad, and hath great Houses that doe pay Tribute 1242135. and 339000. men of Warre.

11 This Lake lyeth behind Siam, and before Champa, and doth joyne with the Lappians, and In a small specific the state of the state o the Chinians doe report this Lake to be the whole World, and so they paint the Sea, the Moone times

12 The Province of Lanfay, hath 13. Cities and a chiefe Citie, and 73. Townes and Cassles. and is 260. leagues broad, and hath great Houses that pay Tribute 1393629. and 12700. men

12 The Prouince Chanfa hath 12. great Cities, 45. small, and 51. Townes and Castles, it is 260. leagues broad, and hath great Houles that pay Tribute 1306390. and men of Warre, both Horsemen and Footmen 100100.

14 The Province of Vanams hath 14 great Cities, and 36. small, and 24. Townes and Ca-20 files, and is 88. leagues broad, and hath great Houses that pay Tribute, 589296. and 15100.

16 The Province of Fuguien hath eight great Cities, and one principall Citie, and 64. Towns and Caffles, and two great Gities of Garrison to keepe watch vpon the Ispans, and is 200 leagues broad, and hath 5009532. great Houses that pay Tribute, and 4003225. men of the Kings

16 The Province of Canton hath 40. great Cities, and feuen small, and 77. Townes and Cafles; and a Citie that putteth forth hundreds of flips for the keeping of Cauchin-china, and is 280. leagues in breadth, and hath 483383. great Houses which pay Tribute, and 39400. men

30 17 The Prouince of Enem hath seuen great Cities and 13. Small, and 90. Townes and Cafiles: and is \$8. leagues broad, and hath 589296. great Houles that pay Tribute, and 15100.

The Spanilo Friers of the Philippinas, as Mendoza recordeth, thus out of the China Bookes relate the names of the Proninces, Paguia, Foquiens, Olam, Siufay, Sifuan, Tolanchia, Canfay, Oquians, Aucheo, Honan, Xanton, Quicheu, Chequian, Susuam and Saxy; tenne of which are seated on the Sea-coaft. He also addes that Pagnia or Pequin hath forty feuen Cities (filled Fu) and one hundred and fiftie others termed Chen. Canton hath thirtie leven of the one, and one hundred and ninetic of the other, and so proceedeth with somewhat differing account, reckoning in all five hundred ninety one Cities entituled Fs, and 1593.0f the Chen Cities, which he makes Townes: 40 whereas the Iesuits have taught vs that Fu is the Title of a Region or Shire, in each Province,

which are sub-divided into Cen and Hien, those the more, these the lesse principall, but yet e-Againe, in a Dialogue printed at Macao, in the Confines of China, 1590. by the Portugals,

Againe, in a Distague painteu at Aranea, in the Committee of Conne, 1500, by the Proringat, thefe Prounces are thus reckoned, Sixe vpon the Sea. Continue, Poquien, Chequium, Ranquin, Kantinu, Paquin; the other time In-land Prouinces, Quinnss, Huquam, Henam, Xienss, Xansi, Suchun, Queichen, Innan, Coansi. Perera teckons them thus, Fuquien in which Cinces is the best knowne City; Cantan, Chequeam, Xutiamfu, Chelm, Quianci, Quicin, Quanet, Confu, Vrnan, Stchina, &c. all which diverfity proceedeth partly from ignorance, partly from different Language and Dialect in the expounding these Characters. And it must needs be so, the Chinois wanting

30 vie of, and Characters to expresse b. d. r. and all their Characters being of things not Letters; in proper names is very great difficulty to express ours in their Characters, or theirs in our Letters; insomuch that one lesuite doth not perfectly agree with another, nay, often diffents from himfelfe, as in lanfen, Tameen, Hiancen, for their great River which Polocals Quian; and Chi, and Ci, and Qin I find often confounded in their fyllables, as alfo x and fei, as X auchin, Scianchin, and the like. Yea, fuch is the difficulty, that the lefuits can scarlly desire to express in China Characters, the forme of Baptime, to put the Latine words thereof, into China Chara-Gers, that Baptisme might vnisormely bee administred after the Romish Rice, as themselves

Touching their Souldiers, I thought good, to adde this note for their Peeces whose Barels Note of Soul-60 Pannia layth, are but a fpan long, that Captayne Sarab beeing asked told mee, hee faw many of direct percent them, and they were as long as Piffols, but the Cocke fuch as makes them of little feruice,

I have added these Pictures of Manand Woman of China, not by ghesse, but out of certain the Printers in China Pictures made also in China in very good Colours, but with Arte meane enough, fault. face cloth inferted in flrong Indian Paper; of which Captayne Saris communicated many to me. Picares.

Their little Eyes and Nofes, long Hayre bound vp in knots, womens feete wrapped vp, long wide-fleeued Garments, Farmes, &c. I haue (taking divers parts out of divers) prefented to ther. A tafte of the China Characters thou haft in the Title. That of Riving I have added from Provinces and the Icluits, in thankes for his great paines, and to shew the habit of the head. &c.

to the South. Degrees.

The names of the Provinces I have hunted out of the Iesuites Iourneyes and other Relations. In the most I am fure I am right, in the other 'you have my coniecture; for neyther know we their Characters, nor haueany giuen vs a particular Geography or Chorography, but only the names of the Prouinces. I have added names also to some Cities and Rivers of principall note. As for the truth of the Map I finde well to agree with the Iefuites Journeyes; but it hath not European Art, it being neyther graduated, nor Hils, nor Woods, or other differing places pre- 10 fented to the view; only having Characters, Lines, Lakes, and Rivers. I have addentured to adde Degrees to helpe such Readers as cannot doe it better themselves, following the lefuits prescripts in generall, although I cannot but maruell at that longitude, so farre differing from the generall opinion, and could almost doubt, that herein these Portugals are minding that diuision agreed on betwixt the Spaniards and them, which hath anciently caused such contentions, and wherein you have read tome Offices of the Iefuits in thefe China Difcourfes. But I will not contend, where them felues speake faintly,

Now for Quian which Polo hath mentioned, as the greatest River in the world (it is here called Quim. Now for Yusan which Poso nath mentioned, as the greatest Kiner in the world (it is here called *Mandeille & Ianfu, or Harrfu, or Tamfu, that is, the Sonne of the Sea, and Ianfuchian) and another called Cao hers speake ramoran (Cara signifieth blacke, and this great Northerne River is alway thicke and troubled) of the irregula and their Marriage by Art, is here viewed; and more then two hundred Cities (one of Poles Wonders) communicating their Merchandizes by that Quian, or Chian, as they now termeit Iansachian, chian signifying the chiefe Riner. For the name Cathar to bee given by the Tartars to China, Goez his Iourney hath made it out of doubt; also that Pequin is Cambalu, that is, the Citie of the King. I doe conceive that Polos Mangi was the nine Southerne Provinces of China; the Northerly before conquered was knowne by the name of Cathay; a name by the Tanarigia uen to divers Countreyes, as Cara Catay and Catay Calay and Great Catay. This Great Catay is

Polo and other Authors speake of Cathar and Mangi as two; perhaps the Tartars so accounting them ; the one, to wit, the North parts being formerly subject to them, and called by their 18 ancient name, the other called Mange in contempt; as the Romanes called the fubiect Britaines of this Iland by their former name, and the others Piets and Barbarians; and as our Ancestors called those Bricons which withstood them Walfbor Welch in a kind of disgrace. Nay still the Mortherne Chinois call the Southerne Mangines , that is , rude or barbarous , as the Lefuites have taught vs. But neither Caibay, nor Manyi, was then the name which they affurmed, but was given them by the Tartars, as China is a name vnknowne to them now. If any will find noother Cambalu, nor Cathar but Pequin and China, I will not contend, though my Reasons elsewhere given out of Polo, and Chaggi Memet, and others, with the former Relations of Pinto and Albacen, make me scrupulous, and still to beleeue some greater Prince or Can with his Cambals or Court in the more Northerly parts of Afia, then the Issuits could learne of; which the 40 China icalouse, admitting no entercouse of Strangers, and the many quarrelling. Tartar Princes in the way have concealed from vs hitherto.

The great blacke space on the North-west hath in the Originall certayne Characters in it which expecifie it : whether it intendeth Mountayns which their Art could no better expresse, and the Rivers thence running may import, or that fandy Deferton the North-west, I cannot fo well determine. The Iefuits fay, that ab occasu qui Aquiloni vicinior est, conterminu visiturarena stuentis ager, qui multorum dictum penuria aduenarum exercitus ab Sinarum Regno ant deseret, aut fepelst. I rather thinke that it is Cara Catay or Blacke Catay, before often mentioned, both Mountaynous, and Defert, and perhaps coloured blackish, as the name intimates, by black fands, or as health grounds with vs: it was the first Tartarian Conquest, and beginning of the greatest 50 greatnesse which this World hath yeelded; the Country before of Prestyrer loannes Asaticu.

The wall is in this forme in the original, not in the Picture made up of Mountaynes, wherein I thinke they had not art to imitate Nature ; the Art in the whole Map much refembling our old Maps, of wooden prints, faue shat I fee not one Mountaine presented in swelling fashion to the Eye. The Ilands are very many with their Characters, but poorely delineated, their names here omitted for their vncertaynties : so little (and yet how much more then any other !) doe wee give you of China, till Time give vs more. The degrees are not so perfectly accommodated to the Map, by reason that we must at once follow the Chinian Map which had no degrees (nor could their Art without degrees give every place his inft longitude or latitude) and the Iefuits Rules : 60 yet we haue comne somewhat neere, as may be seene. Other things appeare in the Hiftery.

CHAP. VIII.

A continuation of the Jeluits Acts and Observations in China Will River ve his death and some yeares after. Of Hanceu or Quintay. An Extract of MONFARTS

Hus having with Pantogias eyes taken fome view of the Kings Palage and with Riem of their whole Gouernment, I hold it fit not to leave the China Apolite Rie Broediti-(fo Ricing is called) till wee have seene some fruits of his labourg ynul, and after on least his death. He tels vs that three days after they had beene shut yo in the Palace of Strangers as yee haue read, they were brought forth into the Kings Palace and performe the wonted Rites to the Kings Throne, This is done in a large and strium.

glorious Court or Porch, where 20000. men might be contay ned; at the end whereof is a high Chamber, under which by fine great doores is a passage to the Kings Lodgings ; in that Champ ber is the Kings Throne, where anciently he fate to heare and diffratch butinelles and Embaffages. and to receive the Rites of Magistrates, rendring thankes for their Preferments. But in the pres Kings Throne fent folitarinesse of the King, those Rites are done to the Empty Throne, many there gratula. reucrenced 20 ting the King every day. In this Court, environed with stately Workes, 3000, Souldiers watch every night, befides others watching in Towres without, a ftones caft from one another. In each of the fine Gates is an Elephant, which with the Souldiers goe forth when it is day; and those Elephants. are admitted which come to gratulate the King. These come in a peculiar Habittof Red, with an Iuory Table in their hand to couer * their mouth, and exhibit their kneelings and bow. *See the like ings to the Throne, as they are taught by Officers of Rites or Mafters of Ceremonies : pne cry+ fap.23. ing out to that purpole at the performance of each gelture. The Gouernour of Strangers having Throne. thut them up, first petitioned the King tharply against Mathan the Eunuch and them, but feeing no answere, he petitioned more gently but would have them sent from Pequin; which the King liked not, yet without Petition from the Magistrates would not detayne them. The Euniches

30 also laboured their stay for feare the Clockes should miscarry beyond their skill, The Kings Mo- Kings politic ther hearing of a felfe-striking bell fent for it, and the King sent it, but to preuent her afking it, caused the Wheeles to be loosed, so that not seeing the vie, she fent it againe. When the Rituall Magistrates could get no answere to their Petitions, for not touching their

flay at Pequin; the Prefett fent to Ricius that he would make a Peringon to give him leave to flan there in precence of Sicknesse and Physicke, which beedid, and the other presently answered, giuing him libertie to hyre a House; continuing also his former allowance, with source servants to bring it enery fifth day, (Flein, Salt, Rice, Wine, Hearlys, Wood,) and another fernant in continual attendance: fo that now they recoursed libertie, and credit. The Eunuches also told Their libertie them of the Kings approbation of their flay; and they had out of the Treasurie sight Crownesa and allowance 40 moneth, which their goeth much further then heere : and the Captayne of Strangers by open Sentence gaue them full libertie. One of the Colai, and then the onely, became their great friend, with his Sonne, after some European Presents, which hee bountifully rewarded : likewise the supreame President of the Court of Magistrates, and other of the Grands, besides the Eunuches of the Palace, and some of the Queenes and Royall family, Amongst others was Fumochan a great Fumochan. man, who for withftanding the Eunuches capacitie in Vquess Prouince, was deprived, whipped, and three yeeres Impriloned; but by others honored with Temples, Odours, Images, and Bookes in prayle of him, as a Saint, and the King wearyed by multitude of Petitions for him, granted him againe his libertie. Also Lingoson a great Magistrate and Mathematician as they accounted, became Rieins his Scholler, and was baptifed Leo, borne at Hancen, the chiefe Citie of Cechian,

so of which afterward. Yet had Recine a great enemy of a great Learned man of Hanlin Colledge, who in zeale of the One of Hanlin Idol-feet had put away his Wife, and professed himselse one of their Votaries or Shauelings, neth Idoldrew many Disciples after him, and writ many Bookes against the Literate Sell; and writ also Priest. against Recise his bookes. One of the Kings Admonibers accused him to the King by Petition, and the King referibing seuerely, hee slue him falfe : yea, the King ordayned, that if the Magifirates would become Apostata shauelings, they should leaue their Robes and get them to the Deferts; many accordingly chufing rather to leave their Offices, then their Idols. One Thacon Thecon 2 fewas so famous, that the chiefe Queene daily worshipped his habit, (nauing no other meane of en. mous infatercourfe) and to proud that hee fent to Rioiss to come and visite him, with the rices of kneeling, mous Prieft. 60 But on occasion of fearch for a Libell against the King, hee was found guiltie of writing ill of the King, for not professing Idols, and of ill viage to the Kings Mother, for which he was Whipped io, that before they could adde bonds, hee dyed. One which by torments confessed himselfe author of the Libell, had 1600 gobbers plucked from his flesh and then beheaded, a Death most (for

the division of the body) abominable to the Chinois.

Traitors.

Scianbai in

Idoll Hoaquan, made with three Eyes, one in his forehead (for though the Chinois have no Idols representing any formes but humane, yet they admit Monsters) as their God of Eye-fight for whom they intended to build him a Temple, and carryed him from house to house a begging to that purpole; the lesistes refusing to grue them. Rumours also of Mashans detayning the Prefents were soone apprehended; as likewise certayne Stage-players which comming from Amacao, fet forth in Pictures those things which the Chinois hated in the Portugals, as their short Gatments (feeming to them ridiculous) praying on Beads by men in Temples, with Swords girded to them, kneeling on one knee, their quarrels one with another and combats, Women grided to them, ancening on one are a the parties and accurded the Infairer to the Tauli, 10 who spate for them and visited them. It happened also that by occasion of a great Drought, Processions and Fasts were commanded, and the Shambles shut vp, the Gouernour and people in differs places appointed thereto, begging rayne with their bowings; and when this pressyled see, they beought an idoll out of the Suburbes, called Levi, which was carryed about, adored, I sem valuell offered too, with no better forceffe. Hereupon they confulted a Witch, which fayd the Quantum or Goddeffe was angry, that her backe was daily korched (fpoken of the Converts burning their Idols) which caused some conspiracie, quenched with the Tantis sauour and the rayne following, At Nanquin one borne at Sciannai, and heft pronounced Licentiat in the examination 1597. was Baptifed by the name of Paulus, who connerted his whole Family. Anno 1604. hee was made Doctor, amongst three hundred and eight, of which number foure and twentie were cho- 20 fen of Hantin Colledge, after the Come course of best Writing, of which hee was the fourth : this Choise of foure and twentie is but for probationers, for at the most after long tryals by the Colai, but twelve or fifteene are let in possession, in which examinations hee was

I rhought to adde this by the way, that Ligotfun a learned friend of the lefuites, had beene put from his great place into I know not what petrie Office, for too light demeanour and too fre-Hollanderstake quene Cheffe-play, which continued three yeeres. The Hollanders much impouerished the Pera Partingall this sugals by taking the lapan Ship of Amacas, the fewell of the lesites beneficence. At Nancias they Converted three of the Blood royall, Baptifed by the names of Melchior, Gafrar, Balthathey conserved times of the book of the state of the book of the state them a Charter, called the Drectorie of Hell, which the Shaueling Impostors had fold her, written to the Infernall King, to give her good entertaynment, and remit her punishment. The le suites exchanged their Images for her Idols, and their Eeclessafticall Falt for that Pegas.

At Nanquin, Chine also was baptifed by the name of Ignatius, firiking the ground foure times first with his forehead, and fecting the profession of his Faith, which hee delinered in writing to the Fathers; the contents of which and of Paulis, are expressed in our Author. The Hollanders fought entrance into China, to bee admitted Trade in Fuquien Province, but were denyed notwithstanding both promises and threats. Feare of them made the Poringals at Amacao begin to build a Tower and to fortifie. Bit a quarrell falling betwixt a Regular, and a Secular Prieft, one fleeing to the lesure Rector for refuge, there grew such a combustion that the Chineis fled to 40 their Countrey, perswaded that Catameus then there intended to get the Kingdome, whereof hee had fuch expense; at Canson was such terrour, that aboue one thausand Houses without the walls were polled downe, the Gates toward Amacae filled up with Lime and Stones, all commerce with Amacaons prohibited, great Watch kept ; Francis Martinez betrayed by a falle brother a atariner whip-Connert, as a Spie, was twice fo Whipped that hee dyed some after the stripes, as hee was entring the Prison. At Nanquin three thousand were found, Anno 1606, to have conspired the Death of the Magistrates, and to inuade the ancient Treasuries. Those which were taken were put in those Pillorie boards, which force them to fland till their Legges rot, some of them holding out a Fortnight, as was thought by bribing the Executioners : the suspition hereof was by some cast on the lesuites. Two Guides or Fraternities were erected of (bina Conuerts.

Ziu Paulus the learned Convert, being to leave his place for three yeeres, to mourne for his Nanquin Pro- Father at Scianbai his natine Towne, he obtayned Catamens to bee sent thither with him, where heestayed two yeeres. This is one of the meanest forts of Cities which they call Hien, one hundred fortie and foure Italian myles from Nanquin, and in that Prouince, in twentie nine Degrees, ouer against Coras and the Laponian Hands, within a little of the Easterne Sea. The name Sciantia, lignifieth on the Sea; and it is fortified with Garrisons and a Fleet against the laponians, being a passage with a good winde of foure and twentie houres sayle. The walls are two myles compatie, the Suburbes contayne as many Houses as the Citie; fo that there are numbred fortie thouland Housholds (by this you may measure the frequencie of great Cities,) the Territoris is an euen Playne, and so cultinated that they seeme a Citie of Gardons, full also of Villages, 60 Hamlets, Towers, contayning twentie thousand Families in this Townes jurisdiction, there being in that Circuit 300000. men. This Iurifdiction alone, payeth to the King the yeerely value of 1,50000. Golden Crownes, in the weight of Silver, and afmuch in Rice, in all 300000 (whence the incredible renennes of this Crowne appears also credible) the Ground being fertile of

CHAP.8. Riccis death. Pantoias Petition to the King. Ticams Chappell.

Corton, whereof there are reckoned 200000. Weaters, Pequin and other parts being hence fer- 200000. Westned with Cloathes. There are many good wits and Students, a good Ayre, and they line long, uers. eightie, ninetie, and a bundred yeeres.

Wee are now come to the Death of Father Ricine (the Author of our Infuitical Discourse of China hitherto; occasioned by multitude of businesse that yeere, fine thousand Magistrates comming to visite the King, and five thousand others standing for their Doctorship, of which about three hundred onely are chosen. Wearyed with his Ecclesiafficall Fasts also and labour of building a Church, hee fell ficke and dyed, May 11, 1610. having much propagated the Goipell by his writings, and furthered it by his Mathematickes. For all Sects haue beene there more en-To creased by Writing then Preaching. Hee dyed leauing much forrow to his friends and care also in that China scrupulofitie, how and where to interre him. It was the counfell of their friends, to put vp a Petition to the King, whereupon they resolved, and Pantogia by Doctor Less helpe, thus Petitioned in behalfe of Ricius his Corps. I lames Pantogia, Subject of the Kingdomes of the great West. Offer a Supplication in behalfe of another Forrainer now deceased. I humbly beseech your great Clemencie for a place of Buriall, that your Royall beneficence may extend to all, even Strangers of remotest Regions, I lames Pantogia am a Stranger of a most remote Kingdome, but mooned with the vertue and fame of your most Noble Kingdome, have in three yeeres fayle, with much trouble, paffed bither about fixe thou and leagues. In the eight and twentieth peere of Vanlie, (for fo, as wee, they account their yeeres by the Kings raigne) in the twelfib Moone, I, with Matthew Ricius, came into 20 Jour Court; where wee presented some gifts, and have since beene sustained at the Kings charge. The nine and twentieth yeere of Vanlic, in the sirst Moone, we Petitioned your Maiestie for a place of resdence, and have many yeeres entoyed the Royall bountie. In the eight and thirtieth yeere of Vanlie, the eighteenth day of the third Moone, Ricius dyed. I, a Client of the Kingdome of the great West, remaine a fit subject of pitie. The returne into our Countrey is long, &c. And I now, after so many yeares stay, suppose that wee may bee numbred to the people which solloweth your Royall Chariot, that your Clemencie, like that of Yao, may not contagne it felfe in the Kingdome of China alone, ore. So proceeds he He was a King to let foorth the good parts of Ricing, and with a long supplication to begge a place of Burvall, of old, accom Some Field, or part of a Temple; and bee, with his fellowes, should observe their wonted Pravers to the Lord of Heanen, for thou fands of yeeres to bim and his Mother. This Libell was written with peculiar forme, Characters, Seales; many Rites herein necessarily observed. Before any bee offered to the King, it must be eviewed of some Magistrate; and they got this to bee allowed by one which is Mafter of Requests, which sent it presently to the King. They must also have many Copies thereof, to flew to those Magistrates, to whom it appertaines; which they did : one of them affirming, That Rieins deserved a Temple also, with his Image to bee there set up. This message hee tent them by another : for when they fauour a cause, they shew great strange-

in that case, and concludes the Petition to bee agreeing to Iustice, and earnestly pleades and sues for confirmation. The King fends this answers to the Colao, which subscribed his approbation; which being fent agains to the King, hee subscribed with his owne hand Xi, that is Fist, or bee st done, which the third day after was delivered them. The lefuiter having so speedie and prosperous successe, bethought of gratifying their friends, which had furthered this defigne with Dyals, especially to the Colas, which vsed Pantogia very kindly and writ to the Gouernour of Pequin to looke out a place fitting. Three or foure were offered to their choyse, one of which much pleased them.

nesse. The King commonly answers the third day (except hee mislike, for then he suppres-

feth) and fends it to the Magistrate that had presented it, who shewes which of the sixe is the

peculiar Court, which judgeth of their things : This being fent to the Ritual Tribunal, Their

answer is sent to the King within a Moneth (which there is a short space) and repeating the

Petition verbatim, and the Kings command to the peculiar Office, answers what the Law fauth

It was aboue a quarter of a myle from one of the Citie gates, built by an Eunuch, who now so was condemned for some crime; and left his Palace which hee had heere builded, with Place affigned the expence of aboue foureteene thousand Duckats (which in China is a great summe, in that to the Islands cheapnesse of all things, farre beyond European computation) should fall into the hands of spoylers (the goods of Eunuches in this Kingdome, viully becomming his which first can catch them) hee confecrated his Palace, and made it a Temple, maintayning therein one Priest. Such Speylers spoy-Palaces many of the Magistrates have neere to the Cities, as retyring places and Tufculanes for led. their Muses. The portraiture of this whole House, with the Garden, and other appurtenances, Trigautius hath fet foorth in Picture; being after the China building, with the doore Southwards, and fo running a great length into the North, with foure great Halls one beyond another; in the middle parts, and on each fide, Chambers and other Roomes; beyond all the Gar-60 den, the pillars of Timber bearing up the roofe; the walls and pauement of Bricke. The outmost of these Halls was converted into a Temple or Idoll-Chappell, in which was a great Altar of Stone and Bricke cunningly fretted, paynted red (a colour forbidden to private Houses) and vp-

on the middest thereof fate a huge Monster of Earth, gilded from top to toe, of massie quantitie. Teamshe far-The Chinois call it Ti cam, the God (as they fable) of the Earth & Treasures, as Plate in the Poets. na Plate.

His Image or

Denils & Hell. M.Paris, Oc. Srix. Elifan fields.

In his hand was a Scepter, on his head a Crowne, not volike those vsed by our Kings. On each fide flood foure minifers of the same matter : on both fides of the Roometwo great Tables, and on each of them fine Kings, or great Officers of Hell. On both the wals were painted the fame Officers, or ludges, fitting on their feuerall Tribunals, giving fentence on wicked men, every one according to the condition of his Court. Before them flood many Deuils, more terribly formed Minny, Status, Rhadamanthus then with vs. The paines of Hell also were so deciphered, that could not but firske terrour to Rhadamanthis then with 15. A me plants of the state of the beholders; some rosted in year Beds, some fryed in scalding Oyle, some cut in pieces, or herehouse the demonsters; tome rotten in your loos, to me to the middle or torne of Dogges, or otherwise tortured. The first of those ludges examples of the first of those ludges examples. other annuals and the minute or torns of Dogges, and a certayne Classe. Those which here found guilte, Bullancesifier were fant to the other ludges, according to the qualitie of the crimes. One of these was ludge in 10 thole in diuces the state of Transfining ration, which fent the foules of cruell men into Tygres; of vincleane perions, into Swine, and the like : or if their crimes were smaller, into the poorer fort. There was a great Ballance; in one of the Scales, a man laden with finnes; in the other, one of their Hypocritical Prayer-bookes, which counterpoyled the other Scale, and freed the Sinner. There rame through Prayer-nookes, with to contemporary of the midft of Hell a discoloured River, which carried away many. For our it were two Briges, one of Gold, the other of Silver; by which, those passed over, which had beene denout Idola. ters, carrying in their hands Enfignes of the same : these were guided by the Priests, which led ters, carrying in their manus sangues of the same and pleasant Groces and Gardens. In another part were parated the Dungeons of Hell, with horrible Serpents, Flames, Deuils. To the Brazen Gates thereof there comes an Idolatrous Priest, which in despight of all the Deuils deliuers his Mother 4 from those slames. There was no infernall punishment painted, but had such an Inscription: He from those names, I nere was no macroan punniment panner, but has not man need a new an interprior. He which shall gray to such an Idoll a thousand times, shall bee free from this panisment. The Idolites beat the Earthen Idols to dust, and burnt those of wood, wherein the Chinese Connects were the forwarder, because the Countrey custome is to fill the hollow bellies of these Images with denoted Money or Iewels. They demolished the Altar and playstred ouer the Pictures, and in place thereof erected the Image of Christ. No private man may erect a Temple by Law, which

* The lefuites A little before this exchange of Idols into Images (after their distinction, and a * filly one it is) some tooke their last leave of Ticam: one kneeling and bidding it fare-well; another chaffing, chinais mayne tayne their I faid; Thom maffe of Dang and Earth, if thom haif no power to maintagne thy Temple and thy felfs, 10 tayne theft 1., what helps may looke for at thy hand? Neither art thou worthy of any homour at mine. Others faid, ing they wort that this had sometime borne the name of some other Idoll, and therefore was auenged for that thip not the Idell, but God

Ricius, having thus taken possession of China by his dead bodie, and living name, wee shall thereby reprebriefly out of the Iesuits Epistles adde some later accidents, and so leave our China Discourles, which if they have feemed tedious and troubleforne, remember that China is both exceffirely tituall, and also inhospitall to Strangers; and I have but imitated my subject, in long and wearifome entertaynment. These tell vs of the Kings vnkindnesse to his Heire, proclaymed, as yet haue seene against his will, scarsly allowing him necessary sustenance, nor permitting his Mother Prince and his at her death to be mourned for with wonred Rites, He is indeaout, his Mother egregiously Su-40 at ner ueuen to be mounted to min monted etter, 12 cs mounted in manuale energous perfitious, mayntayning many Priess, erecling or repayring Temples, that it is a Prouerbe, In the Court the Provinces are Magifrates observed. In that their studie of long life One had beene so mad, that he being a Licentiate, bought children whom secretly he killed, of their bloud making compositions for that purpose; which comming to light by one of his Concubines, he was put to a deferued death, three thousand pieces of flesh first cut from him.

Dry winters. In their Winter is greatest scarity of water in the Rivers, and many shelves then cause many shipwrackes. As they want b. d. r. so they end no word in any other Consonant but m. and w. The China Connerts are very zealous in selfe-whipping penance, and fasting, altered from their forme to the Ecclesiasticall, which is hard to them accustomed to eate thrice a day. Their Priests vse Beads, mumbling thereby their Deuotions and many things alike. They built a 50

Chequian fometimes the Imperiall Pro-

fpected.

The Province of Chequian yeelds only to the two Royall, Nanguin and Pequin, beeing more excellent then any of the reft. Neither hath it loft other Provinciall Ornaments how source it hath loft the feat of the Chma Empire, but is still the best of thirteene. On the East it is washed with the Sea, which the winds favouring admit passage to I apas in four eand twentie hours: on the West it confineth with the Provinces of Nangum and Kiams (or Chians) on the South with Fagnian: to the North is Xanto (or Sciantum.) It hath twelve Cities of principall note, which are the heads of fixtie three leffe; befides innumerable Townes, Caftles, Villages. The foile is the most sertile of the Kingdome pleasantly interlaced with Riuers, many of them produced by Art in imitation of Nature, in commodiousnesse no whit inferiour, yeelding a spectacle of amaze- 60 ment to the amused Posteritic, how humane force could effect such wonders. These Rivers for further commoditie are towred with innumerable Bridges of huge massie stones arising into diuers Arches, like to the European workmanship. You have alreadic Almeidas Epistle of his and Rogers going into this Prouince, to Xao Him, whence foone after they returned. The Chinois have

CHAP.8. Hamceu, faire ftreet, triumphall Arches, Rivers, Ponds,

a Proutibe of Hamcen the Metropolis, and of Sucen, thien xam, thien tham, ti xam Su ham, that which in Heauen is the Hall of Heauen (lattea via, as he elle-where interprets it) that on Earth Suces and Hamces. The Countrey so aboundeth with Mulbery-trees and Silke-wormes, that China, Iapon and India are thence turnished. Ten Vests of Silke are there cheaper, then in our Countrey one of cloth. Hamcen stands from Nanquin South-eastward nine dayes Journey, almost in thirtie degrees eleuation : about three dayes lourney from Scientisi, where Catanesis was, who with Trigantins our Author were fent thither by Lees procurement. They went from Nasquis by the Ruer las fu fift, and then into hand-made Rivers, Cities, Townes, Villages, fo frequent in the way, that nothing feemes in the whole Kingdome more populous. Mid-way, where To Nanquis and Chequian Prouinces joyne is that famous Suces, feated in the Continent, and fee. Sec/19.143ming yet the Daughter of the Sea, like another Venice, but more happie with her fresh waters: ming yet the Language of the Only into another Server, our more inspire with the treat waters the Ports for frequent, and ships so many as if the whole shipping of the Kingdome were thicker comme to some Faires, which yet are in succession perpetuals. When the Fathers were comme hither, the Chinois by I know not what rumour were conceited that their Foe or Gods were

comne thither in Visitation. And a Magistrate sent to Lee about it, to know if, and how, he But to leave their Fooleries, let vs take view of their Citic. Hancen is the chiefe Citie of this Hancen Han-Prounce 19ea, in all this Kingdome; leffe perhaps somewhat in compasse of walles then consolinates. Nangain , but better peopled : 90 place in the Citie emptie , nor occupied with Gardens, but

20 all builded, and all the Buildings almost with divers Stories, which in other Cities of China is not viuall. The Inhabitants are fo many, and the Tribute fo much, that the Iesuites durit not relate that which hereofthey had heard by graue testimonie, for the incredibilitie: the description would aske a whole Volume. The chiefe street is almost halfe a dayes Journey in length, and cannot be leffe then admirable. For whereas the Chinois vie to erect triumphall Arches , as Monuments, to wel-deferring Magistrates, and Ornaments to their Cities; this one street hath at least three hundred such (besides very many others in other parts of the Citie) of massic stones ar tear turer unusure user teamers with many senses in our parts of the Cutte, or many senses, and exceeding curious Workmanship, that if the Houses on both sides yeelded the like splendor, the World could not show such a spectacle. But they occupie is all with shops, and build the

most magnificence of their Houles inwards, and yet those not like the European Palaces. There is alfoa Lake clofe to the Citie, which the eye can fearfly meature, which sliding in- The Lake. There is an a second and in the diverse Hillocks, hath given occasion to Are to flew her See the Map. to a variety casompaning, consequence with Houses, Gardens, vermote in the automing the same, possibly no action of passible business with grounds, carriers, Groues; a very Labyrinth to the bewitched eyes, not knowing whereat most in this Maze to Crouss; a very Lawyrinanto the bowning eyes, the anowing whereat most in this maze to bee most amazed, wherein most to delight. And in delights doe they frend their dayes, filling the Lake with Vessels, furnished with Feasts, Spectacles and Playes on the water. There is a the Lake water venes, attended to the Citie, whereon is a faire Towre or Steeple, where they meajure their houres by a strange deuice. Out of huge Vessels water droppeth from one to another, the lowest being very large, in the middle whereof is perpendicularly rayled a Rule, diffinguithed with houre-spaces, which by the ascent or descent of the water, dunde the rising and de-decining day, and declare the houre severy halfe houre some men appointed by Tables with Cutiming usys assessment of the time to all men. From this Hill is a prospect over all the oreat Lecters, to gue notice on the time to at men.

Citic. All the fireets being fet with Trees, make thew of pleafant Gardens. It is so full of Ri-

uers, Lakes, Rils, Ponds, both in the Citic and Soburbs, as if a man would frame a Platonical ters, saars, sais, sound, sound the said of temples are many and stately, which Idolatry where it is wanting in China, hath a worfe Succeffor, Atheisme. is wanting in Learne, hatti a worse successor, sametime.

And might not warres, in that long sege 6 myleraday. by the Tartars, in the recourty thereof by the Chinas, easily circumcife her superfluitie? Besides, by the Latter, in the troubles placed by the contrast, carry traction and appearance who knoweth whether all this hoge Lake might be contayred in that account of Pander, fall compaffed about with Buildings: Or before those Warres, the Lake it felfe might (as Suca now is) be builded on; which Time and Warre hath confumed; nor fince the remouse of the Court

But that Quinfay of Conti and Abacen, is perhaps Thienfin, being (as they lav it) neerer Com-Thienshi se. But that Quinsay of Comi and Abacen, is perhaps Thiensin, being (as they lay it) neerer Come.

314. Third is bals. I confesse, much may bee sayd for Nanquin to finde Quinsay there, and I have given such a macth Heauth. noce * vpon it, to incite industrious search, because it was the Ancient royall Chamber : Nei-"See pag. 338. ther could I finde any other Royall Citie but Pequin, in Ricins or other Writers, till Triganius later Epiftles intimated, that the Chequian Pronince hath beene fometimes Imperiall; which I conceive to bee that time of Farfur mentioned by Polo, and Hancen his Quinfar,

Anno 1618. Trioantine writes of Perfecution in China, raifed by an Idolotrous Magistrate in 10 Nanquin, and effected by bribes, which hath caused the Issuites to bee sent thence : but because our intelligence is little, wee will leave them heere (as much as lyeth in our power) and vifite some of the other Northerne people; having first given you a briefe view of a French-mans trauell. Monsieur de Monfart, who having travelled thorow the Indies, saluted Canton in China, and Cauchinchina; whole knowledge therefore could not bee fo folid, as the Iesnites.nor vet is to contemptible that it should veterly bee forgotten. Wee will therefore present his Service as a French Page, and one attending the Lesnues Gravitie, and thus as it were bearing

Maran

TRom Malaca I went to Macao, (neere a moneths travell) which is a Citie scituate on the 20 I Sea coast, at the foote of a great Mountayne, where in times past the Portugals had a great Fort, and to this day, there bee yet many that dwell there. This is the entrance into Chine. but the place is of no great importance; they are Gentiles, and there the Inhabitants begin to bee faire complexioned.

Canchinebina. Christians.

Calamba for

Beades.

Thence I trauelled two moneths to the Cochinchines, finding nothing by the way worthy of note : no not so much as necessaries, so that wee were fayne to carrie our Victuals with vs. the greatest part of the way. They are Subjects to the King of China, but sometimes they rebell and make Warre against him ; And there is great number of Christians among them. Their Kings treasure consisteth in a certayne kinde of Wood, called Calamba : for which the Pertugals pay one hundred Crownes a pound, to make Pater-nesters with. It is of a mixt colour, with blacke and yellow veynes; the better fort of it is moyft, fo that being cut it expelleth a kinde of fat oylie liquour. It groweth out of a certayne Tree, which they fell and let it lye a while a putrifying : then they bruife it, and within the same, they finde this kinde of Wood, like many hard knots. They are a very white people, because there it begins to be cold, low of Stature, stat Nosed, and little Eyed, with a very few hayres on their Chins, and Muflachoes : none at all on their Cheekes, the hayre of the Head they weare long like Women. tved vp with a blacke filke hayre-lace, and weare a flat Cap vpon them. They weare Cloath breeches made very levell, and a short Robe above them, like a Matter of the cham-

Huge Serpents red me that travelling in that Countrey, together with fixteene other men, through a Fennie-

selues : but no sooner were they fate, but that which they tooke for a Tree, fiercely rowsed it felfe from under them, and lete them all to picke ftrawes on the ground, for indeed this was one of those Sements. Their cultome is (as they fay) to put themselves in ambush among the boughes of a Tree, and when they espie their prey to draw neere, bee it Man or Beast, they fall voon him with open mouth and denoure it. There are also store of Lions, Leopards, and Tigers : and there the Fruits begin to resemble those of these parts : but the Fruit, which about all others aboundeth there, 10

There are found a kinde of Serpents that will swallow up a whole Stappe : two Friers affir-

marsh, about the dawning of the day, they met to their seeming, a great Tree lying along the ground, the boughes being lopped off, vpon which they all began to fit downe and reft them-

Wild Beafts: threat Lions as doubtfull.

is the Mirabolan.

Thence I fent forwards to Canton, the principall Citie of all China, (fome three Moneths tra-Contain China. This is northe well distant) beyond which there is no passage, say any body what hee will to the contrary; for principall Cineuer any man proceeded further, except (as they fay) fixe lefunes, who dwelled twentie tie, except, of yeeres at Canton, as well to learne the Language perfectly, as to let their havre to grow long, afand for trauel, ter the Countrey manner, of whom there was neuer fince heard any newes, nor is their hope ling further, he suer to fee their returne. That people is very white, and apparelled as is aboue fayd; they are likewise Gentiles, and worship the same Image with three heads. Their Women of the better of ordinarie fort, and qualitie which are able to line of their owne without working, neuer goe out of their couries, but or sources boures they are carryed in a Chayre. And to that effect, from their Intancie, they put and the Art Li. their feete into certayne woodden Slippers, to make them flump-footed and impotent, in fo

Fathers have found admittance, as in the former Relations is seene. This testimenie touching lefutes is worth the noting For fome of Ours which voon great offers could not finde meanes to enter China, have Beld that nene have beene there.

CHAP. 8. Merchandises, Cloath of Gold, Cabinets, Vessels, Massie Gold, Silkes.

much as they are not able to goe: the reason they alleadge for it, is, that Women were made to

The Christians are not permitted to lye within the Citie, but as soone as Night approaches they must retire themselues to their Ships, being lawfull for them to Traff que wheresouer they please by Day-light. And for their traffique, what rarities focuer there bee throughout all Chipresent of the state of the sta cloath of Gold and Silke, Cabinets, wrought Veilels, Venus shells, Maffine gold, and many other things. They will exchange or barter Gold for twice as much waight in Siluer; for they have no coyned money, for when they would buy any thing, they carrie with them a piece of 10 Gold, and will cut off as much as they intend to bestow on what they take, They make car-

used Images of Silver, which they erect heere and there through the Streets, and no body dates The Cirie is gouerned by foure Rulers, and each one hath his Gouernment, or Circuit apart,

feeluded from each other: those of one quarter Jare not goe and labour in another, and those which caufe themfelues to bee carryed, from one part to another, must change their Bearers when they come to the Gate of the next circuit; choic Gates are opened eury morning, and that when they once to the date of the made of fome mildemeanour, committed within earry migns, vinces there we any companion made of none innocure anony, committee within the Circuit; for then they that them indidenly, or if they bee thus, they open them not, till the offender be found. The King bestowes these commands on those who are best Learned. This is our mate or round. I me aning restortes more commands on spore who are one securiou. I may a command a most faire Citie, and well built, very neare as bigge as Park, but there the House are arched, a mortaire Chie, and wendons, voly measurings as a way, our chees the admits at acciding and nothing neare fo high. There is fo much Sugar in that Country, that it is by them very lieand nothing nearest ongo. There is no more agent abundance, but withall more course them outs, by rea. Silke women tre set up, yet is since in raise more great abundance, one water more course then out, by rea-fon of their flore, being fo great as they are confirmed to make it abroad in the Fields, on the ion or their rove, being to great as they are country free to this activation in the events, on the very Trees, in this wife; when the Wormes are hatched, (whereof the Egges are faire greater very rices in this wife a wife the roomer and the roomer and the will bee able to feede, then

then ours.) They obtaine what quantities of worlders call after whitese and to teed they have for many on it, leading them there without any more adoe, except it bee to gather the cods, when they are ready to bee fpunne, which is done as they gather Apricocks: the time coust, when they are ready to occupance, which is one as they gather apricocks: for indeed a farre off they appeare to bee fo, and is a very fine fight to behold: they we a frange thinde of Fishing with Cormorants. They tie their neckes a little aboue their stomackes, less See Pale, Pare they floud denour the Fish they take : then comming to their Master, hee pulleth it a-they floud denour the Fish they take : then comming to their Master, hee pulleth it a-line, out of their throates : Likewise for water Fowle, they make vie of great Bottles with two holes, which they leave floating vp and downe the water a good

while, to acquaint the Powles therewith : then some fellowes will wade vp to the necke in the water, thrusting their heads into those Bottles, and having a bagge underneath, come as necre the Fowle as they will, taking them with their hands, without the rest being atraid

of the name Afarmathes. For the dwelling of all Intrans posteritie is described by Moses, to have beene betwirk Meschoor Masim, (an Hill bridge Amenier) and Sophace, neare to the River Emphrates: Which maketh at very unlikely, that Astronathes should plant any Colonies so lare off, int the North and North-weft Countries. It is bounded Northward by the Lapper, and the North Ocean. On the South-fide by the Tarrers, called Chrims. Eaftward they have the Marraian Tartar, that pollefieth all the Countrey on the East fide of Volgba, towards the Calbian Sea. On the West and South-west border, lie Litmania, Linonia and Polonia.

The whole Countrey being now reduced under the Government of one, contained thefe chiefe Prounces of Shires. Voledemer (which beareth the first place in the Emperours fille, bechiefe Prountes or antes.

cartie their House carrie of the Dukes of that Countrey, Merke, Nifetungred, Pleske, Smolenf- 10. ho, Nonogrod velica (or Nenogrod of the low Countrey) Rostone, Tarnflane, Bealongs, Beren Dayna; Cofe capita, Me (Bora, Varba, Vingba, Ghaletja. Thefe are the natural things permy-ning to Raffia, but farre greater and larger then the Shires of England, though not fo well people. The other Countries or Provinces, which the Ruffe Emperours have gotten perferce added of The Provinces late to their other Dominion, are thefe which follow, Twerra, Tongbona, PermiafVallille, Book ghoria, Chernigo, Oudoria, Obdoria, Condora, with a great part of Siberia : where the people though they bee not matural Ruffer, yet obey the Emperout of Ruffic and are ruled by the Lawer of his Countrey, paying customes and taxes, as his owne people doe. Besides these hee hath vn. der him the King Jomes of Caran and Affracan, gotten by Conquest not long finer. As for all his possessions in Litmania (to the number of thirtie great Townes and more,) with Narme and Dorpin Limonia, they are quite gone, being surprised of late yeeres by the Kings of Poland and Sweden. These Shires and Prounces are reduced all into foure Invisitions, which they call Cheffred (that is) Tetrarchies, or Fourth parts. Whereof wee are to fpeake in the Title or Chapter, concerning the Prouinces, and their manner of Gouernment.

The whole Country is of great length and breadth. Erom the North to the South (if you measure from Cola to Alfridge which bendich four what Eastward) it reachest in length as the Countrey. bout foure thousand two hundred and sixtie verit, or myles. Notwithstanding, the Emperour of Ruffis hath more territorie Northward, farre beyond Cols vnto the River of Tromfebus, that runneth a thousand verst, well nigh beyond Pechinga, neere to Wardhouse, but not intire nor clearely limitted, by reason of the Kings of Sweden and Dennerte, that have divers Townes there clearely imitted, by reason or the ange of sween and the state clears I owner there as well as the Rule, plotted together the one with the pietre : every one of them claying the swhole bishood Northernan his countright. The breakth (if you got from the pietre his Terricoin that it is the parts of sheerin liftward on the Northern Rule, to the parts of sheerin liftward where the Emperour litth his Carriston's is four thought and and four hundred week, or thereboots. A Verit (by chelr reckding) is the thought dock, yet leffely bire quarter than an Enmino tifb myle. If the whole dominise at the the Emperous weet all habitable, and peopled in all places, as it is in some, hee would either hardly hold it all within one Regiment, or becour mightie for all his neighbour Princes,

Ditters licked field the cold is a sound that the your orean to was, carace, and cour meaning with the cond, as you can be a supported by the travell abroad, but in the very Markets, and firects of their Townes, are mortally now, which as pinched and killed withalf 16 that you half life many drop downe in the Streets, many Travel. It is a support of the condition of the condit pinched and gained witchins the track you make seeming a log titled. Divers lofe their Nofes, the faces face for the faces face faces for the faces faces faces for the faces tippes of their Eares, and the balls of their Cheekes, their Toes, Feete, &c. Many times when from his Ma-To (the winter is very hard and extreame) the Beares and Wolues iffue by troupes out of the woods fire Table in (the wines 1976) man and an extremely the accuration of our wines and by thought our of the woods and a page in driven by honger, and enter the Villages, tearing and rauening all they can finde: fo that the In-thenetroom, habitants are faine to fise for fafegard of their lines. And yet in the Summer time you shall fee head the side and the side of the state of the st Birch) forfeth and fo sweet, the Partures and Meadowes fo greene and well growne, (and that for that feeth ypon the fusiden), fach varietie of Flowers, fuch noyfe of Birds, (specially of Nightingales, that roll: a force ppin inclusion), rain various or growers, and moye or areas, (specially or reightingates, that facenet to be more found and of a more variable note then in other Countries) that a man shall not facet offers the facet of the fa

And olight fries and speakers country.

And olight fries and speakers growth of the Spring there, seemeth to proceed from the benefit of red, the Snow; which all the Winter time being spred ouer the whole Country as a white robe. Effect of sinon, and keeping it warms from the rigour of the Frost, in the Spring time (when the Sunne waxeth warme, and diffolueth is into water) doth to throughly drench and toake the ground, that is forms what of a fleight and fandie mold, and then shineth so hotly upon it againe, that it drawoth the Hearbs and Planes forth in great plen ie and varietie, in a very short time. As the Win-

ter exceedeth in cold, to the Summer inclineth to ouermuch heate, specially in the moneths of Lune, July, and August, being much warmer then the summer ayre in England,

The Country throughout, is very well watted with Springs, Risers, and Ozeraes or Lakes. Englawell was Wherein the proudence of God is to bee noted, for that much of the Countrey being fo farre inland, so that fone pare lyetha thousand myles and more every way from any Sea, yet it is ferned with faire Riners, and that in very great number, that emptying themsclues one into another, runne all into the Sea. Their Lakes are many and large, some of fixtie, eightie, a hundred, and two hundred myles long, with breadth proportionate.

The shiefe Rivers are thefe, 1. Valghe, that hath his head or fpring at the roote of an Alder. The chiefe Riv tree, about two hundred veril about Tarnflass, and groweth fobigge by the increase of other Ris uses of Anglas uers by that time it commeth thither, that it is broad an English myle and more, and so runneth into the Cofficer Sea, about two thousand and eight hundred verifior myles of length.

The pext is Berifibenes (pow called Neper) that divideth the Country from Lituaris, and falleth into the Enter Sea.

The third Tanas or Dan, (the ancient bounder betwixt Europe and Afie) that taketh his head out of Recan Ozera, and so naming through the Country of the Christ Tertar, falleth into the 40 great Sea lake, or meart, (called Manie) by the Citie of A.o.s. By this River (as the Refereporteth) you may palle from their Citie Manh to Conflammople, and so into all those parts of the world by water, drawing your Boate (as their manner is) ouer a little shows or narrow dippe of land, a few verds ouerthware. Which was prooued not long fince by an Ambaffadour fent to Configuines/e, who paffed the Riner of Montag, and fo into another called Ocks, whence he drew his Boare over into Taneir, and thence passed the whole way by water.

The fourth is called Duyna, many hundred myles long, that falleth Northward into the Bay of Saint Nicholm, and hath great Alabafter rockes on the bankes towards the Sea fide.

The fifth Dava, that emptyethinto the Baleick Sea by the Towne Rige. The fixt Owegs, that fallerh into the Bay at Solone sten ninety Veril from the Port of S. Niebs. to the training sense that the control of the property of the River Volet, that falleth into the Finland Sea by the Townse Found. So that from the Port of S. Niebolas into the Finland Sea, and to into the Sound, you may halfe all by water, as hath been eryed by the Ruffer.

The feuenth Suchana, that floweth into Dayna, and fo into the North-fea. The nightsh Only, that Seecheth The Head from the Borders of the Chrism, and streameth

The ninch Market, that rumneth thorow the Citie Mosto, and giveth it the name. There is Wirbida allo a wery large and long Riser that rifeth out of Permia, and falleth into Pagest All thefe are Ruers of very large fireames, the leaft to bee compared to the Thomes in bigoelle and in length farmore, befieles diners orber. trey.

most part in May. The Permians and some other that dwell farre North, and in Desart places, are ferued from the parts that lye more South-ward, and are forced to make Bread forcetimes of a kind of Roote called Vagbnoy) and of the middlerine of the Firre-tree. If there became of akind of Roote called Faginney Jano on the motion in the or the Roote and Rye being at thirteen Alrens, amo 1 88. Wheat and Rye being at thirteen Alrens, and the facility is explored the property of the state of the property of the pro or fine fhillings fine pence sterling the Cherfird) the fault is rather in the practice of their Nobia litie that vie to engroffe it, then in the Countrey it felfe. The Native Commodities of the Country trey (wherewith they ferue both their owne turnes, and fend much abroad to the greit enriching of the Emperour, and his people) are many and fubflantiall. First, Furres of all forts, Where in the providence of God is to bee noted, that provide ha naturall remedy for them, to helpe the naturall incongenience of their Countrey by the cold of the Climate. Their chiefe Finn are thefe, Blacke Fox, Sables, Lufernes, Dunne Fox, Martrones, Gurneffalles or Aimins, Lafets or Miniuer, Beuer, Wuluerins, the Skin of a great Water Rat that Imelleth naturally like Minke. Calaber or Gray Squirrell, Red Squirrell, Red and White Foxe. Besides the great quantitie front within the Countrey (the people being clad all in Furs the whole Winter) there are tranfoorted out of the Countrey some yeares by the Merchants of Turkie, Persia, Bougharia, Georgia, Armenia, and some other of Christendome to the value of foure or five hundred thousand Rub. bels, as I have heard of the Merchants. The best Sable Furre groweth in the Country of Pecha ra. Momeoforskor and Obdorskor, the worler fort in Siberia, Perm, and other places. The Blacke Fox and Red come out of Siberia, White and Dunne from Pecbera, whence also come the white Wolfe, and white Beare Skin. The best Wuluerin also, thence and from Perm. The best Marrons are from Siberia, Cadam, Morum, Perm, and Cazan. Lyferns, Mineuer, and Armins, the best are out of Gallets, and Ouglites, many from Nonogrod, and Porm. The Beautr of the beft fort breedeth in Murmonskey by Cola. Other common Furres, and most of these kinds grow in many, and some in all parts of the Countrey.

3. Waxe.

The fecond Commoditie is of Waxe, whereof hath beene shipped in forraine Countreyes (as I have heard it reported by those that best know it) the fumme of fiftie thousand Pood yeardy, every Pood contayning fortie pound, but now about tenne thousand Poods

2. Honey.

The third is their Honey, whereof besides an exceeding great quantitie spene in their ordinary Drinkes (which is Mead of all forts) and their other vies, some good quantitie is carried out of the Country. The chiefe increase of Honey is in Mordua and Calem neere to the Courtmiffin Tartar : much out of Senerskey, Bezan, Merum, Cazan, Dorogobofe, and Valmin.

4 Tallow.

Pourthly, of Tallow they afoord a great weight for transportation : not only for that their Countrey hath very much good ground apt for Pasturage of cartell, but also by realth of their 40 many Lents and other Faits : and partly; because their greater men wie much Waxe for their Lights, the poorer and meaner fort Birch dryed in their Scoues, and custate long friters, which they call Luchiness. Of Tallow there hath beene shipped out of the Realme a few yeares since about one hundred thousand Pood yeerely, now not past thirty thousand or theresbours. The best yeeld of Tallow is in the parts and Territories of Smalenske, Tarafficus, Onglas; Nonograf, and Vologda, Offer, and Gorodetskey.

c. Hide.

Another principall Commoditie is their Loft and Cowillide. Their Loft or Buffe hide is very faire and large. Their Bull and Cow-hide (for O Lenthey make none, neither yet Weather) is of a small lize. There hath beene transported by Merchants strangers some yeares; onehundred thousand Hides. Now it is decreased to thirty thousand or theresbodes. Besides great flore 10 of Goats Skins, whereof great numbers are shipped out of the Countrely. The largest kind of Losh or Buffe breedeth about Rossone; Wichida, Nongrad, &Marum; and Ferm. The lefter for within the Kingdome of Cazan.

An other very great and principall Commoditie is their Trans-oyle; drawne or the Seal-The manner fish. Where it will not be impertinent to shew the manner of their hunting the Seale, which of hunting the they make this Oyle of : which is in this fort. Towards the end of Stringer y before the Frost beginne) they goe downe with their Boats into the Bay of Saint Nicholas, to a Capetalled Cufconesse or Foxnose, where they leave their Boats till the next Spring tivde. When the Summe waxeth warme toward the Spring, and yet the Ice not melted within the Bay; they returne thither againe. Then drawing their Boats over the Sea Ice, they vie them for Houles to reft and 69 lodgein. There are commonly about seventeene or eighteene Fleete of them, of great large

Boats, which divide themselves into divers companies, five or fixe Boats in a confort. They that first find the haunt, fire a Beacon, which they carrie with them for the none. Which being espied by the other companies, by hich among them as are appointed of purpose,

they come all together and compasse the Seales round about in a Ring, that Iye Sunning themfelies together vpon the Ice, commonly foure or fine thousand in a shoale, and so they inuade them every man with his Club in his hand. If they hit them on the Nofe, they are foone killed. If on the fides or backe they beare out the blow, and many times so catch and hold downe the Club with their Teeth by mayne force, that the partie is forced to call for helpe to his

The manner of the Seales is, when they fee themselves beset, to gather all close together in a throng or plumbe, to sway downe the Ice, and to breake it (if they can) which so bendeth the Ice, that many times it taketh the Sea-water vpon it, and maketh the Hunters to wade a foot or to more deepe. After the flaughter, when they have killed what they can they fall to sharing euery Boat his part in equall portions: and so they flay them, taking from the body the Skin, and the Lard or Fat with all that cleaueth to the Skin. This they take with them, leaving the bodies behind, and so goe to shoare. Where they digge Pits in the ground of a fathome and an halfe deepe, or there about, and so taking the Fat or Lard off from the Skin, they throw it into the Pit, and cast in among it hot burning stones to melt it withall. The vppermost and purest is fold and vied to oyle Wooll for Cloth, the groffer (that is of a red colour) they fell to make Sope.

Likewile Ickary or Cauery, a great quantity is made voon the River of Volgba, out of the fift 7. Ickary. Erice Visit State of State State State of State State of State of

CHAP.I.

The next is of Flaxe and Hempe, whereof there hath beene shipped (as I haue heard Mer. 8. Hempe and chants (ay) at the Port of Name a great part of one hundred ships small and great yearely. Now flaxe, not past fine. The reason of this abating and decrease of this and other Commodities, that were wont to bee transported in a greater quantitie, is the shutting vp of the Port of the Narue towards the Finland Sea, which now is in the hands and possession of the Sweaten. Likewise the ftopping of the passage ouer-land by the way of Smolenske, and Plotske, by reason of their Warres with the Polonian, which cauleth the people to bee leffe prouident m mayntayning and gathering these and the like Commodities, for that they lacke Sales. Partly also for that the Merchants and Moulicks (for so they call the common fort of people) are very much discouraged by many 20 heavy and intollerable exactions, that of late time have beene imposed vpon them; no man accounting that which he hath to be fure his owne. And therefore regard not to lay vp any thing, or to haue it before hand, for that it causeth them many times to be sleeced and spoyled, not only of their goods, but also of their lines. For the growth of Flaxe the Province of Volike, and the Countrey about is the chiefe and only place. For Hempe Smolenkeke, Dorogobose and

The Countrey befides maketh great store of Salt. Their best Salt is made at Storerouse in ve- 2. Salt. ry great quantitie, where they have great store of Salt-wels, about two hundred and fiftie verst from the Sea. At Affracan Salt is made naturally by the Sea-water, that cafteth it vp into great Hils, and so it is digged downe, and carryed away by the Merchants and other that will fetch 40 it from thence. They pay to the Emperour for acknowledgement or custome three pence. Ruffe vpon euery hundred weight. Besides these two, they make Salt in many other places of the Realme, as in Perm, Wichida, Toma, Kenitsma, Solonetike, Ocona, Bombaso, and Nonocks all out of Salt-pits, faue at Solonetskey, which lyeth neere to the Sea.

Likewile of Tarre they make a great quantitie out of their Fiere-trees in the Countrey of 10. Tarre. Duyna and Smolenico, whereof much is fent abroad. Besides these (which are all good and fub- 11. Ribezubt. ffantiall Commodities) they have divers other of smaller account, that are naturall and proper to that Countrey : as the fift tooth (which they call Ribacuba which is vied both among themfelues and the Perstans and Boughardens, that fercht it from thence for Beads, Knines, and Swordhafts of Noblemen, and Gentlemen, and for divers other vies. Some vie the powder of it against poyson, as the Vnicornes Horne. The fish that weareth it is called a Morie, and is caught about Pechara. These fish teeth some of them, are almost two foot of length, and weigh eleuen

or twelue pound a-piece.

In the Prouince of Corelia, and about the River Dayna towards the North Sea, there grow- 12. Slude. eth a foft Rocke which they call Stude. This they cut into pieces, and so teare it into thin flakes, which naturall it is apt for and so vie it for Glasse-lanthomesand such like. It giveth both inwards and surwards a cleerer light then Glaffe, and for this respect is better then eyther Glaffe or Horne: for that it neyther breaketh like Glasse, nor yet will burne like the Lanthorne. Salt- 13 Salt peeter peeter they make in many places, as at Onglices, Tarullane and VIIng, and some small store of and Brimstone Brimstone vpon the River Voleba, but want skill to refine it.

Their Iron is somewhat brittle, but a great weight of it is made in Corelia, Cargapoli, and 14-Iron. Vfing Thelefus. Other Myne they have none growing within the Realme.

Their beatls of strange kinds are the Losh, the Ollen, the wilde Horse, the Beare, the Wolue- The strange ring or wood Dogge, the Lyserne, the Beauer, the Sable, the Matron, the blacke and dunne beattsfifth, Foxe, the white Beare towards the Sea coast of Pechora, the Gurnstale, the Laset, or Minener. forthe &c.thm.

They breed in Ruffia

of haire, much like vnto feathers, with a far broader tayle then haue any other Squirrels, which they moue and shake as they leape from tree to tree, much like vnto a wing. They skife a large foace, and feeme for to flie withall, and therefore they call them Letach Vechle, that is , the flying Squirrels. Their Hares and Squirrels in Summer are of the same colour with ours, in Winter the Hare changeth her coate into milke white, the Squirrell into gray, whereof commend the Calabar.

Deare Horfes;

Sheepe, I have land breed the Ram beek foure hornes,

They have fallow Deere, the Roe Bucke, and Goats very great store. Their Horses are bue fmall, but very swift and hard, they trauell them vnshod both Winter and Summer, without all regard of pace. Their Sheepe are but small, and beare course and harsh wooll. Of Fowle, they 10 haue divers of the principall kinds : First , great store of Hawkes ; the Eagle , the Gerstulenn the Slightfaulcon, the Gof-hawke, the Taffell, the Sparhawke, &c. But the principall Hawke swice a yeere : that breedeth in the Countrey, is counted the Gerfaulcon.

Of other Fowles their principall kinds are the Swanne tame and wilde, (whereof they have great flore) the Storke, the Crane, the Tedder, of the colour of a Fealant, but farre bigger and lueth in the Firre woods. Of Fealant and Partridge they have very great plenty. An Owle there is of a very great bigneffe, more vgly to behold then the Owles of this Countrey, with a broad face, and eares much like vnto a man.

For fresh water Fish, besides the common forts (as Carpe, Pike, Pearch, Tench, Roach, &c.) they have divers kinds very good and delicate : as the Bellouga, or Bellougina of foure or five 24 elnes long, the Ofitrina or Sturgeon, the Seueriga, and Sterledy fomewhat in fashion and taffe like to the Sturgeon, but not fo thicke or long. These foure kinds of fish breed in the Voleba, and are catched in great plenty, and ferued thence into the whole Realme for a great food. Of and are catened in great premy, and relief theme into the whole Acaime for a great rood. Or the Roos of thefe fourse kinds they make very great flore of Leary or Causary, as was faid before! They have besides these that breed in the Folgha, a fish called the Ribards, or white Salmon, which they account more delicate then they doe the red Salmon, whereof also they have exceed ding great plenty in the Rivers Northward, as in Duyna the River of Cola, &c. In the Ozara or Lake neere a Towne called Peristane, not farre from the Moske, they have a small fish which they call the fresh Herring, of the fashion, and somewhat of the taste of a Sea-herring. Their chiefe Townes for fish are, Tarusame, Bealouera, Nonogrod, Astracan, and Cazan: which all 10 yeeld a large Custome to the Emperour every yeere for their trades of fishing, which they pra-Etife in Summer, but fend it frozen in the Winter time into all parts of the Realme.

cies of Ruffia,

beareth his

He chiefe Cities of Ruffia are, Mosko, Nonogxad, Roftone, Volodomer, Plefco, Smolenke, larustane, Peristane, Nisnonograd, Vologda, Ustinck, Golmigroe, Cazan, Astracan, Carendia,

The Citie of Moske is supposed to bee of great antiquitie, though the first Founder bee vid knowne to the Ruffe. It feemeth to have taken the name from the River that runneth on the one fide of the Towne. Berofus the Chaldran in his fifth Booke telleth that Nimrod (whom ofected author, ther profane Stories call Saturne) fent Affyrius, Medus, Moseus, and Magog into Asia to plant 40 Colonies there, and that Mofess planted both in Afia and Europe. Which may make some probality, that the Citie, or rather the River whereon it is built; tooke the denomination from this Moscow: the rather because of the climate or lituation which is in the very farthest part and lift of Europe, bordering vpon Afia. The Citie was much enlarged by one Enan or John, fonne to Daniel, that first changed his title of Duke into King: though that honour continued not to his posteritie: the rather because he was invested into it by the Popes Legate, who at that time was Innocentian the fourth, about the yeere 1246 which was very much milliked by the Rufe people, being then a part of the Eastern or Greeke Church, Since that time the name of this Citie hath growne more famous, and better knowne to the World: infomuch that not only the Prouince, but the whole Countrey of Ruffis is termed by some by the name of Mosconis the Me- 50 tropolite Citie. The forme of this Citie is in a manner round, with three strong walls, circuling the one within the other, and fireets lying betweene, whereof the inmost wall, and the buildings closed within it (lying fafeit as the heart within the bodie, fenced and watted with the River Moskua, that runneth close by it) is all accounted the Emperours Cassle. The number of houses (as I have heard) through the whole Citie (being reckoned by the Emperour a little before it was fired by the Chrim) was 41500. in all. Since the Tarter befieged and fired the Towne (which was in the yeere 1571.) there lieth waste of it a great bredth of ground, which before was well fet and planted with buildings, specially that part on the South fide of Moskua, built not long before by Basilius the Emperour for his Garrilon of Souldiers, to whom he gan printledge to drinke Mede, and Beere at the drie or prohibited times, when other Rufes 60 may drinke nothing but water, and for that cause called this new Citie by the name of Naloi, that is , Skinke or powre in. So that now the Citie of Morke is not much higger then the Citie of London. The next in greatnesse, and in a manner as large, is the Citie Nonograde: where was committed (as the Ruffe layth) the memorable warre to much ipoken of in Stories of the Sog-

Treacherie of bondflaues, Iaruflaue, Ruffe building. CHAP.I.

thian feruants, that tooke Armes against their masters: which they report in this fort; vz. That the Boiarens or Gentlemen of Nonograde and the Territorie about (which onely are Souldiers after the discipline of those Countries) had warre with the Tartars. Which being well performed and ended by them, they returned homewards. Where they understood by the way, Pleasant His that their Choloper or Bondilaues whom they left at home, had in their abience politified their florie. Townes, Lands, Houses, Wines, and alle At which newes being somewhat amazed, and yet difdayning the villanie of their feruants, they made the more speed home : and so not farre from Nonograde met them in warlike manner marching against them. Whereupon adulting what was beft to be done, they agreed all to fet your them with no other flew of weapon but with

to their Horse whips (which as their manner is , every man rideth withall) to put them in remembrance of their feruile condition, thereby to terrifie them, and abate their courage. And Likelips, like fo marching on, and lathing altogether with their whips in their hands they gave the onfet, lettice. Which feemed fo terrible in the ares of their villaines, and stroke such a fense into them of the fmart of the whip which they had felt before, that they fled altogether like Sheepe before the Drivers. In memory of this victory the Nonogradians ever tince have stamped their Coine (which they call a dinger Nonogredskey, currant thorowall Ruffie) with the figure of a Horse-man shaking a whip aloft in his hand. These two Cities exceed the rest in oreatnesse. For firength their chiefe Townes are Vobiko , Smoleniko , Cazan and Afracan, as lying upon the borders. But for tituation laruflane farre exceedeth the reft. For belides laruflane 20 the commodities that the foyle yeeldeth of Pasture and Corne, it lieth vpon the famous River

Volga, and looketh over it from a high banke very faire and stately to behold : whereof the Towne taketh the name. For laruflane in that Tongue fignifieth as much as a faire or famous Banke. In this Towne (as may be gheffed by the name) dwelt the Ruffe King Vlademir, furnamed landlane, that married the daughter of Harald King of England, by mediation of Sucre the Dane, as is noted in the Danish Storie about the yeere 1067.

The other Townes have nothing that is greatly memorable, faue many ruines within their walls. Which sheweth the decrease of the Russe People, under this government. The streets of their Cities and Townes in stead of pauing, are planked with Firre trees, plained and layd uen close the one to the other. Their houles are of wood without any lime or stone, built very The mannet 30 close and warme with Firre trees plained and piled one vpon another. They are faitned toge- of Ruffe builther with dents or notches at every corner, and so clasped fast together. Betwixt the trees or ding. timber they thrust in mosse (whereof they gather plehey in their Woods , to keepe out the aire,

Every house hath a paire of staires that lead up into the chambers out of the yard or street after the Scottil manner. This building feemeth farre better for their Countrey, then that of Rone and bricke : as being colder and more dampish then their woodden houses, specially of Fitte. that is a dry and warme wood. Whereof the providence of God hath given them such store, as that you may build a faire house for twentie or thirtie Rubbels, or httle more, where wood is most scant. The greatest inconvenience of their woodden building is the aptnesse for firing, which happeneth very oft, and in very fearefull fort, by reason of the drinesse and fat-40 neffe of the Firre, that being once fired, burneth like a Torch, and is hardly quenched till all bee

The fur-hame of the Imperial house of Ruffia, is called Beada; It tooke the original (as is the furposed) from the Kings of Hangarie. Which may feeme the more probable, for that the Of the house Hungarian Kings many yeeres agoe have borne that name: as appeareth by Bonfinius and other or stocke of Stories written of that Countrey. For about the yeere 1059, mention is made of one Beela the Ruffe Emthat succeeded his brother Andreas, who reduced the Hungarians to the Christian Faith from perour. whence they were fallen by Abbifuse and Turkifu perfusion before. The fecond of that name was called Besis the blind, after whom fucceeded divers of the famename.

That their Ancestry came not of the Russe Nation, Inan vasilowich father to this Emperour, In not naturally 50 would many times boaft, disdayning (as should feeme) to have his progenie derived from the Roff. See 100. Ruffe bloud. As namely to an Englishman his Gold-smith, that had received Bullion of him to 56 where the make certaine Plate: whom the Emperour commanded to looke well to his weight. For my Tarins de-Ruffes (faid he) are theeues all. Whereat the Workeman looking vpon the Emperour, began to ftroyed these fmile. The Emperour being of quicke conceit, charged him to tell him what hee smiled at. If Countreyes then called your Maiestie will pardon mee (quoth the Gold-Imith) I will sell you. Your Highnesse said, that the Bulga in maior. Russes were all sheenes, and forgat in the meane while that your felfe was a Russe. I thought to (quoth many sed into the Emperour) but thou art deceiued. For I am no Ruffe, my Ancestors were Germanes (for lo Hungerie: and they account of the Hungarians to bee part of the Germane Nation, though indeed they come after Bathus 60 of the Hunners. That inuaded thole Countries , and refted in those parts of Pannoning , now called Hungarue.

thus Bullaria

meanearo recouer themselves, and perhaps either by Hungarian affinitie with their Princes, or taking a Prince from Hungarie them affifted with Germans, they began to recours of that Tattain dileale, whereof ftill some Symtomes remayne.

How

The alivence. hou'e of Beals.

How they aspired to the Dukedome of Volodemer (which was their first degree, and ingrafting into Ruffia) and whether it were by Conquest, or by Matriage, or by what other meanes. I could not learne any certainty among them. That from these beginnings of a small Dukedome (that bare notwithflanding an absolute government with it, as at that time did allothe other Shires or Prouinces of Ruffia) this houle of Beala spred it selfe forth, and aspred by degrees to the Monarchie of the whole Countrey, is a thing well knowne, and of very late memorie. The chiefe of that House that advanced the Stocke, and enlarged their Dominions, were the three last that raigned before this Emperour, to wit , Inan Basilem, and Inan father to the other than raigneth at this time. Whereof the first that tooke vnto bim the name and title of Emperour. was Bafilem father to Ime, and grandfather to this man. For before that time they were con- 10 tented to be called great Dukes of Mosks. What hath beene done by either of these three, and how much they have added to their first estate by Conquest or otherwise, may bee seene in the Chapter of their Colonies, or Purchases perforce. For the continuance of the race, this House of Beals at this prefent ' is in like case as are many of the greatest Houses of Christendome, va. the whole Stocke and Race concluded in one, two, or some few of the Bloud. For besides the Em Since the Seepresents been perour that now is, who hath no child (neither is like ever to have, for ought that may be consectured by the conflitution of his body, and the barrennesse of his wife after so many years milies, with manifold commarriage) there is but one more, vz. a child of fixe or feuen yeeres old . in whom refireth all the hope of the succession , and the posteritie of that House. As for the other brother that was eldeft of the three, and of the best towardnesse, he died of a blow given ium by his father vpon 20 the head in his furie with his walking staffe, or (as some say) or a thrust with the prong of it driven deepe into his head. That he meant him no such mortall harme when hee gave him the blow, may appeare by his mourning and passion after his sonnes death, which neuer left him till it brought him to the grave. Wherein may be marked the justice of God, that punished his delight in fledding of bloud with this murder of his sonne by his owne hand, and so ended his dayes and tyrannie together, with the murdring of himselfe by extreme griefe, for this his yahappie and vonaturall fact.

bustions. The Emperor killed his fon-

* Va. A. D.

We have fince had two which haue affumed to be this De metrius, and

The Emperous younger byother of fixe or feuen yeeres old (as was faid before) is kept in a remore place from the Marks, vader the tuition of his mother and her kindred, of the Houfe of the Nagaies: yet not fafe (as I have heard) from attempts of making away by practice of some 10 that aspire to the succession, if this Emperour die without any issue. The Nurse that tasted behue obtained fore him of certaine meat (as I have heard) died prefently. That hee is naturall forne to less Vafilowich, the Ruffe People warrant it , by the fathers qualitie that beginneth to appeare althereof and of ready in his tender yeeres. Hee is delighted (they fay) to see Sheepe and other cattell killed. and to looke on their throats while they are bleeding (which commonly children are afraid t behold) and to beate Geese and Hennes with a staffe till he see them lie dead. Besidesthese of the male kind, there is a Widow, that hath right in the fuccession, Sister to the old Emperour, and Aunt to this man, sometime Wife to Magnus Duke of Holft, Brother to the King of Desmarke, by whom she had one daughter. This woman since the death of her Husband hath beene allured againe into Ruffia, by fome that love the succession better then her selfe, which appeareth 40 by the sequele. For her selfe with her daughter, so soone as they were returned into Russia, were thrust into a Numerie, where her daughter died this last yeere while I was in the Countrey, of thrust Numerie, where (as I have heard) life in the Numerie, where (as I have heard) the bewayleth her felfe, and curfeth the time when the returned into Ruffia, enteed with the hope of marriage, and other faire promifes in the Emperours name. Thus it standeth with the Imperiall Stocke of Ruffia, of the House of Beals, which is like to determine in those that now are, and to make a conversion of the Ruffe estate. If it be into a government of some better temper, and milder constitution, it will be happie for the poore people that are now oppreffed with intolerable feruitude.

Chap 6. Of the man-DCT of crowning or inau-Rufe Empe-

He folemnities vsed at the Russe Emperours Coronation, are on this manner. In the great Church of Precbefte (or our Ladie) within the Emperours Caitle is erected a Stage, whereon standeth a Scrine that beareth vpon it the Imperiall Cap and Robe of very rich stuffe. When guration of the the day of the Inauguration is come, there refort thither, first the Patriarch with the Metropolitans, Arch-bishops, Bishops, Abbots, and Priors, all richly clad in their Pontificalibus. Then enter the Deacons with the Quier of Singers, Who so soone as the Emperour setteth foot into the Church, beginne to fing : Many yeares may line noble Theodore Inanomich, &c. Whereunto the Patriarch and Metropolite with the rest of the Clergie, answere with a certaine Hymne, in forme of a Prayer, finging it all together with a great noise. The Hymne being ended, the Patriarch with the Emperour mount vp the Stage, where flandeth a Seat ready for the Emperour. 60 Whereupon the Partrarch willeth him to fit downe, and then placing himfelfe by him you another Seate prouided for that purpole, boweth downe his head towards the ground, and layed this Prayer : Ob Lord God King of Kings, Lord of Lords, which by thy Prophet Samuel didft shoofe thy fermant Dauid, and anount him for King over thy People Israel, have now our Prayers, and looke

from thy Santhuarie upon this thy Sernant Theodore, whom thou haft chosen and exalted for King oner thefe thy boly Nations, anoint him with the oyle of gladnesse, protect him by thy power, but upon his head a Crowne of Gold and precious Stones, give him length of dayes, place him in the Seat of Inflice. frenethen his arms, make subject unto him all the barbarous Nations. Let thy feare been his whole heart, turne bim from all errour, and shew him the saluation of thy boly and universall Church, that bee may indge thy people with Instice, and protect the children of the poore, and finally attapne enerlasting life. This Prayer he speaketh with a lowe voyce, and then pronounceth a lowd : All prayer and power to Godibe Faiber, the Sonne, and the Holy Ghoft. The Prayer being ended, he commanderh certayne Abbots toreach the Imperiall Robe and Cap: which is done very decently, and with

10 great Solemnitie, the Patriarch withall pronouncing alowde : Peace be unto all. And so he beginneth another Prayer to this effect: Bow your selues together with vis, and pray to him that reigneth ouer all. Preserve him (ob Lord) under thy holy protestion, keeps him that bee may doe good and holy things, let lustice shine forth in his dayes, that we may line quietly without strife and malice. This is pronounced somewhat softly by the Patriarch, whereto hee addeth againe alowd : Thou are the King of the whole World, and the Saniour of our foules, to thee the Father, Sonne, and Holy Ghost, bee all prayle for ener and ener, Amen. Then putting on the Robe and the Cap, hee bleffeth the Emperous with the figure of the Croffe : Saying withall, in the Name of the Father, the Sonne, and the Holy Ghost.

The like is done by the Metropolites, Archbishops, and Bishops: who all in their order come 20 to the Chaire, and one after another bleffe the Emperor with their two fore-fingers. Then is faid by the Patriarch another Praier, that beginneth Omost boly Vargin Mother of God, &c. After which a Deacon pronounceth with an high lowd voyce : Many yeeres to Noble Theodore, good, bonourable, beloved of God, great Diete of Volodemer of Mosko, Emperour, and Monarch of all Ruffia, Je. Whereto the other Priests and Deacons that stand somewhat farre of by the Altar or Table, anfwere finging, Many yeeres, many yeeres, to the Noble Theodore. The fame Note is taken yp by the Priests and Deacons, that are placed at the right and left fide of the Church, and then altogether, they channe and thunder out; inging: Many serves to the Noble Theodore, good, bonourable; beloud of God, great Duke of Votedemer, Mosko, Emperour of all Russa, &c. These Solemnities being ended, first commette the Patriarch with the Metropolites, Arch-30 bishoppes, and Bishops, then the Nobilitie, and the whole Companie in their order, to doe homage to the Emperour, bending downe their heads, and knocking them at his feet to

The Stile wherewith hee is inuefted at his Coronation , runneth after this manner. Theodore laanowich, by the grace of God, great Lord and Emperous of all Ruffa, great Duke of Volodemer, Mosko, and Noungrad, King of Cazan, King of Altracan, Lord of Plesko, and great Duke of Smolensko, of Twerria, Ioughoria, Permia, Vadska, Bulghoria, and others, Lord and great Duke of Nouograd, of the Low Country, of Chemigo, Rezan, Polotskoy, Rostone, Yarusaueley, Bealozera, Leifland, Oudoria, Obdoria, and Condensa, Commander of all Siberia, and of the North parts, and Lord of many other Countreyes, &c.

40 This stile contayneth in it all the Emperours Provinces , and setteth forth his greatnesse. And therefore they have a great delight and pride in it , forcing not onely there owne people but also Strangers (that have any matter to deliver to the Emperour by Speech or writing) to repeat the whole forme from the beginning to the end. Which breedeth much casill, and sometimes quartell between them and the Tartar, and Poland Ambafadours: who refuse to call him Czar, that is Emperour, and to repeat the other parts of his long Stile. My selfe, when I had audience of the Empercur, thought good to salute him onely with thus much, viz. Emperour of all Russia, great Duke of Volodemer, Mosko, and Nouograd, King of Cazan, King of Aftracan. The rest I omitted of purpose, because I knew they gloried, to have their Stile appeare to be of a larger Volume then the Queenes of England, But this was taken in

50 fo ill part, that the Chancellor (who then attended the Emperour, with the rest of the Nobilitie) with a lowd chafing voyce called still upon me to say out the rest. Whereto I answered, that the Emperours Stile was very long and could not so well be remembred by Strangers, that I had repeated fo much of it, as might shew that I gaue honour to the rest, &c. But all would not serue till I commanded my Interpreter to say it all out.

Hemanner of their Gouernment is much after the Turkilb fashion : which they seeme to __Chap.7. I imitate as necre as the Countrey, and reach of their capacities in Politike Affaires will give The Sizecor them leave to doe.

The State and forme of their Government feemeth to apply all to the behoofe of the Prince, The Ruffe Go-60 and that after a most open manner: as may appeare by the Sophismata, or secrets of their Governa unment to ment afterwards fet downe, aswell for the keeping of the Nobilitie and Commons in an vn- rametall. der proportion, and farre vneuen ballance in their severall degrees, as also in their Impositions and Exactions, without any regard of Nobilitie or People: farther then it giveth the Nobilitie a kind of libertie, to exact vpon the Commons and baser fort of People in all parts

forme of their

of the Realme whereforeuer they come , specially in the place where their Lands lye, or where of the Keatine wherehouse they come , specially in the place white they are appointed by the Emperour to gouerne vinder him: Alfo to the Commons fome finall they are appointed by the Emperous to gone the Lands by differnt of Inheritance to whether Some contentment, in that they palle ouer their Lands by differnt of Inheritance to whether Some contentment, in that they pane out then Lands by the stands of their seeds by gift they will; which commonly they doe after our Gamil kind, and dispose of their seeds by gift

Concerning the principall points and matters of State, wherein the Sourreignetic confident Concerning the principal points and marking of Magifirates, power to make Harre or (as the making and annuling of public Lawes, the making of Magifirates, power to make Harre or (as the maning and announcy of purine Laures, we unaging to long them, pures to mane events or Langue with any Eurosiae State, to execute or to pardon life, with the right of Appeale in all matter, buth Lasgue with any correse court, we wholy and abfolutely pertayne to the Emperour, and his Court Civill and Criminally they doe to wnoty and appropriately percayne to the appealon, and his Counfell wnder him, as that he may be faid to be both the Sourreigne Commander, and the Execution 10 ner of all thefe. For as couching any Law or publike Order of the Realme, it is cuer determined ner of all times. For as cooking any new or publish of the foreign any publike Affembly or Parliament be fummoned. Where befodes his Council, hee of before any publish entermory of parameters as are concluded before hand, but onely a nach none order to commun. With this was adulating of the peoples Superflittions, cuen against themselues, which thinke al. to be holy and just, that passeth with consent of their Bishops and Clergie men, whatfoeuer it be. For which purpose the Empercurs are content to make much of the corrupt flate of the Church, as now it is among them, and to neursh the same by extraordithe corrupt mate of the Change, as 1950 to a sound of the State of the nary randours, and ammunities to the Limber dead, about 7 to and a total 2 and to be a special meanes to vp-tion and false Religion best to agree with a Tyrannicall State, and to be a special meanes to vp-

Magistracies.

Secondly, as touching the publike Offices and Magisfracies of the Realme, there is none hereditarie, neyther any so great nor so little in that Countrey, but the bestowing of it is done immediately by the Emperour himselfe, Insomuch that the very Diacks, or Clerkes in enery head Towne, are for the most part assigned by himselfe. Notwithstanding, the Emperourthat now is (the better to entend his Deuotions) referreth all fuch matters pertayning to the State, wholly to the ordering of his Wives Brother, the Lord Borris Feder wich Godonoe.

Hesucceeded Iuridiction.

Thirdly, the like is to be faid of the Iurifdiction concerning matters Iudiciall, specially such as concerne life and death. Wherein there is none that hath any authoritie or publike Iurifiidion that goeth by Difcent, or is held by Charter, but all at the appointment and pleasure of the Emperour, and the same practifed by the Indges with such awe and restraint, as that they dare not 30 productions and the same presentably are stages with referre the fame wholly, vp to the Marketo the Emperours Councell. To flew his Sourceigntic ouer the lines of his Subjects, the late Emperours Inter Pathemics

Emperours Counceil. To thew his source; give over the mice of mis-stepless, the same emperous four fam Vafidowich in his walkes or progretics, if he had misliked the face or perion of any min whom he met by the way, or that looked you him, would command his head to be ftrookeoff.

Which was prefently done, and the head call before him.

Which was prefently done, and the head call before him.

Fourthly, for the Sourreigne Appeale, and giuing of Pardons in Criminall Matters to such as are connected, it is wholly at the pleasure and grace of the Emperour. Wherein also the Emprese are commerce, it is writing a cure presume and great of the ampeton we arrem and the amprese that now is, being a woman of great Clemencie, and withall delighting to deale in publike Affaires of the Realme, (the rather to supply the defect of her Husband) doth behaue her less after an absolute manner, giuing out pardon (specially on her birth day and other solemne times) in 40 her owne name, by open Proclamation, without any mention at all of the Emperour. Some there have beene of late of the ancient Nobilitie, that have held divers Provinces by right of Inheritance, with an absolute Authoritie and Iurisdiction over them, to order and determine all matters within their owne Precinct without all Appeale; or controllment of the Emperour. But this was all annulled and wrung cleane from them by Inas Valionich Father to this

Their highest Court of publishe consultation for matter of State, is called the Zabore, that is, the Publishe Assembly, The states and degrees of persons, that are present at their Pasila-

of twenty being all of his Councell. 3. Certayne of the Clergie men, &c. about the same

number. As for Burghers or other to represent the Comminaltie, they have no place there: the

people beeing of no better account with them then as servants or bond-slaves that are to obey,

not to make Lawes, nor to know any thing of publike matters before they are concluded.

The Court of Parliament (called Zabere) is held in this manner. The Emperour caute the

ments, are these in order, 1. The Emperour himselse. 2. Some of his Nobilitie about the number 50

Chap. 8. of holding the Parlia. ments. The States of Parliament,

The order of the furmons to be furmoned fuch of his Nobilitie as himfelfe thinketh meete, being (as was faid) all of his or affembling. Councell : together with the Patriarch, who calleth his Clergie, to wit, the two Metropolites,

the two Archbishops, with such Bishops, Abbots, and Friers as are of best account and reputation among them. When they are all affembled at the Emperours Court, the day is intima-Friday respect. of that day. ted when the Selfion shill beginne. Which commonly is vpon some Friday, for the Religion 69 When the day is come, the Clergie-men assemble before at the time and place appointed,

which is called the Stollie. And when the Emperour commeth attended by his Nobilitie, they arife all, and meete him in an out-roome, following their Patriarch, who I leffeth the Emperour

with his two fore-fingers, laying them on his fore-head, and the fides of his face, and then kiffeth him on the right fide of his breft. So they passe on into their Parliament House, where they fit in this order. The Emperour is enthronized on the one fide of the Chamber, In the next place not farre from him at a small square Table (that giveth roome to twelve persons or thereabouts) fitteth the Patriarch with the Metropolites and Bishops, and certaine of the principall Nobilitie of the Engerours Councell, together with two Diacks or Secretaries (called Danmor diakes) that enact that which passeth. The rest place themselves on benches round a bout the Roome, euery man in his ranke after his degree. Then is there propounded by one of the Secretaries (who representeth the Speaker) the cause of their Assembly, and the principall matto ters that they are to confider of. For to propound Bils what every man thinketh good for the publike benefit (as the manner is in England) the Ruffe Parliament alloweth no such custome. nor liberty to subjects.

The points being opened, the Patriarch with his Clergie-men haue the Prerogatiue to be first Their discourse asked their vote, or opinion, what they thinke of the points propounded by the Secretarie, at Parliament. Whereto they answere in order, according to their degrees, but all in one forme without any Discourse: as having learned their Leffon before, that servet in their turnes at all Parliaments alike, whatfoeuer is propounded. Commonly it is to this effect. That the Emperour and his Conneell are of creat wildome and experience, touching the Policies and publike Affaires of the Realme, and firre better able to indge what is profitable for the Common-wealth, then they are, which attend upon the 20 Service of God only, and matters of Religion. And therefore it may please them to proceed. That inflead of their admise, they will ande them with their Prayers, as their duties and vocations doe require, ore. To this or like effect having made their Answeres every man in his course, vp standeth some Abbot or Frier more bold then the rest (yet appointed before-hand as a matter of forme) and desireth the Emperour it would please his Maj-stie to command to be deliuered wnto them what his Majesties own judgement, and determinate pleasure is, as touching those matters propounded by his Desake.

Whereto is replyed by the faid Secretarie in the Emperours name. That his Highnesse with thole of his Noble Councell, upon good and found advice have found the matters proposed to be very good and necessary for the Common-wealth of his Realme. Notwithstanding, for assmuch as they are Religious em antiquary for toe temmon-treasis of the Actions, two temporations, prosported they are Resignous on meet, and know what is right him Matifice requires their good Opinions, pea, and their Cenfores too, for the approxime or correcting of the faid Propositions. And therfore defireth them again to fleath their minds freely. And if they shall like to give their consents, that then the matters may passe to a full conclusion. Hereunto when the Clergie-men haue giuen their consents (which they vie to doe without any great pauling) they take their leaves with bleffing of the Enperour : who bringeth the Patriarch on his way to faire as the next Roome, and fo returneth to his Seat, till all be made ready for his returne homeward. The Acts that thus are passed by the Zabore or Parliament, the Deisekers or Secretaries draw into a forme of Proclamation, which they fend abroad into enery Prouince, and head Towne of the Realme, to be published there by the Dukes and Diakeis, or Secretaries of those places. The Session of Parliament being fully ended, the Emperour muiteth the Clergiemen to a folemne Dinner. And fo they depart euery man to his home.

The degrees of persons or Estates of Russia (besides the Sourreigne State or Emperour him- Change).

Changes, the Robbits of four forts. Whereof the chiefe of the Robbits and by the Robbits of the Robb for Birth, Authority, and Reuenne are called the Valency Knazer, that is, The exempt or printeged what money Dukes. Thefe held sometime a seuerall lurissischon, and absolute Authoritie within their Pre- it is kept in an cincis, much like vnto the States or Nubles of Germany. But afterwards (referring their Rights under proporvpon composition) shey yeelded themiclues to this Houle of Beala, when it beganne to waxe tion agreeable mightie, and to enlarge it felfe by ouer-marching their Neighbours. Onely they were bound to this State. mignice, that to entangers are so you transcring the Paragraph of Horfe. But the late Emperour I- The Paragraphic SC Man Validomich Father to this Prince, being a man of high (pirit, and fub ill in his kind meaning of the Nobto reduce his Government into a more first to time, began by degrees to clip off their greatnesse, bute and to bring it downe to a lesser proportion: till in the end he made them not onely his Vassals, but his K. lopber, that is, his very Villaines or Bond-flaues. For so they terme and write themfelues in any publike Instrument or private Petition which they make to the Empirour. So that now they hold their Authorities, Lands, Liues, and all at the Émperours pleafure as the rest do.

The meanes and practice whereby hee wrought this to effect against those, and other of the Nobility (lowell as I could note out of the report of his doings) were these, and such like. First, he cash private emulations among them about prerogative of their Titles and Dignities. Wherein hee yied to let on the inferioris, to prefer or equall themselves to those that were accounted to 6c be of the Nobler Houses. Where hee made his advantage of their malice and contentions, the one against the other, by receiving devised matter, and accusations of secret practice and Conspiracies to bee intended against his Person and State. And so having singled out the greatest of them, and cut them off with the good liking of the reft, hee fell at last to open practice, by forcing of the other to yeeld their Rights vnto him.

The faction of

2. Hee divided his subjects into two parts or factions by a generall Schisme. The one part he The laction of Called the Oppression of Selectmen. These were such of the Nobility and Gentry as he took to his owne part, to protect and maintayne green as his faithfull fubice. The other he called Zemsky, or the Commune. The Zemsky contayned the base and vulgar fort, with such Noblemen and Gentlemen as he meant to cut off, as suspected to missike his Government, and to have a meaning to practife against him. Wherein he prouised that the Oppression number and qualitie of Valure, Money, Armour, &c. farre exceeded the other of the Zempskey fide, whom heputtas it were from under his protection: so that if any of them were spoyled or killed by those of the Oppression, (which he accounted of his owne part) there was no amends to bee sought for by way of publike luftice, or by complaint to the Emperour.

The whole number of both parts was orderly registred and kept in a Booke : so that every man knew who was a Zempther man, and who of the Opprefini. And this libertie of the one part to spoile and kill the other without any helpe of Magistrate, or Law (that continued feven yeeres) enriched that fide, and the Emperours Treasury, and wrought that withall which bee intended by this practile, viz. to take out of the way such of the Nobilitie, as himselfe mishked. whereof were flame within one weeke to the number of three hundred within the Citie of

This mischieuous practice of making a generall Schisme, and publike division among the subjects of his whole Realme, proceedeed (as should seeme) from an extreame doube, and defperate feare, which he had conceived of most of his Nobilitie, and Gentlemen of his Realme, 20 in his Wars with the Poloman and Chrime Tartar. What time he grew into a vehement suspition (conceined of the ill successe of his Affaires) that they practised Treason with the Polonian and Chrim. Whereupon he executed fome, and deuised this way to be rid of the reft.

a. Hauing thus pulled them and seased all their Inheritance, Lands, Priviledges, &c. Sue some very small part which hee left to their name, hee gaue them other Landsof the tenour of Pomestnoy (as they call it) that are held at the Emperour's pleasure, lying far of in another Countrey, and to remoued them into other of his Provinces, where they might have neyther favour, nor authority, not being Natiue nor well knowne there. So that now thefe of the chiefe Nobility (called Vdeiney Knazey) are equalled with the reft : faue that in the opinion and favour of the people they are of more account, and keepe still the Prerogative of their place in all their to

Their practice to keepe downe these Houses from rifing againe and recourring their dignities are these, and such like. First, many of their Heires are kept vnmarried perforce, that the stocke may dye with them. Some are fent into Siberia, Cazan and Afracan, vnder pretence of fervice, and there either made away, or elfe fast clapped vp. Some are put into Abbeves, and sheare themselues Friers by pretence of a Vow to be made voluntary, and of their owne accord, but indeed forced vnto it by feare, vpon some pretenced crime objected against them. Where they are so guarded by some of speciall trust, and the Couent it selfe (vpon whose head it standeth that they make no escape) as that they have no hope but to end their lives there. Of this kind there are many of very great Nobilitie. These and such like wayes begunne by the Emperour Inan Va- 40 filomet are full practifed by the Godonoes, who being advanced by the Marriage of the Empresse their Kinswoman, rule both the Emperour, and his Realme (specially Borrss Federowich Godones, Brother to the Empresse) and endeauour by all meanes to cut off, or keepe downe all of the best and ancientest Nobilitie. Whereof divers already they have taken away, whom they thought likeliest to make head against them and to hinder their purpose, as Knez. Andreas Guraken Bulgatkowe, a man of great birth and authoritie in the Countrey. The like they have done with Peter Gollauni (whom they put into a Dungeon where hee ended his life) with Knez Vafilee Vrywich Golleoben, with Andrien Inanowich Suskey accounted among them for a man of a great wiledome. So this last yeere was killed in a Monastery (whither they had thrust him) one Knez Inan Petrowich Surkey a man of great valour, and feruice in that Countrey : who about five or fixe yeeres 10 fince, bare out the liege of the Citie Vobsko, made by Stephan Batore King of Polonia, with one hundred thousand men, and repulsed him very valiantly, with great honour to himselfe, and his Countrey, and difgrace to the Polonian. Also Micheta Romanowich Vncle to the Emperour by the Mothers fide, was supposed to hauedyed of Poylon, or some like practice.

Names of the

The Names of these families of greatest Nobilitie are these in their order. The first is of Knez les of the Ruffe Volodemer, which restethat this time in one Daughter a widow, and without Children (mentioned before) sometime wife to Hartock Magnus Brother to the King of Denmarke, now closed within a Nunnerie. The second Knez Methelosker, thrust into a Frierie, and his onely Sonne kept from marriage, to decay the houle. The third Glimsley. But one left of his houle, and hee owithout children faue one Daughter. The fourth Suckey, whereof there are foure Brethren young men, and vnmarryedall. The fifth Hubetskey. Of this House are four e living. The fixth Bulgaby, now called Guletcher house, whereof are fine lining, but youths all. The seventh Vorallins. key. Two left of that flocke. The eighth Odgoskey, two. The ninth Tellerskey, one. The tenth Taytone, three. Thefe are the Names of the chiefe Families, called Vdetney Knazy: that in effect

have loft all now, faue the very name it felfe, and favour of the people, which is like one day to restore them againe, if any be left.

The second degree of Nobilitie is of the Boiarens. These are such as the Emperous honoureth. The second (befides their Nobilitie) with the title of Counfellers. The revenue of thefe two force of their degree of No-Nobles that rifeth out of their Land affigned them by the Emperour, and held at his pleafing billing. (for of their owne Inheritance there is little left them, as was fayd before) is about a thousand Marcks a yeere : befides Pension which they receive of the Emperour for their fertice in his Warres, to the fumme of feuen hundred Rubbels a yeere, and none about that fumme.

But in this number the Lord Borris Federowich Godenoe is not to bee reckoned, that is like a Lord Borris af-Transcendent, and in no fach predicament with the rest, being the Emperours Brother in law, his ter this Empe Protector for direction, for Command and authoritie Emperour of Ruffig, His yeersty, revenue rout. in Land and Pension, amounteth to the summe of 93700. Rubbels and more, as appeareth by the particulars. Hee hath of inheritance (which himfelte hath augmented in Vafma Dorogobofe, fixe thousand Rubbels a yeere. For his office of Connick, or Master of the Horse twelve thousand Rubbels or Marcks, raised out of the Conastine Sloboday, or the liberties pertayning to that Office. which are certayne Lands and Townes neere about the Mosco. Besides, all the meadow and pasture ground on both sides the banke of the River Moske, thirtie verit vp the streams, and fore tie verif downwards. For his pension of the Emperour (besides the other for his Office) Efteene thousand Rubbels. Out of the Province or Shire of Wagha, there is given him for a negaliar exempted out of the Chesfird of Pofolskey, two and thirtie thouland Rubbels, belies a rent of

20 Furres. Out of Rezen and Sener, (another peculiar) thirtie thousand Rubbels. Out of Operand Turiock another exempt place eight thousand Rubbels. For rent of Barh-fromes and Bathinghouses without the walk of Make, fifteene hundred Rubbels. Befides his Powell, or Lands, which hee holdeth at the Emperours pleature, which farre exceedeth the proportion of land al-

lotted to the rest of the Nobilitie.

One other there is of the house of Glinker, that dispendeth in Land and Pension about fortie thousand Rubbels veerely. Which hee is suffered to enjoy, because he hath marryed Borris his wives Sifter, being himfelse very simple and almost a naturall. The ordering of him and his Lands are committed to Borris.

In the third ranke are the Voyaudey, or fich Nobles assire, or have beene Generals in the Em- The third for perours warres. Which deliver the honour of their Tiele to their posterities also : who take their of Nobilitie, place about the other Dukes and Nobles, that are not of the two former forts, viz., of the Vdel-

mey knazer, nor of the Boiarens.

These three degrees of their Nobilitie, (to wit) the Vollag knaces, the Boiarens, and the Voisnader, have the addition of Vicb, put vnto their inname, as Apris Federowill. &c. which is a Title Vich. note of Honour that the rest may not vierpe. And in sais it bee not added in the paming of them, they may fue the Bestebest or penaltie of dispanous voon them, that otherwise shall tearme them.

The fourth and lowest degree of Nebilitie with them, is of such as beare the name of Kassey. or Dukes, but come of the younger Brothers of those chiefe Houses, through many discents, and haue no inheritance of their owne, faue the bare name agtitle of Duke onely. For their order is to deliner their names and titles of their Dignities over to all their Children alike, whatforuer else they leave them. So that the Sonnes of a Voisnodey or Generall in the field, are called Vois moder, though they never faw the field, and the Sonnes of a Knee or Duke, are called Kneed, though they have not one groat of inheritance or lawly hood to maintayne themselves wiehalf. Of this fort there are fo many, that the plentie maketh them cheape . In that you hall fee Dukes glad to ferue a meane man for fine or fixe Rubbels or Marcks a yeare, and marchey will fland highly upon their Beficheft or reputation of their Honours. And their are their fenerall den grees of Nobilitie.

rees of Nobilitie.

The fecond degree of persons, is of their Sina Beiarskey, or the sonnes of Gentlemen Medicall- The second o are preferred, and hold that Name by their fermice in the Emperous warres by the Send degree of perdiers by their very stocke and birth. To which order are referred their Dyacks or Sauttaries, fons. that leme the Emperour in every head Towne, being joyned in Committee with the Dukes of that place.

at place. The last are their Commons, whom they call Monsteet. In which gumber they notion their Thatbindee. Merchants, and their common Artificers, The very lowest and basett fort of this kinde (which green are held in no degree) are their Countrey people, whom they call Christianeis. His pension is one hundred and fitte Rub.

bets a yeare.

From these Chefinds or Tetrarchies is exempted the Emperours inheritance or Voction (as they call it) for that it perrayned from ancient time to the House of Beals, which is the Graame of the Imperiall bloud. This flandeth of fixe and thirtie Townes with their bounds or Territories, Imperiant Buons. Ann James of Learning and Annual Medical Residence divers peculiar Iuridictions, which are likewife deducted out of those Cheffrid, as the 20 Benots during pecunian manufactions, which are marked bedoners) and fuch like.

These are the chiefe Governours or Officers of the Provinces, not resident at their charges.

broad, but attending the Emperour whither focuer hee goeth, and carrying their Offices about with them; which for the most part they hold at Merke, as the Emperous chiefe feate.

The parts and practice of these foure Offices, is to receive all Complaints and Actions whatfocuer, that are brought out of their feuerall Cheffred and Quarters, and to informe them to the Emperours Councell. Likewise to send direction agains to those that are under them, in their Gayd Prouinces, for all matters given in charge by the Emperour and his Councell, to bee done or put in execution within their Precincts.

For the ordering of every particular Province of thefe four (beffred, there is appointed one 10 of the Dukes, which were reckoned before in the lowest degree of their Nobilitie, which are resident in the head Townes of the sayd Prouinces. Whereof every one bath joyned with him in Commission a Drack or Secretarie to assist him or rather to direct him. For in the executing of their Commission, the Direct doth all.

The Commif-The parts of their Commission are thele in effect. First, to heare and determine in all civil and pure of their Precine. To which purpose they have vider them certayne Officers, as Galony Scares or Coroners, who besides the cryal of felle Murders; are to attach Fellons and Dukes or Prethe Sondie or vnder Iustices, who themselves also may heare and determine in all matters of the fame nature, among the Countrey people of their owne Wards or Bayliwickes : but to that in remerators, among one commers people on their owner which or anythwickes : our to maxim cale either partie difficut, they may appeale, and goe further to the Doke and Dome that refide 40 within the head Towne. From whom all o they may remoone the mixter to the higher Court at Mostly of the Emperous Council, where I ye all appeales. They have under them allo

Seenally in all criminal matters, as Theft, Murder, Treafon, &c. they have authoritie to apprehend, to examine and to imprison the materiate factor, and to having received perfect evidence and imformation of the cause, they are to fend it ready drawne and orderly digested up to the Mosto, to the Officer of the Cheffird, whereunto that Province is annexed ; by whom it is referred and propounded to the Emperous Councell. But to determine in any matter criminall, or to doe execution upon the partie offending, is more then their Commission will allow T them todoe.

Things, if there bee any publike service to be done within that Province, (as the publishing of any haw, or common order, by way of Proclamation, collecting of taxes and impositions for the Emperor, mustering of Souldiers, and feeding them forth at the day, and to the place assigned by the Emperour or his Councell) all these and such like pertayne to their charge.

Thefe Dukes and Dyacks are appointed to their place by the Emperour himselfe, and are changed ordinarily at enery yeeres end, except upon some special liking or sute, the time bee them valued opposite of the proposition of the medical proposition of the m people where they governe, being neither borne, nor brought vp among them, nor yet having inheritance of their owne there, or elfe where. Onely of the Emperour they have for that fernice an hundred Marcks a yeere, hee that hath most, some fiftie, some bue thirtie. Which ma- 60 keth them more fulpected and odious to the people, because being so bare, and comming fresh and hungry eyour being so bare, and comming fresh and hungry eyour bein lightly energy years, they racke and spoyle them without due regard of Inflice or Conficience. Which is eafily tollerated by the chiefe Officers of the Cheffirds, to the end they may spoyle them againe, and haue a better bootie when they call them to account:

which commonly they doe at the end of their feruice, making an advantage of their injustice and oppression ouer the poore people. There are few of them but they come to the Padker or Whip when their time is ended, which themselves for the most part doe make account of. And therefore they furnish themselves with all the spoyle they can for the time of their Government, that they may have for both turnes, as well for the Emperour and Lord of the Chetfird, as to referue some good part for themselues.

They that are appointed to gouerne abroad, are men of this qualitie: faue that in the foure border Townes that are of greatest importance, are set men of more speciall valour and trust two in euery Towne. Whereof one is euer of the Emperours privile Counfell. These foure border 10 Townes are, Smolensko, Vobsko, Nonogrod, and Cazan, whereof three lie towards the Polonian and Sweden, one bordereth farre off voon the Chrim Tartar. These have larger commission then the other Dukes of the Prouinces that I spake of before, and may doe execution in criminall matters. Which is thought behoofful for the Common-wealth : for incident occasions that may happen voon the borders that are farre off, and may not flay for direction, about every occurrent and particular matter from the Emperour and his Counfell. They are changed every yeere (except as before) and have for their (tipend 700. Rubbels a yeere he that hath most : some have but 400. Many of these places that are of greatest importance, and almost the whole Countrey is managed at this time, by the Godonoes and their Clients.

The Citie of Moske (that is the Emperours Seat) is governed altogether by the Emperours 20 Counsell. All matters there both civill and criminall, are heard and determined in the severall Courts, held by some of the faid Counsell, that reside there all the yeere long,

Onely for their ordinary matters (as Buildings, Reparations, keeping of their Streets decent The governand cleane, Collections, leaving of Taxes, Impositions and such like) are appointed, two Gen- ment of Mesics. tlemen, and two Dyacks or Secretaries, who hold a Court together for the ordering of fuch matters. This is called the Zempskey house. If any Townes-man suspect his servant of these or like matter, hither he may bring him to have him examined vpon the Padker, or other torture. Befides these two Gentlemen, and Secretaries that order the whole Citie . there are Starusts or Aldermen for every severall Companie. The Alderman hath his Society or Constable, and the Constable hath certaine Decetskess or Decurions under him, which have the overlight of 30 ten housholds a piece, whereby every diforder is sooner spyed, and the common service hath the quicker dispatch. The whole number of Citizens poore and rich are reduced into Companies. The chiefe Officers (as the Dyacks and Gentlemen) are appointed by the Emperour himfelfe, the Starait by the Gentlemen and Dyacks, the Saskey by the Starait or Alderman, and the Decetskoyes by the Constables.

This manner of government of their Provinces and Townes, if it were as well fee for the giuing of iuftice indifferently to all fores, as it is to preuent innovations, by keeping of the Nobility within order, and the Commons in fubication, it might feeme in that kind to be no bad nor vnpolitike way, for the contayning of to large a Common-wealth, of that breadth and length as the Kingdome of Ruffae. But the opprefices and flauery is seepen, and so great, that length as the Kingdome of Ruffae. But the opprefices and flauery is seepen, and so great, that 40 a man would maruell, how the Nobilitie and People should suffer themselves to be brought wnder it, while they had any meanes to avoide and repulse it : or being so strengthned as it is at this present, how the Emperours themselves can be content to practise the same, with so open multice and oppretion of their Subiedla, being themselves of a Christian profession: By this Anhardmatic appeareth how hard a matter it were to alter the state of the 2016 Government, as now terto alter the state of the 2016 Government, as now terto alter the state of the 2016 Government, as now terto alter the state of the 2016 Government, as now terto alter the state of the 2016 Government, as now terto alter the state of the 2016 Government, as now terto alter the state of the 2016 Government.

He Emperours of Ruffia give the name of Counfellour to divers of their chiefe Nobilitie, (hap. 11. rather for honours take, then for any vie they make of them about their matters of State. Of the Empa-Thefe are called Boiarene, without any addition, and may be called , Compelloure at large. For rours Countel. The are care to a more several control any analysis and may be control or a few problems of the problems of th ning to the State) have the addition of Dummer, and are named Dummer beiaren, or Lords of the Counfell, their Office or Sitting Boarfine damma.

Their names at this prefent are these in their order. First , Knez Freder leanowich Methisof- The aumber key. 2. Knez luan Michailsmich Glunkey. 3. Knez Vafilie luanomich Sunkey Scopin. (These and nithering three are accounted to be of greater birth then wifedome, taken in (as may feeme) for that end, the Connectrather to furnish the place with their honours and presence, then with their advice or counsell.) 4. Foure Secre-

The foure laft of these are called Dunmay detakey or Lord-Secretaries. These are all of the Em-The route last of these are taken to minory managers as considerables. I melecate all or the Emperours privile Counfell, though but few of them are called to any confultation, for thet all mateperious printe counters, rinoign over the perious following Godone brother to the Emprelle, ters are acuticu and determined your pleaseth him to call. If they come, they are rather to with some nue or size more whom is present themselves. The matters occurrent which are heare, then to giuc countell, and one to centering the interface and the form are of State done within the Realme, are informed them at their fittings by the Lords of the foure to or state done within the exemite, are married in the Chapter concerning the Gourra-Chestfirds, or Tetrarchies. Whereof mention is made in the Chapter concerning the Gourra-Coefficial of 1 etracules. Who bring in all fuch Letters as they recine from the Dukes Dukes, ment or their Frounces, who using in an age of the Citie and Caliles pertayning to their feuerall Quittie or Chetfird, with other advertisements, and informe the Counsell of them.

The like is done by the chiefe Officer of euery feuerall Office of Record : who may come into the Counfell-chambet, and informe them, as occasion incident to his Office doth require. Beto the Commence and informed by the way of fupplilades matters of state, they comment on many product they enterrayne and determine, as the Caule or cation in very great numbers. we need to the Offices whereto they pertayne by common meanes can procure fauour. Some they tend to the Offices whereto they pertayne by common meanes can procure raugur. Source they are a source are Mondayes, Wedneldayes, and Fri. 20 dayes. Their time of meeting is commonly feuen of the clocke in the morning. If there bee cayes, men time of menting a distribution on fome other day, they have warning by the Clerke of of the Counfell, called Dwofey Bullew, who receiveth order from the Rofered, or High Constable of the Realme, to call them together at the time appointed.

The Sreward Receiver of

the Crowne-

land Rents.

Chap. 11.

Of the receiving of Customes, and other Rents belonging to the Crowne, there are appoint ted divers Vnder-officers, which deliver over the same into the head I reasure. The tartis, rors Cuttoms the Office of Dwoerisms or Steward of the boulfold. The second is, the Office of the Chessista. which I comprehend under one, though it be divided into foure severall parts, as was faid be-The Offices of fore. The third is called, Bulba Prechode; or the great Income.

As touching the first, which is the Office of the Steward, it receiveth all the Rents of the Emperours Inheritance, or Crowne-land, which they call, Vockin. The Voction or Crown-land contayneth in it fixe and thirtie Townes with the Territories or Hundreds belonging with them, Whereof the chiefe that yeeld the greatest Rents are these: Alexandrisea, Corelika, Osfer, Sieboday, Danielska, Moifalskoy, Chara, Samerska, Stravarouse, Bransone, &c. The Inhabitants or Tenants of these and the other Townes, pay some Rent money, some other Rent duties (called Obrites) as certaine Chesfirds or measures of Graine, Wilest, Rye, Barley, Oats, &c. or of other victuall, as Oxen, Sheepe, Swannes, Geefe, Hares, Hennes, wilde Fowle, Fish, Hay, Wood, Honey, &c. Some are bound to lowe for the Emperours prouifion certaine acres of ground, and to make the Corne ready for his vie: having for it an allowance of certaine acres of ground for 40

This prouision for the houshold, specially of Graine served in by the Tenants, is a great deale more then is fpent in his boule, or in other allowance ferued out in livery, or for the Emperous honour, called Schalonaney. for which wie there is bestowed very much, both in Graine and other Victuall. This furplus of prominion is fold by the Steward to the best hand, and runneth

In the time of Inam Validanich, father to this Emperour (who kept a more Princely and bountifull house then the Emperour now doth) this overplus of Graine, and other incomes into the Stewards Office, yeelded to his Treasurie not past 60000. Rubbels yeerely, but rifeth now by good husbanding of the Steward Gregory Vasilowich Godbinos, to 230000. Rubbels a yeere. And 50 this by the meanes of the Empresse, and her kindred, specially (Borrie Federarich Godenoe) that account it all their owne that runneth into the Empereirs Treature. Much of this furplulage that rifeth out of the Rent prouision, is employed to the payment of the wages of his houshold Officers, which are very many attending at home, and purueying abroad.

The fecond Office of Receit, is called the Cheffred; (being druided into foure feuerall parts, as before was faid) hath-foure head Officers: which besides the ordering and government of the Shires contayned within their feuerall Cheffed, have this alfo as a part of their Office, to receine the Taple and Podes belonging to the Emperour, that rifeth out of the foure Cheffed or Quarters. The Tagla is a yeerly Rent or Imposition raised upon every wife or measure of Graine, that groweth within the Land, gathered by fworre men, and brought into the Office. The 60 Was contayneth fixtie Chefferds. Every Chefferd is three Bushels English, or little less. The Pode is an ordinary Rent of money imposed vpon every Soake, or Hundred within the whole

This Tagle and Podes bring in yeerely to the Offices of the Cherfirds agreat fumme of money:

as may appeare by the particulars heere fet downe. The Towne and Proninge of Voliko pay veerely for Tagla and Podat about 18000. Rubbels. Nousgrod 3,000. Rubbels. Teripocke and Offer 8000, Rubbels. Razan 30000. Rubbels. Morum 12000. Rubbels. Colmigroe and Durna 8000. Rubbels. Vologda 12000. Rubbels. Cazan 18000. Rubbels. Wilma 20000. Rubbles. Rostone 50000. Rubbels. The Citie of Maske 40000. Rubbels. Sibierskey 20000. Rubbels. Caffrome 12000. Rubbels. The totall amounteth to 400000. Rubbels, or Markes 2 years, which

is brought in yeerely the first of September, that is reckoned by them the first day of the yeere. Yeere be ins The third (that is called the Bullba Prechod, or great Income) receiveth all the Customes that her. are gathered out of all the principall Townes and Cities within the whole Realme. Befides the 1 he Office of

to fees and other duries which rife out of divers smaller Offices, which are all brought into this Builba Presbod Office of Bullha Preched. The Townes of most trade, that doe yeeld greatest Custome, are or great Inthese here set downe. Mosko, Smolensko, Vobska, Nonogrod Velica, Steararonse, Tarfbooke, Ot. come. fer, Taufane, Caftrome, Nefna Nonogred, Cazan, Vologda, This Custome out of the areas Townes is therefore more certaine, and easie to bee reckoned, because it is set and rated precise-Iv what they shall pay for the Custome of the yeere. Which needs must bee payd into the faid Office, though they receive not fo much. If it fall out to be more, it runneth all into the Emmerours advantage.

The Cultome at Mosko for every yeere, is 1 2000. Rubbels. The Cultome of Smolensko 8000. The Emperors Volike 12000. Rubbels. Nouograd velica 6000. Rubbels. Strararanse by Salt and other commo-20 dities 18000. Rubbels. Torflock 800. Rubbels. Osfer 700. Rubbels. Tarnflane 1200. Rubbels. Castrome 1800. Rubbels. Nesna Newsored 7000. Rubbels. Cazas 11000. Rubbels. Vologda 2000. Rubbels. The Custome of the rest that are Townes of trade, is sometimes more, fometimes leffe, as their trafficke and dealings with commodities to and fro , falleth out for

This may bee faid for certaine, that the three Tables of Receits belonging to this Office of The whole re-Bullha Prechod, when they receive leaft, account for thus much , we. The first table , 16000. ceitef the Bul-Rubbels. The second table , 90000. Rubbels. The third 70000. Rubbels. So that there com- fra Preceder meth into the Office of Bullha Prechod, at the least reckoning (as appeareth by their Bookes of great Income, Customes) out of these and other Townes, and maketh the summe of 340000. Rubbles a yeere. 20 Befides this Custome out of the Townes of trade, there is received by this Office of Bullba Pre-

chod, the yeerely Rent of the common Bath-floues, and Cabacks or drinking houses, which pertavne to the Emperour. Which (though it be vncertaine for the inft fumme, yet because it is certaine, and an ordinary matter, that the Ruffe will bathe himselfe as well within as withour) yeeldeth a large Rent to the Emperours Treaturie.

There is belides , a certaine Mulct or Penaltie that groweth to the Emperour out of every Rengon of Indgement or Sentence, that paffeth in any of his Courts of Record in all Civill matters. This the Indiciall Penaltie or Mulci is twentie Dingor or Pence vpon every Rubbel or Marke, and fo ten in the Office. hundred. Which is payd by the parcie that is conuict by Law. He hath besides for every name contayned in the Writs that paffe out of thele Courts, fine Alteens. An Alteens is fine pence 40 feeling, or thereabouts. This is made good out of the Office, whence the Writ is taken forth.

Thence it goeth to the Office that keepeth the leffer Seale, where it payeth as much more to the Emperours vie. This rifeth commonly to three thousand Rubbels a yeere, or thereabouts. Farther also out of the Office of Roilbonia, where all felonies are tryed, is received for the Emperour the halfe part of Felons goods, the other halfe goeth the one part to the Informer, the other to the Officers. All this is brought into the Office of Bullha Preched, or Great insome. Besides the overplus

or remainder that is faued out of the Land-rents allotted to divers other Offices: as namely, to the Office called Roferade, which hath Lands and Rents affigned vnto it to pay the yeerely falaries of the Souldiers, or Horsemen, that are kept still in pay. Which in time of peace, when they reft at home not employed in any feruice, is commonly cut off and payd them by halfes, 50 fometimes nor the halfe: fo that the remainder out of the Roferade Office that is layd into the Emperours treasurie, commeth for the most part enery yeere to 250000. Rubbels.

In like fort (though not fo much) is brought in the furplus out of the Strelletskoy Offices which hath proper Lands for the payment of the Strelfey men or Gunners, as well those at Moske, that are of the Emperors Guard (12000, in ordinary) as on the borders, and other garrifon Towns and Castles, Likewise out of the Office of Prechase, Shistuey Newsbey, which hath set allowance of Lands to maintayne the forraine mercenary Souldiers, as. Foles, Sweadens, Dutches, Scots, &c. So out of the Office of Pulbarskey, (which hath Lands and Rents allowed for the prouition of munition, great Ordnance, Powder, Shot, Saltpeter, Brimstone, Lead, and such like) there is 60 left somewhat at the yeeres end, that runneth into the Treaturie. All these bring into the Office of Bullha Preched that which remayneth in their hand at the yeeres end. Whence it is delivered into the Emperours Treasurie. So that the whole summe that groweth to this Office of Bullha Prechod, or the great Income (as appeareth by the Bookes of the laid Office) amounteth to

800000. Rubbels a yeere, or thereabouts.

All

recainre house file of Mosto.

All these Offices, to wit, the Office of the Steward, the foure Chesfirds, and the Bullea Prechad deliuer in their receipts to the head treasurie, that lyeth within the Emperours house or Caffle within his Ca. at the Moske. Where lye all his Moneys, Iewels, Crownes, Scepters, Plate, and fuch like, the Chefts, Hutches, and Bags being figured by the Emperours themselues with their ownessele. Though at this time the L. Borris Federowich Godonoe, his feale and ouer-fight supplieth for the Emperour, as in all other things. The under Officer at this time is one Stepan Vafilonich Godone. Coufin germane to the faid Borris, who hath two Clerkes allowed to ferue vocethimin the Office.

The fum of the Emperors rent money.

The furn that 1. Out of the Stewards Office about the expence of his Sum 1430000. Ruh. groweth to the bouse 23000. Rubbels.
Emperors Trea2. Out of the foure Chetsirds for Soake and Head charges for his house to fury in money \ money, 400000. Rubbels. and ordinary falleries oncly, for energy 3, Out of the Builha Piccod Office, or great Income of his Souldiers other yeere. for Cuitome and other Rents, 800000, Rubbels. wife discharged.

But besides this reuenue that is paid all in money to the Emperors treasurie, he receiveth yeerely in Furres, and other duties to a great value out of Siberia, Pechora, Permia, and other places, which are fold or bartred away for other forraine commodities to the Turkilo, Perfian. Armenian, Georgian and Bougharian Merchants, that trade with n his Countries, besides others of Christendome, What it maketh in the whole (though the value cannot bee fet downe precifely, as being a thing cafuall as the commoditie may be got) it may be gheffed by that which an was gathered the laft yeere out of Siberia for the Emperours Custome, vz. 466. Timber of Sables, fiue Timber of Martrones, 180. blacke Foxes, befides other commedities.

To these may be added their seazures, and confiscations ypon such as are in displeasure, which rifeth to a great furmine, besides other their extaordinary Impositions, and exactions done vpon their Officers, Monafteries, &c.not for any apparant neceffitie, or vie of the Prince, or Common. wealth, but of will and custome : yet with some pretence of policie. To this purpose this byword was vied by the late Emperout Inan Vafilowich : That his people were like to his beard. The oftner fhanen, the thicker it would grow. Or like fheepe, that must needs bee fhorne once a yeere at the leaft : to keepe them from being over-laden with their wooll,

Vnderftand. thefe politike courses of the times when the Agrhor writ. fro t among

MEanes feruing to which purpose were to preuent no extortions, exactions, or briberies whatfoeuer, done upon the Commons by their Dukes, Diacks, or other Officers in their Provinces : but to fuffer them to goe on till their time be expired, and to fucke themselves full. Then to call them to the Pranculo (or whip) for their behaulour, and to beat out of them all, Gods chaffile- or the most part of the bootie, (as the Hony from the Bee) which they have wrung from the ment hath fince Commons, and to turne it into the Emperours Treasurie, but neuer any thing backe againeto the right owners, how great or euident soeuer the injurie be. To this end the needle Dukes, and Diacks, that are fent into their Provinces, ferue the turne very well, being changed fo often/to wit) once a yeere : where in respect of their owne, and the qualitie of the people (as before was faid) they might be continued for some longertime, without all feare of innovation. For com- 40 ming fill fresh woon the Commons, they sucke more eagerly: like Tiberius the Emperours Flies, that came new fill voon an old fore. To whom he was wont to compare his Prators, and other Prouinciall Officers.

- 2. Yetthey did make of these Officers (that have robbed their people) sometimes a publike example, if any be more notorious then the reft : the Emperour thus feeming to millike the oppressions done to his people, and transferring the fault to his ill Officers. As among divers other, was done by the late Emperor Inan Vafilowich to a Diacke in one of his Provinces : that (befides many other extortions and briberies) had taken a goole readic dreft full of mony. The man was brought to the Market-place in Mosko. The Emperour himselfe present made an Oration. Thefe, good people, are they that would eate you up like bread, or . Then asked he his Po- 50 lachies or Executioners, who could cut vp a Goole, and commanded one of them first to cut off his legs about the midft of the shin, then the armes about his elbowes (asking him still if Gooftflesh were good meat) in the end to chop off his head : that hee might have the right fashion of a Goofe readie dreffed.
- 3. They make an open shew of want, when any great Taxe or Imposition is towards. As was done by this Emperour Theodore Inanomich, by the aduice of some about him at the beginning of his raigne : when being left very rich (as was thought) by his father, he fold most of his Plate, and framped some into Coyne: that he might seeme to want money. Whereupon presently out came a Taxation.
- 4. They fuffer their subiects to give freely to the Monasteries (which for their superfittion 60 very many doe, specially in their last Wills) and to lay vp their money and substance in them, to keepe it more fafe. Which all is permitted them without any restraint or prouiso, as was and is in some Countries of Christendome. Whereby their Monafteries grow to exceeding great wealth. This they doe to have the money of the Realme better flored together, and more rea-

die for their hand, when they lift to take it. Which many times is done without any noyfe the Friers being content rather to part from somewhat (as the increase groweth) then to lose all at once. Which they were made to doubt of in the other Emperours dayes.

To this end Inan Vafilowich late Emperor vied a very Brange practife, that few Princes would A ftrange prachave done in their greatest extremities. Heerefigned his Kingdome to one Velica Knez Simeon, tice to get methe Emperours sonne of Cazan; as though hee meant to draw himselfe from all publike doings ney. to a quiet private life. To wards the end of the veere, he caused this new King to call in all Charters granted to Bishoprickes, and Monasteries, which they had enjoyed many hundred yeeres before. Which were all cancelled. This done (as in diffike of the fact & of the mif-government

of the new King) hee refumed his Scepter, and so was content (as in faugur to the Church and Religious men) that they should renew their Charters, and take them of himselfe : reserving and annexing to the Crowne fo much of their lands, as himfelfe thought good.

By this practice he wrung from the Bishoprickes and Monasteries (pesides the lands which he annexed to the Crowne) an huge maffe of money. From some fortie, from some fiftie, from some an hundred thousand Rubbels. And this as well for the increase of his Treasury, as to shate the ill opinion of his hard gouernment, by a shew of worse in another man. Wherein his ftrange spirit is to be noted : that being hated of his subjects (as himselfe knew well enough) ver should venture such a practice to set another in his saddle, that might have rid away with his horse, while himselfe walked by on foot.

5. They fend their Meffengers into the Prouinces or Shires, where the special commodities of their Countrey grow, as Furres, Wax, Hony, &c. There to foreffall and ingroffe formetime one whole commoditie, fometime two or more, taking them at finall prices what themselves lift, and felling them againe at an excessive rate to their owne Merchants, and to Merchants itrangers. If they refuse to buy them, then to force them voto it. The like is done when any commoditie either natiue or forraine (as Cloth of Gold, Broad-cloth, &c.) thus engroffed by the Emperour, and received into his treatury happeneth to decay, or marre by long lying, or fome other cafualtie. Which is forced vpon the Merchants to be bought by them at the Emperours price, whether they will or no. This last yeere of 1589. was engroffed all the Wax of the Countrey : fo that none might deale with that commoditie, but the Emperour onely,

30 6. To take up and engroffe in like fort sometime forraine commodities (as Silkes, Cloth. Lead. Pearle, &c. brought into his Realme by Turkifb Merchants, Armenians, Bongbarians, Poles. English, and other. And then to force his Merchants to buy them of his Officers at his owne price.

7. They make a Monopoly for the time of such commodities as are paid him for Rent, or Custome, and to inhance the price of them, as Furres, Corne, Wood, &c. What sime none must fell of the same kinde of commoditie, till the Emperours be all fold. By this meanes he maketh of his Rent, Corne, and other prouision of victuall (as before was faid) about 200000. Rubbels or Markes a yeere. Of his Rent, Wood, Hay, &c. 30000. Rubbels, or thereabouts.

- 8. In enery great Towne of his Realme hee hath a Caback or other drinking house, where 40 is fold Aqua-vita (which they call Ruffe Wine) Mead, Beere, &c. Out of these hee receiveth Rent that amounteth to a great fumme of money. Some yeeld 800. fome 900. fome a 1000. some 2000, or 3000. Rubbels a yeere. Wherein besides the base and dishonourable meanes to encrease his treasury, many foule faults are committed. The poore Labouring man, and Artificer, many times spendeth all from his wife and children. Some vie to lay in twentie, thirtie.fortic Rubbels, or more into the Caback, and vow themselves to the pot, till all that be spent. And this (as he will fay) for the honour of Hoffodare, or the Emperour. You shall have many there that have drunke all away to the very skin, and so walke naked (whom they call Naga.) While they are in the Caback, none may call them forth whatfoeuer cause there be, because he hindereth the Emperours reuenue.
- 50 9. Some of his Boiarens, or Nobles of his Court, (whom he vieth vpon truft) that have houfes in the Mosks, faine themselucs robbed : Then they fend for the Zemskey men, or Aldermen of the Citie, and command them to finde out the robbery : In default of not finding it, prane or cease the Citie for their misgouernment in 8000. 9000. or 10000. Rubbels at a time. This is many times practifed.

10. In these exactions to shew their Soueraigntie, sometime they have beene vied very plaine, and yet strange cauillations. As was that of luan Vafilowich , father to this Emperour, after this fort. He fent into Perma for certaine loads of Cedar wood, wherof he knew that none grew in that Countrey. The inhabitants returned answer they could finde none there. Whereupon hee seazed their Countrey in 12000. Rubbels, 25 if they concealed the commoditie of

60 purpole. Againe, he sent to the Citie of Morko to provide for him a Colpack, or measure full of line Fleas for a medicine. They returned answere that the thing was impossible. And if they could get them, yet they could not measure them, for leaping out. Whereupon hee praued, or beat out of their thins 7000, Rubbels for a Mulet. By like cavillation hee extored for his Nobilitic 30000. Rubbels, because he missed of his game, when hee went a hunting for the Hare:

the manner is) Praned prefently againe vpon the Monficks, or common people of the Country.

Chap. 13. Of the flate of people in the Countrey of Ruffia. and miterable

eftate of the

Ruffe people.

Mifrie of

manners and

THe condition of the Commons and vulgar fort of people, may partly bee understood by that which already hath beene fayd concerning the manner of their Gouernment, and the flare of the Nobilitie, with the ordering of their Prouinces, and chiefe Townes of the Land. And patie, or valle and the first touching their libertie how it standeth with them, it may appeare by this : that they are reckoned in no degree at all, nor have any fuffrage nor place in their Zabore, or high Court of Parliament, where their Lawes and publike Orders are concluded upon. Againe into what feruile condition their libertie is brought, not onely to the Prince, but to the Nobles, and Gentle- 10 men of the Countrey (who themselues also are but seruile, specially of late yeeres) it may fire ther appeare by their owne acknowledgments in their supplications, and other writings to anv of the Nobles or chiefe Officers of the Emperours. Wherein they name and fubicribe themfelues Kolophey, that is, their Villaines, or Bond-flaues: as they of the Nobilitie doe vnto the Emperour. This may truely bee fayd of them, that there is no fervant nor bond-slave more awed by his Master, nor kept downe in a more seruile subjection, then the poore people are, and that vniuerfally, not onely by the Emperour, but by his Nobilitie chiefe Officers and Souldiers. So that when a poore Moufick meeteth with any of them voon the high way, hee must turne himfelfe about, as not daring to looke him on the face, and fail downe with knocking of his head to the very ground, as he doth vnto his Idoll,

Secondly, concerning the Lands, goods, and other possessions of the Commons, they answer the Name and lye Common indeed, without any fence against the rapine and spoyle, not onely of the highest, but of his Nobilitie, Officers, and Souldiers. Besides the Taxes, Customes, Seazures, and other publike exactions done vpon them by the Emperour, they are fo racked and pulled by the Nobles, Officers, and Meffengers, fent abroad by the Emperour in his publike affayres, specially in the Tammes (as they call them) and thorow faire Townes, that you shall have many Villages and Townes of halfe a mile, and a mile long, stand all vnhabited : the people being fled all into other places, by reason of the extreame viage, and exactions done upon them. So that in the way towards Moske, betwixt Vologda and Taruflaueley (which is two nineties after their reckoning, little more then an hundred miles English,) there are in fight fiftie Dariesnes or Villa- 30 ges at the least, some halfe a mile, some a mile long (that stand vacant) and desolate without any inhabitant. The like is in all other places of the Realme, as is fayd by those that have better trauelled the Countrey then my selfe had time, or occasion to doe.

The great oppression ouer the poore Commons, made them to have no courage in following their Trades: for the more they have, the more danger they are in, not onely of their goods, but of their liues also. And if they have any thing, they conceale it all they can, sometimes conueying it into Monasteries, sometimes hiding it vnder the ground, and in Woods, as men are wont to doe where they are in feare of forraigne invasion. Infomuch that many times you shall fee them afraid to bee knowne to any Boise on Gentleman, of fuch commodities as they have to fell. I have seene them sometimes when they have layd open their Commodities for a liking 40 (as their principall Furres and such like) to looke still behinde them, and towards every doore: as men in some feare, that looked to bee set vpon, and surprised by some Enemie. Whereof afking the caufe, I found it to bee this, that they have doubted leaft fome Nobleman or Sinaboiarfker of the Emperour had beene in company, and to layed a trayne for them to pray you their Commodities perforce.

This made the people (though otherwise hardened to beare any toyle) to give themselves much to Idlenesse and Drinking : as passing for no more, then from hand to mouth. And hereof it commeth that the Commodities of Russia (as was sayd before) as Waxe, Tallow, Hides, Flax, Hempe, &c. grow and goe abroad in farre leffe plentie then they were wont to doe: because the people being oppressed and spoyled of their gettings, ore discouraged from their labours. Yet this 10 one thing is much to bee noted, that in all this oppression there were three brethien Merchants, of late that traded together with one Stocke in common, that were found to bee worth 300000-Rubbels in money, besides Lands, Cattels, and other Commodities. Which may partly be imputed to their dwellings farre off from the eye of the Court, viz. in Wichida, one thousand miles from Mosko and more. The same are sayd by those that knew them, to have set on worke all the yeere long ten thousand men in making of Salt, carriages by Cart, and Boat, hewing of Wood and such like : besides siue thousand Bond-slaues at the least, to inhabite and till their Land. They had also their Physitians, Surgeons, Apothecaries, and all manner of Artificers of Doutches and others, belonging vnto them. They are fayd to have payed to the Emperour for Cuftome to the summe of three and twentie thousand Rubbels a yeere, (for which cause they were 60 suffered to enion their Trade) besides the maintayning of certaine Garrisons on the borders of Siberia, which were neare vnto them. Wherein the Emperour was content to vie their purie, till fuch time as they had got ground in Siberia, and made it habitable, by burning and cutting downe Woods, from Wiebida to Perm, aboue one thousand verst, and then tooke it all away from

them perforce. But this in the end being enoyed and dislayned, as a matter not standing with eheir policie, to haue any to great, specially a Monfick, the Emperour began first to pull from them by pieces, sometimes twenter thousand Rubbels at a time, sometime more : till in the end their Sonnes that now are are well saied of their Stocke, and have but I mall part of their Fathers fubflance : the reft being drawne all into the Emperours treaturie. Their names were facone.

Gregorie, and Simon, the Sonnes of Ornice.

For the qualitie of their people otherwise, though there segment to bee in them some prenesse to receive any Art (as appeareth by the natural) wits in the men, and very children.) yes they excell in no kinde of common Art, much leffe in any learning of literall kinde of knowto ledge: which they are kept from of purpole, as they are allo from all military practice; that they may bee fitter for the female condition, wherein now they are's and have neither reafon, nor valour to attempt us out ion. For this purpole also they are kept from travelling, that Raffin at perthey may learne nothing, nor fee the fashions of other Countries abroad. You shall seldome muced to the fee a Ruffe a traueller, except hee bet with forme Emballadour, or that hee make an eligible pub of his Countrey. Which hardly he can doe, by reason of the borders that are watched so nare rowly, and the punishment for any such attempt, which is death, if her bee taken, and all his goods confileate. Onely they learns to write, and to read, and that very few of them. Neid ther doe they fuffer any stranger willingly to come more their Realmetons of any civill Countries. for the same cause, farther then necessitie of vetering cheir commodities; and taking in of forreine doth enforce them to doe.

And therefore this yeare 1189, they consulted about the removing of all Merchants strange The isologies gers to the border Townes; to abide and haue their refidencie there, and to bee more wary in of the Empe. admitting other strangers heereaster into the Inland parts of the Realme. For the same pur, rour conce pose also they are kept within the bounds of their degree by the Lawes of their Countrey; ning his state fo that the sonne of a Monsiek, Artificer, or Husbandman, is euer a Monsiek, Artificer, &c. and hath no meanes to afpire any higher: except, having, learned to write and reade, hee attayne to the preferment of a Priest, or Dyack. Their Language is all one with the Slavonies. which is thought to have beene dernied from the Rufe Tongue, rather then the Rufe from the Slaumian. For the People called Selam, are knowne to have had their beginning out of Selaumia and 30 Sarmatia, and to have tearmed them (claus of their Conquest Sciances, (that is) Eamous or the Language.

Glorious, of the word Sclaus, which in the Rolle and Slauonian Tongue lignifieth as much as Glorie, or Fame. Though afterwards being fulcined and trod vpon by divers Nations, the Belians, the Neighbours, has turned the word to a contrary fignification, and terme every Semant or Pealant by the name of Science, as did the Remover by the Case and Systems, for the same reason. The Russe Character or Letter, 15,00 other then the Greeks , somewhat

difference.

Concerning their Trades, Diet, apparell, and fuch like, it is to be noted in a feuerall Chapter
of their private behauseur. This order that bindeth every man to keepe his ranke, and severall degree, wherein his fore-fathers lived before him, is more meet to keepe the Subieds in a lengle 40 subjection, and so apt for this and like Commonwealths, then to advance any vertue; or to breed any rare or excellent qualitie in Nobilitie or Commons: as having no further reward nor preferment, whereunto they may bend their endeauours, and employ themselves to advance their, effate, but rather procuring more danger to themselves, the more they excels in any noble of

Heir Courts of Civill Inflice for matters of Contract, and other of like fort, are of three. Chep. 14. kinds, the one being subject vnto the other by way of appeale. The lowest Court (that Of their pubfeemeth to be appointed for some ease to the Subices) is the Office of the Gubney Sterner, that like little and feement to or appointment and of the States Starnif, or Bayliffe of the Soake or Hundred, whereproceeding in ngument an accountant, which proceeding of the Prouinces. Thele may end matters among their neigh. Chill, and 50 bours within their Soake, or feuerall Hundred, where they are appointed vnder the Dukes and Criminall bours within their Soake, or leuerall Hundred, where they are appointed under the Direct and Direct of the Prouinces, to whom the parties may remove their matter, if they cannot be agreed matter.

Court of Cal

The second is kept in the head Townes of every Province or Shire , by the faid Dukes and three, Djacks, that are Deputies to the foure Lords of the Cheffeds (as before was faid.). From these The Dokes Courts they may appeale, and remoue their Suits to the chiefe Court, that is kept at the Moske, and Dracts. Course they may appears and the foure Cheffred. These are the chiefe Inflices of Indiges. Course, where are resident the Officers of the foure Cheffred. These fact in their feueral Cheffed or Quarter, and The high court of them in all Civill matters that grow within their several Cheffed or Quarter, and Court of may be either commenced originally before them, or profecuted out of the interious Courts of Marie. 60 the Shires by way of appeale.

Their commencing, and proceeding in Civill actions is on this manner. Fire, the Plaintife putteth up his Supplication, wherein he declareth the effect of his Caule, or wrong done wire. Their minner puttern up his supplied and the supplied of proceeding him. Whereupon is granted with him a Mopie, or Warrant, which he delinerest to this Brofiles. of proceeding him. Whereupon is granted with a Could mitor Sergeant, to doe the arrest vpon the partie whom hee meaneth to implead. Who vpon the cert.

Rich Ruffian Merchanes.

arreft, is to pur in Swettes to answere the day appointed, or elfe flandeth at the Serguants deno-tion; to be kept fafe by such meanes as he thinketh good.

The Seguents are many, and excelf for their hard and cruell dealing towards their prisoners: commonly they clap Irons upon them, as many as they can beare, to wring out of them some larger feet. Though it be but for fixe pence, you shall fee them goe with Chaines on their less armes, and necke. When they come before the Judge, the Plaintiffe beginneth to declare his matterafter the contents of his Supplication. As for Attorneys, Counfellors, Procurators and Aduocates to plead their Caufe for them, they have no fuch order; but every man is to tell his owne tale, and plead for himselfe as well as he can.

Ending of controuerfies

If they have any witnesse or other evidence, they produce it before the Judge. If they have none, or if the trueth of the Caufe cannot fo well bee differried by the plea, or enidence on both parte: then the fudge asketh either partie (which hee thinkern good, Plaintiffe or Defendant) whether hee will kife the Croffe, vpon that which hee anoncheth, or denyeth, Hee that taketh the Croffe (being fo offered by the Indge) is accounted cleare, and carrieth away the matter. This Ceremonie is not done within the Court , or Office, but the partie is carried to the Church by an Officer, and there the Ceremonie is done: the money in the meane while hanging whon a maile, or elfe lying at the fdols feet, ready to be delinered to the partie, as foone as he wash kiffed the Croffe before the faid Idoll,

Indgement

This killing of the Croffe (called Crenfina chelonania) is as their corporall Oath, and accounted with them a very holy thing, which no man will dare to violate, or prophane to with a false allegation. If both parties offer to kiffe the Croffe in a contradictorie matter, then they draw Lots. The better Lot is supposed to have the right, and beareth away the matter. So the partie connicted is adjudged to pay the debe or penaltie whatforuer, and withall to pay the Emperours fees, which is twentie pence voon enery Marke, as before hath When the matter is thus ended, the partie connicted is delivered to the Sergeant, who bath a

Writ for his warrant out of the Office, to carrie him to the Prancy or Righter of Luftice, if prefemily he pay not the money, or content of the partie. This Transent or Rightor, is a place more to the Office: where fuch as have fentence passed against them, and reture to pay that which is adjudeed, are beaten with great cudgels on the finimies, and calues of their legs. E- 10

very fore-noone from eight to elenen, they are fet on the Praisesh, and beate in this fort till the money bee payd. The after-moone and night time, they are kept in chaines by the Sergeant: except they put in fufficient Sureties for their appearance at the Prancing at the houre appointed. You shall fee fortie or fiftie fland together on the Prancelo all on a rew, and their hinnes thus becudgelled, and behafted every morning with a pireous crye. If after a veeres standing on the Pranens, the partie will not, or lacke wherewithall to satisfie his creditor, it is lawfull for him to fell his wife, and children, either outright, or for a certaine terme of yeeres. And if the price of them doe not amount to the full payment, the Creditor may take them to be his bond-flaues, for yeeres, or for euer, according as the value of the debt requireth.

Such kind of Suite as lacke direct enidence, or fland vpon coniectures and circumftances to be 40 weighted by the Indge, draw of great length, and yeteld great advantage to the Judge, and Officers. If the Suit beyon a Bond, or Biff, they have for the most pare good and speedy inflice. The forme of Their Bonils or Bills are drawne in a very plaine fort, after this tenour. I luan Vafileo base borrowed of Alphonasse Dementio, the summe of one hundred Rubbels of going money of Mosko , from the Kreshenea (or hallowing of the water) until the Saburney Voscreshenea (or Counfell Suriday) mithout interest. And if this money rest impaged after that day, then bee shall gine tell dunday y menom uncerst. Denn y von money rete ongegie diet iden nay, voes och punke-interest open the fail money, after the common state, at it gent de money the people, vz. for every fine the five Rubbell. Ypon this there are Witnesses, Alebeira Sydrounkey, &c. Schicined, This Bill hame I wraten Gabriel Iacouelefini, in the yeere 7096. The Witneffes , and Debter (if hee can write) endorse their names on the backefide of the Bill. Other figning, or fealing have

Proceeding in

When any is taken for a matter of Crime (as Treason, Murder, Theft, and such like) he is first brought to the Duke and Diack, that are for the Prouince where the partie is attached, by whom hee is enamined. The manner of examination in such cases, is all by torture, as scourging with Pudies whips made of finowes, or whitleather (called the Pudies) as big as a mans finger, which giueth a lore lash, and entreth into the fielh; or by tying to a Spit and rolling at the fire; sometimes by Breaking and wrefting one of their ribs with a paire of hot Tongs, or cutting their fielh winder the dayles, and fuch like,

The examination thus taken with all the proofes, and evidences that can bee alleaged against the partie, it is fent up to the Morke, to the Lord of the Chefferd or Fourth part, vader whom the Prouince is; and by him is presented to the Councill table, to be read and sentenced there, where onely hidgement is given in matter of life and death, and that by evidence vpon informetion, though they never law nor heard the partie who is kepe full in prison where the fact was committeed, and never fent up to the place where hee is tryed. If they finde the partie

guilty, they give Sentence of death according to the qualitie of the fact : which is fent downe by the Lord of the Chefferd, to the Duke and Disch to bee put in execution. The Prifoner is carried to the place of execution with his hands bound, and a Waxe candle burning held be-

Their Capitall punishments are hanging, heading, knocking on the head, drowning, put- Executions. ting vnder the Ice, fetting on a stake, and such like. But for the most part, the Prilippers that are condemned in Summer, are kept for the Winter, to be knockt in the head, and put vnder the Ice. This is to bee vinderstood of common persons. For theft, and murder, If they bee committed voon a poore Mousick by one of Nobilitie are not lightly punished, nor yet is hee To called to any account for it. Their reason is because they are accounted their Kolopher, or Bond-slaues. If by some Sinaboiarskey, or Gentleman Souldier, a murder or theft bee committed peraduenture hee shall bee imprisoned at the Emperours pleasure. If the manner of the

tach be very notorious, hee is whipped perchance, and this is commonly all the punishment that is inflicted upon them.

If a man kill his owne feruant, little or nothing is faid vnto him, for the fame reason: because hee is accounted to be his Kolopher, or Bond-slaue, and so to haue right ouer his very head. The most is some small mulet to the Emperour, if the partie bee rich: and so the quarrell is made rather against the purse, then against the injustice. They have no written Law, faue Rivall (not onely a small Booke that contayneth the time and manner of their fitting, order in proceeding, right-all) and such other Iudiciall formes and circumstances, but nothing to direct them to give Sentence woon right or wrong. Their onely Law is their Speaking Law, that is, the pleasure of the Prince, and of his Maciltrates and Officers.

He Souldiers of Ruffia are called Sinzboiarsker, or the Sonnes of Gentlemen: because they Chapter are all of that degree, by vertue of their military profession. For every Souldier in Russia They fotces is a Gentleman, and none are Gentlemen but onely the Souldiers , that take it by difcent from for the warter, their Ancestors: lo that the sonne of a Gentleman (which is borne a Souldier) is cust a Gentle-Officers and man, and a Souldier withall, and profeseth nothing else but military matters. When they are filaries, of veeres able to beare Armes, they come to the Office of Roferade, or Great [onfiable, and there The onely present themselves: who entreth their names, and allotteth them certaine Lands to maintaine Gendemen. their charges, for the most part of the same that their fathers emioyed. For the Lands affigued birth and inheto maintage, the Armie, are ener certaine, annexed to this Office without improving, or detra-nizance. Ains one foot. But that if the Emperour haue lufficient in wages, the roomes being full so farre as the Land doeth extend already, they are many times deferred, and have nothing allowed them, except some one portion of the Land be divided into two. Which is a cause of great disorder within that Countrey: When a Souldier that hath many children, shall have formetimes but one entertayned in the Emperours pay. So that the rest hauing nothing, are forced to line by vaiuft and wicked faitts, that tend to the hurt and oppression of the Monsieke, or common fort of people. This inconvenience groweth by maintayning his forces in a continual fucceffion. The whole number of his Souldiers in continuall pay, is this: First, he hathof his Dporang, that is, Penfonent, or Guard of his perfon, to the number of 15000. Horfemen, with their Guard.

Captaines and other Officers, that are alwaying in a readineff.

Of these fifteene thousand Horsemen, there are three sorts or degrees, which differ as well Degrees of in estimation, as in wages, one degree from another. The first fort of them is called, Dworane, Hersemen.

Bullery, or the companie of head Pensoners, that have, some 100. some 80. Rubbels a yeers, such as attended none under 70. The second for recorded and none under 70. The second for recorded to the second s and none vnder 70. The second fort are called, Seredney Dworeney, or the middle ranke of Pen- the Emperors froners: these have 60. or 50. Rubbels by the yeere, none under 40. The third and lowest fort petion, 15000 are, the Dyta Botarikey, that is, the lowe Pensioners : their salarie is 30. Rubbels a yeere, for him that hath most; some haue but 25. some 20, none under 12. Whereof the halfe part is 50 payd them at the Morte, the other halfe in the field by the General, when they have any warres, and are employed in feruice. When they receive their whole pay, it amounteth to 55000. Rubb.

And this is their wages, besides lands allotted to every one of them, both to the greater and the leffe, according to their degrees. Whereof he that hath leaft, hath to yeeld him 20. Rubbels or Markes by the yeere. Besides these 15000. Horsemen, that are of better choise (as being the Emperours owne Guard when himf-life goeth to the warres, not wnlike the Roman Souldiers called Pretoriani) ste 110. men of speciall account for their Nobilitie, and truft, which are chofen by the Emperour, and haue their names regilfred, that find among them for the Emperours Twoother warres, to the number of 65000. Horsemen , with all necessaries meet for the warres of the troupes to the 60 Ruffe manner.

To this end they have yeerely allowance made by the Emperour for themselves, and their Companies, to the fumme of 40000. Rubbels. And these 65000, are to repaire to the field euery yeere on the borders towards the Chrim Tartar, (except they bee appointed for forme other feruice) whether there bee warres with the Tariars, or not. This might feeme peraduenture

somewhat dangerous for some State, to have so great forces under the command of Noblemen. to affemble every yeere to one certaine place. But the matter is so vsed, as that no danger can grow to the Emperour, or his State by this meanes. First, Because these Noblemen are many. to wit, 110. in all, and changed by the Emperour fo oft as hee thinketh good. Secondly, Because they have their livings of the Emperour, being otherwise but of very small Revenue, and receive this yeerely pay of 40000. Rubbels, when it is presently to be paid forth agains to the Souldiers that are vinder them. Thirdly, Because for the most part they are about the Emperors person, being of his Counsell, either speciall, or at large. Fourthly, They are rather as Pay-mafters, then Captaines to their Companies, themselves not going forth ordinarily to the warres. faue when some of them are appointed by speciall order from the Emperour himselfe. So the to whole number of Horièmen that are euer in a readinesse, and in continual pay, are 80000. a few more or leffe.

continual pay

If he haue need of a greater number (which seldome falleth out) then hee entertayneth of those Sinaboiarskey, that are out of pay, so many as he needeth : and if yet he want of his number, hee gineth charge to his Noblemen, that hold Lands of him, to bring into the field every man a proportionable number of his feruants (called Kolopher, fuch as till his Lands) with their furniture, according to the iust number that hee intendeth to make. Which, the service being done, presently lay in their weapons, and returne to their seruile occupations againe.

Footmen in continuall pay

Strangers

mercenaries

in pay 4300.

Of Footmen that are in continuall pay, he hath to the number of 12000. all Gunners, called Streller. Whereof 5000, are to attend about the Citie of Moske, or any other place where the m Emperour shall abide, and 2000. (which are called Stremaney, Strelley, or Gunners at the Stirrop) about his owne person at the very Court or house where himselfe lodgeth. The rest are placed in his garrison Townes, till there be occasion to have them in the field, and receive for their salarie or itipend euery man seuen Rubbelsa yeere, besides twelue measures, a piece of Rye, and Oats. Of mercenary Souldiers, that are ftrangers (whom they call Nimfeoy) they have at this time 4:00. of Polonians: of Chirchaffes (that are vader the Polonians) about 4000, whereof 2500. are abroad in his Garrilons: of Dutches and Scots, about 150: of Greekes, Turkes, Danes. and Sweadens, all in one band, 100, or thereabouts. But these they vie only voon the Tartar fide. and against the Siberians: as they doe the Tartar Souldiers (whom they hire sometimes, but onely for the present) on the other fide against the Polonian and Sweaden: thinking it best po- 30 licy fo to vie their fernice youn the contrary border.

The chiefe Captaines or or Generall.

The chiefe Captaines or Leaders of these forces, according to their names and degrees, are these which follow. First, the Voyanodey Bulfbaia, that is, the Great Captaine, or Lieutenant Leaders.

1. The Valued generall under the Emperour. This commonly is one of the foure houses of the chiefe Nobilitie of the Land : but so chosen otherwise, as that he is of small valour or practice in Martiall matters, being thought to serue that turne so much the better, if he bring no other parts with him faue the countenance of his Nobilitie, to bee liked of by the Souldiers for that, and nothing elfe. For in this point they are very warie, that thefe two, to wit, Nobilitie and Power, meet not both in one, specially if they see wile lome withall, or aptnesse for policie. Their great Voianod or Generall at this present in their warres, is commonly one of these de

2.Lieutenant generall,

Tranbetskor, all of great Nobilitie, but of very simple qualitie otherwise: though in Glinskor (as they fay) there is somewhat more then in the reft. To make up this defect in the Voicend or Generall, there is some other joyned with him as Lieutenant generall, of farre leffe Nobilitie, but of more valour and experience in the warres then he, who ordereth all things that the other countenanceth. At this time their principall man, and most vsed in their warres, is one Knez. Demetrie Inanomich Forestme, an antient and expert Captaine, and one that hath done great seruice (as they fay) against the Tartar, and Polonian. Next under the Voianed and his Lieutenant the field, foure. generall, are foure other, that have the marihalling of the whole Armie divided among them, and may be called the Marshals of the field.

foure, Knez Feoder Inanowich Methislostey, Knez Inan Michailowich Glinskoy, Cherechaskoy, and

Euery man hath his quarter, or fourth part vnder him : whereof the first is called, the Prans Polskey, or Right wing. The fecond is , the Leney Polskey, or Lett wing. The third is, Rufney Polskoy, or The broken band, because out of this there are chosen to send abroad upon any sudden exploit, or to make a refcue or supply, as occasion doth require. The fourth, Storesbonor Polskor, or The warding band. Every one of these foure Marshals have two other under them (eight in all) that twice every weeke at the least must muster and traine their severall wings or bands, and hold and give inflice for all faults and diforders committed in the Campe.

4.Marthale Deputies 8.

5. Coronels

Vnder-cap-

raines.

And thefe eight are commonly chosen out of the hundred and ten (which I spake of before) that receive and deliver the pay to the Souldiers. Vnder thele eight are divers other Captaines, as the Gul anoy, Captaines of thousands, five hundreds, and hundreds. The Petrde Seiskey, or 60 Captaines of fifties; and the Decetskies, or Captaines of tennes. 6. Mailers of

Besides the Voianeda, or Generall of the Armie, (ipoken of before) they have two other that the Artillerie. beare the name of Voianoda: whereof one is the Master of the great Ordnance (called Naradna Voianoda) who hath divers Vnder-officers, necessary for that service. The other is called, the

Voiameda Gulamor, or the Walking Captayne, that hath allowed him 1000, good Horiemen of The walking principall choice, to range and ipye abroad, and hath the charge of the running Caffle, which Captayne, we are to speake of in the Chapter following. All these Captaynes, and men of charge must once every day refort to the Bullba Voianoda, or Generall of the Armie, to know his pleasure, and to informe him if there be any requifite matter pertayning to their Office.

WHen Wars are towards (which they faile not of lightly enery yeere with the Tartar, Chap. 16. and many times with the Polonian and Sweden, (the foure Lords of the Cheffirds fend Of their muforth their Summons in the Emperours name, to all the Dukes and Dyacks of the Provinces, to flering, and le-10 be proclaymed in the head Townes of enery Shire: that all the Sinabeiarskey, or Sonnes of Gen- uying of fortlemen make their repayre to fuch a border where the Service is to be done, at fuch a place, and Armour, and by fuch a day, and there prefent themselves to such and such Captaynes. When they come to provide the place affigned them in the Summons or Proclamation , their names are taken by certayne victualifor the Officers that have Commiffion for that purpole from the Roferade, or High Conflable as Clerkes Warres of the Bands.

for muftering.

If any make default and faile at the day, he is muleted, and punished very severely. As for the Generall and other chiefe Captaines, they are fent thither from the Emperours owne hand, with fuch Commission and charge as he thinketh behoofefull for the present service. When the Souldiers are affembled, they are reduced into their Bands, and Companies, vinder their feuerall 20 Captaynes of tens, fifties, hundreds, thousands, &c. and these Bands into source Politicis or Legions (but of farre greater numbers then the Romane Legions were) under their foure great Leaders, which also have the authoritie of Marshals of the field (as was said before.) Concerning their Armour they are but flightly appointed. The common Horse-man hath The Horse-

nothing else but his Bow in his Casewnder his right arme, and his Quiver and Sword hanging on mans Funi-

the left fide: except some few that beare a Case of Dagges, or a lauding, or short Staffe along ture. their Horse fide. The vnder Captaynes will have commonly some piece of Armour besides, as a shirt of Male, or such like. The Generall with the other chiefe Captaynes and men of Nobilizy, will have their Horse very richly furnished, their Saddles of Cloth of Gold, their Bridles The bottle of the rest of the property of the yet couered commonly with Clothot Gold, and edged round about with Armine Furre, his Steele Helmeton his head of a very great price, his Sword, Bow, and Arrowes at his fide, his Speare in his hand, with another Helmet, and his Sheffa pera, or Horfe-mans Scepter carried before him. Their Swords, Bowes, and Arrowes are of the Turkille falhion. They practite like the Tartar to shoot forwards and backwards, as they flye and retyre.

Shooting for

The Strelfey or Footman hath nothing but his Peece in his hand, his firiking Hatchet at his ward and backe, and his Sword by his fide. The Hocke of his Peece is not made Caleeuer wife, but with backward a plaine and strait stocke (some-what like a Fowling-peece) the Barrell is rudely and vnartis- Furniture, cially made, very heavie, yet shooteth but a very small Bullet. As for their proussion of victu- Promison of 40 all, the Emperour alloweth none, either for Captayne, or Souldier, neyther prouideth any for victuall. them except peraduenture some Corne for their Money. Euery man is to bring inflicient for himselfe to serue his turne for foure moneths, and if need require to give order for more to bee Provisions,

brought vnto him to the Campe from his Tenant that tilleth his Land, or some other place. One great helpe they have, that for Lodging and Dyet every Ruffe is prepared to bee a Souldier before-hand. Though the cheife Captaynes and others of account carry Tents with them after the fashion of ours with some better prouision of victuall then the rest. They bring with them commonly into the Campe for victuall a kind of dryed Bread (which they call Sucharie) with fome store of Meale, which they temper with water, and so make it into a Ball, or small sumpe of dowe, called Tollactno. And this they eate raw in stead of Bread. Their Meate is Bacon, or of convertinated a consequent that the control of the Ruffe Souldier were as hardie to execute an Enterprize, as he is hard to be are out to yle and travell, or were otherwise as apt and well trayned for the Warres, as he is indifferent for his Lodging and Dyet, hee would farre exceed the Souldiers of our parts. Whereas now he is faire meaner of courage and execution in any Warlike service. Which commeth partly of his servile condition, that will not soffer any Homes alit etters

great courage or valour to grow in him. Partly for lacke of due honour and reward, which hee

Drummes.

They

charging.

They have Drummes besides of a huge bignesse, which they carrie with them vpon a board Theoremans lavd on foure Horfes, that are sparred together with Chaines, every Drumme having eight stria kers, or Drummers, besides Trumpets and Shawmes, which they sound after a wild manner. much different from ours. When they give any charge or make any invafion, they make a great hallow or shoute altogether, as loude as they can, which with the found of their Trumpets. Shawmes, and Drummes, maketh a confused and horrible noyse. So they set on first discharging their Arrowes, then dealing with their Swords, which they vie in a brauery to shake, and brandish over their heads, before they come to strokes. Their Footmen (because otherise they want order in leading) are commonly placed in some

The footmans

ambush or place of advantage, where they may most annoy the enemy, with least burt to themfelines. If it be a fet battell, or if any great inuasion be made vpon the Rasse borders by the Tor-The walking tar, they are let with in the running or moning Castle (called Beza, or Gulay gorod) which is care ried about with them by the Voianoda gulanoy (or the malking Generall) whom I spake of before This walking or mouing Caftle is fo framed, that it may be fet up in length fas occasion doth require) the space of one, two, three, source, fine, sixc, or seven miles : for so long it will reach. It is nothing eliebut a double wall of wood to defend them on both fides behind and before, with a space of three yards or thereabouts betwire the two sides : so that they may stand within it. and have roome enough to charge and discharge their pieces, and to vie their other weapons. It is closed at both ends, and made with loope-holes on either side, to lay out the nose of their Peece, or to pulh forth any other weapon. It is carryed with the Armie wherefoeuer it goeth. 20 being taken into pieces, and so layed on Carts sparred together, and drawne by Horse that are not feene, by reason that they are coursed with their carriage as with a shelfe or pent-house. When it is brought to the place where it is to bee vied (which is deuised and chosen out before by the the walking Voianod) it is planted so much as the present vie requireth, sometime a mile lone. fometimes two, fometimes three, or more : which is foone done without the helpe of any Carpenter, or Instrument : because the Timber is so framed to claspe together one piece within an other : as is eafily vnderstood by those that know the manner of the Raffe building

In this Castle standeth their shot well senced for advantage, specially against the Tarter, that bringeth no Ordnance, nor other weapon into the field with him, faue his Sword, and Bow and Arrowes. They have also within it divers field Peeces, which they vie as occasion doth require, 30 Of Pecces for the field they carrie no great ftore, when they warre against the Tartar but when they deale with the Polonian (of whole forces they make more account) they goebetter furnished with all kind of Munition, and other necessarie prouisions. It is thought that no Prince of Christendome hath better store of Munition, then the Ruffe Emperour. And it may partly appeare by the Artillerie Houle at Moske, where are of all forts of great Ordnance, all

Braffe Peeces, very faire, to an exceeding great number.

The Ruffe Souldier is thought to be better at his defence within some Caffle, or Towne, then he is abroad at a fet pitched field. Which is ever noted in the practice of his Wars, and namely, as the fiege of Vobike, about eight yeares fince : where he repulled the Polonian King Stepan Batore, with his whole Armie of 100000. men, and forced him in the end to give over his fiege, with 40 the lose of many of his best Captaynes and Souldiers. But in a fet field the Russeis noted to haue ouer the worfe of the Poloman, and Sweden.

Reward for

Store of Mu-

If any behave himselfe more valiantly then the rest, or doe any speciall piece of service, the Emperour fendeth him a piece of Gold, stamped with the Image of Saint George on Horseback. Which they hang on their sleeues, and set in their Caps. And this is accounted the greatest honour they can receive, for any feruice they doe.

valour.

or purchales

by force.

He Ruffe Emperours of late yeeres have very much enlarged their Dominions and Territories. Their first Conquest after the Dukedome of Moske, (for before that time they were but Dukes of Volodomer, as before was faid) was the Citie, and Dukedome of Nonograd on the 50 their conquests West, and North-west side : which was no small enlargement of their Dominion, and strengthning to them for the winning of the rest. This was done by Inan great Grand-father to Thesdore now Emperour, about the yeere 1480. The same began like wife to encroach upon the Countreyes of Lituania, and Liumia, but the Conquest onely intended, and attempted by him vpon fome part of those Countreyes, was pursued and performed by his Sonne Bafiless, who first wan the Citie and Dukedome of Pleske, afterwards the Citie and Dukedome of Smolenske, and many other faire Townes, with a large Territory belonging vnto them, about the yeere 1514. These Victories against the Lettoes or Lituarians in the time of Alexander their Duke, hee atchieued rather by aduantage of civill Diffentions and Treasons among themselves, then by any great policie, or force of his owne. But all this was loft againe by his Sonne Inan Vafilowich, about eight 60 or nine yeeres paft, voon composition with the Polonian King Stepan Basore: whereunto he was forced by the aduantages which the Pole had then of him, by reason of the soyle hee had given him before, and the disquietnesse of his owne State at home. Onely the Russe Emperour, at this time hath left him on that fide his Countrey, the Cities of Smolensko, Vitobsko, Cheringo, and Beala gered in Lituaria. In Linenia, not a Towne, nor one foot of ground.

When Bafiless first conquered those Countreyes, he suffered the Natives to keepe their Poffessions, and to inhabit all their Townes, onely paying him a Tribute, under the Gouernment Litamia, of his Ruffe Captaynes. But by their Conspiracies and Attempts not long after, hee was taught to deale more furely with them. And fo comming upon them the fecond time, hee killed and carryed away with him, three parts of foure, which hee gaue or fold to the Tartars that ferned him in those Wars, and in flead of them placed there his Ruffes, fo many as might ouer-match the rest, with certayne Garrisons of strength besides , wherein notwithstanding this ouer-fight was committed, for that (taking away with him the Vp-land, or Countrey people that should haue tilled the ground, and might easily haue beene kept in order without any danger, by other 10 good policies) he was driven afterwards many yeeres together to victual the Countrey (efpecial-

letthe great Towne) out of his owne Conntrey of Ruffis, the foyle lying there in the meanewhile waste, and vitilled.

The like fell out at the Port of Name in Liefland, where his Sonne Inan Vafilowich denifed Name. to build a Towne, and a Castle on the other fide the River (called Inangorod) to keepe the Towne and Countrey in subjection. The Castle hee caused to bee so built, and fortified, that it was thought to be inuincible. And when it was finished, for reward to the Architect (that was a The Deuillie Poloman) he put out both his eyes, to make him vnable to build the like againe. But having left was. the Natines all within their owne Countrey, without abating their number or strength, the Towns and Castle not long after was betrayed, and surrendred agains to the King of Sweden.

On the South-east fide they have got the Kingdomes of Cazan and Astracan. These were wonnefrom the Tartar, by the late Emperour Inan Valilowich, Father to the Emperour that now is : the one about thirty five, the other about thirty three yeeres agoe. North-ward out of the Countrey of Siberia, he hath layed vnto his Realme a great breadth and length of ground, from Wiebida to the River of Obba, about 1000, miles space ; so that he is bold to write himselfe now. The great Commander of Siberia.

The Countreyes I kewise of Permis, and Pechora, are a divers People and Language from the Permis and Pe-Rulle, ouercome not long fince, and that rather by threatning, and thaking of the Sword, then there by any actuall force : as being a weake and naked people, without meanes to relift,

30 Their Neighbours with whom they have greateft dealings and intercourse, both in Peace Chap.ig.

Of the Tattaria and Warre, are fifth the Tarrar: Secondly, the Polonian whom the Raffe calleth Lasher, and other bore and other bore. noting the first Author or Founder of the Nation, who was called Lasbes or Leebes, whereunto deres to the is added Po, which fignifieth People, and io is made Polaches; that is, the People or Posteritie of country of Laches , which the Lacines after their manner of writing call Polanos. The third are the Swe- Ruffia, with dens. The Polonians and Swedens are better knowne to these parts of Europe, then are the Tar whom they sars that are farther off from vs (as being of Asia) and divided into many Tribes, different both doe in was and in name, and government one from another. The greatest and mightiest of them is the Chrim prace. Tartar, (whom some call the Great Chars) that lyeth South, and South-east-ward from Russa, Th. Polonian and doth most annoy the Countrey by often Inuations, commonly once every yeere; sometimes called Laches 40 entring very farre within the In-land parts.

In the yeere 1571, he came as farre as the Citie of Mosko, with an Armie of 200000. men, Testa. without any battell, or refistance at all, for that the Russe Emperour (then Issan Vasilowsch) lea- The bring of ding forth his Armie to encounter with him, marched a wrong way : but as it was thought of Marterly the very purpose, as not daring to aduenture the field, by reason that he doubted his Nobilitie, and Crim Tariar,

chiefe Captaynes, of a meaning to betray him to the Tartar. The Citie he tooke not, but fired the Suburbs, which by reason of the buildings (which is all of Wood without any Stone, Bricke, or Lime, faue certayne out Roomes) kindled so quickly, and went on with such rage, as that it consumed the greatest part of the Crite almost within the frace of foure houres, being of thirty miles or more of compasse. Then might you have seene 50 a lamentable Spectacle: befides the huge and mightie flame of the Citie all on light fire, the people burning in their houses and ftreets, but most of all of such as laboured to passe out of the Gates farthest from the Enemie, where meeting together in a mighty throng, and so pressing everie man to preuent another, wedged them lelues to fast within the Gate, and fireets neere vnto it, as that three Rankes walked one vpon the others head, the vppermost treading downe those that were lower: fo that there perished at that time (as was faid) by the fire and the press, the number of 80000. people, or more.

The Chrim thus having fired the Citie, and fed his eyes with the fight of it all of a light flame, returned with his Armie, and fent to the Ruffe Emperour a Knife (as was fayd) to sticke himfelfe withall : obrayding this loffe, and his desperate case, as not daring either to meete his Ene-60 mie in the field, nor to truit his Friends or Subjects at home. The principall cause of this continual quarrell, betwixt the Ruffe and the Chrus, is for the right of certayne border parts claimed by the Tartar, but possessed by the Ruffe. The Tartar alleadgeth, that besides Astracan and Ca-Zan, (that are the ancient possession of the East Tarter) the whole Countrey from his bounds North and Westward, so farre as the Citie of Moske, and Moske it selfe, pertayneth to his right.

the Chrim Tat-Tartars Con-

Homigedone Which feemeth to have beene true by the report of the Ruffes themselves, that tell of a certayne by the suffero homage that was done by the Ruffe Emperour enery yeare, to the great Chrim or Cham, the Ruffe Emperour standing on foote and feeding the Christs Horse, (himselfe sitting on his backe) with Oates out of his owne Cap, in stead of a Boll or Manger, and that within the Castle of Mosko. And this homage (they lay) was done till the time of Bafileus Grandiather to this man. booke of 84.

they and of the Who surprising the Chriss Emperour by a stratagem, done by one of his Nobilitie (called Mass. Demetrowich Belicher) was content with this Ransome, viz. with the changing of this homase into a Tribute of Furres : which afterwards also was denyed to bee payed by this Em-

Hereupon they continue the quartell, the Ruffe defending his Countrey, and that which hee 10 hath wonne, the Chrim Tarter invading him once or twice every yeere, sometime about White. fontide, but oftner in Haruest What time if the Great Cham or Chrim come in his owne perfon, hee bringeth with him a great Armie of 100000. or 200000. men. Otherwise they make fhort and fudden roades into the Countrey with leffer numbers, running about the lift of the border as wilde Geese slie, inuading and retiring where they see advantage.

fight, and Ar-

Apparell.

Mirchson

Their common practice (being very populous) is to make divers Armies, and so drawing the Rulle to one, or two places of the frontiers, to inuade at some other place, that is left without defence. Their manner of Fight, or ordering of their forces, is much after the Ruffe manner. (ipoken of before) faue that they are all Horse-men, and carrie nothing elie but a Bow, a sheafe of Arrowes, & a falcon Sword after the Tarkifb fash on, They are very expert horse-men, and vie 20 to shoote as readily backward as forward. Some will have a horf-mans staffe like to a bore Speare. besides their other weapons. The common Souldier, hath no other Armour then his ordinary Apparell, viz., a blacke Sheepes skinne with the wooll-fide outward in the day time, and inward in the night time, with a Cap of the fame. But their Marfey or Noblemen imitate the Tarke, both in Apparell and Armour. When they are to passe ouer a River with their Armie. They receive or four thorse together, and taking long poles or pieces of wood, binde them faft to the tay les of their Horfe: 6 fitting on the Poles they drue their Horfe ouer. At handie firokes (when they come to joyne battell) they are accounted farre better men then the Ruffe people, fierce by nature, but more hardie and bloudie, by continuall practice of Warre : as men knowing no Arts of Peace, nor any civill practice.

The fubribie

Yet their subtiltie is more then may seeme to agree with their barbarous condition. By reaof the Tatter. fon they are practifed to inuade continually, and to rob their neighbours that border about them. they are very pregnant, and ready witted to deuise Stratagems vpon the fudden, for their better advantage. As in their warre against Beals the fourth King of Hangarie, whom they invaded with fine hundred thousand men, and obtayined against him a great v ctorie. Where among other, having flaine his Chancellor, called Nicholas Schinick, they found about him the Kings priuie Seale. Whereupon they deuised presently to countefeit Letters in the Kings name, to the Cities and Townes next about the place, where the Field was fought : with charge that in no case they should conuay themselves, and their goods out of their dwellings, where they might abide fafely without all feare of danger, and not leave the Countrey defolate to the pofferfion of 40 fo vile and barbarous an Enemie, as was the Tartar Nation, tearming themselves in all reproachfull manner. For not with tanding he had loft his carriages, with fome few stragers that had mar-ched disorderly, yet he doubted not but to recour that loss, with the accessor a notable victory, if the faunge Totar durst abide him in the field. To this purpose having written their Letters in the Polish Character, by certayne young men whom they tooke in the Field, and figned them with the Kings Seale, they dispatched them foorth to all the Quarters of Hangarie, that lay neere about the place. Whereupon the Ungarians, that were now fiying away with their goods, Wives, and Children, vpon the rumour of the Kings overthrow, taking comfort of these counterfeit Letters, stayed at home. And so were made a prey, being surprised on the sudden by this huge number of these Tartars, that had compassed them about before they were awares

When they beliege a Towne or Fort, they offer much Parley, and fend many flattering meffages to perswade a surrendrie : promising all things that the Inhabitants will require ; but being once possessed of the place, they we all manner of hostilitie and crueltie. This they doe vpon a rule they have, viz. That luftice is to bee practifed but towards their owne. They encounter not lightly, but they have some ambush, whereunto (having once shewed them selves, and made fome shor: conflict) they retire, as repulsed for feare, and so draw the Enemie into it if they can-But the Ruffe being well acquainted with their practife, is more warie of them. When they come a Rouing with some small number, they set on Horsebacke counterfeit shapes of men, that their number may seeme greater.

When they make any onset, their manner is to make a great showte, crying all out together, Olla Billa, Olla Billa, God belpe vs, God belpe vs. They contemne death fo much, as that they

choole rather to dye, then to yeeld to their Enemie, and are feene when they are flaine to bite the very weapon, when they are pair striking, or helping of themselues. Wherein appeareth show different the Tarter is in his desperate courage from the Ruffe and Turke. For the Ruffe CHAP.I. Miferable Captiuitie, Tartar Religion, Idols, Sorcerie, Marriage.

Souldier if hee begin once to retire putteth all his safetie in his speedie flight. And if once he he taken by his enemie, hee neither defendeth himselfe, nor intreateth for his life, as reckoning flraight to dye. The Turk- commonly when hee is past hope of escaping, falleth to intreatie. and casteth away his weapon, offereth both his hands, and holdeth them vp, as it were to bee tved : hoping to faue his life, by offering himfelfe Bond-flaue.

The chiefe bootie the Tartars seeke for in all their warres, is to get store of Captines, speci- Captines ally young Boyes and Girles, whom they fell to the Turkes, or other their neighbours. To this purpose they take with them great Baskets made like Bakers panniers, to carrie them tenderly, and it any of them happen to tyre, or to bee ficke on the way, they dash him against the ground. or fome Tree, and so leave him dead : The Souldiers are not troubled with keeping the Captiues and other bootie, for hindering the execution of their warres, but they have certayne bands that intend nothing elfe, appointed of purpose to receive and keepe the Captives and the other prev.

The Raffe borders(being vied to their invasions, lightly every yeere in the Summer) keepe few The Total other Cattell on the border parts, faue Swine onely, which the Tartar will not touch, nor drive a- Religion. way with him: for that he is of the Turkilb Religion, & will eate no Swines-flesh. Of Christour Saujour they confesses much as doth the Twike in his Alcaron, viz. That he came of the Angell Gabriel, and the Virgin Marie, that hee was a great Prophet, and shall bee the Judge of the world at the last day. In other matters likewise, they are much ordered after the manner and 20 direction of the Turke : having felt the Turkib forces when hee wonne from them Azon and Caffa, with some other Townes about the Euxine, or Blacke Sea, that were before tributaries to the Chrims Tartar. So that now the Emperour of the Chrims for the molt part is chofen some one of the Nobilitie whom the Turke doth commend : whereby it is brought now to that paffe, that the Chrim Tartar giveth to the Turke the tenth part of the Spoyle, which hee getteth in his warres against the Christians.

Herein they differ from the Turkifo Religion, for that they have certayne Idoll puppets made Idols, of Silke or like stuffe, of the fashion of a man, which they fasten to the doore of their walking houses, to bee as lanusses, or keepers of their house. And these Idols are made not by all. but by certayne Religious women, which they have among them for that and like vice. They haue befides, the Image of their King or great Cham of an huge bigneffe, which they erect at eue-

30 rie flage, when the Armie marcheth: and this every one mult bend or bow vnto 28 hee paffeth by it, bee he Tartar, or Stranger. They are much given to Witchcraft and ominous conjectures, Soretrie.

In making of Marriages, they have no regard of alliance or confariguinitie. Only with his Mo-Marriage, ther, Sifter, and Daughter, a man may not marrie, and though he take the woman into his house and accompanie with her, yet he accounteth her not for his Wife, till hee haue a Child by her, Then he beginneth to take a downe of her friends of Horse, Sheepe, Kine, &c. If shee be barren, after a certayne time hee turneth her home againe.

Vnder the Emperour they have certayne Dukes, whom they call Morfeis or Dysomorfeis! The York that rule ouer a certayne number of 10000. 20000. or 40000. a piece, which they call Hoords. Nobilitie, When the Emperour hath any vieo: them to lerue in his warres, they are bound to come, and to bring with them their Souldiers to a certayne number, euery man with his two Horse at the least, the one to ride on, the other to kill, when it commeth to his turne to have his Horse cate. For their chiefe victuall is Horfe-flesh, which they cate without Bread, or any other thing with The Tarte it. So that if a Tarter bee taken by a Ruffe, hee shall be sure lightly to finde a Horse-legge, or dye. fome other part of him at his faddle bow.

This last yeere when I was at the Moske, came in one Kiriach Morfer, nephew to the Emperour of the Chrims that now is (whole Father was Emperour before) accompanied with three hundred Tartars, and his two Wives, whereof one was his Brothers widow. Where being en-50 tertayned in very good fort after the Roffe manner, hee had fene vnto his lodging for his welcome, to bee made ready for his Supper and his companies, two very large and far Horses, ready flayed in a Sled. They preferre it before other flesh, because the meace is stronger (as they say) then Beefe, Mutton, and fuch like. And yet (which is maruell) though they ferue all as Horsemen in the warte, and eate all of Horse-field, there are brought yearely to the Macke to bee exchanged for other Commodities, thirtie or fortie thouland Tartar Horse, which they call Cones. They keepe also great herds of Kine, and flocks of blacks Sheepe, rather for the Skinnes and Milke (which they carry with them ingreat bottles) then for the vie of the flesh, though sometimes they eate of it. Some vie they have of Rice, Figges, and other fruits. They drinke Milke or warme Bloud, and for the most part card them both together. They wse sometimes as they tra-60 uell by the way, to let their Horse bloud in a veyne, and to drinke it warme, as it commeth

Townes they plant none, nor other standing buildings, but have walking Houses which the The Total Latines call Very, built vpon wheeles like a Shepherds Cottage. Thele they draw with them whis dwelling. thersoener they goe, driving their Cattell with them. And when they come to their Stage or

Moneable Cirie and Court.

standing place, they plant their Cart-houses very orderly in a ranke: and so make the former ffreets, and of a large Towne. And this is the manner of the Emperour himselfe, who hath no other seate of his Empire but an Agora, or Towne of wood, that mooneth with him whitherfoeuer hee goeth. As for the fixed and standing building vied in other Countries, they say they are vnwholfome and vnpleafant.

They begin to moone their Houses and Cattell in the Spring time, from the South part of their Countrey towards the North parts. And so driving on till they have grased all up to the furtheft part Northward, they returne backe againe towards their South Countrey (where they continue all the Winter) by ten or twelue miles a stage : in the meane while the graffe being continue au the Winter Joy ten or weeps much a tage for the Benefit of the Salas to 10 forms y pagaine, to ferue for their Cattell as they returne. From the border of the Salas to 10 wards the Caspian Sea, to the Russe frontiers, they have a goodly Countrey, specially on the South and South-east parts, but lost for lacke of tillage.

Of money they have no vie at all, and therefore preferre Braffe and Steele before other metals, specially Bullate, which they vie for Swords, Kniues, and other necessaries. As for Gold and Siluer they neglect it of very purpose, (as they doe all tillage of their ground) to be more free for their wandring kinde of life, and to keepe their Countrey leffe fubject to innafions. Which gineth them great aduantage against all their neighbours, euer invading, and never being invaded.

Speach.

Shooting.

Diners kindes

For Perion and Complexion, they have broad and flat visages, of a tanned colour yellow and Considerabee. blacke, fierce and cruell lookes, thinne hayred vpon the vpper Lip, and a pit on the Chin, light and nimble Bodied, with short Legges, as if they were made naturally for Horse-men: whereto 10 they practife themselues from their Child hood, seldome going a soot about any businesse. Their Speach is very sudden and loude, speaking as it were out of a deepe hollow throat. When they Sing you would thinke a Cow lowed, or some great Bandogge howled. Their greatest exercife is Shooting, wherein they trayne up their Children from their very infancie, not fuffering them to eate, till they have shot neere the marke within a certain e scantling.

of Tartate. The Nagay Tartar the couelleft. The Chircaice the civillest Tertars. The Cheremiffen Tertar.

There are divers other Tartars that border vpon Ruffia, as the Nagaies, the Cheremiffens, the Mordwites, the Chircasses, and the Shalcans, which all differ in Name more then in Regiment, or other condition, from the Chrimo Tartar, except the Chircasses, that border South-well towards Litmonia, and are farre more civill then the rest of the Tariars, of a comely person, and of a stately behaulour, as applying themselves to the fashion of the Toloman. Some of them have subjected to themselues to the Kings of Poland, and professe Christianitie. The Nagay lyeth Eastward, and is reckoned for the best man of warre among all the Tartars, but very sauage and cruell above all the rest. The Cheremisin Tartar, that lyeth betwixt the Russe and the Nagar, are of two forts, the Luganor (that is of the valley) and the Nagornay, or of the hilly Countrey. These have much troubled the Emperours of Ruffia. And therefore they are content now to buy Peace of them, vnder pretence of giving a yeerely pension of Russe Commodities, to their Morles or Die noymor feis, that are chiefe of their Tribes. For which also they are bound to serue them in their warres, under certayne conditions. They are fayd to bee just and true in their dealings ; and for that cause they hate the Ruffe people, whom they account to bee double, and false in all their dealing. And therefore the common fort are very vnwilling to keepe agreement with them, but that they are kept in by their Morfess, or Dukes for their penfions fake.

The Mordwit Tarter the moft barbarous of the

The most rude and barbarous is counted the Mordante Tartar, that hath many selfe fashions, and frange kindes of behauiour, differing from the reft. For his Religion, though hee acknowledge one God, yet his manner is to worship for God, that living thing, that hee first meeteth in the morning, and to sweareby it all that whole day, whether it bee Horse, Dog, Cat, or whatfoeuer else it bee. When his friend dyeth, hee killeth his best Horse, and hauing flayed off the skinne, he carryeth it on high vpon a long pole, before the Corps to the place of Buriall. This he doth (as the Rafe fayth) that his friend may have a good horse to carrie him to Heaven: but it is likelier to declare his love towards his dead friend, in that hee will have to dye with him the

Next to the Kingdome of Astracan, that is the furthest part South-eastward of the Russe Dominion, lyeth the Shalcan, and the Countrey of Media : Whither the Ruffe Merchants trade for raw Silkes, Syndon, Saphyon, Skinnes, and other commodities. The chiefe Townes of Media where the Ruffe tradeth, are Derbent (built by Alexander the great, as the Inhabitants fay) and Zamachie, where the staple is kept for raw Silkes. Their manner is, in the Spring time to reuine the Silke-wormes (that lye dead all the Winter) by laying them in the warme Sunne, and (to haften their quickning, that they may fooner goe to worke) to put them into bagges, and fo to hang them under their Childrens armes. As for the Worme called Chrimfin (as wee call it Chrimfon) that maketh coloured Silke, it is bred not in Media, but in Affiria. This trade to Derbent and Samachie for raw Silkes, and other commodities of that Countrey, as allo in Perfia, 60 and Bongbaria, downe the River Volgba, and through the Caspian Sea, is permitted as well to the English, as to the Ruffe Merchants, by the Emperours last Grant at my being there. Which hee accounteth for a very speciall favour, and might prove indeed very beneficiall to our English Merchants, if the Trade were well and orderly vied.

The whole Nation of the Tatters are veterly voide of all Learning, and without written Law. Yet certayne rules they have which they hold by tradition, common to all the Hoerds for the practice of their life. Which are of this fort. First, To obey their Emperons and other Ma Torton sens. pifrates, what former they command shout the publice Service. Secondly, Except for the publice behavior, tall Rules. gytraki, proj. jumi. vog symproma gran, vog propies, etter proj. stemmen je prosper je toe projence eccopies, enery man so hes free and aut of Cantrolomport. Thirds, No private man se posselle gry Lends, hus the whole Camputer to be a se a Crommon. Emership, V o neglett gill destrinesse and vergette of Adaptes, and so content them solves with that which composeth next to hond, for more hardnesse, and to the executing of their Affaires. Fifily, To mears any bale Ating, and to patch their Clouthes, whether there bes my need or not : that when there so made in he we hoppy to maner a partiet Coate. Somenthly, Tomande their same Hourd and Nation, to bee true in mand and deed. Eightly, To suffer we Stranger to compensation the Realme, if any dee, the fame to hee Bond Laye to him that first taketh him, except fuck Merchants and other, at have the Tattat Bull or Pattore

He Permians and Samoitrahat Ive from Ruffia, North and North east, are thought likewife to hene taken their beginning from the Tarter kinde. And it may partly be gheffed by the Of the Permi. fallion of their Countenance; as having all broad and flat faces, as the Tartars have, except the aus, Samoits. Chircaffee. The Permia ne are accounted for a very ancient people. They are now subject to the and Laper. 20 Rufe. They live by Horsing and trading with their Furres, as dothalfo the Sameyt, that dwel- The Permins.

lath mone towards the North Sea. The Samers hath his name (as the Ruffe faith) of Esting bornbimfelfe sas if in times past, they lived as the Cannibals, eating one another. Which they make more probable, because at this time they eate all kinde of raw flesh, whatsoeuer it bee, even the very Carrion that lyeth in the ditch. But as the Sameits themselves will say, they were called Samoie, that is, of themselves, as though they were indigina, or people bred vpon that very soyle, that never changed their feate from one place to another, as most Nations have done, They are

Subject at this time to the Emperour of Rullia.

I talked with certains of them, and finds that they acknowledge one God : but represent him The Sandas by fuch things as they have most vie and good by. And therefore they worthin the Sunne, the Religion, 30 Ollen, the Loft, and fuch like. As for the Storie of Slate Babe, or the Golden bagge, (which I Slate Babe) haue read in some Mans, and descriptions of these Countries, to bee an Idoll after the forme of Hag. an old Woman) that being demanded by the Priest, gueth them certaine Oracles, concerning the successe and event of things, I found it to bee but a very fable. Onely in the Province of Obdaria upon the Sea lide, neere to the mouth of the great River Obba, there is a Rocke, which naturally (being somewhat helped by imagination) may seeme to beare the shape of a ragged Woman with a Child in her armes (as the Rocke by the North capeane shape of a Frier) where the Obdorian Samons vie much to refort, by region of the gommoditie of the place for Fishing : and there fametime (as their manner is) conceine, and practice their Sorceries, and ominous conje-Cturings about the good, or bad speed of their Journeyes, Fishings, Huntings, and such like.

They are clad in Scale-skinnes, with the havrie, fice outwards downe as low as the knees, The Seminary with their Breezhes and Netherstocks of the same, both men and women. They are all Blacke histic and behayred, naturally beardleffe. And therefore the Men are hardly differred from the Women by haulour. their lookes: faue that the Women weare a locke of hayre downe along both their cares. They line in a manner a wilde and a farage life, rouing still from one place of the Countrey to another, without any propertie of House or Land more to one then to another. Their leader or directer in euery Companie, is their Pape or Prieft.

On the Northide of Ruffie next to Corelia, lyeth the Countrey of Loppie, which reacheth in The Lapres.

length from the furthest point Northward, (towards the North cape) to the furthest part Southeast (which the Rufe calleth Sweemeffe or Holy nois, the English men Cape-grace) about three hundred and fortie fine verft or miles, From Swatteffe to Cantelox, by the way of Verfega 50 (which measure the breadth of that Country) is innetic miles or thereabouts. The whole Countrey in a manner is either Lakes or Mountaines, which towards the Sea fide are called Tondro, because they are all of hard and graggie Rooke, but the inland parts are well furnished with Woods, that grow on the hills fides, the lakes lying betweene. Their dyet is very bars and fimple. Bread they have none, but feed onely vpon Fishand Fowle. They are subject to the Em- No Bread. percur of Raffia, and the two Kings of Sandan and Demmarke : which all exact Tribute and Cuftome of them (as was layd before) but the Emperour of Ruffis beareth the greatest hand ouer them, and exact of them farre more then the reft. The opinion is that they were first tearmed Lappes, of their briefe and thort speach. The Raffe dindeth the whole Nation of the Lappes into two forts. The one they call Nouremenskey Lapary, that is, the Normegian Lappes : because they bee of the Danis Religion. For the Danes and Noruegians, they account for one people.

The other that have no Religion at all, but line as bruite and Heathernth people, without God Wilde Land, in the world, they call Dikey Lopery, or the wilde Lappes. The whole Nation is veterly vulcarned, having not so much as the vie of any Alphabet, or

Cola.

Wirches

Letter among them. For practice of Witch-craft and Sorcerie, they passe all Nations in the the World. Though for the inchanting of thips that fayle along their Coaft (as I have heard it reported) and their giving of winds good to their friends, and contrary to other, whom they meane to hurt by tying of certayne knots vpon a Rope (formewhat hie to the Tale of exchin his meane to man to cynig of the same of the s ming neere their Coaft. Their Wespons are the Long-bow, and Hand-gunne, wherein they excell, alwell for quickneffe to charge and discharge, as for neernesse arche Marke, by reason of excest, a west for quicasses. Consider their continual practice (whereto they are forced) of shooting at wild fowle. Their manner is in Summer time to come downe in great companies to the Sea-fiele, to Warding fe, Code, Kogo, in Summer time to come unwise in great companies and the Bay of Vedagobis, and there to fifth for Cod, Salmon, and But-fifth, which they fill to the 10 Ruffer, Davie, and Norwegians, and now of lare to the English men that trade thirther with Cloth, which they exchange with the Loper and Corelisor, for their Fifth, Oyle, and Furres, whereof allo they have some store. They hold their Mart at Cala, on Saint Peters day, white time the Captayne of Wardhusse (that is Resiant there for the King of Denmarke) must be prefent, or at least send his Deputie to set prices vpon their Stock-fish, Tranc-oyle, Furres, andother Commodities : as also the Ruffe Emperours Customer, or Tribute taker, to receive his Cufrome, which is ever payed before any thing can be bought; or fold. When their fishing is done, their manner is to draw their Carbaffes, or Boats on flioare, and there to leave them with the Keele turned vpwards, till the next Spring-tyde. Their trauell too and fro is vpon Sleds, drawne by the Olen Deere: which they vie to turne a grazing all the Summertime, in an Hand called 30 Wilden (of a very good Soyle compared with other parts of that Country) and towards the Winter time, when the Snow beginneth to fall, they fetch them home againe, for the ve

Sleds drawne with Deere.

Chap. 21. ckfiafticall flate, with Offices,

Oncerning the Gouernment of their Church, it is framed altogether after the manner of the Greeke: as being a part of that Church, and neuer acknowledging the Iurifdicton of the Latine Church, vsurped by the Pope. That I may keepe a better measure in describing their Ceremonies, then they in the ving them (wherein they are infinite) I will note briefly Fuff, what Ecclefacticall Degrees, or Offices they have with the Iurifdiction, and practice of them. Secondly, what Doctrine they hold in matter of Religion. Thirdly, what Lyturgie, or forme \$0 of Seruice they wie in their Churches , with the manner of their administring the Sacriments. Fourthly, what other strange Ceremonies, and Superstitious Denotions are vsed among

The Church Officers.

Their Offices, or Degrees of Church-men, are as many in number, and the fame in a manner both in name and degree, that were in the Westerne Churches. First, they have their Patriarts. then their Metropolites, their Archbifbops, their Oladker, or Bifbops, their Protopopes or Arch triefts, their Deacons, Friers, Monkes, Nunnes, and Eremites.

The Patriarch.

Patriarch of Sio, or Chio.

Their Patriarch, or chiefe Directer in matter of Religion untill this laft veere, was of the Citie of Confiantinople (whom they called the Parriarch of Sio) because being drinen by the Turke out of Constantinople (the Scate of his Empire) he removed to the He Sis, sometimes called Chis, 40 and there placed his Patriarchiall Sea. So that the Emperous, and Clergie of Russia, were wont veerely to fend Gifts thicher, and to acknowledge a Spirituall kind of homage, and subjection due to him, and to that Church. Which custome they have held (as resemeth) ever fince they professed the Christian Religion. Which how long it hatfi bn I could not wel learne, for that they haue no Story or Monument of Antiquitie (that I could heare of) to shew what hath been done in times pall within their Countrey, concerning ofther Church, or Common-wealth matters. Onely I heare a report among them, that about three hundred yeers fince, there was a Mariage betwirt the Emperour of Constantinople, and the Kings Daughter of that Country: who at the first denyed to joynehis Daughter in Mariage with the Greeks Emperour, because he was of the Christian Religion. Which agreeth well with that I find in the Story of Launieu Chal. 50 cacendylas concerning Turkish Affaires in his fourth Booke : where hee speaketh of such a Mariage betwixt lobn the Greeks Emperour, and the Kings Daughter of Sarmatis. And this argueth out of their owne report, that at that time they had not received the Christian Religion: as alfo that they were converted to the Faith, and withall perverted at the very fame time, receiving the Doctrine of the Gospell, corrupted with Superflitions even at the first when they tooke it from the Greeke Church, which it felfe then was degenerate, and corrupted with many Superflitions, and foule Errours, both in Doctrine and Discipline: as may appeare by the Story of Nicophorus Gregorus, in his eighth and ninth Bookes. But as touching the time of their Conuersion to the Christian Faith, I sppose rather that it is mistaken by the Russe, for that which I find in the Polonian Story, the second Booke the third Chapter: where is faid that about the 60 yeere 990. Vladomirus Duke of Ruffia, married one Anne Sifter to Bafilius, and Conftantinus Brothers, and Emperours of Constantinople. Whereupon the Raffe received the Faith and Profesion of Christ. Which though it be somewhat more ancient then the time noted before out of the Ruffe Report, yet it falleth out all to one reckoning, touching this point, viz. in what truth and

finceritie of Doctrine the Ruffe received the first stampe of Religion : for as much as the Greeke Church at that time also was many wayes infected with errour and superstition.

At my being there, the yeere 1,88. came unto the Mosko the Patriarch of Constantinople, or on of the Pa-Sio (called Hieronimo being banished as some sayd) by the Turke, as some other reported by the triarchicallica Greeke Clergie deprived. The Emperour being given altogether to superstitious devotions, gave from Confiantihim great entertaynment Before his comming to Morke, hee had beene in Italy with nople or Sio, to the Pope, as was reported there by some of his company. His arrand was to consult with the Mosto. Emperour concerning these points, First, about a League to passe betwixt him and the King of Spaine, as the meeteft Prince to joyne with him in opposition against the Tirke. To which pur-

10 pole also Ambassages had passed betwire the Russe and the Persian. Likewise from the Georgians to the Emperour of Rullia, to joyne league together, for the inuading of the Turke on all fides of his Dominion : taking the advantage of the simple qualitie of the Turke that now is. This treatie was helped forward by the Emperours Ambassadour of Almayne, sent at the same time to solicite an inuation upon the parts of Polonia, that lye towards Rustand, and to borrow money of the Ruffe Emperour, to pursue the warre for his Brother Maximilian, against the Swedens sonne. now King of Poland. But this confultation concerning a league between the Ruffe and the Spaniard. (which was in some forwardnesse at my comming to Moske, and already one appointed for Ambassage into Spaine) was marred by meanes of the overthrow given to the Spanish King by her Majeitic, the Queene of England, this last yeere. Which made the Russe Emperour and his 20 Councell, to give a fadder countenance to the English Ambassadour at that time : for that they were disappointed of so good a policie, as was this conjunction supposed to bee betwixt them

His fecond purpose (whereto the first served as an introduction) was in revenge of the Turke and the Greeke Clergie, that had thrust him from his seate, to treate with them about the reducing of the Ruffe Church under the Pope of Rome. Wherein it may feeme that comming lately from Rome, hee was fet on by the Pope, who hath attempted the fame many times before. though all invaine : and namely the time of the late Emperour Inan Vafilowich, by one Anthony his Legate. But thought this belike a farre better meane to obtayne his purpose by treatie and mediation of their owne Patriarch. But this not succeeding, the Patriarch fell to a third point 30 of reatie, concerning the relignation of his Patriarchihip, and translation of the Sea from Conflantinople or Scio, to the Citie of Moske. Which was fo well liked, and entertayned by the Emperour (as a matter of high Religion and policie) that no other treatie (specially of forraigne Ambaffages) could bee heard or regarded, till that matter was concluded

The reason wherewith the Patriarch perswaded the translating of his Sea to the Citie of Mosko, were thele in effect. First, for that the Seaps the Patriarch was vnder the Turke, that is enemie to the Faith. And therefore to bee remooued into some other Countrey of Christian profession. Secondly, because the Russe Church was the onely naturall daughter of the Greeke at this time, and holdeth the same Doctrine and Ceremonies with it : the rest being all subject to the Turke, and fallen away from the right profession. Wherein the subtill Greeke to make the bet-

40 ter market of his broken ware, aduanced the honour that would grow to the Emperour, and his Countrey : to have the Patriarchs Seat translated into the chiefe Citie, and seate of his Empire. As for the right of translating the Sea, and appointing his Successour, hee made no doubt of it, but that it pertayned wholly to himfelfe.

So the Emperour and his Councell, with the principall of his Clergie, being affembled at the The Patriarch-Morke, it was determined that the Metropolite of Morke, should become Patriarch of the whole simplerrandles Greeke Church, and have the tamefull Authoritie and Iunifdiction that pertayned before to the tred to Mosfee Patriarch of Constantinople, or Sio. And that it might bee done with more order and solemnitie, the fine and twentieth of Ianuarie, 1 588. the Greeke Patriarch accompanied with the Ruffe Clergie, went to the great Church of Prechefle, or our Ladie, within the Emperours Castle (having

50 first wandred thorow the whole Citie in manner of a Procession, and bleshing the people with his two fingers) where hee made an Oration, and delivered his refignation in an Instrument of writing, and so layed downe his Patriarchicall staffe. Which was presently received by the Metropolite of Moske, and divers other ceremonies vied about the Inauguration of this new

The day was holden very folemne by the people of the Citie, who were commanded to forbeare their workes, and to attend this solemnitie. The great Patriarch that day was honoured with rich Presents sent him from the Emperour and Emptesse, of Plate, cloath of Gold, Furres, &c. carryed with great pompe thorow the streets of Moiks, and at his departing received many gifts more, both from the Emperour, Nobilitie, and Clergie. Thus the Patriarchilhip of Conflan-60 timple, or Sis, (which hath continued fince the Councell of Nice) is now translated to Meske, or they made beleeve that they have a Patriarch with the same right and Authoritie that the other had. Wherein the fubtill Greeke hath made good advantage of their Superitition, and is now gone away with a rich bootie into Poland, whither their Patriarchihip be currant or not.

The matter is not valike to make some Schisme betwirt the Greeke and Roffe Church, if the

Russ- hold his Patriarchship that hee hath so well payed for, and the Greekes Elect another withall, as ' likely they will, whether this man were banished by the Tarke, or deprined by *As they doe and ener fince order of his owne Clergie. Which might happen to give advantage to the Pope, and to bring on uer the Ruffe Church to the Sea of Rome, (to which end peraduenture hee deutsed this Stratagem, and catt in this matter of Schisme among them) but that the Emperours of Russia know well enough, by the example of other Christian Princes, what inconvenience would grow to their State and Countrey, by Subjecting themselves to the Roms & Sea. To which end the late Emperour Inan Valilomeb, was very inquilitiue of the Popes authoritie ouer the Princes of Chris flendome, and fent one of very purpose to Rome, to behold the order and behausour of his Court.

With this Patriarch Hieronymo, was driven out at the same time by the great Turke, one De- 10 metrio Archbishop of Lariffa : who is now in England, and pretendeth the same cause of their banishment by the Turke, (to wit) their not admitting of the Popes new Kalender, for the alteration of the yeere. Which how vnlikely it is, may appeare by these Circumstances. First, becaule there is no such affection, nor friendly respect betwirt the Pope and the Tinke, as that hee fhould banish a Subject for not obeying the Popes ordinance, specially in a matter of some sequel for the alteration of Times within his owne Countries. Secondly, for that hee maketh no such fcruple in deducting of times, and keeping of a just and precise account from the Incarnation of Christ: whom hee doth not acknowledge otherwise then I noted before. Thirdly, for that the favd Patriarch is now at Neples in Italy, where it may be gheffed he would not have gone within the Popes reach, and so neere to his nose, if hee had beene banished for opposing himselfe a- 20 gainst the Popes Decree.

The Parrie archs Iurifdi-

This office of Patriarchship now translated to Mosko, beareth a superiour Authoritie over all the Churches, not onely of Russia, and other the Emperours Dominions, but thorow out all the Churches of Christendome, that were before vinder the Patriarch of Constantinople, or Sio : or at least the Russe Patriarch imagineth himselfe to have the same authoritie. Hee hath under him as his proper Dioceffe the Prouince of Moske, befides other peculiars. His Court or Office is kept at the Mesko.

Two Metropo.

Before the creation of this new Patriarch, they had but one Metropolite, that was called the Metropolite of Moske. Now for more flate to their Church, and new Patriarch, they have two Metropolites, the one of Nonogrod velica, the other of Roftone. Their office is to receive of the 20 Patriarch fuch Ecclefiasticall orders, as hee thinketh good, and to deliner the charge of them ouer to the Archbishops : besides the ordering of their owne Diocesse.

bishiops.

Their Archbishops are foure : of Smolenso, Cazon, Vobsko, and Vologda. The parts of their office is all one with the Metropolites : faue that they have an under lutifdiction, as Suffraganes to the Metropolites, & Superiors to the Bishops. The next are the Vladskeis or Bishops, that are but fixe in all : of Crutitska, of Rezan, of Orfer and Torshock , of Collomenska, of Volodemer, of Susdalla, These have every one a very large Diocesse : as dividing the rest of the whole Countrey among

Ecclefiafficall Iunfdiction.

Their Gentles

The matters pertayning to the Ecclesiasticall jurisdiction of the Metropolites, Archbishops, and Bishops, are the same in a manner that are vied by the Clergie in other parts of Christendome. 40 For besides their authoritie ouer the Clergie, and ordering such matters as are meere Ecclesiasticall, their jurisdiction extendeth to all Testamentarie causes, matters of Marriage, and Dinorcements, some Pleas of iniuries, &c. To which purpose also they have their Officials, or Commisfaries (which they call Boiaren Vladitikey) that are Lay-men of the degree of Dukes, or Gentlemen, that keepe their Courts and execute their Iurisdiction. Which besides their other oppressions ouer the common people, raigne ouer the Priests: as the Dukes and Dracks doe ouer the poore people, within their Precincts. As for the Archbishop or Bishop himselfe, hee beareth no fway in deciding those causes, that are brought into his Court. But if hee would moderate any matter, he must doe it by intreatie with his Gentleman Officiall. The reason is, because these Boiarskey, or Gentlemen officials, are not appointed by the Bulhops, but by the Emperour him- 50 felfe, or his Councell, and are to give account of their doings to none but to them. If the Bishop can intreat at his admission to have the choice of his owne Officiall, it is accounted for a speciall great fauour. But to speake it as it is, the Clergie of Ruffia, as well concerning their Lands and reuenues, as their Authoritie and Iurischion, are altogether ordered and ouer-ruled by the Emperour and his Councell, and have so much, and no more of both as their pleasure doth permit them. They have also there Affistants or severall Counsels (as they call them) of certayne Priests that are of that Diocesse, retiding within their Cathedrall Cities, to the number of foure and twentie a piece. These aduise with them, about the speciall and necessarie matters belonging to their

The Church

Concerning their Rents and Reuenues to maintayne their dignities, it is somewhat large. The 60 Patriarchs yeerely rents out of his Lands (besides other fees) is about 3000. Rubbels or Marcks. The Metropolites and Archbishops, about 2500. The Bishops, some 1000. some 800. some 500.8cc. They have had some of them (as I have heard say) tenor twelvethousand Rubbels2 yeere : as had the Metropolite of Nenograd.

Their

Their Habit or Apparell (when they shew themselves in their Pontificalibus after their folemnell manner is a Mitre on their heads after the Popish fashion, set with Pearle and Precious Stone, a Coape on their backes, commonly of Cloth of Gold, embroydered with Pearle, and a Crossers Staffe in their hands, layed ouer all with Plate of Siluer double gilt, with a Crosse or Sheepherds Crooke at the upperend of it. Their ordinary habit otherwise when they ride or goe abroad, is a Hood on their heads of blacke colour, that hangeth downe their backes, and standeth out like a Bon-grace before. Their vpper Garment (which they call Reis) is a Gowne or Mantell of blacke Damaske, with many Lifts or Gards of white Sattin layed voon it, enery Gard about two fingers broad, and their Crofiers staffe carried before them, To Themselves follow after, bleffing the people with their two fore-fingers, with a marvel-

The Election, and appointing of the Bishops and the rest, pertayneth wholy to the Empe- The Election rour himselfe. They are chosen euer out of the Monasteries : fo that there is no Bishop, Arch. of Bishops, bishop, nor Metropolite, but hath beene a Monke, or Frier before. And by that reason they are. and must all bee vnmarried men, for their Vow of Chastitie when they were first shorne. When the Emperour hath appointed whom he thinketh good, hee is inuefted in the Cathedrall Church of his Diocesse, with many Ceremonies, much after the manner of the Popish Inaugura-

tion. They have also their Deanes, and their Arch-deacons.

As for preaching the Word of God, or any teaching, or exhorting such as are under them, The learning they neither vie it, nor haue any skill of it: the whole Clergiebeing veterly valearned both for and exercise they neither vie is, nor naurany same is the manuscript of the far the first of September (which is the first day of their yeere) and on Saint John Baptists day, to make an ordinary speech to the people, enery Metropolite, Arch-bishop, and Bishop, in his Catherall Church, to this or like effect: That if any bee in malice towards his Neighbour. hee shall leaue off his malice : if any have thought of Treason or Rebellion against his Prince, hee beware of such practice: if hee haue not kept his Falts, and Vowes, nor done his other Duties to the holy Church, hee shall amend that fault, &c. And this is a matter of forme with them, vttered in as many words, and no more, in a manner, then I have heere set downe. Yet the matter is done with that Grace and Solemnitie, in a Polpit of

20 purpole fet vp for this one Act, as if hee were to discourse at large of the whole substance of Distinctie. At the Moste the Emperour himselfe is ever present at this Solemne Ex-

As themselves are void of all manner of Learning, so are they wary to keepe out all meanes that might bring any in : as fearing to have their ignorance and vngodlineffe discouered. To that purpose they have perswaded the Emperors, that it would breed Innovation, and sow danger to their State, to have any nouelty of Learning come within the Realme. Wherein they fay but truth, for that a man of spirit and understanding, belped by Learning and liberall Education, can hardly indure a tyrannicall Gouernment. Some yeeres past in the other Emperours time, there came a Presse and Letters out of Polonia, to the Citie of Merito, where a Printing House was 40 fet vp, with great liking and allowance of the Emperour him elie. Bu: not long after, the house was let on fire in the night time, and the Press and Letters quite burnt up, as was thought by the procurement of the Clergie-men.

Their Priests (whom they call Paper) are made by the Bishops, without any great tryall for Priests. worthinesse of gifts, before they admit them, or Ceremonies in their admission : laue that their heads are shorne (not shauen , for that they like not) about an hand breadth or more in the crowne, and that place anointed with Oyle by the Bishop: who in his admission puttern upon the Priest, fift his Surplesse, and then fetteth a white Crosse on his brest of Silke, or some other matter, which he is to weare eight dayes, and no more : and fogueth him authoritie to say and fing in the Church, and to administer the Sacraments.

They are men vtterly vnlearned, which is no maruell, for as much as their Makers, the Bi-They are men veterity vincarneo, winten a no manufan, or as manufan to manufan so monthly of the standard of t any kind of Learning, no not of the Scriptures themselves, saue to reade and to sing them. Their ordinary charge and function is to lay the Lyturgie, to administer the Sacraments after their manner, to keepe and decke their Idols, and to doe the other Ceremonies vivall in their Churches. Their number is great because their Townes are parted into many small Parishes, without any diferetion for dividing them into competent numbers of Housholds, and people for a just Congregation : as the manner in all places where the meanes is neglected, for increasing of knowledge, and inftruction towards God. Which cannot well be had, where by meanes of an vnequall partition of the people, and Parishes, there followeth a want and vnequalitie of 6c flipend for a fufficient Ministery.

pena tor a tuttoctor manufery.

For their Priefts, it is lawfull to marry for the first time. But if the first Wife dye, a second The Rolls. he cannot take, but he must lose his Priest-hood, and his living withall. The reason they make Priests can out of that place of Saint Paul to Timothy 1.3, 2, not well voterflood, thinking that to bee fpo. marry but ken of diners Wines successinely, that the Apostle speaketh of at one and the same time. If hee once

will needs marrie againe after his first wife is dead, he is no longer called Papa, but Rospapa, or Priest quondam. This maketh the Priests to make much of their Wines, who are accounted as the Matrones, and of best reputation among the women of the Parish.

For the stipend of the Priest, their manner is not to pay him any tenths of Corne, or or the elfe : but he must stand at the deuotion of the people of his Parish, and make vp the Incommes elle: our ne must raun ar trae urusurus or trae peppe or mas a mana ar trae urusurus or tra Seruice within their Churches, their manner is for euery private man to have a Prayer laid for him by the Prieft, vpon any occasion of businesse whatsocuer, whether he ride, goe, faile, plough. or what foeuer elfe he doth. Which is not framed according to the occasion of his businesse, but to at randome, being some of their ordinary and vsuall Church-prayers. And this is thought to be more holy, and effectuall, if it be repeated by the Priests mouth, rather then by his owne. They haue a custome besides to folemnize the Saints day, that is, Patrone to their Church once every yeere. What time all their Neighbours of their Countrey and Parishes about, come in to have Prayers faid to that Saint for themselues, and their friends : and so make an Offering to the Priest for his paines. This Offering may yeeld them some ten pounds a yeere, more or lesse, as the Patrone or Saint of that Church is of credit and estimation among them: The manner is on this day (which they keepe Anniuersary for the Priest, to hire divers of his Neighbour Priests to helpe him : as having more Dishes to dresse for the Saint, then he can well turne his hand ynto. They vie besides to visit their Parishioners houses, with Holy Water, and Perfume, com- 20 monly once a quarter: and so hauing sprinkled, and becensed the goodman and his Wife, with the rest of their houshold, and houshold-stuffe, they receive some Deutotion or less, as the man is of abilitie. This and the rest layd altogether, may make vp for the Priest towards his mayntenance, about thirty or forty Rubbels a yeere : whereof he payeth the tenth part to the Bilhop of the Diocesse.

The Pricas maintenance.

Their Priefts

The Papa or Prieft is knowne by his long Tufts of Haire, hanging downe by his Eares, his Gowne with a broad Cape, and a walking staffe in his hand, For the rest of his Habit, heeis apparelled like the common fort. When he fayth the Lyturgie or Seruice, within the Church, hee hath on him his Surpleffe, and sometimes his Coape, if the day bee more Solemne. They have besides their Papars or Priests, their Churmapapars (as they call them) that is, Black Priess: 30 that may keepe their Benesices, though they be admitted Friers withall within some Monasterie. They seeme to be the very same that were called Regular Priests in the Popish Church Ynder the Priest, is a Deacon in euery Church, that doth nothing but the Office of a Parilli Clerke. As for their Protopapaes, or Arch-priefts, and their Arch-deacons (that are next in election to be their Protopopas) they ferue onely in the Cathedrall Churches.

Friers.

Of Friers they have an infinite rabble farre greater then in any other Countrey, where Popery is professed. Buery Citie, and good part of the Countrey, iwarmeth full of them. For they have wrought (as the Popish Friers did by their Supersition and Hypocrise) that if any part of the Realme be better and sweeter then other, there standeth a Friery or a Monastery dedicated to some Saint.

The number of them is so much the greater, not onely for that it is augmented by the Superfittion of the Countrey, but because the Friers life is the fafest from the Oppressions, and Exactions, that fall vpon the Commons. Which caufeth many to put on the Friers Weed, as the best Armour to beare off such blowes. Besides such as are voluntary, there are divers that are forced to shire themselues Friers, vpon some displeasure. These are for the most part of the chiefe Nobility. Diners take the Monafteries as a place of Sanctuary, and there become Friers, toauoyde some punishment, that they had deserued by the Lawes of the Realme. For if hee geta Monaftery ouer his head, and there put on a Coole before hee bee attached, it is a protection to him for euer against any Law, for what crime soeuer : except it be for Treason. But this Promise goeth withall, that no mancommeth there, (except fuch as are commanded by the Emperour to 50 be received) but he giveth them Lands, or bringeth his stocke with him, and putteth it into the common Treasury. Some bring 2000. Rubbels, and some more. None is admitted under three or foure hundred.

The manner of their Admission is after this fort. First, the Abbot strippeth him of all his Secular or ordinary Apparell. Then he putteth vpon him next to his skinne, a white flamell shirt, with a long Garment ouer it downe to the ground, girded vnto him with a broad Leather Belt. His vpper-most Garment is a Weed of Garras, or Say, for colour and fashion, much like to the vpper Weed of a Chimney-sweeper. Then is his crowne shorne a hand breadth, or more close to the very skinne, and thefe, or like words pronounced by the Abbot, whiles hee clippeth his haire : As these haires are clipped of, and taken from thy head; so now we take thee, and separate thee 60 cleane from the World, and worldly things, &c. This done, hee anointeth his crowne with Oyle, and putteth on his Coole : and so taketh him in among the Fraternitie. They vow perpetual Chastitie, and Abstinence from fiesh.

Befides , their Lands (that are very great) they are the greiteft Merchants in the whole

Countrey, and deale for all manner of Commodities. Some of their Monasteries dispend in Lands, one thousand, or two thousand Rubbels a yeere. There is one Abbey called Troits, that hath in Lands and Fees, the summe of 100000. Rubbels, or Markes a yeere. It is built in manner of a Castle, walled round about, with great Ordnance planted on the wall, and contavneth within it a large breadth of ground, and great varietie of building. There are of Friers within it, (besides their Officers, and other Seruants) about seuen hundred. The Empresse that now is, hath many Vowes to Saint Sergins, that is Patrone there: to intreate him to make her fruitfull, as having no children by the Emperour her Husband. Lightly every yeere shee goeth on Pilgrimage to him from the Mosko, on foot, about eighty English miles, with five or fixe thousand women attending upon her, all in blue Liveries, and foure thousand Souldiers for her Guard. But Saint Sergins hath not yet heard her Prayers, though (they lay) hee hath a speciall gift and facultie that way.

What Learning there is among their Friers, may be knowne by their Bishops, that are the What Learning enter is among user triefs, may be amorned by their Disposal Where The Friest choice men out of all their Monatteries I talked with one of them at the Citie of Flooreds, where The Friest Choice and Company of the Comp (to try his skill) I offered him a Ruffe Testament, and turned him to the first Chapter of Saint Matthews Gotpell. Where hee beganne to reade in very good order. I asked him first what part of Scripture it was, that he had read? he answered, that he could not well tell. How many Euangelifts there were in the New Testament? He faid he knew not. How many Apostles there were! He thought there were twelve. How he should be faved! Whereunto he answered me with a piece of Ruffe Doctrine, that he knew not whether he should be faued, or no:but if God would Poshallowate him, or gravise him so much, as to saue him, so it was . he would bee glad of it: if not, what remedy. I asked him, why hee shoare himselfe a Frier? Hee answered, because he would eate his Bread with peace. This is the Learning of the Friers of Russia, which though it be not to be measured by one, yet partly it may bee ghessed by the ignorance of this man, what is in the reft.

They have also many Nunneries, whereof some may admit none but Noblemens Widowes. Nunneries and Daughters, when the Emperour meaneth to keepe them vnmarryed, from continuing the bloud or stocke, which if he would have extinguished. To speake of the life of their Friers, and Nunnes, it needs not, to those that know the hypocrisie, and vncleannesse of that Cloy-3c fter-brood. The Ruffe himselfe (though otherwise addicted to all Superstition) speaketh so found

ly of it, that it must needs gaine silence of any modest man.

Besides these, they have certayne Eremites, (whom they call Holymen) that are like to those Fremites. Granolophilis, for their life and behauiour : though farre valike for their Knowledge . and Learning. They vie to goe starke naked, saue a clout about their middle, with their haire hanging long, and wildly about their shoulders, and many of them with an Iron coller, or chaine about their neckes, or midst, euen in the very extremitie of Winter. These they take as Prophets, and Strange hards them seeds of mining countries of contents of the seed fort foeuer, they answere nothing, but that it is Po gracum, that is, for their finnes. And if 40 any of them take some piece of sale ware from any mans shop, as he passeth by, to give where he lift, hee thinketh himselfe much beloued or God, and much beholding to the holy Man, for ta-

Of this kind there are not many, because it is a very hard and cold Profeshon, to goe naked in Ruffia, specially in Winter. Among other at this time, they have one at Moske, that walketh naked about the streets, and inueigheth commonly against the State, and Gouernment, especially against the Godonoes, that are thought at this time to be great Oppressors of that Commonb) against the control of the state of the s would take upon him to reproue the old Emperour, for all his crueltie, and oppressions, done to miss. wards his people. His body they have translated of late into a sumptious Church, neere the Em-SC perours Houle in Maste, and have canonized him for a Saint, Many Miracles he doth there (for to the Friers make the people to beleeue) and many Offerings are made vnto him, not only by the people, but by the chiefe Nobilitie, and the Emperour, and Empresse themselves, which vihe that Church with great Denotion. But this last yeere, at my being at Moske, this Saint had il lucke in working his Miracles. For a lame man that had his limmes reflored (as it was pre- Lame Miracles tended by him) was charged by a woman that was familiar with him (beeing then fallen out) that he halted but in the day time, and could leape metrily when hee came home at night. And that he had intended this matter fixe yeeres before. Now hee is put into a Monastery, and there rayleth vpon the Friers, that hired him to have this counterfeit Miricle practifed vpon him. Besides this disgrace, a little before my comming from thence, there were eight slaine with in 60 his Church by hire in a Thunder. Which caused his Bels (that were tingling before all day and night long as in triumph of the Miracles wrought by Bajileo their Saint) to ring somewhat softhigh and hath wrought no little differedit to this Miracle-worker. There was another of great Nichbit the account at Pleike, (called Niebola of Pleike) that did much good, when this Emperours Father Etemier

came to facke the Towne, vpon sufpition of their revolting and Rebellion against him. The Em-

perour, after he had faluted the Eremite, at his lodging, fent him a reward. And the Holy man to requite the Emperour, sent him a piece of raw Fiesh, being then their Lent time. Which the Emperour feeing, bid one to tell him, that he maruelled that the Holy man would offer him flesh to cate in the Lent, when it was forbidden by order of holy Church. And doth Euste (which is as much to fay, as Iacke) thinke (quoth Nicola) that it is vnlawfull to cate a piece of bertle fleih in Lent and not to eate vp fo much mans fleih, as he hath done already. So threatning the Emperour with a prophecy of fome hard aduenture to come vpon him, except he lett murdring of his people, and departed the Towne: he faued a great many mens lives at that time.

This maketh the people to like very well of them, because they are as Pasquils, to note their great mens faults, that no man elfe dare speake of. Yet it falleth out semetime, that for this 10 rude libertie, which they take vpon them, after a counterfeit manner, by imi-ation of Prophets. they are made away in fecret: as was one or two of them, in the last Emperours time, for be-

ing ouer-bold in speaking against his government.

Cb40. 22. Of their Lyturgie, or form of Churchfernice, and their manner of admini ftring the Sacrameats. Their morning Seruice.

Heir morning Seruice they call, Zautrano, that is, Mattint. It is done in this order. The Priest entreth into the Church with his Descon following him. And when he is come to the middle of the Church, he beginneth to fay with a loude voyce : Blastaner Uladika (that 15) Bleffe vs heavenly Paftor: meaning of Christ. Then hee addeth, In the name of the Father, and of the Sonne, and of the hely Ghost, one very God in Trinitie: and Aspedy pomelui, or, Lord have merty vpon vs , Lord have mercy vpon vs , Lord have mercy vpon vs : repeated three times. This done, 18 he marcheth on towards the Chancell, or Santium Santiorum, (as they vieto call it) and io entreth into the Scharfuey Dwere, or the Heavenly Doore: which no man may enter into , but the Priest onely. Where standing at the Altar, or Table (set neere to the upper wall of the Chancell) he fayeth the Lords Prayer, and then againe Afrody pomelus, Ct, Lord have merey upon vi, Lord have mercy upon vs, &c. pronounced twelve times. Then praifed be the Trimitie, the Father, the Sonne, and boly Ghost, for euer and euer. Whereto the Deacons, and People fay, Amen. Next after, the Priest addeth the Pfalmes for that day, and beginneth with, O come let us worship, and fall downe before the Lord, &c, and therewithall himselfe, with the Deacons, and People, all turne themselues towards their Idols, or Images, that hang on the wall, and eressing themselues, bon downe three times, knocking their heads to the very ground. After this, he readeth the Ten Com-30 maridements, and Athanassis Creed, out of the Service Books. This being done, the Deacon that flandeth without the Heavenly Doore, or Chancell, readeth

Legend.

a piece of a Legend, out of a written Booke, (for they have it not in Print) of some Saints life, miracles, &c. This is divided into many parts, for every day in the yeere, and is read by them with a plaine finging note, not value to the Popish tune, when they fung their Gospels. After all this (which reacheth to an houre and an haife, or two houres of length) he addeth certaine set Collects, or Prayers upon that which he hath read out of the Legend before: and so enderh his Seruice. All this while stand burning before their Idols, a great many of Waxe candles, (whereof iome are of the bigneffe of a mans waste) vowed, or enioyned by penance, vpon the people of the Parish.

Candles. Compline.

About nine of the clocke in the morning, they have another Service, called Obeidna, (or Compline) much after the order of the Popush Service, that bare that name. If it be some High or Festival day, they furnish their Service beside, with Bleffed bee the Lord God of Ifrael, &c.

Their euening Seruice, is called Vecherna, where the Prieft beginneth with Blallang Ulabba, as he did in the morning, and with the Pfalmes appointed for the Vecberna. Which being read, he fingeth, My foule doeth magnifie the Lord, &c. And then the Prieft, Deacons, and People, all with one voice, fing, Aspedy pomelui, or Lord have merry upon vs, thirty times together. Whereunto the Boyes that are in the Church , answere all with one voice , rolling it vp so fast, as their lips can goe : Very, Very, Very, Very, or, Praife, Praife, Praife, &c. thirty timestogether, 40 with a very strange noise. Then is read by the Prieft, and vpon the Holidayes sung, the first Pfalme : Bleffed is the man, &c. And in the end of it , is added , Alleluia, repeated ten times. The next in order is some part of the Gosp-Il read by the Priest, which hee endeth with Alleluia repeated three times. And so having said a Collect in remembrance of the Saint of that day, hee endeth his evening Service. All this while the Priess standard above at the Altar, or high Table, within the Chancell, or Santium Santiorum, whence hee never moveth all the Seruice time. The Deacon, or Deacons (which are many in their Cathedrall Churches) it and without the Chancell by the Scharfuey Dware, or Heanenly Doore: for within they may not be seene all the Service time, though other wife their Office is to sweepe and keepe it, and to set up the Waxe candles before their Idols. The people stand together the whole Seruice time in the body of the Church, and some in the Church Porch, for Piew, or Seat they have none within their

The manner Baptilme.

The Sacrament of Baptisme they administer after this manner. The child is brought vnto the Church (and this is done within eight dayes after it is borne) if it bee the child of some

Nobleman, it is brought with great pompe in a rich Sled or Wagon, with Chaires and Cushions of cloth of Gold, and fuch like fumptuous flew of their best furniture. When they are come to the Church, the Priest standeth ready to receive the child within the Church Porch, with his Tub of water by him. And then beginneth to declare vnto them, that they have brought a little Infidell to be made a Christian, &c. This ended, he teacheth the Witnesses (that are two or three) in a certaine fet forme out of his Booke, what their dutie is in bringing up the child after he is baptifed. vz. That he must be taught to know God, and Christ the Saujour. And because God is of great majestie, and wee must not presume to come vnto him without Mediators (as the manner is when we make any funt to an Emperour, or great Prince) therefore they must to teach him what Saints are the best, and chiefe Mediators, &c. This done, he commandeth the Deuill in the name of God after a conjuring manner, to come out of the water; and so after certaine Prayers he plungeth the child thrife ouer head and eares. For this they hold to bee a point necessary, that no part of the child be vndipped in the water.

The words that beare with them the forme of Baptilme vttered by the Prieft, when he dippeth in the child, are the very same that are prescribed in the Gospell, and yied by vs. 12. In the name of the Father, and of the Sonne, and of the boly Ghoff. For that they thould alter the forme of the words, and fay, by the holy Ghost, (as I have heard that they did) following certains Heretikes of the Greeke Church, I tound to be vntrue, as well by report of them that have beene often at their Baptismes, as by their Booke of Lyimrete it felte, wherein the order of Baptisme

20 is precifely fet downe.

When the childe is baptifed, the Priest layeth Oyle and Salt tempered together upon the Oyle and Salt forehead, and both ides of his face, and then you his mouth, drawing it along with his finger ouer the childs lips (as did the Popith Prietts) faving withall certaine Privers to this effect: that God will make him a good Christian, &c. all this is done in the Church Porch. Then is the child (as being now made a Christian, and meet to be received within the Church Doore) carried into the Church, the Priest going before, and there he is presented to the chiefe Idoll of Presented. the Church, being layd on a Cushion before the feet of the Image, by it (as by the Mediator) to be commended vnto God. If the child be ticke, or weake (specially in the Winter) they vie to make the water luke warme. After Baptisme the manner is to cut off the haire from the childs Cutting off 30 head, and having wrapped it within a piece of Waxe to lay it vp as a Relique or Monument in haire.

a fecret place of the Church. This is the manner of their Baptisme, which they account to be the best and perfectest forme. As they doe all other parts of their Religion, received (as they by), by tradition from the beft Church, meaning the Greeke. And therefore they will take great paines to make a Profelyte, or Profelyte Conuert, either of an Infidell, or of a forreine Christian, by rebapting him after the Ruffe manner. When they take any Tartar prisoner , commonly they will offer him life , with condition to be baptifed. And yet they perswade very few of them to redeeme their life so : because of the naturall hatred the Tartar beareth to the Ruffe, and the opinion he hath of his fashood, and iniuffice. The yeere after Mosko was fired by the Chrim Tartar, there was taken a Discommerfey, 40 one of the chiefe in that exploit with three hundred Tartars more : who had all their lives of - Tartars choose

fered them if they would be baptifed after the Ruffe manner. Which they refuled all to doe, to die rather with many reproches against those that perswaded them. And so being carried to the River then turne Mosko (that runneth through the Citie) they were all baptifed after a violent manner : being thrust downe with a knock on the head into the water, through an hole made in the Ice for that purpose. Of Lieflanders that are captines, there are many that take on them this second Ruffe Rebaptifings Baptisme to get more libertie, and somewhat belides towards their living, which the Empe-

rour ordinarily vieth to give them.

Of Englishmen fince they frequented the Countrey there was never any found, that fo much forgot God, his Faith, and Countrey, as that he would be content to be baptifed Ruffe, for any respect of feare, preferment, or other meanes whatsoeuer: faue onely Richard Relph, that fol-To lowing before an vngodly trade, by keeping a Caback (against the order of the Country) and being put off from that trade, and spoiled by the Emperours Officers of that which he had, entred himselfe this last yeere into the Russe Profession : and to was rebaptised, living now asmuch an Idolater, as before he was a Rioter, and unthrifty person.

Such as thus receiue the Ruffe Bap:isme , are first carried into some Monasterie to bee instru-Eted there in the doctrine and ceremonies of the Church. Where they vie these ceremonies. First, they put him into a new and fresh sute of apparell, made after the Rasse fashion, and set a Coronet, or (in Summer) a Garland vpon his head. Then they anoint his head with Oyle, and put a Waxe candle light into his hand: and so pray over him foure times a day, the space 60 of feuen dayes. All this while he is to abstaine from fielh, and white meats. The feuen dayes being ended, he is parified and washed in a Bath-stoue, and so the eight day hee is brought into the Church, where he is taught by the Friers how to behaue himselfe in presence of their Idols, by ducking downe, knocking of the head, croffing himselfe, and such like gestures, which are the greatest part of the Ruffe Religion.

The admini-Bring of the

The Sacrament of the Lords Supper they receive but once a yeere, in their great Lent time, a littlebefore Eafter. Three at the most are admitted at one time, and neuer aboue. The manner firing of the Lords Supper, of their communicating, is thus. First, they confesse themselves of all their sinnes to the Priest (whom they call) their ghoftly Father. Then they come to the Church, and are called vo to the Communion Table, that flandeth like an Altar, a little remoued from the vpper end of the Church, after the Dutch manner. Heere first they are asked of the Priest, whether they he the country, area the same of the country area of the country area. fiver, No, they are taken to the Table. Where the Priest beginneth with certayne vivall Prayers, the Communicants standing in the meane while with their armes folded one within ano. ers, the Communication of Mourners. When these prayers are ended, the Priest taketh a Spoone 10 and filleth it full of claret Wine. Then hee putteth into it a small piece of Bread, and tempereth them both together: and so delivereth them in the spoone to the Communicants, that stand in order, speaking the vsuall words of the Sacrament. Estethis, G. Drinkethis, G. both at one time without any paule.

Communion

After that hee deliuereth them againe Bread by it selfe, and then Wine carded together with alittle warme water, to represent Bloud more rightly (as they thinke) and the water withall. that flowed out of the fide of Christ. Whiles this is in doing the Communicants vnfold their armes. And then folding them againe, follow the Priest thrice round about the Communion table, and so returne to their places againe. Where having sayd certayne other prayers, hee difmiffeth the Communicants, with charge to bee merrie, and to cheere vp themselves for the seun 20 dayes next following. Which being ended, hee enjoyneth them to fait for it as long time after. Which they vie to observe with very great denotion, eating nothing else but Bread and Salt, except a little Cabbage, and some other Herbe or Root, with water or quasse Mead for

This is their manner of administring the Sacraments. Wherein what they differ from the institution of Christ, and what Geremonies they have added of their owne, or rather borrowed of the Greeker, may eafily bee noted. Heir chiefest errours in matter of Faith I finde to bee these. First, concerning the Word of

Chap. 23. Of the Do-Etrine of the Ruffe Church, & what errors it noldeth. 1. Their difallowing of certaine parts of the Canonical

God it selfe they will not read publikely certayne Bookes of the Canonicall Scripture, as 10 the bookes of Moles : specially the foure last, Exodus, Leutieus, Numeri, and Denteronomie. which they say are all made disauthentique, and put out of vie by the comming of Christ: as not able to difference the difference betwixt the Morall and the Ceremonial Law. The bookes of the Prophets they allow of, but reade them not publikely in their Churches, for the fame reason : because they were but directers vnto Christ, and proper (as they say) to the Nation of the Iems. Onely the Booke of Pfalmes they have in great estimation, and fing and say them daily in their Churches. Of the New Testament they allow and reade all, except the Renelation: which therefore they reade not (though they allow it) because they understand it not, neither have the like occasion, to know the fulfilling of the Prophecies contayned within it, concerning especially the Apostacie of the Antichristian Church, as have the Westerne Churches. Notwithstanding, 40 they have had their Autobrifts of the Greeke Church, and may finde their ownefalling off, and the punishments for it by the Turkish invasion in the Prophecies of that Booke. Secondly, (which is the fountagine of the rest of all their corruptions both in Doctrine and

2. Traditions equallto the holy Scripture.

Church, and fo vnto them.

3. The Church to have foueraigne authoritie in inter. preting the Scriptures. 4. The holy Ghoft to proceed from the Father onely. .Christ not fole Mediator Saint Niceles

Images.

firming that they have the true and right Traditions, delivered by the Apostles to the Greeke Thirdly, that the Church (meaning the Greeke, and specially the Patriarch and his Synod, as the head of the reft) having a soueraigne Authoritie to interpret the Scriptures, and that all are bound to hold that Interpretation, as found and authentique. Fourthly, concerning the Divine nature and the three Persons, in the one substance of God,

Ceremonies) they hold with the Papists, that their Church Traditions are of equal authoritie

with the written Word of God. Wherein they preferre themselues before other Churches : af-

that the holy Ghoil proceedeth from the Father onely, and not from the Sonne.

Fiftly, about the office of Christ, they hold many foule errours, and the same almost as doth the Popish Church : namely, that hee is the sole Mediatour of redemption, but not of intercession. Their chiefe reason (if they bee talked withall) for defence of this errour, is that vnapt and foolish comparison, betwixt God, and a Monarch or Prince of this world, that must bee sued vnto by Mediatours about him : wherein they give speciall preferment to some aboue others, as to the bleffed Virgin whom they call Prochefte, or vindefiled, and Saint Nicolas, whom they call Scora his 300 Angels pomefaick, or the Speedy beiper, and fay, that hee hath three hundred Angels of the chiefelt appointed by God to attend vpon him. This hath brought them to an horrible excesse of Idolatrie, af- 60 ter the groffest and prophanest manner, giving vnto their Images all religious worthip of Prayer, Thankelgiuing, Offerings and Adoration, with proftrating and knocking their heads to the ground before them, as to God himfelfe. Which because they doe to the Picture, not to the portraiture of the Saint, they fay they worship not an Idoll, but the Saint in his Image, and so ofCHAP. I. Ruffe opinions of Saluation and Damnation. Abstinence, Marriage, 453

fend not God : forgetting the Commandement of God, that forbiddeth to make the Image or likenesse of any thing, for any Religious worship, or vie whatsoeuer. Their Church walls are verie full of them, richly hanged and fet foorth with Pearle and Stone, vpon the smooth Table, Though some also they have embossed, that slicke from the board almost an inch outwards. They call them Chudonodites, or their Miracle workers : and when they prouide them to fet up in their Churches, in no cale they may fay, that they have bought the Image, but Exchanged money for it.

Sixtly, for the meanes of Iudification, they agree with the Papifts, that it is not by Faith one. 6. Iudification ly apprehending Christ, but by their Workes also. And that Open operations, or the worke for the by workes.

10 worke fake, must needs please God. And therefore they are all in their numbers of Prayers. Fafts, Vowes, and Offerings to Saints, Almes deeds, Croffings and fuch like, and carrie their numbring Beads about with them continually, as well the Emperour and his Nobilitie, as the common people, not onely in the Church, but in all other publike places, specially at any set or solemne meeting, as in their Fasts, law Courts, common Consultations, entertaynment of Ambalfadours, and fuch like.

Secrethly, they say with the Papifts, that no man can be affured of his saluation, till the sen- 7. Saluation tence be passed at the day of Judgement.

Eightly, they vie auricular Confession, and thinke they are purged by the very action from 6 8. Auricular many finnes, as they confesse by name, and in particular to the Priest.

Ninthly, they hold three Sacraments, of Baptifme, the Lords Supper, and the last Anothing or 9. Three Sa-Unction. Yet concerning their Sacrament of extreame Vnction, they hold it not so necessarie craments, to faluation as they doe Baptisme, but thinke it a great curse and punishment of God, if any dye

Tenthly, they thinke there is a necessitie of Baptisme, and that all are condemned that dye that die wish without it.

Eleventh, they rebaptife as many Christians (not being of the Greeke Church) as they convert 11. Anabapto their Ruffe profession : because they are divided from the true Church, which is the Greeke, time.

Twelfth, they make a difference of Meates and Drinkes, accounting the vie of one to be more 12, Difference 30 holy then of another. And therefore in their fet Fasts they forbeare to cate flesh, and white of meates. meates (as wee call them) after the manner of the Popilh superstition : which they observe so firicily, and with such blinde denotion, as that they will rather die, then eate one bit of Flesh.

Egges or fuch like, for the health of their bodies in their extreame ficknesse. Thirteenth, they hold Marriage to bee vulawfull for all the Clergie men, except the Priests 13. Marriago onely, and for them also after the first Wife, as was sayd before. Neither doe they well allow of for some perit in Lay-men after the second marriage. Which is a pretence now vied against the Emperours sons valantall onely Brother, a childe of fixe yeeres old : who therefore is not Prayed for in their Churches, (as their manner is otherwise for the Princes bloud) because hee was borne of the fixt marriage, and fo not legitimate. This charge was given to the Priests by the Emperour himselfe, by procure-

40 ment of the Godones : who make him beleeve, that it is a good policie to turne away the liking of the people from the next successour.

Many other falle opinions they have in matter of Religion. But these are the chiefe, which they hold, partly by meanes of their traditions (which they have received from the Greeke Church) but specially by ignorance of the holy Scriptures. Which notwithstanding they have in the Polonian tongue, (that is all one with theirs fome few words excepted) yet few of them reade them with that godly care which they ought to doe : neither have they (if they would) Bookes sufficient of the old and new Testament for the common people, but of their Lyturgic onely, or Booke of common service, whereof there are great numbers. Which notwithflanding it is not to bee doubted, but that having the Word of God in some fort (though without the or-50 dinarie meanes to attaine to a true fenfe and vnderstanding of it) God hath also his number among

them. As may partly appeare by that which a Ruffe at Moske fayd in fecret to one of my Seruants, speaking against their Images and other superstitions : That God had given vnto England light to day, and might give it to morrow (if hee pleased) to them. As for any Inquintion or proceeding against men for matter of Religion, I could heare of Inquisition.

none : faue a few yeeres fince against one man and his wife, who were kept in a close Prison the space of eight and twentie yeeres, till they were over-growne into a deformed fashion, for their hayre, nayles, colour of count mance, and such like, and in the end were burned at Mosko, in a small House set on fire. The cause was kept secret, but like it was for some part of truth in matter of Religion : though the people were made to beleeue by the Priests and Friers, that they 60 held fome great and damnable Herefie.

He manner of making and folemnizing their Marriages, is different from the manner of o- Otthe manner ther Countries. The man (though hee neuer faw the woman before) is not permitted to of tolemnihaue any fight of her all the time of his wooing: which hee doth not by him felfe, but by his Marriages.

Mother

Mother or some other ancient woman of his kinne or acquaintance. When the liking is taken (as well by the Parents as by the parties themselves, for without the knowledge and consentor the Parents, the contract is not lawfull) the Fathers on both fides, or fuch as are to them in flead of Fathers, with their other chiefe friends, haue a meeting and conference about the dowrie, or rathers, with the commonly very large after the abilitie of the parents; so that you shall have a Market man (as they call them) give a thousand Rubbels, or more with his Daughter.

The manner

454

As for the man it is neuer required of him, nor standeth with their custome to make any joyn-The manner of indowment ter in recompence of the dowrie. But in case hee haue a Child by his Wife, shee enjoyeth a third deale after his deceale. If he have two Children by her or more, the is to have a courtefe more, at deale after his accesse. If he made two commencery net of mode, in the base where the difference of the husband. If the husband depart without life by his wife, here is returned 10 home to her friends without any thing at all, saue onely her dowrie: if the husband leave fo much behind him in goods. When the agreement is made concerning the downie, they figue Bonds one to the other, as well for the payment of the dowrie, as the performing of the Marie age by a certayne day. If the woman were neuer married before, her Father and friends are bound besides to assure her a Maiden. Which breedeth many brabbles and quarrels at Law, if the man take any conceit concerning the behaulour and honeftie of his wife,

Thus the contract being made, the parties begin to fend tokens the one to the other, the Woman first, then afterwards the Man, but yet see not one another till the Marriage bee solemnized. On the Eue before the marriage day, the Bride is carryed in a Collimage, or Coach, or in a Sled (if it bee winter) to the Bridegroomes house, with her marriage Apparell and Bed-ftead so with her, which they are to lye in. For this is ever provided by the Bride, and is commonly vorie faire, with much cost bestowed vpon it. Heere she is accompanied all that night by her Mother and other women : but not welcommed, nor once feene by the Bridegroome himfelfe.

Ceremonies in Marriages.

Ring.

Loafe.

When the time is come to have the marriage folemnized, the Bride hath put vpon hera kinde of Hood, made of fine Knit-worke or Lawne, that couereth her head, and all her body downe to the middle. And so accompanied with her friends, and the Bridegroome with his, they goe to Church all on Horsebacke, though the Church be neare hand, and themselues but of very meane degree. The words of contract and other ceremonies in folemnizing the Marriage, are much after the order, and with the same words that are vsed with vs : with a Ring also given to the Bride. Which being put on, and the words of contract pronounced: the Brides hand is delivered 30 into the hand of the Bridegroome, which standeth all this while on the one side of the Altarot Table, and the Bride on the other. So the marriage knot being knit by the Prieft, the Bride commeth to the Bridegroome (Randing at the end of the altar or table) and falleth downe at his feet, knocking her Head voon his Shooe, in token of her subjection and obedience. And the Bridegroome againe, casteth the lappe of his Gowne or vpper garment ouer the Bride, in token of his dutie to protect and cherish her ...

Then the Bridegroome and Bride, standing both together at the Tables end, commeth first the Father and the other friends of the Bride, and bow themselves downe low to the Bridegroome : and so likewise his friends bow themselves to the Bride, in token of affinitie and love euer after betwixt the two kindreds. And withall, the Father of the Bridegroome offereth to 40 the Priest a loafe of Bread, who delivereth it straight againe to the Father and other friends of the Bride, with attestation before God and their Idols, that hee deliner the downe wholly and truely at the day appointed, and hold loue euer after, one kindred with another. Whereupon they breake the Loafe into pieces, and eate of it, to testifie their true and fincere meanings, for performing of that charge, and thenceforth to become as graines of one Loafe, or menof

These ceremonies being ended, the Bridegroome taketh the Bride by the hand, and so they goe on together with their friends after them towards the Church porch. Where meet them certaine with pots and cups in their hands, with Mead and Ruffe Wine. Whereof the Bridegroome taketh first a Charke, or little cup full in his hand, and drinketh to the Bride : who opening her 50 Hood or Vale below, and putting the Cup to her mouth underneath it (for being leene of the Bridegroome) pledgeth him againe. Thus returning all together from the Church, the Bridegroome goeth not home to his owne, but to his Fathers house, and shee likewise to hers, where either entertayne their friends apart. At the entring into the Houle, they vie to fling Corne out of the windowes vpon the Bridegroome and Bride, in token of plentie and fruitfulnesse to bee

Silence:

When the Eucuing is come, the Bride is brought to the Bridegroomes Fathers house, and there lodgeth that night, with her Vayle or couer still ouer her head. All that night she may not speake one word (for that charge shee receiveth by tradition from her Mother, and other Matrons her friends) that the Bridegroome must neither heare, nor see her, till the day after the 60 marriage. Neither three dayes after, may she bee heard to speake, saue certaine few words at the Table in a fet forme, with great manners and recerence to the Bridegroome: If sheebehaue herfelfe otherwife, it is a great prejudice to her credit and life euer after: and will highly bee diffiked of the Bridegroome himfelte.

After the third day, they depart to their owne, and make a Feaft to both their friends together. The marriage day, and the whole time of their festivall, the Bridegroome hath the honour to be called Moloday Knez, or young Duke, and the Bride Moloday Knezar, or young Dutcheffe,

In living with their wives, they shew themselves to be but of a barbarous condition : vsing them as feruants, rather then wines. Except the Noble-women, which are, or feeme to bee of more estimation with their hushands, then the rest of meaner fort. They have this foule abuse, contrary to good order, and the Word of God it selfe, that vpon dislike of his wife, or other cause whatsoeuer, the man may goe into a Monasterie and shire himselfe a Frier, by pretence of deuotion : and so leave his wife to shift for her selfe so well as shee can-

"He other Ceremonies of their Church, are many in number : especially, the abuse about the figne of the Croffe, which they fet vp in their high wayes, in the tops of their Churches, Of the other and in enery doore of their houses, figuing themselves continually with it on their forcheads & Ceremonics breafts with great deuotion, as they will leeme by their out ward geiture. Which were leffe of or the Raffe fence, if they gaue not withall that religious reuerence and worthip which is due to Church.

The figne of God onely, and vsed the dumbe show, and signing of it instead of thanksgiving, and of all the Gossichow other duties which they owe vato God. When they rise in the morning, they goe commonly a consider our in the fight of some steeple that hath a Crosse on the top; and so bowing themselves towards other desocithe Croffe, figne themselues withall on their foreheads and breafts. And this is their thankigi- ons. uing to God for their nights reft, without any word speaking, except peraduenture they say, Affody Pomelny, ot Lord have mercie upon vi. When they fit downe to meat, and rife againe from it, the thankiguing to God, is the croffing of their foreheads and brefts. Except it be some few that adde peraduenture a word or two of some ordinary prayer, impertinent to that purpose. When they are to giue an oath for the deciding of any controuerfie at Law, they dee it by (wearing by the Croffe, and kiffing the feet of it, making it as God, whose name onely is to bee vied in fuch triall of Iustice. When they enter into any house (where ever there is an Idoll hanging on the wall) they figne themselues with the Croffe, and bow themselues to it. When they begin any worke, bee it little or much, they arme themselues first with the figne of the Croffe. 30 And this commonly is all their prayer to God for good speed of their businesse. And thus they ferue God with croffes, after a croffe and vaine manner: not with franding what the Croffe of

Turkes in comparison of themselues (and so they will say) because they bow not themselues when they meet with the Croffe, nor figne themselves with it, as the Ruffe manner is, They have Holy-water in like vie and estimation, as the Popish Church hath, But heerein Holy-water, they exceed them, in that they doe not onely hollow their Holy-water (tockes, and tubsfull of water, but all the Rivers of the Countrey once every yeere. At Marke it is done with great Hallowing of water, but an inclinate with Country once easily yette. At Onesign it is none with great Hallowi pompe and folemnitie: the Emperour himselfe being present at it with all his Nobilitie, mar-Ricers, ching through the streets towards the Riuer of Monkey, in manner of Procession, in this order

Christis, nor the power of it. And yet they thinke all strangers Christians, to be no better then

40 as followeth. First goe two Deacons, with banners in their hands, the one of Precheffe (or our Lady) the other of Saint Michael fighting with his Dragon. Then follow after the rest of the Deacons, and the Prices of Merko, two and two in a ranke, with Coaps on their backes, and their Idols at their brefts, carried with girdles or flings, made fast about their necks, Next the Priests come their Bishops in their Pontificalibus : then the Friers, Monkes, and Abbots : and after the Patriarches in very tich attire, with a Ball or Sphere on the top of his Myter, to fignific his voluerfalitie ouer that Church. Last commeth the Emperour with all his Nobilitie. The whole traine is of a mile long, or more. When they are come to the Riuer, a great hole is made in the Ice, where the Market is kept of a road and a halfe broad, with a stage round about it to keepe off the presse. Then beginneth the Patriarch to say certaine prayers, and conjureth to the Deuill to come out of the water; and so casting in Sak, and centing it with Frankincenie, maketh the whole River to become Holy-water. The morning before, all the people of Make

vic to make croffes of chaulke ouer cuery doore and window of their houses; least the Deuill being conjured out of the water, should flye into their houses.

When the Ceremonies are ended you shalse the black Guard of the Emperors house, & then the rest of the Towne, with their pailes and buckers to take off the hallowed water for drinke, and other vies. You shall also see the women dip in their children over head and cares, and many men and women leape into it, fome naked, fome with their clothes on, when fome man would thinke his finger would freeze off, if he should but dip it into the water. When the men have done, they bring their horfe to the River to drinke of the fanctified water, and so make 60 them as holy as a horse. Their set day for the solemne action of hallowing their Rivers, is that we call Twelftb-day. The like is done by other Bishops in all parts of the Realme.

Their manner is allo to give it to their ficke in their greatest extremitie: thinking that it will Inter manner is anoto guest to their to God. Whereby they kill many, through their vnreaeither recouer them, or fanctifie them to God. Whereby they kill many, through their vnreafonable superstittion, as did the Lord Borris his onely some, at my being at the Aleke: whom his water

Gruell blind-

he killed (as was faid by the Phylitians) by powring into him cold Holy-water, and prefer-Gruellblind-neife of uper- ting him naked into the Church, to their Saint Bafiles, in the cold of Winter in an extremitie of fickeneffe.

They have an Image of Christ, which they call Normehi, (which fignifieth as much as Made without hands) for so their Priests, and superstition withall perswadeth them it was. This in their Proceffions they carry about with them on high vpon a pole, enclosed within a Pixe, made like a Lanthorne, and doe reuerence to it as to a great myflerie.

Brewing with

At every brewing their manner is likewife to bring a dish of their woort to the Priest within the Church; which being hollowed by him, is powred into the brewing, and so gueth it fush a vertue, as when they drinke of it they are feldome fober. The like they doe with the first fruits of their Corne in Harueft.

Palm-funday.

They have another Ceremony on Palm-funday, of ancient tradition : what time the Patriarch rideth through the Mosks, the Emperour himselfe holding his horse bridle, and the people crying Hofama, and spreading their vpper garments under his horse feet. The Emperour hath of the Patriarch for his good service of that day two hundred Rubbels of standing penfion. Another pageant they have much like to this, the weeke before the Natinitie of Christ. when euery Bishop in his Cathedrall Church, setteth forth a shew of the three children in the When earry mine is a season of the control of the c der, by the Chaldeans (as they call them) that run about the Towne all the twelue dayes, dif- 10 guifed in their players coats, and make much good foort for the honor of the Bifhops pageant. At the Moske, the Emperour himselfe, and the Empresse neuer faile to be at it, though it be bat the same matter plaid enery yeere, without any new invention at all.

Fafts.

Befides their fafts on Wednesdayes, and Fridayes throughout the whole yeere, (the one because they say Christ was fold on the Wednesday, the other because he suffered on the Friday) they have foure great Fasts or Lents every yeere. The first, (which they call their great Lent) is at the same time with ours. The second, about Mid-summer. The third, in Haruest time, The fourth, about Hallontide : which they keepe not of pollicie, but of meere superstition, Intietr great Lent, for the first weeke, they eat nothing but bread and falt, and drinke nothing but water, neither meddle with any matter of their vocation, but intend their firining and falling on 10 ly. They have also three Vigils, or Wakes in their great Lent, which they call Stoiania and the last Friday their great Vigil, as they call it. What time the whole Parish must be present in the Church, and watch from nine a clocke in the Euening, till fixe in the morning, all the while standing, saue when they fall downe and knocke their heads to their Idols, which must bee an hundred and seucntie times just through the whole night.

Vigils. Burialls.

About their burialls alfo, they have many superstitious and prophane Ceremonies : as putting within the finger of the corps, a letter to Saint Nicolas : whom they make their chiefe mediatour, and as it were the porter of heaven gates, as the Papiffs doe their Pater.

In Winter time, when all is conered with snow, and the ground so hard frozen, as that no spade nor pick-axe can enter their manner is not to bury their dead, but to keepe the bodies (fo ma- 40 ny as die all the Winter time) in an house, in the suburbs, or out-parts of the Towne, which they call Bobsedom, that is, Gods house: where the dead bodies are pyled up together, like billets on a woodftacke, ashard with the frost as a verie stone, till the Spring-tide come, and resolueth the frost : what time eueric man taketh his dead friend, and committeth him to the ground,

Monehs minds

They have befides their yeeres and moneths mindes for their friends departed. What time they have prayers faid ouer the grave by the Prieft : who hath a peny ordinary for his paines. When any dieth, they have ordinary women mourners, that come to lament for the dead partie : and frand howling ouer the body after a prophane and heathenish manner (sometimes in the house, sometimes bringing the body into the back-fide, asking him what he wanted, and 50 what he meant to die. They bury their dead, as the party vied to goe, with coat, hofe, bootts, hat, and the rest of his apparell.

Many other vaine and superstitious Ceremonies they have, which were long and tedious to report. By these it may appeare how farre they are fallen from the true knowledge, and practice of Christian Religion, having exchanged the Word of God for their vaine Traditions, and brought all to externall and ridiculous Ceremonics, without any regard of Spirit and Truth, which God requireth in his true worship.

Chap. 26. Of the Empe. rours domeflicke, or pri-

The Emperours private behaviour, so much as may be, or is meet to bee knowne, is after this manner. Hee riseth commonly about source a clock in the morning. After his appar- so relling and washing, in commeth his ghoftly Father, or Priest of his chamber, which is named in their tongue, Otetz Duhouna, with his Crosse in his hand, where with he blesseth him, laying it first on his forchead, then voon his cheekes, or fides of his face and then offereth him the end of it to kiffe. This done, the Clerke of the Croffe (called Chreib) Deyack Profery) bringeth

into his Chamber, a painted Image, representing the Saint for that day; for enery day with into his Champer, a painted image, representing an admit of that day; This hee placeth among the His private them hath his femeral! Saint, as it were the Patrone for that day. This hee placeth among the His private rest of his Image Gods, wherewithall his Chamber is decked, as thicke almost as the wall can Prayer. beare . with Lampes and Waxe-candles burning before them. They are very coftly and gorgeously decked with Pearle and Precious Stone. This Image being placed before him, the Emperour beginneth to croffe himselfe after the Ruffe manner, hrst, on the fore-head, then on both tides of his brest, with Aspody Powelny, Powelny mena bospody, facroy mena grasnick Sybodestina: which is as much to say, as, Helpe me, O Lord my God, Lord comfort me, defend and keepe me a Sinner from doing enil, To. This he directeth towards the Image, or Saint for that day, whom hee Io nameth in his Prayer, together with our Lady (whom they call Procheste) Saint Nicholas, or fome other, to whom he beareth most denotion, bowing himselfe prostrate water them, with knocking his head to the very ground. Thus he continueth the space of a quarter of an houre of

Then commeth againe the Ghostly Father or Chamber Priest, with a Silver Bowle full of Holy-water, which they call in Ruffe, Sweta Voda, and a sprinkle of Basill (as they call it) in his hand : and fo all to befprinkleth first the Image Gods, and then the Emperour. This Holy-water is brought fresh euery day from the Monasteries, farre and neere sent to the Emperour from the Abbot or Prior, in the name of the Saint, that is Patrone of that Monastery, as a speciall token of good will from him.

These Denotions being ended, he sendeth into the Empresse, to aske whether she hath rested in health, &c., And after a little pawfes goeth himfelfe to falute her in a middle Roome betwixt both their chambers. The Emprefielyeth a-part from him, and keepeth not one chamber, nor Table with the Emperour ordinarily, faue vpon the Eue of their Lents, or common Fafts: what time she is his ordinary Ghest at Bed and Boord. After their meeting in the morning, they goe together to their private Church or Chappell, where is faid or fung a morning Service (called Zautrana) of an houre long or thereabouts. From the Church hee returneth home, and fitteth The Emperour him downe in a great chamber, to be seene and saluted by his Nobilitie, such as are in fauour a- giuethprebout the Court. It he have to fay to any of them, or they to him, then is the time. And this is lence every ordinary, except his health, or some other occasion alter the custome.

30 About nine in the morning, he goeth to another Church within his Caftle : where is fung by Priests, and Choristers, the high Service (called Obeadna, or Complin) which commonly lasteth two houres: the Emperour in the meane-time talking commonly with some of his Councell, Nobilitie, or Captaynes, which haue to fay to him, or he to them. And the Councell likewife conferre together among themselves, as if they were in their Councel-house. This ended, he returneth home, and recreateth himselfe vntill it be Dinner time.

taffed by the Cooke, in the presence of the high Sceward, or his Deputie. And so is received by Serule athis

He is ferued at his Table on this manner. First, enery Dish (as it is delinered at the Dresser) is The Emperor the Gentlemen-wayters (called Shifter) and by them carryed up to the Emperours Table, the Table.

high Steward or his Deputie going before. There it is received by the Sewer (called Eraffrey) 40 who gueth a tafte of enery Dish to the Tafter, and so placeth it before the Emperour. The number of his Dilhes for his ordinary Service, is about feventy: dreffed fomewhat grofly, with much Garlike, and Salt, much after the Duich manner. When hee exceedeth vpon some occasion of the day, orentertainment of some Ambassadour, hee hath many more Dislies. The Service is fent up by two Dishes at a time, or three at the most, that he may eate it warme, first the baked, then the Roass meats, and last the Broths. In his dining chamber is another Table : where sit the chiefe of his Nobility that are about his Court, and his Ghoffly Father, or Chapleine. On the one fide of the chamber flandeth a Cubboord, or Table of Plate, very faire and rich, with a great Cifterne of Copper by it, full of Ice and Snow, wherein fland the Pots that ferue for that meale. The Tafter holdeth the cup that he drinketh in all Dinner time, and delivereth it voto him with

a fay, when he calleth for it. The manner is to make many Diffnes out of the Service after it is let on the Table, and to fend them to fich Noblemen and Officers as the Emperour liketh best.

After dinner he layeth him down to rest, where commonly he taketh three houres sleep, except he employ one of the houres to bathing, or boxing. And this cultome for fleeping after Dinner, is an ordinary matter with him, as withall the Ruffer. After his fleep, he goeth to Even-long (called Vectorias) and thence returning, for the most part recreatesh himselfe with the Empresse till Supper time, with Iesters and Dwarfes, men and women, that tumble before him, and sing many Songs after the Ruffe manner. This is his common recreation betwixt meales that he most delights in. One other speciall recreation, is the fight with wild Beares, which are caught in Pits Bearebying.

60 or Nets, and are kept in barred Cages for that purpole, against the Emperour bee disposed to see the pastime. The fight with the Beare is on this fort. The man is turned into a Circle walled round about, where hee is to quite himfelfe fo well as hee can: for there is no way to flye out. When the Beare is turned loole, he commeth vpon him with open mouth ; if at the first push he miffe his ayme, to that the Beare come within him, hee is in great danger. But the wilde Beare

being very scarce, hath this quality, that gineth advantage to the Hunter. His manner is, when he affayleth a man, to rife vp right on his two hinder-legs, and fo to come roaring with open. mouth vpon him. And if the Hunter then can puffi right into the very breft of him betwixt his fore-legs (as commonly he will not miffe) refting the other end of their Boare-! peare at the fide of his foot, and so keeping the Pike still towards the face of the Beare, hee speedeth him commonly at one blow. But many times thefe Hunters come short, and are either slaine, or milerably torne with the Teeth and Talents of the fierce Beaft. If the partie quite himselfe well in this fight with the Beare, he is carried to drinke at the Emperours Seller doore: where he drinketh himselfe drunke for the honour of Hespodare. And this is his Reward for aduenturing his life, for the Emperours pleasure. To maintay ne this passime, the Emperour hath certayne Huntimen that are appointed for that purpose to take the wild Beare. This is his recreation commonly on the holy dayes. Sometimes hee spendeth his time in looking vpon his Gold-smithes and Iewellers, Taylors, Embroyderers, Painters, and such like, and so goeth to his Supper. When in draweth towards Bed-time, his Priest saith certayne Prayers : and then the Emperour blesseth and croffeth hunfelte, as in the morning for a quarter of an houre or thereabouts, and so goeth to

Emperour Theodore deferibed.

The Emperour that now is (called Theodore Inanowich) is for his person of a meane stature. fome-what low and groffe, of a fallow complexion, and inclining to the Dropfie, Hawke-noted uniteady in his pafe, by reason of some weaknesse of his limmes, heavy and vnactive, yet commonly smiling almost to a laughter. For qualitie otherwise, simple and slow witted, but very 20 gentle, and of an easienature, quiet, mercitull, of no martiall disposition, nor greatly apt to matter of Policie, very Superstitious, and infinite that way. Besides his private Devotions at home, he goeth euery weeke commonly on Pilgrimage, to some Monasterie or other that is neerest hand. He is of whirtie foure yeeres old, or thereabouts, and hath reigned almost the space of fix yeeres.

houthold Of-

Horic.

Pilgrimage.

He chiefe Officers of the Emperours houshold, are these which follow. The first, is the Office of the Boiaren Coneshona, or Master of the Horse. Which contayneth no more then is rors private, or expressed by the name, that is, to be Over-feer of the Horse , and not Magister Equitum, or Malter of the Horsemen. For he appointeth other for that Service, as occasion doth require (as 20 before was faid.) He that beareth that Office at this time, is Borris Federowich Godonoe, Brother Mafter of the to the Empresse. Of Horse for Service in his Warres (besides other for his ordinary vies) he hath to the number of 10000, which are kept about Mosko.

The Lord Steward. The Lord Treasurer. Comptroller. Harbengers.

The next is the Lord Steward of his houshold at this time, one Gregorie Vasilowich Godonoe. The third, is his Treasurer, that keepeth all his Moneyes, Iewels, Plate, &c. now called Stepas Vasilowich Godonoe. The fourth, his Comptroller, now Andreas Petrowich Clesinine. The fift, his Chamberlaine. He that attendeth that Office at this time, is called Eftoma Bifabroza Paffeinif-Chamberlaine char. The fixt, his Tafters, now Theodore Alexandrousch, and Inan Vafilowich Godonoe. The feuenth, his Harbengers, which are three Noblemen, and divers other Gentlemen that do the Office vnder them. These are his ordinary Officers, and Offices of the chiefest account.

Of Gentlemen, beside that wait about his Chamber, and Person (called Shilfer Strapfer) there the Chamber. are two hundred, all Noblemens Sonnes. His ordinary Guard is two thousand Hagbutters, ready with their Peeces charged, and their Match lighted, with other necessary Furniture, continually day and night: which come not within the house, but waite without in the Court or Yard where the Emperour is abiding. In night time there lodgeth next to his Bed-chamber, the chiefe Chamberlaine, with one or two more of best trust about him. A second chamber off, there lodge fix other of like account, for their trust and faithfulnesse. In the third chamber lye certayne young Gentlemen, of these two hundred, called Shilfer Strapfer, that take their turne by forties enery night. There are Groomes besides that watch in their course, and lye at enery gate and doore of the Court, called Estopnick.

Groomes.

The Hag-butters or Gunners, whereof there are two thousand (as was said before) watch about the Emperours Lodging, or Bed-chamber, by courfe two hundred and fiftie enery night, and two hundred and fiftie more in the Court-yard, and about the Treasure-house. His Court or house at the Mosko, is made Castle-wise, walled about with great store of faire Ordnance planted vpon the wall, and contayneth a great breadth of ground within it, with many dwelling houses. Which are appointed for such as are knowne to be sure, and trustic to the Emperour.

Chep. 28.
Or the private behaviour and qualitie of the Ruffe people, may partly be understood by that which hath beene sayd, concerning the publike State and viage of the Country. As touwhich hath beene hayd, concerning the publice State and viage of the Country, as two-qualines of the fing the natural lable of their bodies, they are for the most part of a large fize, and very of leftly bodies accounting it a grace to be formewhat große and burley, and therefore they non-Conflimion rith and spread their Beards, to have them long and broad. But for the most part they are very of their bodies vinweldy, and vinactive withall. Which may bee thought to come partly of the Climate, and the numbneffe which they get by the cold in Winter, and partly of their Dyet that flandeth

CHAP. I. Russian drinking, bathing, extremes; womens painting; Attire.

most of Roots, Onions, Garlike, Cabbage, and such like things that breed grosse humours, which they vie to eate alone, and with their other meates.

Their Dyet is rather much, then curious. At their Meales they beginne commonly with a Their Dyet. Chark . or imall cup of Aqua-vita (which they call Ruffe Wine) and then drinke not till towards the end of their Meales, taking it in largely, and all together with kiffing one another at Drinking and euery pledge. And therefore after Dinner there is no talking with them, but euery man goeth kiffing. to his bench to take his after-noones fleepe, which is as ordinary with them as their nights reft. Sleeping. When they exceed, and have varietie of Difhes, the first are their baked meates (for roast meats they vie little) and then their Broaths or Pottage. To drinke drunke, is an ordinary matter

10 with them euery day in the Weeke. Their common Drinke is Mesd, the poorerfort vie water, and a thin Drinke called Qualle, which is nothing elfe (as wee fay) but water turned out of bis wits, with a little Bran meathed with it.

This Dyet would breed in them many Difeafes, but that they wie Bath-floues, or Hot-hou- Bath floues, fes in stead of all Physicke, commonly twice or thrice enery Weeke. All the Winter time, and almost the whole Summer, they heate their Peaches, which are made like the Germane Bathfloues, and their Poilsds like Quens, that so warme the House, that a stranger at the first shall hardly like of it. These two extremities, specially in the Winter of heate within their Houses, and of extreame cold without, together with their Dyet, maketh them of a darke and fallow complexion, their skinnes being tanned and parched both with cold and with heat: specially 20 the women, that for the greater part are of farre worfe complexions then the men. Whereof the

cause I take to be their keeping within the Hot-houses, and busying themselues about the heating, and ving of their Bath-floves and Peaches.

The Ruffe because that he is vied to both these extremities of heate and of cold, can beare them both a great deale more patiently then strangers can doe. You shall see them sometimes (to Extremises, feafon their bodies) come out of their Bath-floues all on a froth, and fuming as hote almost as a Pigge at a Spit, and prefently to leape into the River starke naked, or to powre cold water all ouer their bodies, and that in the coldeft of all the Winter time. The women to mend the bad hue of their skinnes, v'e to paint their faces with white and redde colours, so visibly that every Women daw. man may perceive it. Which is made no matter, because it is common, and liked well by their bers.

30 Hisbands: who make their Wives and Daughters an ordinary allowance to buy them colours to paint their faces with all, and delighe the melues much to fee them of foule women to become such faire Images. This parcheth the skinne, and helpeth to deforme them when their pain-

They apparell themselues after the Greeke manner. The Noblemans attyre is on this fashion. First, a Tassis, or little night cap on his head, that concreth little more then his crowne, commonsly very rich, wrought of Silke and Gold Thread, and let with Pearle and Precious Stone. His The Noblehead he keepeth hauen close to the very skin, except hebe in fome diffleasure with the Emper-mans anyte, our. Then he suffereth his haire to grow and hang downe vpon his shoulders, couering his face as

vgly and deformedly as he can. Ouer the Taffia he weareth a wide Cap of blacke Foxe (which 40 they account for the best Furre) with a Trara, or long Bonnet put within it, standing up like a Persian or Babyloman Hat, About his necke (which is seene all bare) is a Coller set with Pearle and Precious Stone, about three or foure-fingers broad. Next ouer his shirt (which is curiously wrought, because hee strippeth himselfe into it in the Sommer-time, while hee is within the house) is a Shepon, or light Garment of Sill e made downe to the knees, buttoned before; and then a Cafran or a ciole Coat buttoned, and girt to him with a Perfan Girdle, whereat he hangs his Kniues and Spoone. This commonly is of Cloth of Gold, and hangeth downe as low as his ankles. O ser that he weateth a loofe Garment of some rich Silke, furred and faced about with some Gold Lace, called a Ferrie. Another over that of Chamblet, or like Stuffe called an Alkeben, seewed and hanging low, and the Cape commonly brooched, and set all with Pearle. When so he goeth abroad, he catteth ouer all thefe (which are but flerght, though they feeme to be many)

another Garment called an Honoraikes, like to the Alkaben, lave that it is made without a Coller for the necke. And this is commonly of fine Cloth, or Camels haire. His Buskins (which hee weareth in itead of Hole, with Linnen Folles under them in itead of Boot-hole) are made of a Terstan Leather called Saphian, Embroydered with Pearle. His viper flocks commonly are of Cloth of Gold. When he goeth abroad, hee mounteth on Horfe-backe, though it bee but to the next doore; which is the manner also of the Boiarsker, or Gentlemen.

ext doore; which is the mainter and of the barne fallion, but different in Stuffe; and yet. The Gentlehe will bane his (after or Violet coat fometimes of Cloth of Gold, the reft of Cloth or Silke.

Vhe Noble woman (called Chyna Baisessea) weareth on her head, fifth a Caull of some for The Noble. 60 Silke (which is commonly called Red) and ouer it a Fruntlet, called Obrofa, of white colour, woman ar-Quer that her Cap (made after the Coife-fashion of Cloth of Gold) called Shaple Zemphie, tie. edged with some rich Furre, and set with Pearle and Stone. Though they have of late begun to diffaine Embroydering with Pearle about their Caps, because the Diacks, and some Merchants Wines have taken up the fashion. In their cares they weare Earenings (which they call

To the Reader.

Thought good here to give an account of my course. Having spent much time in that other World. To listle known to This (Tartatia and China) that the parts least known might be made best known: I have comme neerer home, to Ru'lia, and her neighbours, the neerer, or Chrim Tartars, the Samoveds, and others; whereof Doctor Fletchers Story being fo elaborate (where, though the centre bee Ruffia, yet his circumference is more generall) and by men indicious which have in those parts enioyedmost bonourable employment, and exactest intelligence, commended; I have given him the first

nace. And if some terme bee mollified, or some few things omitted, it is not to defraud Thee of the Historie (which for substance is whole, as by perusalt is found) but not to destand our industrious Coun-Historic worth our propance to wood, on of you again to ground the see feeke accasion of undermi-trymen in their merchandizing mysterie, wherein some perhaps would hence seeke accasion of undermiming. For like cause I have given the next place to Captaine Edge , (the one our gowned Generall by Land , the other in his generall Historic also by Sea) as described by his ten receas Voyages , and his other Merits. As for the question of Willoughbies Land, I list not to dispute it but I stinke, nekher Hollander (as is also confessed by the French Booke , called, The Historie of Spitsberghe a on the 2 H. G. A. ... Dutch behalfe) nor any other haue found any fuch Lands as bis Stern describes, but forme part of those communication which now with a generall name wee call, Greenland (how focuer the makers of Maps and Globes may ferden on the create Lands and Ilands at pleasure, especially in whomme places) and the first setted, ordinary, and or leager, sayd.

20 derly Voyages for the Whale-killing, and the most for discoverie in those parts have been made by the Hesting way English, their gaynes awakening the Hollander to that enterprise, and that also (as elsewhere in the que mustante World) by English guides. That which I most grieve at in this contention, is the detention of further niers Nontiroudiscoursy to the Pole and beyond (where it is not likely to be colder then here, and at the Artine circle: 72 degree out as in the Red Sea, Ormus, and the Countrey about Ballara on this side the Tropike, is found greater can Eris. beat then under the Line it felfe) the defire of gayne enery where can jung debate, and confequently losse 72 in Sir Hugh of the best gaine both in Earth and Heanen. Merchants might get the World, and gine ve the World Willoughbirs better, if Charitie were their Needle; Grace, their Compas, Heanen their Hauen, and if they would Booke penhaps the their beiche he also wise the Sunan of Richard and their beiche he also wise the Sunan of Richard and their beiches better, if Chattle wareteen Account of Righteoulnelle in the Scripture-aftrolabe, and foun- for 17-their fidong their depth by a Leading Faith, and not by a Leadden bottomleffe Couetoulneffe : that is, if gure of 7, and

Sargee) of two Inches or more compasse, the matter of Gold fet with Rubies , or Saphires, or fome like Precious Stone. In Sommer they goe often with Kerchiefs of fine white Lawne, or Cambricke, fastned under the chinne, with two long Tassels pendent. The Kerchiefe sported and fet thicke with rich Pearle. When they ride or goe abroad in raynie' weather, they were white Hats with coloured bands (called Stapa Zempskey.) About their neckes they weare Collers of three or foure-fingers broad, fet with rich Pearle and Precious Stone. Their vpper Garment is a loofe Gowine called Opolhen, commonly of Scarlet, with wide loofe fleeues, hanging downe to the ground buttened before with great Gold Buttons, or at least Siluer and gilt, nigh downe to the ground buttened octors with great Gong anatoms, or a transfer and greet, mgn as bigge as a Wal-nut. Which hath hanging out it faffined voder the Cap, a large broad Cape of some rich Furre, that hangeth downe almost to the middle of their backes. Next wader the 10 transfer shows the statement of the Opoiken or vpper Garment, they weare another called a Leanich that is made chose before with great wide fleques, the cuffe or halfe fleque vp to the elbowes, commonly of Cloth of Gold: and under that a Ferris Zemskey, which hangeth loofe buttoned throughout to the very foot, On the hand wrests they weare very faire Bracelets, about two fingers broad of Pearle and Precious Stone. They goe all in Buskins of White, Yellow, Blue, or some other coloured Leather, em-

broydered with Pearle. This is the attyre of the Noble-woman of Ruffie, when shee maketh

the best shew of herselfe. The Gentlewomans apparell may differ in the Stuffe. but is all one for the making or fashion. The Moulichs

As for the poore Monfiek and his Wife they goe poorely clad. The man with his Odnorates, or loofe Gowne to the Imall of the legge, tyed together with a Lace before, of course white a or blue cloth, with some Shabe or long Wast-coat of Furre, or of Sheep-skinne vnder it, and his firred Cap, and Buskins. The poorer fort of them haue their Odnoratkey, or upper Garment, made of Cowes haire. This is their Winter Habit. In the Sommer time, commonly they weare nothing but their shirts on their backes, and Buskins on their legs. The woman goeth in a med or blue Gowne, when she maketh the best shew, and with some warme Shube of Furre vnder it in the Winter time. But in the Sommer, nothing but two shirts (for so they call them) oneouer the other, whether they be within doores, or without. On their heads, they weare Cans of some coloured Stuffe, many of Veluet, or of Cloth of Gold : but for the most part Kerchiefes. Without Earings of Siluer or some other Metall, and her Crosse about her neck, you shall see no Russe woman, be shee Wife, or Maide.

As touching their behaulour, and qualitie, otherwise, they are of reasonable capacities, if 30 they had those meanes that some other Nations have to trayne up their wits in good Nurture. and Learning. Which they might borrow of the Polonians, and other their Neighbours, but that they refuse it of a very selfe-pride, as accounting their owne fashions to be farre the best. Partly alfo (as I faid before) for that their manner of bringing vp (void of all good Learning, and Civille behaulour) is thought by their Gouernours most agreeable to that State, and their manner of Gouernment. This causeth the Emperours to bee very wary for excluding of all Peregninitie, that might alter their fashions. Which were lesse to bee disliked, if it set not a print into the very minds of his people. For as themselves are very hardly and cruelly dealt with all by their chiefe Magistrates, and other Superiours, so are they as cruell one against another, specially over 40 their inferiours, and fuch as are vinder them. So that the baseft and wretchedelt (bristianoe (as they call him) that stoopeth and croucheth like a Dogge to the Gentleman, and licketh up the Cruelicofthe dust that lyeth at his feet, is an intollerable Tyrant, where hee hath the aduantage. By this Ruffe people. meanes the whole Countrey is filled with Rapine, and Murder. They make no account of the life of a man. You shall have a man robbed sometime in the very streets of their Townes, if he goe late in the Euening; and yet no man to come forth out of his doores to refue him, though he heare him cry out. I will not speake of the strangenesse of the Murders, and other cuelities committed among them, that would fearfly be believed to be done among men, specially such as professe themselves Christians.

The number of their vagrant and begging poore is almost infinite: that are so pinched with 50 Famine and extreame need, as that they begge after a violent and desperate manner, with Gine me and cut me, Gine me and kill me; and such like Phrases. And yet it may be doubted whether is the greater, the Crueltie or Intemperancie that is yied in that Countrey. I will not speake of Intemperancy. it, because it is so foule and not to be named. The whole Countrey overfloweth with all sinne of that kind. And no maruell, as having no Law to restraine Whoredomes, Adulteries, and like vncleannesse of life.

As for the truth of his word, as some say, the Ruffe neither beleeveth any thing that another man speaketh, nor speaketh any thing himselfe worthy to bee beleeved. These qualities make them very odious to all their Neighbours, specially to the Tartars, that account themselves to be honest and just, in comparison of the Russe. It is supposed by some that doe well consider of 69 the State of both Countries, that the offence they take at the Ruffe Gouernment, and their manner of behaulour, hath beene a great cause to keepe the Tartar still Heathenish, and to milike as he doth of the Christian profession.

Silver by a Dutchman (Michael Mercator, Nephew to Gerardus) many yeeres before Scouten or Maire intended that Voyage. As for Nova Zemla by Stephen Burrough, and others, long before disconered, they also have given new names, which I envie not: onely I feare a væ soli, and hate intratitude both ours and theirs. But too much of this. Next to this more generall Discourse shall follow the Dutch Northerne Voyages, and the English North-easterne: after which wee will take a more complementall leave of that Continent, and from thence visite the Northerly and North-westerne Discour. ries ; at once hunting for a New World and a New passage to This.

CHAP. II.

A briefe Discouerie of the Northerne Discoueries of Seas, Coasts, and Conntries, delinered in order as they were hopefully begunne, and have ever fince happily beene consinued by the fingular industrie and charge of the Wor-Thipfull Society of Mulcouia Merchants of London, with the ten severall Voyages of Captaine THOMAS EDGE the Authour

Greenland first discoursed by Sir HVGH WILLOVGHEIL: the Voyages of FROBISH'ER, PET and IACKMAN, DAVIS, the Dutch; First Morfe and Whale-killing, with further Disconeries.

W.Gemeticensis

He Northerne parts of the World haue euer beene held to be Officina Continue of velut Vacina Nationim, Natures Shop and Store-house of Men, better furnished then any other part of the Earth, and from whence those notable Inundations came first of the Cymbrians and Tensons, in the time of the antient Roman; and secondly of the Gothes and Vandals under Assila, to the confusion of things both Diuine and Humane in all the Southerne parts of Europe, as farre as Barba-

rifme could preuaile against Civilitie and Religion. For remedie whereof the Townes alongst the Baltick Sea entred into a confederacy under the names of the Hars Townes, and undertooke the keeping of those Northerne people, and the securing of these Southerne Kingdomes from any the like ouerflowings, vpon such Priniledges and Immunities as were granted and agreed vnto them by all the Southerne Princes, and according to such Lawes as were made and prouided for the maintenance and strength of the faid Hans Townes , amongst which the supreme and fundamentall Lawe was that none of these Nations so secured should have trade or commerce in any parts beyond the Baltike Seas, to the end the barbarous people might not bee enabled thereby to practife or moue against the Hans Townes: which was the cause together also with the extremitie of cold, that those Northerne Seas were neuer looked vnto vntill the yeere 1553. At which time the trade of this Kingdome waxing cold and in decay, and the Merchants incited with the fame of the great masse of riches which the Portugals and Spaniards brought home yeerely from both the Indies, entred into a resolution, not with standing the prohibition of the Hans Law to discouer the Northerne Seas, which so long had beene frozen and Cathay. See La. that vp; and to fee whether they could not affoord a passage to Cathay and the East Indies, and 40, 1. of this accordingly prouided three ships, and fent them forth under the command of Sir Hagh Willowsh whole Voyage. bie, Knight, who embarqued him selfe in a ship called, the Bona Esperança, Admirall of that Voyage, with Richard Chancellor Captaine of the Edward Bonanemure, together with a third ship, called the Bona Confidentia. These three ships falling downe from Rateliffe, the tenth of May in the foresaid yeere went on their Voyage, and proceeding as farre as the Cape of Norway, they were seuered by a tempest. Chancellor after he had stayed at Ward-house seuen dayes, expe-Sting the Admirall and the other ships, according to a former appointment upon any such cafualtie, and hearing nothing of them, went on, and discouered the Bay of Saint Nicolas, and

fetled a trade there, which hath continued to these times. tude, the Land Rands in 77.

Sir Hugh Willomebbie was driven to the height of 72. * where heefell upon an Iland, now knowne by the name of Willowgbbie Land, and lieth from Sinam (vpon the Continent of Nor- 60 way East and by North an hundred and fixtie leagues or thereabouts, from thence he went North and North-west, and within eight dayes after he tell upon a Land which lay West South-west, and East North-east, betweene 74. and 75. degrees of latitude, and plying Westward along by

CHAP.2. S.I. Greenland discouered by Sir H. Willoughbie. Borough, &c. 462

the Land, he was driven by the wind to put to Sea againe, vntill the wind came about. Then they made towards the Land againe, and bare with it, but finding that place vnfit for landing, they haled out againe, running along the Land fixteene leagues North-west, where they found a faire Bay, went on Land and found the place inhabited. From thence they put to Sea againe. runne alongst the coast for fortie leagues together, till at length they came to an ancior within two leagues of the shoare, where they landed, and found two or three good Harbours.

Afterwards they entred into the Hauen which ranne vp into the Maine a- Greenland discouered by Sir Hueb bout two leagues, where they remained for the space of a weeke vpon the willaughbie. This Voyage was writmaine Land. They found Beares, great Deere, Foxes, and other beafts. They tenby Sir H. will, and found in his To fent out three men three dayes journey to the South-west, and three others also thip. In lanuarie after he was aliue, lent out three men three dayes sourney to the sourn-wert, and three others also
appeares by a Will of Gab. Will.
full Weft, all which returned after diuers dayes trauelling, and found no people
his kinfinan, lab/cribed by Sir Hug. nor any likelihood of habitation. And this is that Land which now is called 19/floughbie which Will I now have. Greenland, or King lames his New-land, and is knowne to the Hollanders by the and keepe as a Relike of that worname of Spafbergen. Sir Hugh Willoughbie returned into Lapland, where he and this discourser and first finder of his companie were trozen to death, in the Happen called drying near New Ling Lanes his New Land. his companie were trozen to death, in the Hauen called Arzina, neere Kegor,

The Mulconia Merchants having thus fetled a trade in Russia, and being incorporated by the name of, The Merchants of England, for the discouerie of new trades, pursued their first reso. lutions for finding a way to Cathar by the North-east, and in the yeere 1556. fent out Stephen Burrough, for discouerie of the River Obb, who proceeding forwards in that Voyage discouered 20 the River Pechora, the Streights of Vargats and Nonazembla "; went on shoare vpon the Iland " See Hath. V of Vaigats, and upon the North Continent of Ruffia; met with the Samoeds, observed their tom. 1. pug. 274.

manner of life, their Religion, their Sacrifices to their rude and ill staped Idols; and the veere being ipent, returned into Ruffia.

The Companie having fought for the North-east passage, and finding such difficulties as are mentioned in their particular Journals, refolued to make triall, if the North-west part could not affoord a passage to the Indies, which was the first and maine scope of their Northerne Discoueries. And in the yeare 1 976, they fent forth Sir Martin Frebifber with two Barkes, who comming into the height of 62, or thereabouts, found a great Inlet, now knowne by the name of Sir M. Frebilber Frobibers Streights, into which he put himselfe, and sayled sixtie leagues with a mayne Land on Hatt. tom, 3.294 20 each tide, and to for that yeere returned.

The next yeere following he made a second Voyage to that place, purposely to lade himselfe with a kind of Oare, which the yeere before he had found there, and gaue hope by the colour to yeeld Gold, and being laden with some quantitie, returned.

The yeere following, being 1,78, having made tryall here of that Oare, and finding it not to fall out according to his expectation, hee was furnished out to proceed in the further discouerie of those Streights, and entring into the same, made way so farre as hee thought fit, and then returned backe, having first taken possession thereof in the name of Queene Elizabeth of famous memorie, who called the place Metaincognita: he brought home some of the Natives, and left tome of his men there.

In the yeere 1580, the Companie sent out a second Voyage for the discouerie of the River 1580. Obb, and thence to goe on to Cathay; furnishing forth two ships under the command of Arthur Pet and lack-Pet, and Charles luckman, who following their instructions, arrived at Vaigats, passed those man, Haliton, Streights with a particular observation of those Ilands and places therein, plyed along the East f.445. part of Nonazembla, and the North of Russia, and the Samoeds Country, so farre as the Ice would give them leave, and finding no possibilitie of passage by reason of the Ice, returned backe in the latter end of the yeere. By this time the Voyage of Saint Nicolas was knowne, and become a beaten trade. And the Companie sent out yeerely thither ten or twelue ships, which returned fraighted with the commodities of that Countrey.

In the yeere 1583. by the leave and admittance of the Mosconia Companie, Sir Humfrey 50 Gilbert went out for the discouerie of the North part of Terra Florida, came into the great Ri- Sir H. Gilbers uer called, Saint Laurence in Canada, tooke possession of the Country, fetled the government of Haleta, P. 1432 the filhing there which is fo well knowne in these times.

In the yeere 1585. Master Iohn Danis was furnished out at Dartmouth with two Barkes, for the discouerie of the North-west, came into the height of 66. plyed along the coast, observed Master Daniel the probabilitie of a passage, and in the end of the yeere returned.

In the yeere following, being 1,86. hee went on againe in the further discouerie thereof, & feq. found a great Inlet betweene 55. and 56. of latitude, which gaue him great hope of a paffage, traded with the people there, and so returned.

In the yeare 1587, hee made a third Voyage to those places, followed his course to the North 60 and North-west, to the Latitude of 67. degrees, having the Continent (which hee called America) on the West fide and Groineland, which hee named Desolation on the East, and going on the height of 86.degrees, the passage enlarged so that hee could not see the Westerne shoare. Thus he continued in the Latitude of 73. degrees in a great Sea free from Ice, of an vnmeasurable depth, but by the occasion of the departure of two Ships which were in company with him,

Hak.to.3. p. 93.

which hee left Fishing at a place, he returned home. This passage continueth the Name and me-Fretum Danis. morie of the first Discouerer, and is called Fretum Danis. And thus the Discouerie of the Nor. thern Seas proceeded on from time to time, by the endeavour and charge of the Musiconia Companie, until they had particularly discouered the Lands, Coasts, llands, Straights, Hauens, Bayes, Rivers and other places therein, and measured every part thereof, by their often tracing to and fro: Together allo with the observation of the Commodities and Advantages, arising from curry part of the fame, continuing even vnto thefe times to haunt and frequent the parts which they had formerly found out; As by their yeerely Reportaries and Journals may appeare, and thateither without emulation or competition of any other Nation, that ever came into those parts or ther without emutation or compensation and only the transfer and the earliest and into more parts or enterprifed any Difficueries there will followeth.

When Richard Chancelor had fetled a trade with Jehn Pafitonech then Emperous of Ruffle, and

Hak. Tom. t.

his Ambassadours had beene heere in England, to accomplish matters requisite for maintenance of the Amitie and Entercourse made and agreed vpon betweene these two Crownes; King Philip, Queene Marie, Dukes also at that time of Burgundie, and Soueraignes of all the Netherland. made a grant of Priviledge vnto the Musconia Merchants for the fole Trade of those Seas, prohibiting all others to haunt and frequent the fame, without speciall Licence and consent of the favd Companie: which grant of Priviledge was accordingly enjoyed without diffurbance or interloping of the Hollanders, who out of obedience either to the Prohibition made by their Soneraigne, or for that they durft not adventure into these Seas, did not any way attempt to be feene or appeare there, either for Discouerie or trade of Merchandize, for the space of five and to twentie yeeres, after the Port of Saint Nicholas was first Discourred and found out by the Es. glib. For the Company having as is about mentioned, made their first Discourie in the yeere 1552, there was never heard of any Netherlander that frequented those Seas, vntill the yeere 1678. At which time they first began to come to Cola, and within a yeere or two after, one John de Whale a Netherlander, came to the Bay of Saint Nicholas, being drawne thither by the perswassion of some English for their better meane of Interloping, which was the first man of that Nation that euer was seene there. And this as is formerly noted was fine and twentie yeeres after it was Discouered by the Musconia Merchants.

25. 1494. follow.

Afterwards the Hollanders crept in more and more, and in the yeere 1594. they made out Theie Voiages foure Ships for Discouerie of the North-east passage to China, the Master Pylot whereof was 10 William Barrents, these came upon the Coast of Nonazembla to the Latitude of 77.degrees, drew backe againe towards the Straights of Vaigats, and then returned giving Names vnto iome places and Promontories upon that Land.

Hackluits

In the yeere 1595. They sent out a second Voyage, tracing the way through the Straightsof Vasgats in the fame steps, as Pet and lackman had formerly passed, and so returned, In the yeere 1 596. They fet out a third Voyage with two Ships, the one of which shaped her

1596. which writeth against this English allegation, &c. but

course from the Cape of Norway, to an Iland in the Latitude of 74. degrees, which wee call Cherie Iland, and they call Beare Iland, and from thence to Greenland, where Sir Hugh Willoughbie had beene two and fortie yeeres before, for fo long time there is betweene the half Discourse published 1613 thereof and the yeere 1596. And from thence to the North-east part of Nouazembla, in the 40 Latitude of 76. degrees, where they Wintred and loft their Ship, and came home with much In the yeere 1603. Stephen Bennet was imployed by the Companie, in a Ship called the Grace,

to those parts Northwards of the Cape, and was at Cherie Hand and killed some Sea-horses, and brought home Lead Oare from thence.

In the yeere 1608, the faid fellowship fet foorth a Ship called the Hope-well, whereof William Hudson was Master, to discouer to the Pole, where it appeareth by his Journall, that hee came to William Hudfon the height of 81 idegrees, where he gave Names to certayne places, vpon the Continent of Greenland formerly discouered, which continue to this day, namely, Whale Bay, and Hackluit Headto 81.Degrees. land, and being hindred with Ice , returned home without any further vie made of the Coun- 50 trey, and in ranging homewards, hee discourred an Hand lying in 71. degrees, which hee named

Hudfons Tout-

Heere it is to bee understood, that the Companie having by often refort and imployment to those parts , observed the great number of Sea-horses at Cherie Iland , and likewise the multitude of Whales, that shewed themselves upon the coast of Greenland; They first applyed themfelues to the killing of the Morces, which they continued from yeere to yeere with a Ship or two yeardy in which Ships the Companie appointed Thomas Widen Commander, and in the yeare 1609, the Companie imployed one Thomas Edge their Apprentice, for their Northeren Voyage, and joyned him in Commission with the foresayd Welden. Now the often vsing of Cherie Hand, did make the Sea-horse grow scarse and decay, which made the Companie looke out 60 for further Discoueries.

the Author,

In the yeere 1610. the Companie fer out two Ships, viz. the Lioneffe for Cherie Iland, Thomas Edge Commander ; and the Amitie, for a Northerne Discouerie, the Master of which Ship was longs Poole: who in the moneth of May fell with a Land, and called it Greenland, this is the

Land that was difcourred by Sir Hugh Willoughby long before, which Ship Amitie continued up. * See Baffins on the coast of Greenland, discouring the Harbours and killing of Morces, vitil the moneth of North-west on the coaft of Greenland, discovering the Hardours and Kining of Maches, when the moneth of August, and so returned for England, having gotten about some twelve Tunnes of goods, and an Vnicorne, a Vnicornes * horne.

In the yeere 1611, the Companie set foorth two Ships for Greenland, the Marie Margaret Horne. Admirall, burthen one hundred and fixtie tunnes, Thomas Edge Commander; and the Elizabeth. burthen fixtie tunnes, Ionas Poole Matter, well manned and furnished with all necessarie Prouisions, they departed from Blackwall the twentieth of Aprill, and arrived at the Foreland in Green-

land in the Latitude of 70, degrees, the twentieth of May following, the Admirall had in her 10 fix Biskayners expert men for the killing of the Whale; this was the first yeers the Companie set First whale out for the killing of Whales in Greenland, and about the twelfth of June the Biskayners killeda killing. fmall Whale, which yeelded twelue Tunnes of Oyle, being the first Oyle that euer was made in Bicayners v-Greenland. The Companies two Shalops looking about the Harbour for Whales, about the five and twentieth of Iune rowing into Sir Thomas Smith his Bay, on the East fide of the Sound faw on the shoare great store of Sea-horses; after they had found the Morses they presently rowed vnto the Ship, being in croffe Road feuen leagues off, and acquainted the Captayne what they had found. The Captayne understanding of it, gaue order to the Master, Stephen Bennet, that he should take into his Ship fiftie tunnes of emptie Caske, and set sayle with the Ship to goe into Foule Sound. The Captayne went prefently away in one Shallop with fixe men vnto the Sea-

20 morfe, and tooke with him Lances, and comming to them they fet on them and killed fine hundred Morfes, and kept one thousand Morfes living on shoare, because it is not profitable to kill them all at one time. The next day the Ship being gone vnto the place & well mored where the Morfe were killed, all the men belonging to the Ship went on shoare, to worke and make Oyle of the Morfes; and when they had wrought two or three dayes, it fortuned that a small quantitle of Ice came out of Foule Sound, and put the Ship from her Moring. The Master and ten men Shipwracke being a board of the Ship, let fall their Sheat anchor which brought the Ship vp to ride; the Ice by Ice. comming vpon her againe, brought her Anchor home and ranne the Ship alhoare, where shee by the Masters weake Indgement was cast away, and all their Bread spoyled not set to cate. The

Ship being cast away without hope of recouerie, the Commander Thomas Edge gaue order, that 30 all the Morfe living on shoare should be let goe into the Sea, and so gave over making of Oyle, and presently haled vp ashoare all his Shallops and Boates, being fine, setting the Carpenter to trim them, the Saylers to make Sayles and Wastcloathes for the Boates, fit to serue them at Sea. Hauing fitted their Boates as well as they could with the small prouision they had, being in number foure small Shallops and the ships Boate, they divided their men into them equally with what provisions of victuals they could well carrie, and after they had fayd Prayers all together on Land; being fiftie men they departed from the place where they loft their Ship, on the fifteenth of July with the winde Southerly, and rowed thirtie or fortie leagues to the Southward. and then they loft companie of one Shallop and their thips Boate of Horne Sound, which two

Boates met with a Hall Ship, and acquainted him with the loffe of the London Ship, and that flee 40 had left on land goods woorth fifteene hundred pounds : So our men carryed the Hall Ship into Hall Ship. Foule Sound, to take in the Companies goods and to kill some Sea-horses for her selfe at that place. The Captayne and two other Shallops put from the Coast of Greenland in the height of 77. . Degrees, and set their course for Cherie Iland, which lyeth in 74. Degrees (-) sometimes Sayling and sometimes Rowing, and made Cherie Iland the nine and twentieth of July, having Cherie Iland. beene in their Shallops at Sea fourteene dayes, and comming into the Iland with a great florme

at North-west, with much difficultie they landed on the South side of the Iland.

Being on shoare, the Captayne sent three of his Saylers ouer land vnto the North roade, being three miles distant from that place, to see if the Elizabeth was there, and they saw a Ship riding in the North roade, and being ouer-joyed they returned backe vato the Captayne to ac-50 quaint him, without staying to speake with any of the Ships companie, and by good hap the Master of the Elizabeth espyed men on the Shoare, being at that time weighing Anchor to set fayle for England, voon which hee stayed and sent the Boate ashoare to see what men they were, and when the men of the Elizabeth came ashoare, they found them to bee men of the Mary Margaret, and so went aboard vnto the Master to acquaint him; whereupon the Master caused Anchor to bee weighed and went to the South fide of the Iland, and there tooke in the Captayne, and hee being aboard understanding what a poore Voyage the Elizabeth had made, gaue order to the Master to goe for Greenland, there to take in such Goods as the sayd Edge had left in Foule Sound. They departed from Cherie Hand the first of August, and arrived at Foule Sound the

Fourteenth Dicto: where they found two Boates which they had loft companie of before, and 6c all their men being come thither with a Hall Ship which they met with, and brought to that place; which Ship had spent all the yeere in Horne Sound, and got little goods. The Elizabeth being mored, the Captayne gaue order vnto the Matter to deliver out of his Ship, all the goods hee had got at Cherie Iland, which was Sea-horse hydes and Blubber, being of little woorth; And to take in the Oyle and Whale-finnes, which were gotten by the Marie Margarets com-

panie, the Master in valading of his Ship brought her fo light, that varior tunatly hee our riether, Danie, the Matter in vintaining or in a simp or organ near our grantes amortunary nec outer-technic. Ship outer feet. having goods in her worth leuen hundred pounds. This ill chance happening vinto the two Less. paining goods in net worth seven numered pounds. I mis in chance inspecting vito the two London Ships, the Capcayne of them agreed with Thomas Marmaduse Master or the Hull Ship, to don Slups, the Captayne or tnem agreed when I purmed that memore elected in the could ship, to take in the goods which was faued, at the rate of fine pounds the Tun e, which was great rate take in tinggoods within was about a time for the population and the hundred pounds for the (notwithiltanding they had beene a meanes to get him goods worth fine hundred pounds for the (notwittentaining trey man and twentieth of August, 1611, they departed from Greatastin the Hope-well, being ninetie nine men in all, and arrived at Hall the fixth of September, where the layd Edge tooke out the Companies goods, and Shipped them for London by order from the the laye Lage took of the fact and the Shallops, discoursed all the Harbours on the West

II.

Dutch, Spanish, Danish disturbance; also by Hull men, and by a new Patens, with the succeeding Successe and further Discourses till this present.

N the yeere 1612, the Companie fer forth two Ships, viz. The Whale, burthen one hundred and fixtie Tunnes, and the Seaborfe, burthen one hundred and eightie tunnes, 20 under the Command of John Ruffell, and Thomas Edge, for discovering and killing of the Whale. They discourred that yeere nothing worth writing of, by reason of some fall

Hollmdere.

ling out betwist Ruffell and Edge; yet they killed that yeere fewenterne Whales, and some Seahories, of which they made one hundred and eightie Tunnes of Oyle with much difficultie; a not being experimented in the businesse. This yeere the Hellanders ('Okcepe their wont in fellowing of the English teps) came to Greenland with one Ship, being brought thither by an Enghis man, and not out of any knowledge of their owne Discoueries, but by the direction of one Allen Sallowes, a man imployed by the Muscenia Companie in the Northerne Seas forthe space of twentie yeeres before; who leauing his Country for Debt, was entertayned by the Hollanders, and imployed by them to bring them to Greenland for their Pylot. At which time 10

Spanift Ship.

being met withall by the Companies Ships, they were commanded to depart, and forbidden to haunt or frequent those parts any more by mee Thomas Edge. There was also a Spanish Ship brought thither, by one Nucholas Woodcocke this yeere, a man formerly imployed by the fayd Woodcocke Im. Companie; which Spanyb Ship made a full Voyage in Green-harbonr. But Woodcocke at his returne into England, being con plained of by the Companie, was Impilioned in the Gateboofe and Tower, fixteene Moneths, for carrying the Spanish Ship thither.

In the yeere 1613, the Companie fet out for Greenland feuen fayle of Ships, under the Com-Bestamm Heferb mand of Bent smin lofeph, and Thomas Edge, the Slips departed from Graneford the fix and twentieth of Aprill, and arrued in Greenland the fourteenth of May. This yeere the English had the Kings Patent under the broad Seals of England, to foo bid all Strangers and others, but the Musics 40

Mea Companie to vie the Coast of Greenland. The English met with titteene layle of great Ships, two of them were Dutch Ships, the rest were French, Spanish, and of the Archdukes, besides foure English Intellopers. The Companies Ships forced them all from the Coast of Greenland, not suffering any of them to make a Voyage; they tooke from the two Dateb Ships certaine goods, bu in g ing to take it, they neglected their owne voyage, which was damnified thereby to the value of three or foure chouland pounds. For their Ships came home dead Fraight two or three hundred Tunnes by that meanes. This yeere was Hope Hand and other Hands discoursed, to the

Hope Hand.

Dateb fhips.

In the yeere following, which was 1614, the Companie fet out for Greenland, thirteene great Thirteen sher Ships and two Pionaffes, vinder the Command of Beniamin Infept, and Thomas Edge, all which 50 Ships were well appointed with all manner of Artillerie for defence, and other necessaries for the making of their Voyage and for Discourrie. This yeare the Hollanders fet out for Greenland eighteene great Ships, whereof foure of them were of the States men of Warre, Ships with thirtie pieces of Ordnance a piece. This yeere the Dutch stayed and fished for the Whale perforce, they were farre stronger then the English, which was a cause that the English Ships came home halfe laden, and the Dutch with a poore Voyage. This yeere the Companie Discourred vnto the Northwards of Greenland, as farre as 80. Degrees odde Minuts, in the Ship Thomazen, as by herdaily lournall doth appeare at large; in which Ship was imployed Thomas Sherwin, and Walliam Baffin, being the second Voyage they were imployed into those parts. And some llands to the Eastwards of Greenland, were Discourred by soure Ships imployed in that service, as by their 60 Iournall more at large appeareth.

80. Degrees Sherwin and 1615.

In the yeere 1615, the Companie set out for Greenland, two sayle of great Ships and two Pinnaffes, vnder the Command of Beniamint ofepb, and Thomas Edge, who following their Instructions, arrived upon the Coast of Greenland the fixth of lune, which they found to bee much

pettered with Ice, and being foggie weather, they runne into the Ice, fo farre, that they were Fast in Ice, fait in it fourteene dayes before they could cleare themselues of it. This yeere also the Hollan- in lune fourteene ders fet out fourteene fayle of thips, whereof three of them were States Men of warre of great treene dayes. force: they killed Whales in Horn-found, Bel-found, and Faire-hauen, and flayed youn the coaff of Greenland perforce, as they did the former yeere; whereby the English came home halfe la- King of Denden. This yeere allo the King of Denmarke lent vnto Greenland three of his ships, Men of warre, marke demands to demand a toll of the English; but they had none payd them: for they fell with the Foreland in 79. degrees, where Captaine Edge was, and he denyed payment of any toll, all dging Vn English that the Countrey of Greenland belonged to the King of England. These were the first Danis English to terre thips that ever came to Greenland, who had for their Pilot one lames Vaden, an Englishman to Dutch, Spenish. To bring them thither.

In the yeere 1616, the Company fer out for Greenland eight Sayle of great thips, and two their owne. Pinnaffes under the command of Thomas Edge, who following his course arrived in Greenland a. bout the fourth of June, having formerly appointed all his thips for their feuerall Harbours, for their making of their Voyage vpon the Whale; and having in every Harbour a sufficient numher of expert men, and all promitions fitting for such a Voyage. This yeare it placed God to bleffe them by their labours, that they full laded all their ships with Oyle, and left an over-plus in the Countrey, which their ships could not take in. They imployed this yeere a small Pinnasse unto the East-ward, which discouered the East-ward part of Greenland, Namely, the lland cal-

led now Edges Hand, and other Hands lying to the North-wards as farre as fewentie eight de- Edges Hand. grees, this Pinnasse was some twentie tunnes, and had twelue men in her, who killed one thoufand Sea-horses on Edges Iland, and brought all their Teeth home for London. This was the first yeere that ever the Company full laded all their ships tent to Greenland, and this yeere they made twelu- or thirteene hundred tunnes of Oyle in Greenland by the fourteenth of August All the thins arrived in fafety in the River of Thames, in the moneth of September. The Hollanders had this veere in Greenland foure thips, and those kept together in odde places, not easily to bee

found, and made a poore Voyage.

In the yeare 1617, the Company fet out for Greenland fourteene Sayle of hips, and their two Pinnaffes turnished and manned with a fufficient number of men, and all other provisions fitting 20 for that Voyage, under the command of Thomas Edge. They departed from Grane fend about the foure and twentieth of Aprill, and arrived vpon the Coast of Greenland, the eight and twentieth

of May all in fafety.

At our first comming upon the Coast this yeere, I met with a Dateb shippe of two hundred tunnes, which I commanded aboard, the Captaynes name was Coske, who told mee there were ten Sayle of Dutch vpon the Coaft, and two men of Warre, and that he came to make a Vove age voon the Whale. I shewed him the Kings Commission; and commanded him by vertue thereof to depart from the Coast, willing him to acquaint the rest of his Countrey-men with it. And further, I told him that if I met with him or any Dutch thips heereafter, I would take from them what they had gotten, and thus having entertayned him aboord with me courteout-40 ly, I let him goe without taking any prouitions from him. At his departure from mee, hee promifed hee would but stay to meet with two of his Conforts, which hee had lost company with the day before, and then hee would directly goe for Flufting, and acquaint his Merchants, that the English Captayne would not fuffer him to Hay vpon the Coast of Greenland; but it feemeth at his meeting with his Conforts, they agreed altogether to goe into Horne-found, and there they killed fome few Whales which they faued in Blubber. I vnderstanding of it, gaue order to my Vice-admirall when he was laden, that he should goe into Horne-found, and put the Flemmings from thence, and take what they had gotten, which he did accordingly : but the goods he tooke from the Dutch thips, were not worth to the English twentie pounds, for it was but Blubber and Finne's, which they had no need of, in regard they had killed as many Whales as would lade their ships, and more then they could carry or iaue. This yeere the English made nineteene hun-

dred tunnes of Oyle in Greenland, and all their ships arrived at home in the moneths of August and September in fafetie. They also employed a ship of fixtie tunnes, with twenty men in her, who discouered to the Eastward of Greenland, as faire to the North-wards as seventie nine degrees, and an Iland which he named Witches Iland, and divers other Ilands as by the Map appea- withbes Iland. reth, and killed ftore of Sea-horfes there, and then came into Bel-found : where hee found his lading of Oyle, left by the Captayne which he tooke in. This yeere the Hall men let a small thip Hall men. or two to the East-wards of Greenland, for the Hull men still followed the steps of the Londoners, and in a yeere or two called it their Difcouery, which is falle and victue, as by Oath in the Admiraltie doth appeare. The Dutch likewife practife the same course.

60 In the yeare 1618, some difference having pasted betweene the English and some Zelanders. the yeere before, in King lames his Newland, alias Greenland (which Zelanders were neuer in those Zelanders. parts before, and vpon promife of the prefent departure) were permitted to passe elie-where with their prouitions which they had, and comming to Cherrie Iland, and meeting with one English Interloper of Hall; namely Marmaduke, he animated the faid Zelanders to returne back Marmaduke.

for Greenland, alleaging vnto them, that the Companies ships were in each seuerall Harbourba. for Greename, aucaging vine units, the tone would flure from his Harbours to moleft them, and that feel about their voyage, and that the state of the state they being enter impose of the state of the and there make a voyage product and the state of the stat duers Snattops, nature united to the state of the Land Flore, having nought. Whereupon Captayue Thomas Edge, chiefe Commander of the English Fleet, having laden those ships that were in Harbour with him, and presently sent for William Flest, his Vice-Jacen those injecture were in training and proteinly remain range, his Vice-admirall, giving him order (who was not then full laden, but in good forwardnesse) for the ship he was in, and goe to Horne-found afore-said, and put the said Zelanders from thence: which the he was in, and goe to Horne-Junou active-inity, and put the land active and active which the faid Holy prefently put in execution. But before his comming thicker, the Zelander ind notice 10 faid Heep pretently put in careful and depart, the English Vice-admiral would come prefentby an Engage Surgeon thanks. Whereupon the Zelanders laded all the goods they had in two ly and rorce used from away before the comming of the English Vice-admirall, leaning one hip thips, and tent them away version the comming of the Cargine vice-admirant, seating one inip behind, with certaine caske of Blubber, and two Whales and an halfe vicut vp, in a brauedo to trye if the English would meddle with them or not, which faid ship and goods there left, were trye is the saying would make the same the same the same thing and goods there lett, were furnized by the said English Vice-admirall; the goods detayned to the Companies wie; and the dispractory in the Delander; which flip having in herten caft Peeces, and fixtie men, and having intelligence of one of the Companies ships, at that time laden in the Country and nature members to the companies amps, at that time much in the country with one hundred and eightie tunnes of Oyle, the Zelender gaue out he would lie in waite and with one minoreu and eighter counts of Cyre, the Leasuner gaue one me would me in waite and take that fhip of the Companies and her lading, and carrie her to Zeland. For preuention where take that fhip of the Companies were take that hip of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Powder from the ship of the Cadminal tooke fixe Peeces of Ordnance, and some Peeces of Ordnance, and Zeland, which were in England restored to the owners.

In which faid yeere 1618, the Zelanders lending over for reflitution of the goods taken from them. A new Company commixt of English, Sentish and Zelanders, through the meanes of oce Sir Iohn Comingbann Knight, procured a grant for fetting forth of shipping to those parts, which might veterly haus oserthrowne and spoiled the trade of the first discournes thereof and to that end divers of the chiefe men were hired by the new Company that had been fervants to the fifth discouerie, and much shipping and prouisons agreed for. Whereupon there was an agreement, East India Ad. that the East India Adventurers should some stocke with the Mifemia Adventurers, and se one ioynt Companie for that trade of King Jamas his Newland. The Scottifb Companies Patent thereupon diffolued, to the Mojesnia Companies great trouble and cost, in taking of all the preuisions they had bespoken, and paying ready money for the same, having no viethereof, but great part spoyled, and came to little good, and in joyning unfortunately with the East ladie Companie, in which yeere, and the next yeere after, their Voyages proued very ill, and they were lofers, and much vexed and croffed in their proceedings, to the great diffeathing and detriment of the Mosemia Companie: yet that yeere 1618 they set forth thirteene ships and two Pinnasses, vnder the command of the said Captaine Thomas Edge, who arriving vpon the coast of King lames his Newland, in the beginning of June separated themselves to severall Harbours for accomplishing of their Voyages, the most part being ships of no force. Presently after in all Harbours where the English were, arrived great store of ships of Zeland, in warlike 40 manner, being thips of great force, who continued in the same Harbours amongst the English, fetting two boats to the English one, with Biskainers, with a full purpose to drive the English from their Harbours, and to reuenge the iniurie (as they termed it) done them the yeere before: and for that the Scottife Patent was diffolued; wherein many Flemmings were to be intereffed. And to that purpose towards the latter end of July, ten Saile of the said Zelanders, being at a Harbour called the Foreland, where the faid William Heley, Vice-admirall of the English Fleet that yeere, was in the thip Pleafure, Matter Robert Salmon, with one English thip and a Pinnaffe there of no force, fet vpon the faid English Vice-admirall, threatning, if hee would not yeeld prefently, to dispoyle him of ship and goods, not permitting to take his men aboord. And with two of their chiefest ships layd the English Vice-admirall aboord, there being but seuen English abourd the ship, which they detay ned for foure and twentie houres, the Zelenders not danng to enter, making many brauadoes and attempts, thinking to make the English to yeeld; and stand to their mercy, which was refuled. And thereupon fine of those Zelenders ships; namely, the Forume of Campbine, burthen foure hundred tunnes, with eighteene caft Peeces, befides braffe Bales and Murtherers, Captaine Habreght Cornelifon, the Saint Peter of Flufting, burthen three hundred tunnes , with eighteene caft Peeces, Captaine Cornelius Cooke; the Salamander of Flufoing, two hundred tunnes, fourteene cast Peeces, Captaine Adrian Peeterson; the Cat of Debb Hauen, with fixteene cast Peeces, Abraham Leuerstuck being Captaine and Generall of the Zelanders, and William I obn for of Millworth, in a thip with fourteene cast Pecces: all which, after much conference passed betwixt the faid Zelanders and William Hely: which faid Zelanders gaue out many vnciuill speeches against the Kings Marettie, not esteeming his Commission; alledging that there was good law in Flanders for what they did. And on Sunday the nineteenth of Iuly, 1618, did forcibly fet you the faid English Vice-admiral , fue together plying cheir great Ordnance, small Shot, and Murderers, seeking what in them lay to kill and spoile all the

the Englifb.

Enolab that were aboord: who refifted their force, and in spite of all their opposers set sayle, faluting them with their Ordnance, and maintayning fight against them till their Sayles were thot downe, some of their chiefe men flaine, others hart, and their ship forced either to anchor. or run ashoare. The Zelanders vied the English very vakindly, tifling their ship of all their goods. and taking away all their munition and artillery, not leaving any goods ashoare, but burning vp the Caske, not permitting the English to take in fielh water, but shot their Boat thorow in going ashoare, and minding, as they protested and swore vnto the faid William Hely, that they would take and ransacke all the English ships in the Countrey, and carrie the English Captaine to Zeland: having as they faid, that yeere in those parts 23. sayle of well appointed ships, onely to 10 ouerthrow all the English, all which were to meet in Scotland outward bound. After the furpriling of the faid English Vice-admirall, all the reft of the English thips being dispersed farre afunder, could not joyne together, being in all places hindred by the Flemmings: and by that meanes the English Voyage veterly overthrowne, to the extraordinary great losse and charge of

the Companie, the most part of their ships returning home without any goods.

The next veere 1619, the faid Mosconia and East India Companies let out nine ships, and two Pinnasses , under the command of the faid Captaine Edge , in which yeere, divers Hollanders being in the Northermost Harbour in the Countrey, employing great quantitie of Boats in chafing the Whale there, off into the Sea, put them by their vivall course, so that the Companies ships being fine of the nine, in the two Northermost Harbours, were disappointed of their 20 Voyage in those Harbours; and thinking to better it in the other Harbours; the foresaid walliam Heley fending a Shallop with ten men in her, with Letters to the faid Captaine Edge, of their ill successe to the Northwards, the said Shallop was cast away, and all the men lost: and the faid Captaine being laden, fent a Pinnasse to the said Heley in August, advertising him of his departure, thinking all the ships to the Northward had been laden, wishing them to haste home. By meanes of which Shallops casting away, the Voyage was greatly hindred to the Companies exceeding great loffe; in that the Hollanders did as then bring ouer great quantitie of Whale-oyle, and fold it at under rates, so that the Companie was forced to keepe theirs on their hands twelue moneths, and fell it afterwards at a very small price, and lost one ship in her returne homewards neere Tarmourb : which did fo much dishearten the faid Companie, that

30 they diffolued againe, and thought verily to have adventured no more thither (their fuccesse those two yeeres past, in which the East India Companie ioyned with them was so bad, that any that would buy their probition might enjoy the benefit of the Trade there.) At which time, the worthie and famous Merchants Aduenturers; namely, Ralph Freeman, Beniamin Deicrope, George Strond , with Captaine Thomas Edge, all brethren of the Moscowia Companie , pitying the down-fall of so worthie a Trafficke, in which yeerely so many poore Land-men received great comfort, and breeding of Mariners, at their owne charge compounded with the faid Companies, and tooke that Trade into their hands. In which yeere 1620, they fet out feuen fayle of ships, vnder the command of William Goodlad, and the faid William Heley; in which faid yeere, by reason of great store of Flemmings and Danes in the foresaid Northermost Harbours, their 40 ships had ill successe to the Northwards, and were forced to passe from Harbour to Harbour to seeke to make a Voyage, but could not, and so returned home halfe laden, with seuen hundred

tunnes of Oyle. The next yeere 1621. the foresaid Aduenturers hired, and set forth eight ships, seuen for the Whale Voyage, and one to the South-eastwards vpon Discouerie, under the command aforesaid, which yeere in one of their chiefest Harbours their Voyage was ouerthrowne, by reason of the foresaid Flemmings and Danes, being to the Northward, as aforesaid, putting the Whale by her course, and in all places in the Countrey generally disheartned, and out of hope to have made any Voyage that yeere, whereby to have earned their bread. Yet it pleased God afterwards in some Harbours, Whales hitting in, a Voyage was performed, and 1100. tunnes of Oyle brought home, to the great encouragement of the faid Aduenturers: otherwise that Trade had beene 50 vtterly ouerthrowne.

The yeere following 1622, the faid Aduenturers at their owne charge fet forth nine ships, vnder the command aforesaid, and therein employed divers Land-men; many of which afterwards proue good Sea-men, and are fit for any Sea feruice. Eight of which ships were appointed to make their Voyage vpon the Whale, and one to goe on discouerie to the South-eastwards. But ill successe happening, one of their greatest ships of burthen, whereof lohn Masson was Master, haung in her two hundred tuns of Caske, Coppers, and divers provisions, was unfortunatly cast Shipwricke, away against a piece of Ice, upon the coast of King James Newland, four eleagues from the shoare, in which thip perished nine and twentie men, and the remainder being three and twenty, were 60 by the providence of the Almightie miraculoully faued in a Shallop, coaffing thirtie leagues afterwards to meet with some other ships to find some succour, having neither bread nor drinke,

nor any meanes whereby to get any food: and fo remayned three dayes in extreme cold weather, being in a small Boat ready to bee swallowed up of enery wane, but that God prouided better for them. Many of which prople their hands and feet rotted off, being frozen, and they

1621.

died in the Countrey. The rest of the ships returned home laden, bringing in them 1300, time of Oyle, yet the foresaid chiefe Harbour could not performe their full lading there, by reason of the Flemmings and Danes being to the Northwards, as aforefaid, which doth yearely hinder the Companies ships from making a Voyage.

The like wee

Nature being

He Whale is a Fish or Sea-beast of a huge bignesse, about fixtie fine * foot long, and thirtie fine foot thicke, his head is a third part of all his bodies quantitie, his spacious mouth contayning a very great tongue, and all his finnes, which we call Whale finnes,

These finnes are fastned or rooted in his upper shap, and spread oner his tengue on both fides his mouth, being in number about two hundred and fiftie on one fide, and as many on the other fide. The longest finnes are placed in the midst of his mouth, and the rest doe shorten by their proportionable degrees, backward and forwards, from ten or eleven foot long to foure inches in length, his eyes are not much bigger then an Oxes eyes, his body is in fashion almost ao round forwards, growing on still narrower towards his tayle from his bellie, his tayle is about ewentie foot broad, and of a tough folid substance, which we vie for blockes to chop the Blubber Stow mentions on (which yeelds Oyle) and of like nature are his two swimming finnes (and they grow for-

This creature commeth oftentimes aboue water, spouting eight or nine times before he goeth downe againe, whereby he may be descried two or three leagues off. Then our Whale-killers presently rowe forth from the place where they stand to watch for him, making what halle they can to meet him : but commonly before they come neere him, he will be gone downe againe, and continue a good while before he rifeth; so that sometimes they rowe past him. Yes are they very circums pect, euer looking round where they may espie him risen, or discerne his 10 may sheffe of way under water, which they call his Walke. When he is up and the Shallops neere him, they the throat &c. rowe towards him very resolutely, as if they would force the Shallop vpon him, if hee went downe under water : but the Harponyre, who flandeth up in the head of the Boat, darteth his herein luxuriant, and diver- Harping-iron at the Whale with both his hands, to foone as he commeth within his reachingherwith the Whale being ftrucken, prefently descendeth to the bottome, and therefore doe they reare out a rope of two hundred fathome, which is fastned to the Harping-iron, and lieth coyled in the Boat : And they let him have as much of the rope as reacheth to the bottome, and when they perceive him rifing they hale in the rope to get neere him, and when the Whale commeth wp about water, then do the men lance him with their lances, either out of one Shallon or the other; for most commonly there bee two Shallops about the killing of one Whale. In 40 lancing him they strike neere to the finnes he fwimmeth withall, and as lowe under water neere his bellie as conveniently they can: but when he is lanced, he friskes and strikes with his tayle fo forcibly, that many times when hee hitteth a Shallop hee iplitteth her in pieces; fo that the men are relieued and taken in by another Shallop; and sometimes he striketh so fully vpon them, that some of the men are either maymed, or killed with his stroke. Therefore they who vndertake this businesse which is the principall thing in the Voyage, must not onely bee bold and reso-Captaine Edge lute, but also discreet and wary; otherwise their rash forwardnesse may preuent them of their expected conquest; confidering they have no shield to withstand the offended beast their enemy, but onely by a heedfull warmeffe to avoide the receiving of his dangerous stroke. Swimming is also requisite for a Whale-killer to be expert in, for it may be a meanes to faue his life, when 50 he hath loft his Boat, and another is not neere presently to helpe him.

The Whale having received his deadly wound, then he spouteth bloud (whereas formerly he cast forth water) and his strength beginneth to fayle him; but before he dieth, hee will sometimes draw the Shallop three or foure miles from the place where he was first stricken: and as he is a dying, he turneth his bellie vpwards, which lieth vppermost being dead. Then they faften a rope to his tayle, and with the Shallops, one made fait to another, they towe him towards the ship with his tayle foremost. Then doe they lay him croffe the sterne of the ship, where he is cut vp in this manner; two or three men in a Boat or Shallop come close to the side of the Whale, and hold the Boat fast there with a Boat-hooke; and another standing either in the Boat, or most commonly upon the Whale, cutteth the fat (which we call Blubber) in square pieces with 60 A cutting Knife, three or foure foot long. Then to race it from the flesh, there is a Crane or Capthen placed purposely vpon the poope of the ship, from whence there descendeth a rope with a booke in it; this hooke is made to take hold on a piece of Blubber: and as the men winde the Capsten, to the cutter with his long knife loofeth the fat from the flesh, even as if the lard of a

Swine were to be cut off from the leane. When a piece is in order cut off, then let they lower the Crane, and let downe the Blubber to flote vpon the water, and make a hole in some part of ir. putting a rope thorowit; and so they proceed to cut off more, faithing ten or twentie pieces together to bee towed a shoare at one time, being made fast to the sterne of a Boat or Shallon. These pieces being thus brought vnto the shoare side, they are drawne by one and one vpon the floare with an high Crane, or carried vp by two men on a Barrow vnto a Stage, there to be cut into small pieces about a foot long, but thin : then it is carried vnto the choppers by two boyes. with two little hand-hookes, taking in each hand a piece, and so they put it into half-tubs which fland behind the choppers, out of which the choppers take it vp; who stand at the side of a boat which is raifed of an equall height fit for the furnace. And the boat being fitted with all

Io things necessarie for the choppers, they place the chopping blockes, which they make of the Whales tayle, and the Blubber is layd ready for them, as they vie it, in small pieces vpon the boord whereon they stand. Then the choppers take it vp with hand-hookes, and lay it on their blockes, and chop it in thin pieces (the thinner he cutsit, the better it is) and when it is chopped, they put it off the blocke downe into the Shallep, with a short Paddle made like a Coleped, they put it out in the state and the state of the state of the boat, and on the or take: and this doe fixe or eight men fland chopping on the one fide of the boat about two or three yards diffant are the Furnaces and Coppers placed and heated. Then betweene the chopping boat and the Coppers, is layd a broad thicke planke, on which standeth a hogshead, which contayneth as much as is put into the Copper, at one time for one boyling, and the tub being emptied, is made to flide vnto the chopping boat againe, be-

20 ing there filled with a copper ladle againe, and put into another Copper. When it is boyled enough, the small pieces of Blubber, which wee call Fritters, will looke browne as if they were fried. Then are they taken out with copper ladles, and some of the Oyle also with them, and put into a Barrow made close to dreyne the Oyle, which standeth ouer another Shallop, that is fet on the back-side of the Furnace to receive the Oyle in, and as soone as the Fritters are taken cleane out of the Copper, then prelently is the tub of small Blubber emptied into the Copper againe to be also boyled.

The Boat into which the hot Oyle is put out of the Coppers, is ever kept halfe full of water, which doth not onely coole the Oyle before it runne into the Caske, but also is a cleanser of it from drolle, which descendeth to the bottome of the Boat. Out of the Oyle-boat doth the Oyle runne thirtie or fortie yands in Troughs or Gutters, and fo into Buts or Hogheads, which being filled, is rolled off to coole, and another Caske layd to fill, and when there is any quantitie of Oyle made, it is carried aboord the ship in rafts. In this manner is the Oyle faued and

epared. Now concerning the Whale Finnes, the Whaleshead being cut off from the body (as hee Whale Finnes) floteth at the sterne of the ship where hee is cut up) is towed by a Boat as necre the shoare as it will come: but it is aground in twelue or thirteene foot water, then by crabes which are placed on land it is drawne on land, at feuerall times when the water is at highest, so neere the dry shoare, that men at a lowe water with their Boats on, cut off the Blubber and Finnes, which by 40 the crabes are drawne on shoare, and the Finnes are with Axes, one seuered from another, and being made cleane, are packed up by fiftie in a bundle, and fo shipped.

ting manuturaties are personal portrained and differing the one from the other in goodnesse, Eight tinds of quantitie and qualitie.

The fift fort of Whale is called the Grand bay, taking his name from Grand bay in New 1. Grand by foundland, as having there beene first killed : he is blacke of colour, with a smooth skinne, and While. white underneath the chaps. This Whale is the best for Oyle and Finnes of all the rest (and doth yeeld most the elder it growes.) This fort of Whale doth yeeld about an hundred hogsheads

The second fort of Whale is called Sarda, of the same colour as the former, but somewhat 2. Sarda. leffer, and the Finnes likewite leffer, and yeelds in Oyle according to his bigneffe, fometimes feuentie hogheads, or eightie hogheads. This Whale hath naturally growing vpon his backe,

The third fort of Whale is called Trumps, being as long as the first, but thicker forwards, of 3. Trumps. colour more gray then the former, having but one spoute in his head, and the rest have all two; he hath in his mouth teeth about a fpan long, and as thicke as a mans wrift, but no finnes; his he natural mis mount recture about a pair tong, and as three as a mails write, our not many, mis head is bigger then the two former, and in proportion farrebigger then his bodie. In the head of this Whale is the Permefitie, which lieth there in a hole like a Well. This is the Whale that Spermanter. is supposed to yeeld the Ambergreese; There taken about fortie hogsheads of Oyle besides the

The fourth fort of Whale is called Otta Sotta, and is of the fame colour of the Trampa, having 4.0tta Sotta. finnes in his mouth all white, but not aboue halfea yard long , being thicker then the Trampa, but not fo long : he yeelds the best Oyle, but not aboue thirtie hogsheads.

The fitt fort of Whale is called Gibara, of colour blacke like the two first, fauing that it & Gibarta, hath standing upon the top of his backe, a finne halfea yard long. This Whale is as bigge

You may fee this Story of the Whale-killing prefented liuely in the Map, which bath liberally added to this

as the first; his fins little or nothing worth, being not about halfe a ward long: and hee weeldeth about twelue hogsheads of Oyle, all which his backe yeelds; as for his bellie it yeelde

The fixt fort is called Sedena, being of a whitly colour, and bigger then any of the former. 6. Sedeua. the finnes not aboue one foot long, and he yeelds little or no Oyle.

The feuenth is called Sedena Negro, of colour blacke, with a bumpe on his backe; this Whale yeelds neither Oyle, finnes, nor teeth, and yet he is of a great bigneffe.

The eight fort is called Sewria, of colour as white as snow, of the bignesse of a Wherrie, be yeelds notaboue one hoghead or two of Oyle, nor any finnes, and is good meate to becaten.

The description of Greenland.

Antiphraffical this defeription of Greenland,

8. Semiia.

474

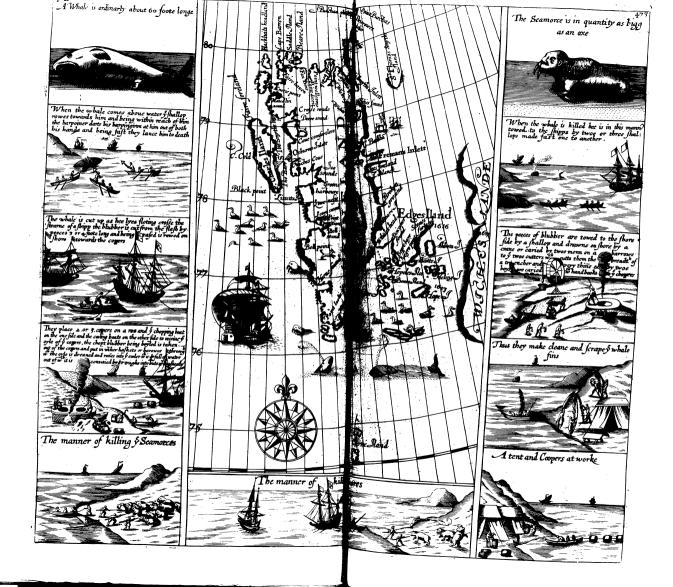

Reculand is a place in Nature nothing like vnto the Name: for certainly there is no place In the World, yet knowne and discouered that is lesse greene then it. It is couered with fnow, both the Mountaines and the lower Lands , till about the beginning of June , being very Mountamous, and beareth neither graffe nor tree, faue onely fuch as grow vpon the Moores and heathie grounds, in the North parts of England, which we call Heath, or Ling. This groweth notes, written when the snow melteth, and when the ground beginneth to be vincouered. And on this doe the by Ra. Fasherin. Deere feed in the Summer time, and become very fat therewithall in a moneths space, but how to they live in the Winter time it is not eafily to be imagined. For seeing at the end of May wee find the ground all couered with fnow, it is very like, that in the time of Winter there is no part bare, where any thing can grow; especially during the time that the Sunne is altogether depressed under the horizon, which in the latitude of 77. degrees, continueth from the eighteenth of October till the fourth of Februarie. This Countrey by all probabilities hath neuer been inhabited by any people; notwithflanding, I thinke men might live there, carrying thither good flore of prouition of victuals, and other things necessary against the cold, which perhaps will be vehement in the Winter time, by the former reasons; namely, because the Sunne remayneth so

Neuertlieleffe, there will not be any continuance of darknesse, because the Sunne in his greatest declination will be but 10.degrees vnder the Horizon, at this time of his being in the South of the Meridian in the former latitude of 77, degrees, which is once in foure and twentie homes: and therefore the time of their Noone will bee much lighter then our Night here in England, when the dayes are at the longest; for then is the Sunne I c. degrees under the Horizon at midnight, and yet the greatest darkmesse is but like twi-light. And although it bee a generall saying, and a common received opinion, that the further North the greater cold, yet experience teacheth, that it is not alwaies true. For at Mofco, and thereabouts in the Winter time, there is extreme frosts and cold weather, informuch that oftentimes men are brought homedead, being flarued with cold; and many have their nofes and cares caufed to fall off, through the extremity of the piercing aire : yet at Edenborrow, which is more Northerly by one degree and an halfe, 40 and in all places neere vnto it the aire is temperate, and the cold tolerable, the fnow nener sying any long time on the ground after it is fallen. Notwithstanding, wee have snow remayning all the yeere long in divers places of England, but the reason of this is, because the aire is ever warmest neere vnto the Sea shoare, (as Edenborron standeth) and contrariwise the cold is most veeuen neere the hement in places which are fartheft remote from the Sea, as Mofco is fituated.

All the Creatures that appeare vato vs vpon the Land, are Deere, Beares, and Foxes, and fundrie forts of wilde Fowle, as Cuthbert Duckes, Willockes, Stints , Sea-pigeons , Sea-parrets, 30. and 40, the Gulls, Noddies, &c. The Author addes a discourse of sending condemned men to inhabite there, with diners projects for their sernice there, for the further discourse how best to bee effected, for such things as are most need ary for this employment of Whale-killing, &c. but because experience halb gi- 50 nen best instructions already, and destructions must otherwise be presented, I have serborne to decame the Reader in those (otherwise indicious) speculations.

The Southermost part of Greenland stands in 76. degrees 30. minutes, which wee call , Point Looke our, and we have discourred all the West side of the Land as farre vnto the Northwards as 80 degrees odde minutes: in which compasse were have already experience of fixe or eight good Harbours for the killing of the whale; and on the East side we have discovered as farre as 78. degrees, finding divers Ilands, great and small, yeelding good Harbours, and store of Whales, and Sex-horfes; and for a further discouery on the East fide, I am perswaded it had beene farre greater, if the Dutch had not so disturbed vs in our proceedings, as also the Hull-men, who ever practifed to follow our steps, after the discouerie within one yeere or two: as by our Masters Journall more at large may appeare. The best actions have their hindrances and crosses, and 6 60 hath this had; for, the Dutch have beene a bane to this Trade and Discourie: The Hull-min have done some bad service in this Action , for they were the first that carried the Dutch to the Tutches, as by Winandens Oath and Journalt appeares, they were also a cause of that bad Voyage,

Yet in China Sea, and farre neerer the Sun, betwixt extreme. R. Foth.

to vs in 1618, in that they animated the Flemmings to come backe to Greenland againe, as appeareth in this Journall, in the yeere 1617, they have done fome other ill feruices against vs as well as the Dutch, but in regard they are our Countrey-men, I will omit and wish their amendment, and pray to God to fend a good and further Discouery to bee made in their Northerne

Eader, I present thee here three admirable Voyages of Discourry made by the Dutch, no whit en-Ruying their due prayle, but bonouring their worthy Alts and Arts. They have formerly beene published in Dutch, and translated by W. Philip. I have beere abbreniated them, as my vie is with others. 10 to anoid prolinite. The Durch themselmes * write that after the English Rustian Trade, one Oliver * Prolesumena. to assed profixetie. Bernards Journall bere followeth, of that and his two later Voyages, the two later written by one employed therein.

CHAP. III.

The first Nauigation of WILLIAM BARENTS, alias BEA-NARDS into the North Seas ; Written by GI-RAT de VEER.

T is a most certayneand an assured Affertion, that nothing doth more benefit and further the Common-wealth (specially these Countryes) then the art and knowledge of Nauigation, in regard that such Countreyes and Nations as are strong and mightie at Sea, have the meaner and ready way to draw, fetch, and bring vnto them for their mayntenance, all the principallest commodities and fruits

In these Natigations we must not be difmayed if some missike, or if we cannot perfect a Difcourry in the first, fecond, or third Voyage. Alexande Chapma (after he had wonne all Greeis, A thing not and from thence entred into little and great Ale; and comming to the fartheft parts of India, continued, there found fome difficultie to paffe) [aid.] If wee had not gothe forward, and periffed in our inthere found some discusse to paste) had . It wee had not gone torward, and persated in our intent, which other men effermed and held to be impossible, we had full remayned and stayed in the Allthings are entry of Cicilia, where as now we have over-runne and past through all those large and spacious effected in countreyes: for nothing is found and effected all at one time, neyther is any thing that is put in convenient practice, prefently brought to an end. To the which end, Cierra wifely faith; God hath given vs time. some things, and not all things, that our Successors also might have some-what to doe. Therefore we must not leave off, nor flay our pretence in the middle of our proceedings, as long as there is any commoditie to be hoped, and in time to bee obtayned : for that the greatest and richeft Treasures are hardlieft to be found. I thought good to set downe, in regard that I have vndertaken to describe the three Voyages made into the North Seas, in three yeeres, one after the other; behind Norway, and along and about Muscousia, towards the Kingdome of Cashaia, and China: whereof, the two laft, I my felfe holpe to effect; and yet brought them not to the defired end that we well hoped.

First, to shew our diligent, and most toylesome labour and paines taken, to find out the right The first sin-50 courfe; which we could not bring to paffe, as wee well hoped, wished, and defired, and possible dingis hard, might haue found it, by croffing the Seas, if we had taken the right courle; if the Ice & the fhortneffe of time, and had crosses had not hindered vs. We have affuredly found, that the onely and enfur. most hinderance to our Voyage, was the Ice that we found about Nona Zembla, vnder 73-74-75. and 76. degrees, and not so much voon the Seabetweene both the Lands : whereby it appeareth, that not the neerenesse of the North-pole, but the Ice that commeth in and out from the Tartarian Sea, about Nona Zembla, caused vs to feele the greatest cold. Therefore in regard that the neerenesse of the Pole was not the cause of the great cold that wee felt, if wee had had the meanes to have held our appointed and intended courfe into the North-east, we had peraduchture found some entrance : which course wee could not hold from Nous Zembla, because that 60 there we entred amongst great store of Ice; and how it was about Nona Zembla, we could not tel, before we had fought it; and when we had fought it, we could not then alter our course, at though also it is vnoertayn, what we should have done, if we had continued in our North-east course, because it is not yet found out. But it is true, that in the Countrey lying under 80. degrees, (which we esteeme to be Greenland) there is both Leaues and Grasse to be seene : Wherein, such Beats

of the heate voder the line with the cold North Pole.

The refoluse liam Barants.

The particu-

lars beeing

as feed of Leaues and Graffe (as Harts, Hinds, and fuch like heafts line, whereas to the contrary in Mona Zambia, there groweth neyther Leaues nor Graffe, and there are no beafts therein ry in Acus Carmeta, itte grows and Foxes, &c. Although Now Zemila lyeth 45, and 6. de. but manuar eace men, as some season a very the policy and a season and a season a season a season and a season grees more southersy from the Fourth of the Sunne on both fides, betweene both the Iron on the South and North-fide of the Line of the Sunne on both fides, betweene both the Iron on the South and Morthshale of the South as the South as it is right under the Line. What worship picks, under 23, degrees and an halfe, yet it is as hor, as it is right under the Line. What worship is the south and the south as the south der then should it be, that about the North-pole also, and as many degrees on both fides, it should not be colder then right under the Pole ! It was not the Sea, nor the necreases unto the Pole, but the Ice about the Land, that let and hindered vs (as I faid before) for that affoom as we made but the Ice about the Land, and put more into the Sea, although it was much further Northward, preferrly 10 from the Land, and pur more and the opinion our Pilot William Earents dyed, who not wishifunding the searcful and intolerable cold that he indured, yet he was not discouraged, but offered to by wagers with divers of vs., that by Gods helpe, hee would bring that pretended Voyage to an wagers wing a nerror va, water or va, and the North Cape, But I will leave that, and thew you end, if he held his courie North-east from the North Cape, But I will leave that, and thew you of the three Voyages aforesaid, begunne and set forth by the permission and surberance of the Generall States of the voited Proninces, and of Prince Marrice, as Admirall of the Sea, and the

First, you must vinderstand, that in Anno 1594, there was four eships set forth out of theynited Prouinces, whereof two were of Amsterdam; one of Zelands, and one of Enchonsien, that were appointed to Tayle into the North Seas, to discouer the Kingdomes of Cathaia, and Chine; 20 Northward from Norway, Masconia, and about Tarteria, whereof William Barents, a notable skilfull and wife Pilot, was Commander over the ships of Amsterdam, and with them you Whit-funday, departed from Amfterdam, and went to the Texell,

Vpon the fifth of Iume they fayled out of the Texel, and having a good wind and faire weather, vpon the three and twentieth of Iune, they arrived at Rildnin in Musconia, which for that it is a place well knowne and a common Voyage, I will make no further description thereof. The nine and twentieth of June, at foure of the clocke in the after-moone, they fet fayle out

knowne to many of our Mariners, I The fourth of July they faw None Zembla, lying South-east and by East fix or feven miles

from them, where they had blacke durtie ground at one hundred and fine fathome. William Ba- 30 rents tooke the height of the Sunne with his Croffe-ftaffe, when it was at the loweft , that is betweene North North-eaft, and Eaft and by North, and found it to be eleuated about the Hon-ZOB fix degrees and 1. part, his declination being 12. degrees and 55. minutes, from whence fibfiracting the aforefard height, there reflech fixtnenth degrees and 35. minutes, which being fibstracted from 90. degrees, there refteth 73. degrees and 25. minutes. Then they wound Eastward and fayled fine miles, East and by South, and East South-east, and past by a long point of Land that lay out into the Sea, which they named Langenes, and hard by that point East-ward. there was a great Bay, where they went a Land with their Boat, but found no people. From Langenes to Cape Bapo, East North-east it is foure miles. From Cape Bape to the West point of Lombfbay North-east and by North are fine miles, and betweene them both there are two 40 Creeks. Lombibay is a great wide Bay, on the West-side thereof having a faire Haven, fix, seven, or eight fathome deepe, blacke fand, there they went on floare with their Boat, and voon the shoare placed a Beacon, made of an old Mast which they found there; calling the Bay Lombitan, because of a certayne kind of Beares so called, which they found there in great abundance. The

Lombsbay.

East point of Lombibay, is a long narrow point, and by it there lyeth an lland, and from that long point to Sea-ward in, there is a great Creeke. This Lambfe at lyeth under 74. degrees and f. part. Admirals Hand From Louis bay to the point of the Admirals Hand, they fayled fix or feven miles, North-east and by North. The Admirals Iland is not very faire on the East-fide, but a farre off very flat, so that you must shunne it long before you come at it, it is also very vneuen, for at one casting of the Lead they had ten fathome deepe, and presently at another casting of the Lead they had but 50 fix fathome, and presently after that againe ten, eleuen, and twelve fathome, the streame runnine hard against the Flats.

From the East-end of the Admirals Iland, to Cape Negro, that is the Blacke point, they sayled about five or fix miles, East North-east, and a mile without the Blacke point it is Ceventy fathome deepe, the ground flimy, as vpon Pamphiss, right East-ward of the Blacks point, there are two sharpe pointed Hils in the Creeke, that are easie to be knowne. The fixt of July, the Sunne being North, they come right before the Blacks point with faire weather, this Blacks point lyeth under 75. degrees and 20. minutes. From the Blacks point to Williams Iland, they fayled feuenoreight

miles, East North-east, and betweene them both about halfe a mile, there lay a small lland. The fewenth of July they fayled from Williams Illand, and then Williams Barents tooke the 60 height of the Sunne, with his Croffe-staffe, and found it to be elegated about the Horizon in the South-west and by South 53: degrees and 6. minutes, his declination being 22. degrees and 49. minutes, which being added to \$3. degrees and 6. minutes, make 75. degrees and 55. minutes. This is the right height of the Pole of the faid lland. In this Iland they found great store of

Driftmood, and many Sea-horses being a kind of fish that keepeth in the Sea, having very great Sea-horses, of teeth, which at this day are vied in fread of Juory or Elephants Teeth, there allo is a good Road Mories. for thips, at twelve and thirreene fathome deepe against all winds, except it bee West Southwest, and West-winds, and there they found a piece of a Rassia ship, and that day they had the wind East North-east, miffie weather.

The ninth of July they entred into Beeren-fart, vpon the Road under Williams Iland, and there Beeren-fart they found a white Beare, which they perceiuing, presently entred into their Boat, and shot her white Beare, into the bodie with a Musket, but the Beare shewed most wonderfull strength, which almost is terrible. not to be found in any beatt, for no man euer heard the like to bee done by any Lion or cruell beaft what locuer : for not withfranding that the was that into the bodie, yet the leapt vp. and fwamme in the water, the men that were in the Boat rowing after her, caft a Rope about her necke, and by that meanes drew her at the sterne of the Boat, for that not having feene the like Beare before, they thought to have carryed her aliue in the ship, and to have shewed her for a strange wonder in Holland; but she vied such force, that they were glad that they were rid of her, and contented themselves with her skinne only, for shee made such a noyse, and stroug in fuch fort, that it was admirable, wherewith they let her reft and gaue her more scope, with the Rone that they held her by, and so drew her in that fort after them, by that meanes to wearie her : meane-time, William Barents made neerer to ber, but the Beare iwamme to the Boat, and with her fore-feet got hold of the sterne thereof, which William Barents perceining, faid, she will 20 there reft her felte, but she had another meaning, for she vsed such force, that at last the had gotten halfe her body into the Boat, wherewith the men were fo abashed, that they ranne into the further end of the Boat, and thought verily to have beene spoyled by her, but by a strange meanes they were delinered from her, for that the Rope that was about her necke, caught hold woon the hooke of the Ruther, whereby the Beare could get no further, but fo was held backe, and hanging in that manner, one of the men boldly stept forth from the end of the Scute , and thrust her into the bodie with a halfe-pike; and therewith thee fell downe into the water, and fo they rowed forward with her to the shippe, drawing her after them, till shee was in a manner dead, wherewith they killed her out-right, and hauing flayed her, brought the skin to Amilerdam.

The twentieth of July, they sayled out of Becreen-fores from trillams; Illand, and the same day Illand of Croffet

in the morning got to the Iland of Creffer, and there went on Land with their Pinnafe, and found the Hand to be barren, and full of Cliffes and Rocks, in it there was a small Hauen, whereinto they rowed with their Boat. This Iland is about halfe a mile long, and reacheth East and West, on the West end in hath a banke, about a third part of a mile long, and at the East end also another banke, vpon this Hand there flandeth two great Croffes, the Hand lyeth about two long miles from the firme Land, and under the East-and thereof there is a good Road, at fixe and twentie fathome loft ground; and formewhat closer to the Hand on the Strand at nine fathome fandie ground.

From the Iland of Croffes to the point of Cape Naffam, they fayled Eaft, and Eaft and by Cape Naffam. North about eight miles; it is a long flat point which you must be carefull to shunne, for thereabouts at feuen fathome there were flats or shooles, very farre from the Land; it lyeth almost vnder 76. degress and a halfe. From the West end of Williams Hand, to the Hand with the Crosses is three miles , the course North. From Nasaw point they sayled Eaft and by South , and East South-east fine miles, and then they thought that they faw Land in Nor th-east , and by East, and fayled towards it fine miles North-salt to descrie it, thinking it to bee another Land, that lay Northward from Nous Zemble, but it began to blow so hard out of the Well, that they were forced to take in their Marfaile, and yet the wind role in fuch manner , that they were forced to take in all their Sayles, and the Seawent fo hollow, that they were conftrayned to drine fixteene houres together, without fayle, eight or nine miles East North-east.

The elementh of July their Boat was by a great want of the Sea funke to the ground, and by that meanes they loft it, and after that they draue without fayles fine miles , East and by South; at laft the Sunne being almost South-east, the wind came about to the North-west, and then the weather began somewhat to cleere up, but yet it was very miltie. Then they hoyfed up their fayles againe and fayled foure miles till night, that the Sunne was North and by East, and there they had fixtie fathome deepe, muddie ground, and then they faw certayne flakes of Ice, at which time voon the twelfth of July they woond West, and held North-west, and fayled about a mile with miftie weather, and a North-west wind, and sayled up and downe West Southwest three or foure miles, to see if they sould find their Boat againe: after that they wound againe with the wind, and layled foure miles South-east, till the Sunne was South-west, and then they were close by the Land of Nous Zemble , that lay East and by North , and West and by 60 South, from thence they wound over againe till noone, and sayled three miles, North and by West, and then till the Sunne was North-west, they held North-west and by North three miles,

then they wound East-ward and sayled foure or fine miles North-east and by East. The thirteenth of July at night, they found great flore of Ice, as much as they could defery out of the top, that lay as if it had beene a plaine field of Ice, then they wound Westward over from

Cape Truft.

Gold Stones.

The seventeenth of July, William Barents tooke the height of the Sunne with his Affroisfine reductive way and a first and a first first and a first and perceived the firme Land, lying South from them. Then they fayled till the nineteenth of and percentage the mane Land, 1712 of the manual services and manual services and miffle fully in the morning, Well South-well fixe or feven miles, with a North-well winde, and miffle weather, and after that South-west and South-west and by West seven miles, the Sunne being 77. degrees 5. minutes leffe. Then they fayled two miles South-west, and were close by the land of Nona Zembla, about Cape Nassaw.

The flue and recent ieth of July, they were so inclosed about with flakes of Ice, that out of the top they could not diferene any thing beyond it, and fought to get through the Ice, but they top trey could not unterme any similar top tooke the height of the Sunne, when it was at the 10 lowest betweene North and North-east, and North-east and by North, it being eleuated above the Horizon 6, degrees, and 4, his Declination being 19, degrees 50, minutes, now take 6, degrees 1. from 19. degrees and 50. minutes, and there refleth 13. degrees 5. minutes, which fib.

itracted from 90. there refteth 77. degrees leffe s. minutes.

The fixe and twentieth of July in the morning, they fayled fixe miles South South-eaft, till the Sunne was South-west, and then South-east fixe miles, and were within a mile of the land of Noua Zembla, and came againe to Cape Trust.

The eight and twentieth of Iuly, the height of the Sun being taken at noone with the Afrelabium, it was found to be eleuated aboue the Horizon 57 degrees and 6 minutes, her Declination being 19. degrees and 18. minutes, which in all is 76. degrees and 24. minutes, they being then 2-20 bout four miles from the land of Nona Zembla, that lay all couered ouer with Snow, the wea-

The nine and twentieth of July, the height of the Sun being taken with the Croffe-flaffe, A. Brolabium & Quadrant, they found it to be elevated above the Horizon 32. degrees, her declination on being 19, degrees, which substracted from 32, there resteth 13. degrees of the Equator, which being substracted from 90, there rested 77, degrees, and then the nearest North point of Nose Zembla, called the Ice point, lay right East from them. There they found certaine Stones that gliftered like gold, which for that cause they named Gold-stones, and there also they had a faire Bay

V pon the same day they woond Southward againe, and sayled South-east two miles be- 30 tweene the Land and the Ice, and after that from the Ise poin t Eaft, and to the Southwardfixe Orange Illands miles to the Ilands of Orange; and there they laboured forward betweene the Land and the Ice, with faire full weather, and vpon the one and thirtieth of July got to the Ilands of Orange. And there went to one of those Ilands, where they found about two hundred Walrushen, or Sea-horfer, lying vpon the shoare to bast themselves in the Sunne. This Sea-horse is a wonderfull strong Monster of the Sea, much bigger then an Oxe, which keepes continually in the Seas, haning a skin like a Sea-calfe or Seale, with very short hayre, mouthed like a Lion, and many times they lye vpon the Ice; they are hardly killed vnlesse you strike them just vpon the forehead, it hath foure Feet, but no Eares, and commonly it hath one or two young ones at a time. And when the Fither-men chance to finde them vpon a flake of Ice with their young ones, thee caffeth her 40 young ones before her into the water, and then takes them in her Armes and fo plungeth vp and downe with them, and when shee will revenge her-felse vpon the Boates, or make resistance against them, then she casts her young ones from her againe, and with all her force goeth towards the Boate (whereby our men were once in no small danger, for that the Sea-horse had almost stricken her teeth into the sterne of their Boate) thinking to ouer-throw it, but by meanes of the great crie that the men made, the was afraid, and fwomme away againe, and tooke her young ones againe in her armes. They have two teeth flicking out of their mouthes, on each fide one, each being about halfe an Ell long, and are efteemed to bee as good as any luorie or Elephants teeth, specially in Musiconia, Tartaria, and thereabouts where they are knowne, for they are as

The Sea-horses that lay bathing themselues upon the Land, our men supposing that they could not defend themselves being out of the water, went on shoare to assaile them, and fought with them, to get their Teeth that are so rich, but they brake all their Hatchets, Cuttle-axes, and Pikes in pieces, and could not kill one of them, but ftrucke some of their Teeth out of their mouthes, which they tooke with them : and when they could get nothing against them by fighting, they agreed to goe aboord the Ship, to fetch some of their great Ordnance, to shoot at them therewith; but it began to blow so hard, that it rent the Ice into great pieces, so that they were forced not to doe it, and therewith they found a great white Beare that flept, which they shot into the bodie, but shee ranne away, and entred into the water; the men following her with their Boate, and killed her out-right, and then drew her vpon the Ice, and so sticking a halft-pike 60 vpright, bound her fast vnto it, thinking to fetch her when they came back againe, to shoot at the Sca-horfes with their Ordnance, but for that it began more and more to blow, and the Ice therewith brake in peeces, they did nothing at all.

After that, William B arous finding that hee could hardly get through, to accomplish and end

CHAP. 3. Naugations into the North-Seas, by William Barents.

his pretended Voyage, his men also beginning to bee wearie, and would sayle no further, they all together agreed to returne backe againe, to meet with the other Ships that had taken their course Thererentee to the Wer-gates, or the Straights of Maffam, to know what Difconeries they had made there. The backe again. first of August they turned their course to sayle backe againe from the Ilands of Orange: There William Berents tooke the height of the Sunne, it being vnder 71. degrees and a. and there they

found a great Creeke, which William Barents judged to bee the place where Oliner Brunel had heene before, called Coffine farch. From the Blacke Hand they fayled South, and South and by Blacke Hand.

East to another small point three miles, on which point there stood a Croffe, and therefore they called it the Croffe-power, there also was a flat Bay and low water, five, fix, or seven fadome deepe Croffe-point.

To fost ground. From Crafe-paint they fayled along by the land South South-east source miles, and then came to another (mail point, which behind it had a great Creeke, that reached Eastward: This point they called the fifth point, or Saint Laurence point. From the fifth point they favled to the Seemer point three miles, South South-east, and there lay a long blacke Rocke clote by the land, whereon there flood a Croffe; then they entred into the Ice againe, and put inward to the Sea because of the Ice. Their intent was to sayle along the coast of Nona Zembla to the Wey-gates, but by reason that the Ice met them, they woond Westward, and from the ninth of August in the Equening, till the tenth of August in the Morning, sayled West and by North eleuen miles, and after that foure miles West North-west, and North-west and by West, the winde being North; in the Morning they woond Eastward againe, and fayled vntill Ecuening ten miles East. and 20 East and by South; after that East, and East and by North foure miles, and there they faw land. and were against a great Creeke, where with their Boate they went on land, and there found a faire Hauen fine fathome deepe, fandie ground. This Creeke on the North fide bath three blacke points, and about the three points lyeth the road, but you must keepe somewhat from the third point, for it is itonie, and betweene the fecond and third point there is another faire Bay, for Saint Laurens North-west, North, and North-east windes, blacke fandie ground. This Bay they called Saint Bay.

Laurence Bay, and there they tooke the height of the Sunne, which was 70, degrees and 1. From Saint Laurence Bay, South South-east two miles to Sewer point, there lay along blacke Sconce point. Rocke close by the land, whereon there flood a Croffe, there they went on Land with their Boat and perceived that some men had beene there, and that they were fled to save themselves.

30 for there they found fixe Sackes with Rye-meale buried in the ground, and a heape of stones by the Croffe, and a Bullet for a great Piece, and thereabouts also there flood another Croffe, with three Houses made of wood, after the North Countrey manner : and in the houses they found many barrels of Pike-staues, whereby they conjectured, that there they yied to take Salmons. and by them flood fine or fix Coffins, by Granes, with dead mensiones, the Coffins flanding voon the ground all filled vp with fromes ; there also lay a broken Ruffis thip, the Keele thereof being fortie foure foot long, but they could fee no man on the Land ; it is a faire Hauen for all winder, which they called the Meale-haues, because of the Meale that they found there. From the blacke Rocke or Cliffe with the Croffe, two miles South South-east, there lay a low Hand a little into the Sea ; from whence they fayled nine or ten miles South South-east, there the height 40 of the Sunne was 76.degrees and 50. minutes, when it was South South-weft. From that Iland they fayled along by the Land foure miles South-east and by South, there they came to two Ilands, whereof the vetermost lay a mile from the Land : those Ilands they called Saint Clara.

Then they entred into the Ice againe, and woond inward to the Sea in the wind, and fayled from the Hand vntill Ecuening, West South-west foure miles, the wind being North-west; that Ecuening it was very miftie, and then they had eightic fathome deepe.

Then againe they fayled South-west and by West, and West South-west three miles, there they had feuentie fathome deepe, and so sayled till the thirteenth of August in the morning, South-west and by West foure miles, two houres before they had ground at fiftie fixe fathome, and in the morning at fortie fine fathome, foft muddie ground. Then they woond from the land and fayled North, and North and by East foure miles, from thence they wound to land againe, and fayled till the fourteene of August, fine or fixe miles South-west, fayling close by the land, colones.

which (as they ghelle) was the Hand of Colgogon. August the fifteenth, the Sun being South-west, William Barents tooke the height thereof, and found it to bee elevated above the Horizon 35 degrees, his Declination being 14 degrees and 1. 10 that as there wanted 55 degrees of 90. which 55. and 14. degrees 1. being both added together, made 69. Degrees 15. Minutes, which was the height of the Pole in that place, the wind being North-west, then they sayled two miles more Eastward, and came to the Ilands called Matfine Matfine Matfine and Delgoy, and there in the morning they met with the other Ships of their companie, being of Delgoy. Zelands and Enck-hayfen, that came out of Weg-gates the fame day, there they shewed each other with their with their 60 where they had beene, and how farre each of them had fayled and discourred.

The Ship of Enck-buy few had past the Straights of Wey-gates, and faid, that at the end of Weygates hee had found a large Sea, and that they had fayled fiftie or fixtie miles further Eastward. and were of opinion that they had beene about the River Obi, that commeth out of Tartaria, and that the Land of Tartaria reacheth North-eastward agains from thence, whereby they thought

that they were not farre from Cape Tabin, which is the point of Tararia, that reacheth towards that they were the state of Cathai, North-east and then Southward, and so thinking that they had Disco. the August for that time, and that it was too late in the yeere to fayle any further, as allo that pered enough for that time, and that it was not have in the year to easily having, at another their Commission was to discour the scituation, and to come home agains before Winter, they turned againe towards the Wry-gates, and came to an Iland about fine miles great, lying Southturned agains our sus the Tension fide, and called it the State Iland, there they found many Stones that were of Christall Mountayne, being a kind of Diamond.

Ones that were or Comman and the state of th When they were meeting, the other Ships thinking that William Barout had layled round their Ordnance, and were merrie, the other output output their Ordnance, and were merrie, the other output dayled round about Nona Zombia, and had come backe againe through the Wey-gate: and after they had to about None Company, and made of the state of newed each outer wind they make they are the fixteenth of August they went vader course to turne backs againe for Holland, and upon the fixteenth of August they went vader the Hands of Mailes and Dalger, and put into the road, because the wind was North-well, and lay till the eighteenth of August. Then they set sayle, and came to the Texes the fixteenth

CHAP. IIII.

A briefe Declaration of BARENTS his second Nanigation, made in Anno 1595. behinde Norway, Muscouia, and Tartaria, written by GERAT DE VEER.

He foure Ships aforefaid, being returned home about Haruest-time, in Anne 1594. they were in good hope that the Voyage aforefaid would bee done, by paring along the Straights of way-gates, and specially by the report made by the two Ships of Zelands, and Euch-bussen, wherein lobu Horgben of Linschoten was Committee, who declared the manner of their travell in fuch fort, that the General

States and Prince Maurice resolued, in the beginning of the next yeere to pre- 30 pare certayne Ships, not onely (as they went before) to discour the passage, but to lend certayn Wares and Merchandizes thither, wherein the Merchants might lade what Wares they woold, with certaine Factors to fell the faid Wares, in fuch places as they should arrive, neither paying Fraight nor Cuftome. Peter Plantine a learned Cofmographer, being a great furtherer and setter forward of this Voyage, and was their chiefe Instructer therein, setting downe the scinuation of the Coasts of Tartaria, Carbaia, & China; but how they lye it is not yet sufficiently Discovered, for that the courses and rules by him set downe, were not fully effected, by meanes of some inconveniences that fell out, which by reason of the shortnesse of time could not bee holpen,

In Anno 1 595, the Generall States of the vnited Prouinces, and Prince Maurice, caused seven Ships to be prepared to fayle through the Weg-gates, or the Straights of Naffan, to the King-40 dome of Cathaia and (bina: two out of Amberdam, two out of Zelands, two out of Ench-baylen, and one out of Rotterdom: fixe of them laden with diners kindes of Water, Merchandizes, and with Money and Factors, to fell the faid Wares; the fouenth being a Pinnaffe, that had Commission, when the other Ships were past about the Cape de Tabin (which is the furthest point of Tartaria) Or fo farre, that they might fayle forth Southward, without any let or hinderance of the Ice, to turne backe againe, and to bring newes thereof : and I being in William Barent: Ship that was our chiefe Pilot, and lames Hemf kerke chiefe Fastor, thought good to write downe that was out the farme in order, as it is hereafter declared, as I did the first Voyage, according to the course and firetching of the Land as it lyeth.

First, after we had beene mustered at Amsterdam, and every man taken an Oath, that was then 50 purposely ministred vnto vs; vpon the eighteene of June wee sayled to the Texes, from thence

parpoint to Sea, with other Ships that were appointed to meet va at a certayine day; and so to begin our Yoyage in the name of God. The second of July wee set sayle out of the Texes. The sirth of August, the North Cape lay about two miles East from vs, and when the Sunne was Northwest, the Mosher and ber Daughters lay Southward from vs foure miles.

The seuenteenth, wee saw great store of Ice, all along the Coast of Nona Zembla, and cashing out the Lead, had 75. fathom foft ground, After that we held divers couries because of the lee, and fayled South-east and by East, & South South-east, for the space of eighteene miles, till the eighteenth of August, when the Sunne was East, and then we cast out the lead againe, and found 30. fathome foft ground, and within two houres after that, fathome, red fand, with small shelles: 69 three Glasses after that we had ground at twentie fathome, red sand, with blacke shels, as before: then wee faw two Ilands, which they of Euck-bussen gave the names of Prince Maurice, and his Brother, which lay from ve South-east three miles, being low Land, and then wee fayled eight miles, till the Sun was South. Then we fayled East, and of tentimes cashing out the lead, we found

twentie, nineteene, eighteene, and seuenteene fathome deep, good ground mixed with black shels. and faw the Wey-gates (the Sunne being West) which Lay East North-east from vs about five miles, and after that we fayled about eight miles.

Then we fayled under 70. degrees, until we came to the Wey gates, most part through broken Ice, and when we got to Weg-gates, we cast out our Lead, and for a long time found thirteene and fourteene fathome, foft ground, mixed with blacke thels, not long after that we cast out the Lead and found ten fathome deepe, the windbeing North, and we forced to hold flifly aloofe.in regard of the great quantitie of Ice, till about mid-night, then were forced to wind Northward. because of certaine Rocks that lay on the Southfide of Weg-gates, right before vs, about a mile and

a halfe, having ten fathome deepe : then we changed our courfe, and fayled West North-west for the space of foure Glasses, after that we wound about againe East, and East and by South, and fo entred into VVey-gates, and as wee went in, wee cast out the Lead, and found seven fathome deepe, little more or leffe, till the nineteenth of August, and then the Sunne being South-east, we nerred into the VVey-gates, in the Road, the wind being North. The right Channell betweene Image point, the Image point and the Samuters Land was full of Ice, so that it was not well to bee past tho. Samuel land. row, and so we went into the Road (which we called the Traen Bay, because we found store of Train Bay. Traen-oyle there, this is a good Bay for the course of the Ice, and good almost for all winds, and we may fayle so farre into it as we will, at foure, fine, and three fathome, good Anchor-ground, on the East side it is deepe water.

The twentieth of August, the height of the Sunne being taken with the Crosse-staffe, wee found that it was eleuated aboue the Horizon 69. degrees 21. minutes, when it was South-west and by South, being at the highest, or before it beganne to descend. The one and twentieth of August, we went on Land within the VVog-gates with foureand fiftie men, to see the situation They goe of of the Country, and being two miles within the Land we found many Vel-werek, Traen, and Land fuch like Wares, and divers foot-steps of men, and Deere; whereby wee perceived that fome men dwelt there abouts, or else vied to come thither. And to affure vs the more thereof, wee might perceive it by the great number of Images, which we found there vpon the Image or Beetthooke, Images. (so called by vs) in great abundance, whereof ten dayes after wee were better informed by the Samuters and the Ruffians, when wer spake with them. And when wee entred further into the Land, we vied all the meanes we could, to fee if we could find any houses or men, by whom we might be informed of the figuation of the Sea there abouts, whereof afterward we had better in-

telligence by the Samuters; that told vs, that there are certayne men dwelling on the VVeygates, and vpon Nona Zembla, but we could neither find mehanouses, nor any other things, so that to have better information, wee went with some of our men further South-east into the Land; towards the Sea-side, and as we went, we found a path-way made with mens feet in the Mosse or Marth-ground, about halfe knee deepe; for that going so deepe we felt hard ground ynderour feet, which at the deepest was no higher then our shooes, and as we went forward to the Sea-coast, we were exceeding glad, thinking that we had feene a passage open, where we might get through, because we saw so little Ice there : and in the Euening entring into our ship againe, we shewed them that newes. Meane-time, our Master had fent out a Boat to fee if the Tieres. rian Seawas open, but it could not get into the Sea because of the Ice, yet they rowed to the Croffe-point, and there let the Boat lye, and went over the Land to the West point, and there

perceived that the Ice in the Tartarian Sea, lay full upon the Ruffian Coafts, and in the mouth of VVey-gates. The three and twentieth of August we found a Ladgie, or Boat of Pitzere, which was sewed together with Baft or Ropes, that had beene Northward to feeke for some Sea-horses Teeth, Traen, and Geese, which they fetcht with their Boat, to lade in certaine shippes that were to come out of Russia through Wey-gates. Which ships they said (when they spake with vs) were to fayle into the Tartarian Sea, by the River of Oby, to a place called Ugolita in Tartaria, there 50 to flay all Winter, as they vied to doe euery yeere : and told vs that it would yet bee nine or ten

Weekes ere it began to freeze in that place, and that when it once beganne to freeze, it would freeze so hard, that as then men might go ouer the Sea into Tartaria (along vpon the Ice) which

The foure and twentieth of August in the morning betimes, we went on board of the Lodgie, to have further information and intiruction of the Sea, on the Eastfide of PVer-gates, and they gaue vs good instruction, such as you have heard.

The fine and twentieth of August we went agains to the Lodgie, and in friendly manner spake with them, we for our parts offering them friendship; and then they gaue vs eight fat Geefe, that lay in the bottome of their Boat : we defired that one or two of them would goe with vs a-6c board our ship, and they willingly went with vs to the number of seuen; and being in our ship, they wondred much at the greatnesse and furniture of our ship: and after they had seene and looked into it in every place, we fet Fish, Butter and Cheese before them to eate, but they refused it; faying, that that day was a Fasting day with them, but at last when they faw some of our Pickled Herrings, they eate them both heads, tayles, skinnes, and guts, and having eaten thereof,

Iames Hemfherke famous

we gaue them a small Firkin of Herrings, for the which they gaue vs great thankes, knowing not what friendship they should doe vs to require our courtese, and wee brought them with our Pinnaffe into the Trace Bay. About Noone we hoyfed up our Anchors with a West North-west winds the course or freeching of VV9-gate, is East to Grau point, and then North-east to the Twiff point, and somewhat more Easterly: From thence the Land of W9-gate, reacheth North North-east, and North and by East, and then North, and somewhat Westerly, wee syled North-east and East ward two miles, by the Twift point, but then we were compelled to faile backe againe, because of the great store of Ice, and tooke our course to our Road aforesaid; and fayling backe againe we found a good place by the Croffe point, to anchor in that night. The fix and twentieth of August in the morning we hoysed Anchor, and put out our fork-laile, and so 10 failed to our old Road, and there to stay for a more convenient time.

The eight and twentie, nine and twentie, and thirtieth of August till the one and thirtieth. They focks I ne cight and twenter min and twenter, and William Barents our Captaine failed to the with Sangeds, the wind for the most part was South-west, and William Barents our Captaine failed to the South-side of VVey-gates, and there went on Land, where we found certaine Wildmen (called Samuers) and yet not altogether wilde, for they being twentie in number, staid and spake with our men, being but nine together, about a mile within the Land, our men not thinking to find any men there (for that we had at other times beene on Land in the VVeg-gates, and faw none) at last, it being missie weather, they perceiued men, fine and fine in a company, and weewere hard by them before we knew it : then our Interpretour went alone towards them to speake with them; which they perceiving, fent one towards vs, who comming almost to our men, tooke ta an Arrow out of his Quiuer, offering to shoot at him; wherewith our Interpretor, being with out Armes, was afraid, and cryed vuto him, faying (in Ruffian speech;) Shoote not, we are friends: which the other hearing, cast his Bow and Arrowes to the ground, therewith giving him to vnderstand that he was well content to speake with our man: which done, our man called to him once againe, and faid: We are friends: whereunto he made answere and faid; then you are welcome : and fainting one the other, bended both their heads downe towards the ground, after the Russian manner: this done, our Interpretor questioned with him, about the situation and streeching of the Sea East-ward through the Streights of Weg-gater; whereof he gaue vs good infin-Ction, faying that when they should have past a point of land about five daies sailing from thence, shewing North-eastward; that after that, there is a great Sea (shewing towards the South-east to vpward,) faying, that he knew it very well, for that one had beene there that was fent thither by their King with certaine Souldiers, whereof he had beene Captaine.

The manner of their Apparell is, like as we vie to paint Wildmen, but they are not wilderfor they are of reasonable judgement: they are apparelled in Harts skinnes from the head to the feet, vnleffe it be the principalleft of them, which are apparelled, whether they be men or women, like vnto the rest, as atoresaid, vnlesse it be on their heads, which they couer with certains coloured Cloth lined with Furre : the rest weare Caps of Harts or Bucks skinnes, the rough fide Haire, perion, outwards, which fland clofe to their heads, and are very fir. They weare long Haire, which they outwards, which fland clofe to their heads, and are very fir. They weare long Haire, which they have pleate and fold, and let it hang downe vpontheir backes. They are (for the moft part all) thore and low of flature, with broad flat faces, small eyes, thore legs, their knees flanding outwards 40 and are very quicke to goe and leape. They trust not Strangers; for although that wee shewed them all the courtesse and friendship that wee could, yet they trusted vs not much : which wee perceived hereby, that as upon the first of September wee went againe on Land to them, and that one of our men desired to see one of their Bowes : they refused it, making a signe that they would not doe it. Hee that they called their King, had Centinels standing abroad, to see what was done in the Countrey, and what was bought and fold : At last, one of our men went neerer to one of the Centinels, to speake with him, and offered him great friendship, according to their accustomed manner, withall giving him a Bisket; which he with great thankes tooke, and presently eate it; and while hee eate it, hee still lookt diligently about him on all sides what

Their Sleds.

Their Sleds stood alwayes readie with one or two Harts in them, that runne so swiftly with one or two men in them, that our Horses are not able to follow them. One of our men shota Musket towards the Sea, wherewith they were in fo great feare, that they ranne and leapt like mad men : yet at last, they satisfied themselves, when they perceived that it was not maliciously done to hurt them : and we told them by our Interpretor, that we vied our Peeces in flead of Bowes; whereat they wondered, because of the great blow and noyse that it gaue and made; and to shew them what wee could doe therewith, one of our men tooke a flat stone about halfe a handfull broad, and let it vpon a Hill a good way off from him: which they perceiving, and thinking that we meant some-what thereby, fiftie or fixtie of them gathered round about vs; and yet some-what farre off, wherewith hee that had the Peece, shot it off, and with the Bullet

fmote the stone in sunder: whereat they wondred much more then before. Departure. After that, wee tooke our leaues one of the other, with great friendship on both fides; and when we were in our Pinnasse, wee all put off our Hats, and bowed our heads vinto them, sounding our Trumpet: They (in their manner) faluting vs alto, and then went to their Sleds again.

And after they were gone from vs, and were tomewhat within the Land, one of them came riding to the shoare, to fetch a rough-hewed Image, that our men had taken off the shoare, and Image, carryed into their Boate : and when hee was in our Boate, and perceived the Image, he made's a figne that wee had not done well to take away that Image: Which we beholding, gate it to him againe : Which when hee had receiued, he placed it vpon a Hill right by the Sea fide. and tooke it not with him, but fent a Sled to fetch it from thence : and as farte as wee could perceive, they esteemed that Image to be their God; for that right over against that place in the perceine, they entermed that image to be then does not be supported by the first part of the carried Images, all Hundreds of roughabout the Heads, being somewhat round, and in the middle, hatting a little hill in itead of illuspen tensor to a Nofe; and about the Nofe two cuts, in place of Eyes; and vnder the Nofe; accus in place of a ges.

CHAP.4. Beelt-hooke, fo called of certaine Images there found.

Mouth. Before the Images, wee found great flore of Alhes, and bones of Harts : whereby it is to bee supposed, that there they offered votothem.

The fecond of September, a little before Sunne riling, wee put forth an Anthor to get out, for that the winde as then blew South South-west; at being good weather to get out, and if weather to lye still: for wee lay under a low Banke. The Admirall and Vice-admirall seeing vs making out, began also to hoyse their Anchors, and to set sayle. When wee put out our Focke-fayle, the Sunne was Eaft and by South : and then wee fayled to the Croffe-point, and there wee cast Anchor to stay for the Vice-admirals Pinnasse; which with much labour and paines, in time got out of the Ice, by often cafting out of their Anchor : and in the Ecuening 20 thee got to vs : in the Morning about two hours before Sunne ring we fet fayle, and by Sunne

rling, wee got within a mile Eastward of the Twitt-point, and fayled Northward fixe miles, till the Sunne was South. Then wee, were forced to wind about, because of the great quantitie of Ice, and the Myst that then fell, at which time the winde blew so vincertayne, that we could hold no courfe, but were forced continually to winds and turns about, by reason of the Ice, and the vnconfrantnesse of the winde, together with myst, so that our course was vncettayne, and wee supposed that we had sayled Southward up towards the Samuters. Country, and then held our courie South-well, till the watchers were North-well from vs ; then we came to the point

of the States Hand lying Eastward about a Musker shot from the land, having 1 3 fathom deepe. The fourth of September, wee hoyfed Anchor because of the Ice, and sayled betweene the firme Land and the States Iland, where we lay close by the States Iland at foure and five fathori States Iland

30 deepe, and made our Ship full with a Cable call on the shoare, and there were were fafe from the course of the Ice, and diners times went on land to get Hares, whereof there were many in that lland. The fixth of September, some of our men went on shoare spon the firme land to seeke for Stones, which are a kinde of Diamond, whereof there are many also in the States Iland : and while they were feeking the Stones, two of our men lying together in one place, a great leane white Beare came suddenly stealing out, and caught one of them fast by the necke, who not white Deare came requestly iterating one and large of the state of the Allowing what is was that cook into by the most fare from him; lifted up his head to fee two men. who it was, and perceiuing it to bee a monftrous Beare, cryed out and Gyd, Oh Mate! it is a

40 Beare, and thetewith profendly role vp and ranne away;

The Beare at the first falling you the man, but his/head in fineler, and fuckt out his blood, wherewith the reft of the men that were on the Land, being about twentie in number, ranne wherewith the reit or the men that were in the sealing young about a white in humber, and have presently thither, either to faue the man, or else to drive the Beare from the dead body : and had been from the dead body in the flourises. uing charged their Pieces and bent their Pikes, fet vpon her, that still was denouring the man; but perceiuing them to come towards her, heroely and cruelly ranne at them, and got another of them out from the Companie which shee tore in pieces, wherwith all the rest ranne away.

We perceining out of our Ship and Pinnaffe, that our men ranne to the Sea-fide to faue themfelues, with all speed entred into our Boates, and rowed as fast wee could to the shoare to relieue our men. Where being on Land, we beheld the cruell spectacle of our two dead men; that had beene fo cruelly killed and torne in pieces by the Beare, wee feeing that, incouraged our men to goe backe againe with vs. and with Pieces, Curtolaxes, and Halfe-piker, to fet vpon the Beare, goe to the against with a same of the same of them faying, our men are already letd, and we but they would not all agree thereunto; fome of them faying, our men are already letd, and we final get the Bear well enough, though we oppose not our selves into so open larger, if wee might fane our fellowes lives, then wee would make halfe, but now we need not make fch fpeed, but take her at an advantage, with most fecuritie for our felues, for we have to doe with a eruell, serce, and ranchous Beast. Whereupon three of our men went forward, the Beare still des wouring her prey, not once fearing the number of our men, and yet they were thirtie at the least : the three that went forward in that fort, were Corneling taceb for, Mafter of William Barents fhip, William Cifen, Pylot of the Pinnasse, and Hans wan Nossen, William Barents, Purser : and after 60 that the fayd Master and Pylor had thot three times and mist, the Purser steepping somewhat further forward, and feeing the Beare to be within the length of a floe, prefently leuclied his Piece, and discharging it at the Beare, shor her into the head betweene both the eyes, and yet she held the man still fast by the necke, and lifted up her head with the man in her mouth, but thee Begm fomwhat to flagger, wherewith the Purfer and a Seerift-man drew out their Curtehexes;

They kill he

and strooke at her so hard, that their Curtelaxes burst, and yet she would not leave the man, at last and into see few went to them, and with all his might strooke the Beare vpon the snout with his Piece, at which time the Beare fell to the ground, making a great moyle, and William Gersen leaping vpon her cut her throat. The feuenth of September, wee buried the dead bodies of our men in the States Hand, and having flayed the Beare, carryed her Skin to Amberdam.

The minth of September, we fet fayle from the States Iland, but the Ice came in fo thicke and with such force, that we could not get through, so that at Eenening we came backe agains to the States Iland, the winde being Wefterly. There the Admirall and the Pinnaffe of Restrates fell on around by certayne Rockes, but got off againe without any hurt.

Il on ground by certayue working a game from the States Iland towards the 1979-gates, and 10 fent two Boates into the Sea, to certifie vs what flore of Ice was abroad : and that Ecuening wee came all together into Weg-gates, and Anchored by the Twiff-point. The eleventh of September in the Morning, we fayled againe into the Tartarian Sea, but we fell into great store of Ice, so that we sayled backe againe to the Weg-gates, and Auchored by the Croffs-point, and about midnight we faw a Ruffian Lodgie, that fayled from the Beets-point towards the Sammers Land. The thisteenth of September, the Sunne being South, there began a great storme to blow out of the South South-welt, the weather being miftie, melancholy, and snowie, and the storme increasing more and more, we draue through,

The fourteenth of September, the weather began to bee somewhat clearer, the winde being North-west, and the storme blowing sliffe out of the Tarjarian Sea, but at Ecuening it was faire an weather, and then the wind blew North-east, the same day our men went on the other side of Wes-sates, on the firme land, to take the depth of the Channell, and entred into the Bough behind the Hands, where there flood a little House made of wood, and a great fall of water int the land. The fame Morning we hoyfed vp our Anchor, thinking once againe to try whateve could doe to further our Voyage, but our Admirall being of another minde, lay full till thefeteenth of September. The same day in the Morning, the winde draue in from the East-end of the Weg-gates, whereby we were forced prefently to hoyse Anchors, and the sameday sayled out from the West-end of the West-gates, with all our Fleet, and made homewards againe, and that day paft by the Hands called Marfoe and Delgey, and that night we fayled twelve miles, Northwest and by West, till Saturday in the morning, and then the winde fell North-east, and it be- 30 gan to Snow. We saw the point of Candynaes, lying South-east from vs, and then wee had seven and twentie fathom deepe, red fand with blacke thele.

The nine and twentieth of September, in the Eeuening entred into Ward-boule, and there we flayed till the tenth of October. And that day we fet fayle out of Ward-honfe, and voon the eighteenth of November, we arrived in the Mass.

CHAP. V. The third Voyage Northward to the Kingdomes of Cathaia, and China, in Anno 1596. Written by GERAT DE VEER

What happened to them at Sea, before they came to build their House.

Free that the seuen Ships (as I said before) were returned backe againe from their North Voyage, with leffe benefit then was expected, the Generall States of 50 the Vnited Provinces consulted together, to send certayne Ships thither againe, a third time, to fee if they might bring the faid Voyage to a good end, if it were possible to bee done : but after much Consultation had, they could not agree thereon; yet they were content to cause a Proclamation to be made, that if

any, either Townes, or Merchants, were disposed to venture to make further search that way, at their owne charges, if the Voyage were accomplished, and that thereby it might be made apparant, that the layd paffage was to be fayled, they were content togine them a good reward, in the Countries behalfe, naming a certayne fumme of money. Whereupon in the beginning of this yeere, there was two Ships rigged and fet forth by the Towne of Amsterdam, to tayle that Voyage, the men therein being taken vp vpon two Conditions : viz. What they should have if 69 the Voyage were not accomplished, and what they should have if they got through, and brought the Voyage to an end, promiting them a good reward if they could effect it, thereby to encourage the men, taking up as many vnmarried men as they could, that they might not bee diffwaded by meanes of their Wines and Children to leane off the Voyage. Vpon these Conditions, those

two Ships were ready to fee fayle in the beginning of May. In the one, lacob Heemskerke Hendrickson, was Master and Factor for the Wares and Merchandizes; and William Barents chiefe Pylot. In the other, loba Cornelison Rup, was both Master and Factor for the goods that the Merchants had laden inher.

The fifth of May, all the men in both the Ships were Mustered, and vpon the tenth of May. they fayled from Amfterdam, and the thirteenth of May got to the Ule. The thirtieth of May we had a good winde, and fayled North-east, and wee tooke the height of the Sunne with our Croffe-staffe, and found that it was elevated about the Horizon 47. degrees and 42. minutes, his Declination was 21, degrees and 42 minutes, fo that the height of the Pole was 69, degrees

The first of Iune we had no night, and the second of Iune we had the winde contrarie, but yoon the fourth of June we had a good winde, out of the West North-west, and sayled North-east. Three Sunnes on the fourth of lune we had a good winde, out or the west inorth-west, and layied inorth-east, and when the Sunne was about South South-east, wee faw a strange fight in the Element: for Rain-bowes. on each fide of the Sunne there was another Sunne, and two Raine-bowes, that past cleane thorow the three Sunnes, and then two Raine-bowes more, the one compassing round about the beene seene in Sunnes, and the other crosse thorow the great rundle; the great rundle standing with the vtter- England about Sunnes, and the other croite thorow the great runnie; the great runnie manning with the vttermost point, eleuated about the Horizon 28.degrees: at noone the Sunne being at the higheff, the therine this
most point, eleuated about the Horizon 28.degrees: at noone the Sunne being at the higheff, the therine this
most control to the state of t height thereof was measured, and wee found by the Aftrolabium, that it was eleuated about the the Preffe. Horizon 48 degrees and 43 minutes, his Declination was 22 degrees and 17 minutes, the which 20 being added to 48. degrees 43. minutes, it was found that wee were vnder 71. degrees of the height of the Pole.

John Cornelis ship held aloofe from vs, and would not keepe with vs, and would hold no course but North North-east, for they alledged, that if wee went any more Easterly, that then we should enter into the Weg-gates, but wee being not able to perswade them, altered our course one point of the Compasse, to meet them, and sayled North-east and by North, and should otherwise haue fayled North-east, and somewhat more East.

The fifth, wee faw the first Ice, which we wondered at, at the first, thinking that it had beene The fifth, wee law the fifth at your with the Fore-decke, on a finder began to cry out with white Swannes, for one of our men walking in the Fore-decke, on a finder began to cry out with white Swannes, for one of our men walking in the Fore-decke, on a finder began to cry out with the walking in the Fore-decke, on a finder began to cry out with the walking in the Fore-decke, on a finder began to cry out with the walking in the Fore-decke, on a finder began to cry out with the same and the first began to cry out with the first began to c a loud vovce; and faid; that hee faw white Swannes: which wee that were under Hatches hea-

20 ring, presently came up, and perceived that it was Ice that came driving from the great heape, showing like Swannes, it being then about Eenening, at midnight we sayled through it, and the Sunne was about a degree eleuated about the Horizon in the North.

The fixth, about foure of the clocke in the after-noone, were entred againe into the Ice, which was softrong that we could not passe through it, and sayled South-west and by West, till eight Glaffes were runne out, after that we kept on our course North, North-east, and fayled along by the Ice.

The feuenth, we tooke the height of the Sunne, and found that it was elevated about the Horizon 28 degrees and 28 minutes, his Declination being 22. degrees 38 minutes; which being taken from 38. degrees 38. minutes, wee found the Pole to bee 74. degrees : there we found to 40 great flore of Ice, that it was admirable: and we sayled along through it, as if we had past betweenetwo Lands. The water being as greene as Grasse, and we supposed that we were not Greene water. farre from Greenland, and the longer we fayled, the more and thicker Ice we found. The eight

of lune, we came to fo great a heape of Ice, that we could not fayle through it, The ninth of lune, we found the Iland that lay under 74. degrees and 30. minutes, and as we Beste, or Chegheft, it was about fine miles long. The tenth, we put out our Boate, and therewith eight of our tie-lland. men went on Land, and as we palt by Iohn Cornelisms thip, eight of his men also came into our Boat, whereof one was the Pilot. Then William Barents asked him, whether we were not too much Westward, but hee would not acknowledge it : whereupon there passed many words betweene them, for William Barents fayd, he would proue it to bee so, as in truth it was. The ele-

50 uenth, going on Land, we found great flore of Sea-Mewes Egges vpon the shoare, and in that Ihand we were in great danger of our liues: for that going vp a great Hill of Snow, when wee should come downe againe, we thought we should all haue broken our neckes, it was so slipperie, but we fate upon the Snow and flid downe, which was very dangerous for vs, to breake both our armes and legges; for that at the foot of the Hill there was many Rockes, which we were likely to haue fallen vpon, yet by Gods helpe we got fafely downe againe. Meane time William Variation of Barents fate in the Boate, and faw vs slide downe, and was in greater feare then we, to behold vs. the Compasse. in that danger. In the faid lland, we found the varying of our Compasse, which was 13. degrees, to that it differed a whole point at the least : after that wee rowed aboord lobn Cornelisons thip, and there we eate our Egges.

The twelfth in the morning, we faw a white Beare, which wee rowed after with our Boate, durst not doe it, but rowed backe againe to our Ship to fetch more men and our Armes, and to made to her againe with Muskets, Harquebusses, Halberts, and Hatchets. Ichn Carnelssons men comming also with their Boate to helpe vs : and so being well furnished of men and weapons.

we rowed with both our Boates vnto the Beare, and fought with her while foure Glaffes were runne out, for our Weapons could doe her little hurt; and amongst the rest of the blowes that we gaus her, one of our men ftrooke her into the backe with an Axe, which flucke faft in her backe, and vet shee swamme away with it; but we rowed after her, and at last we cut her head in funder with an Axe, wherewith the dyed : and then wee brought her into John Cornellons Bearesskin 12. Ship, where we flayed her, and found her Skinne to bee twelue foot leng: which done, we cate fome of her flesh; but wee brookt it not well. This Iland we called the Beare-Iland.

The thirteenth we left the Iland, and fayled North, and somewhat Easterly, the winde being West, and South-west, and made good way : so that when the Sunne was North, weeghest that

we had fayled fixteene miles Northward from that Iland.

The fourteenth, when the Sunne was North, we cast out our Lead one hundred and thirteene fathomedeepe, but found no ground, and fo fayled forward till the fifteenth of Iune, when the Sunne was South-east, with missie and drilling weather, and sayled North, and North and by East: about Eeuening it cleared up, and then we faw a great thing driving in the Sea, which we thought had beenea Ship : but passing along by it, we perceived it to bee a dead Whale, that funke monstroully; and on it there face a great number of Sea-mewes : At that time, wee had

Dead Whale.

The fixteenth, with the like speed we sayled North and by East, with mistie weather; and as we fayled, we heard the Ice before we faw it ; but after, when it cleared vp, we faw it, and then woond off from it, when as we ghest we had fayled thirtie miles. The fenenteenth and eigh- 20 teenth, we saw great store of Ice, and sayled along by it, vntill we came to the point, which we could not reach, for that the wind was South-east, which was right against vs. & the point of Ice lay Southward from vs : yet wee lauered a great while to get beyond it, but we could not doe it, The nineteenth, we faw Land againe, then we tooke the height of the Sun, and found that it was eleuated aboue the Horizon 33. degrees and 37. minutes : her Declination being 22.degrees and 26, minutes : which taken from the fayd 33, degrees and 37. minutes, wee found that we were and 11 minuts, vnder 80.degrees and 11.minutes: which was the height of the Pole there. This Land was verv ereat, and we fayled Westward along by it, till we were vnder 79. degrees and a halfe, where we found a good road, and could not get neare to the Land, because the winde blew North-east, which was right off from the Land : the Bay reacheth right North and South into the Sea.

Another fight Beare.

So.Degrees

The twentie one, we cast out our Anchor, at eighteene fathome before the Land; and then we and lobn Cornelisons men, rowed on the West-fide of the Land, and there fetched Balaft; and when we got on boord againe with our Balaft, we faw a white Beare that swamme towardsour thip; whereupon we left off our worke, and entering into the Boate with Iohn Cornelisons men, rowed after her, and croffing her in the way, droue her from the Land, wherewith the fwamme further into the Sea, and we followed her; and for that our Boate could not make good way after her, we manned our Scute also, the better to follow her: but shee swam a mile into the Sea: vet we followed her with the most part of all our men of both Ships in three Boats, and strooks oftentimes at her, cutting and hewing her, fo that all our Armes were most broken in pieces. During our fight with her, thee strooke her Clawes fo hard in our Boate, that the figues thereof 40 were seene in it; but as hap was, it was in the fore-head of our Boate : for if it had beene in the middle thereof, she had (peraduenture) ouer-throwne it, they have such force in their Clawes: At last, after we had fought long with her, and made her wearie with our three Boates that kept about her, we ouercame her and killed her : which done, we brought her into our ship, and flayed her : her Skinne being thirteene foot long. After that, we rowed with our Scute, about a mile inward to the Land, where there was a good Hauen, and good Anchor ground, on the East-fide being sandie, there wee cast out our Lead, and found sixteene fathom deepe, and after that, ten, and twelve fathome, and rowing further, we found that on the East-side there was two llands, that reached Eastward into the Sea : on the West-side also there was a great Creeke or River, which shewed also like an Iland. Then we rowed to the Iland that lay in the middle, and there 50 we found many Red Geefe-egges, which we faw fitting vpon their Neits, and droue them from them, and they flying away, cryed red, red, red : and as they fate we killed one Goose dead with a stone, which we drest and eate, and at least sixtie Egges, that wee tooke with vs aboord the ship, and vpon the two and twentieth of lune, we went aboord our ship againe.

Beares skin 13 foot long.

Red Geefe Egges,

Red Geefe breed their young Geefe, Vnder 80 Degrees in Green Fable of Bar-

rie yeere are there taken in abundance, but till this time it was neuer knowne where they hatcht their Egges, so that some men haue taken upon them to write, that they sit upon Trees in Scotland, that hang ouer the Water, and fuch Egges as fall from them downe into the Water become young Geele, and swim there out of the water; but those that fall vpon the Land burst in sunder, and are lost; but this is now found to bee contrary, and it is not to be wondred at, that no man 60 could tell where they breed their Egges, for that no man that euer wee knew, had euer beene vnder 80. Degrees : nor that Land vnder 80. degrees, was neuer iet downe in any Card, much leffe the red Geefe that breed therein.

Those Geese were of a perfit Red colour, such as come into Holland about Weiringen, and eue-

No:e.

It is heere also to bee noted, that although that in this land which we esteeme to be Green-

land lying under 80. Degrees, and more, there groweth Leaues and Graffe, and that there are fuch Beafts therein as eate graffe, as Harts, Buckes, and fuch like beafts as live thereon, yet in Noua Zembla vnder 76. Degrees, there groweth neither Leaues nor Graffe, nor any Beafts that eare graffe or leaves live therein, but such Beasts as eate Flesh, as Beares and Foxes: and yet this Land Iveth full 4. Degrees from the North Pole, further then Greenland aforefayd doth.

The three and twentieth, wee hoysted Anchor againe, and sayled North-westward into the Sea: but could get no further, by reason of the Ice; and so we came to the same place againe where we had layne, and cast Anchor at eighteene fathome : and at Eeuening being at Anchor. the Sunne being North-east, and somewhat more Eastward, wee tooke the height thereof, and To found it to be elevated about the Horizon 13. degrees and 10. minutes, his Declination being 22. degrees and 28.minutes : which substracted from the height aforesaid resteth 10. degrees and 18. minutes, which being fubstracted from 90, degrees, then the height of the Pole there was 70

degrees and 42. minutes.

After that, we hoysted Anchor againe, and sayled along by the West side of the Land, and then our men went on Land, to fee how much the Needle of the Compaffe varyed : Meane time Bareaffanie there came a great white Beare swimming towards the Ship, and would have climbed up into them. it, if we had not made a noyfe; and with that wee shot at her with a Piece, but she left the ship, and swam to the Land, where our men were : which we perceiuing, sayled with our ship towards the Land, and gaue a great shout; wherewith our men thought that wee had fallen on a Rocke with our Ship, which made them much abashed; and therewith the Beare also being a-

fraid, swamme off againe from the Land, and left our men, which made vs glad : for our men had Variation of no Weapons about them. Touching the varying of the Compasse, for the which cause our men the Compasse

went on Land, to trie the certaintie thereof : it was found to differ 16. Degrees,

The fine and twentieth of Iune, we hoyfted Anchor againe, and fayled along by the Land, and went South, and South South-weft, with a North North-eaft winde, vnder 79. degrees. There we found a great Creeke or River, whereinto we fayled ten miles at the leaft, holding our courfe Southward; but we perceived that there we could not get through: there we cast out our Lead. and for the most part found 10.fathom deepe, but we were constrained to lauere out again, for the winde was Northerly, and almost full North, and we perceived that it reached to the firme land. 30 which we supposed to bee Low-land, for that wee could not fee it any thing farre, and therefore we fayled fo neere vnto it, till that we might fee it, and then we were forced to lauere, and vpon the feuen and twentieth of June we got out againe.

The eight and twentieth, we got beyond the point that Ly on the West side, where there was fo great a number of Birds, that they flew against our Sayles, and wee sayled ten miles South. Store of Birds; ward, and after that West, to shun the Ice. The nine and twentieth, wee fayled South-east and fomewhat more Easterly, along by the Land, till we were under 76. degrees and 50.minutes, for we were forced to out off from the Land, because of the Ice. The thirtieth of June, wee fayled South, and somewhat East, and then we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 38. degrees and 20.minutes, his Declination was 23. degrees and 20.

40 minuts, which being taken from the former height, it was found that we were vnder 75. degrees. The first of July wee faw the Beare-Iland againe, and then Iohn Cornelison and his Officers July. came aboord our fhip, to speake with vs about altering our course, but wee being of a contrary o. Chris. Hards pinion, it was agreed that we should follow on our course, and hee his : which was, that he (according to his defire) should sayle vnto \$0. Degrees againe : for he was of opinion, that there he should finde a passage through, on the East side of the Land that lay under 80. Degrees. And up. They pare on that agreement we left each other, they fayling Northward, and wee Southward, because of companies the Ice, the winde being East South-east,

The fecond, we fayled Eastward, and were vnder 74.degrees, having the wind North Northwest, and then wee woond ouer another Bough, with an East North-east winde, and sayled so Northward. In the Eeuening the Sunne being about North-west and by North, we woond about againe (because of the Ice) with an East winde, and sayled South South-east, and about East South-east, and then we woond about againe (because of the see) and the Sunne being South South-west, we wound about againe, and sayled North-east. The third, we were under 74 degrees, having a South-east and by East winde, and sayled North-east and by North : after that wee woond about againe with a South winde, and fayled East South-east, till the Sume was North-west, then the winde began to be somewhat larger.

The eight, wee had a good North-west winde, and sayled East and by North, with an indifferent cold gale of wind, and got vinder 72. degrees and 15. minutes. The ninth of July, we went East and by North, the wind being West. The tenth of July, the Sunne being South South-west, 60 we cast out our Lead, and had ground at one hundred and fixtie fathome, the wind being Northeast and by North, and we fayled East and by South, under 72. degrees. The eleuenth, we found 70.fathome deepe, and faw no Ice, then weeghelt that we were right South and North from Dandinaes, that is the East-point of the White-sea, that lay Southward from vs, and had sandie ground, and the banke firetched Northward into the Sea, fo that we were out of doubt that we

W:Clourhbies

Land concei-

were upon the banke of the White Sea, for wee had found no fandie go and all the Coast along, but onely that banke. Then the wind being East and by South, we failed South, and South and by East, under 72. degrees, and after that, we had a South South-east Wind, and sayled Northeast to get ouer the Banke.

The thirteenth of July, we sayled East with a North North-east wind: then wee tooke the height of the Sunne, and found it to be eleuated aboue the Horizon 54. degrees and 38. minutes. his declination was 21. degrees and 54. minutes, which taken from the height aforefaid, the height of the Pole was found to bee 73. degrees, and then againe wee found Ice, but not very much, and we were of opinion, that we were by Willoughbies Land. The fourteenth, we layled Morth-eaft, the wind being North North-weft, and in that fort fayled about a dinner time, 10 ted from (ome along through the Ice, and in the middle thereof we cast out our Lead, and had ninety sathome deepe, in the next quarter wee cast out our Lead againe, and had an hundred fathome deepe, and we fayled to farre into the Ice, that wee could goe no further: for wee could fee no place where it opened, but were forced (with great labour and paine) to lauere out of it agains, the wind blowing West, and we were then under 74. degrees and 10. minutes:

had an hundred fathome deepe, at which time the wind being East, wee sayled West. The fixteenth, we got out of the Ice, and faw a great Beare lying vpon it, that leaped into the water when shee law vs : Wee made towards her with our ship, which shee perceiving got vp vpen the Iceagaine, wherewith wee shot once at her. Then wee sayled East South-east, and saw no as Ice, ghelling that we were not farre from Nona Zembla, because we saw the Beare there you the Ice, at which time we cast out our Lead, and found an hundred fathome deepe.

The feuenteenth, we tooke the height of the Sunne, and it was eleuated about the Horizon 37. degrees and 55. minutes , his declination was 21. degrees and 15. minutes , which taken from the height aforesaid, the height of the Pole was 74. degrees and 40. minutes: and when the Sunne was in the South, we faw the Land of Noua Zembla, which was about Lembar: I was the first that espied it. Then we altered our course, and sayled North-east and by North, and hoyfed vp all our fayles, except the Fore-fayle and the Lefien. The eighteenth, wee faw the Land againe, being vider 75, degrees, and fayled North-east and by North, with a North-Admirabiliand, west wind, and we gate aboue the point of the Admirals Hand, and sayled East North-east, 30 with a West Wind, the Land reaching North-east and by North. The nineteenth, wee came to the Croffe Iland, and could get no further , by reason of the Ice , for there the Ice lay still close 76. degrees 200 vpon the Land, at which time the wind was Weft, and blew right vpon the Land, and it lay vnder 76. degrees and 20. minutes. There stood two Crosses vpon the Land, whereof it had the Name.

The twentieth, we anchored vnder the Iland, for we could get no further for the Ice. There we put out our Boat, and with eight men rowed on Land, and went to one of the Croffes, where we rested vs a while to goe to the next Crosse, but being in the way wee saw two Beares by the other Croffe, at which time we had no weapons at all about vs. The Bearestofe vp vpon their hinder feet to fee vs (for they smell further then they fee) and for that they smelt vs: therefore 40 they rose voright, and came towards vs, wherewith we were not a little abashed, in such fort that we had little lust to laugh, and in all haste went to our Boat againe, still looking behind vs, to see if they followed vs, thinking to get into the Boat, and so put off from the Land : but the Master stayed vs, faying, hee that first beginnes to runne away, I will thrust this Hake staffe (which he then held in his hand) into his ribs ; for it is better for vs (faid hee) to flay all together, and fee if we can make them afraid with whooping and hollowing; and fo we went foftly towards the Boat, and got away, glad that we had escaped their clawes, and that we had the leafure to tell our fellowes thereof.

The one and twentieth we tooke the height of the Sunne, and found that it was eleuated aboue the Horizon 35. degrees and 15. minutes, his declination was 21. degrees, which being ta-50 ken from the height aforefaid, there refted 14. degrees, which substracted from 90. degrees, then the height of the Pole was found to be 76, degrees and 15, minutes, then we found the variation of the Compasse to bee 26. degrees. The same day two of our men went againe to the Crosse, and found no Beares to trouble vs, and wee followed them with our Armes, fearing least wee might meet any by chance, and when we came to the second Crosse, we found the foot-steps of two Beares, and faw how long they had followed vs, which was one hundred foot-steps at the least, that way that we had beene the day before. The two and twentieth being Munday, wee fet vp another Croffe, and made our Marke thereon : and lay there before the Croffe Iland, till the fourth of August, meane time we washt and whited our Linnen on the shoare.

The thirtieth, the Sunne being North, there came a Beare fo neere to our ship, that we might 60 hit her with a stone, and we shot her into the foot with a Piece, wherewith shee ranne halting away. The one and thirtieth of July, the Sunne being East North-east, seuen of our men killed a Beare, and flayed her, and caft her bodie into the Sea. The same day at noons (by our Infrument) we found the variation of the Needle of the Compafe to be 17. degrees.

The fifteenth, we draue through the middle of the Ice with a calme, and casting out our Lead,

Noua Zembla,

Two Beares.

Variation 36.

The first of August we saw a white Beare, but she ran away from vs. The fourth, we got out of August. the lee, to the other the of the Hand, and anchored there : where, with great labour and much name, wefetched a Boat full of stones from the Land. The fifth, wee set sayle against towards Ice point, with an East Wind, and sayled South South-east, and then North North-east, and faw no Ice by the Land, by the which we lauered. The fixth, we gate about the point of Nas- Point Nassaw.

faw, and fayled for ward Eaft, and Eaft and by South, along by the Land. The feuenth, we had a West South-west Wind, and sayled along by the Land, South-east, and South-east and by East, and saw but a little Ice, and then past by the Trust-point, which we had Trust-point. much longed for : at Ecuening we had an East Wind, with mistic Weather, so that we were forced to make our ship fast to a piece of Ice, that was at least thirtie fixe fathome deepe wider the

water, and more then fixteene fathome about the water: which in all was two and fifty fathome thick, for it lay fast v pon ground, the which was thirtie sixe fathome deepe. The eight in the lee 52-fathom morning we had an East Wind, with mistie Weather.

The ninth lying still fast to the great piece of Ice, it snowed hard, and it was mistic weather. Snow, and when the Sunne was South, we went vpon the Hatches(for we alwayes held watch) where as the Mafter walked along the ship, he heard a beaft souffe with his nose, and looking over-boord, he faw a great Beare hard by the flip, where hee cryed out, a Beare, a Beare; and with that all Beares affaulte our men came vp from vnder Hatches, and faw a great Beare hard by our Boat, feeking to get into it. but we giving a great shout, she was afraid, and swamme away, but presently came backe againe, and went behind a great piece of Ice, whereunto we had made our fhip fast, and climbed vpon it, and boldly came towards our ship to enter into it: but we had torne our Scute Sayle in the fhip, and lay with foure Peeces before at the Boot-sprit, and shot her in the bodie : and with that, thee ranne away; but it snowed so fast that wee could not see whither shee went : but wee

gheft that shee lay behind a high Hoouell; whereof there were many vpon the piece of Ice.

The tenth, being Saturday, the Ice began mightily to breake, and then wee first perceived that the great piece of Ice whereunto we had made our ship fast, lay on the ground; for the rest of the Ice draue along by it, wherewith wee were in great feare that wee should bee compassed about with the Ice, and therefore we vied all the diligence and meanes that we could to get from thence, for we were in great doubt : and being under fayle, wee fayled upon the Ice, because it was all broken under us, and got to another piece of Ice; whereunto we made our thip fast agains with our Sheate Anchor, which we made fast vpon it; and there we lay till Eenening: and when Iciethander. we had supped, in the first quarter, the said piece of Ice began on a sudden to burst and rend in pieces, fo fearefully that it was admirable; for with one great cracke it burst into foure hundred pieces at the least : we lying fast to it, weighed our Cable, and got off from it, under the water it was ten fathome deepe, and lay voon the ground, and two fathome about the Water; and it made a fearefull noyfe both under and aboue the Water when it burft, and spread it selfe abroad on all fides. And being with great feare, gotten from that piece of Ice, wee came to another piece, that was fix fathome deepe vnder the Water: to which wee made a Rope fast on both fides. Then wee law another great piece of Ice, not farre from vs, lying fast in the Sea, that 40 was as sharpe aboue, as it had beene a Tower; whereunto wee rowed : and cashing out our Lead, we found that it lay twentie fathome deepe, fast on the ground vider the Water, and twelve fathome aboue the Water.

The eleuenth being Sunday, we rowed to another piece of Ice, and caft out our Lead, and found that it lay eighteene fathome deepe fast to the ground under the Water, and ten fathome aboue the water. The twelfth, wee fayled neere vnder the Land, the better to shunne the Ice, for the great flakes that draue in the Sea, were many fathome deepe under the Water, and we were better defended from them being at foure and fine fathome Water, and there ranne a great current of water from the Hill. There we made our ship fast againe to a piece of Ice, and called that point, The small Ice point.

The thirteenth in the morning, there came a Beare from the East point of the Land, close to Beare hilleds our ship, and one of our men with a Peece shot at her, and brake one of her legs, but she crept vp the Hill with her three feet, and we following her, killed her, and having flaved her, brought the skinne aboord the ship. From thence weelet sayle, with a little gale of Winde, and were forced to lauere, but after, that it began to blow more out of the South, and South South-east.

The fifteenth, we came to the lland of Orange, where we were inclosed with the Ice, hard Orange llands by a great piece of Ice where we were in great danger to lose our ship, but with great labour and much paine, we got to the Iland, the Wind being South-east, whereby we were constrayned to turne our ship, and while we were busied thereabouts, and made such noyse, a Beare that lay there and flept, awaked, and came towards vs to the flip, io that wee were forced to leave our 60 Worke about turning of the ship, and to defend our selues against the Beare, and shot her into the bodie, wherewith the ranne away to the other fide of the Hand, and swamme into the water, and got vp vpon a piece of Ice, where the lay still, but we comming after her to the piece of Ice where the lay, when the faw vs, the leapt into the water, and fwamme to the Land : but we got betweene her and the Land, and strooke her on the head with a Hatchet, but as often as wee

Point Defre.

strooke at her with the Hatchet, she duckt vider the water, whereby wee had much to doe befrom we could kill her: after the was dead we flayed her on the Land, and tooke the skinne aboord with vs, and after that, turned our shippe to a great piece of Ice, and made it fast

The fixteenth, ten of our men entring into one Boat, rowed to the filme Land of Nowa Zembla. and drew the Boat vp vpon the Ice, which done, we went vp a high Hill, to feethe fination of and orew the Boat vp vpour the control of the Land, and found that it reached South-eath, and found that it reached South-eath, and found that it reached South-eath, and south South-eath, and then againe South. the Land, and found that I have been southward; but when wee faw open water Southwhich wee diffixed, for that it lay so much Southward; but when wee faw open water South which were unliked to this result comforted again, thinking that we had wome our Voyeaft, and East South-eaft, we were much comforced agains, sinnang that we have wome our voyage and knew not how we should get soone enough aboord, to certific William Barents thereof. 10

The eighteenth, we made preparation to fee layle, but it was all in vaine : for wee had almost In engineering, which may be a summer loft our Sheat Anchor, and two new Ropes, and with much loft labour got to the place against from whence wee came: for the streame ranne with a mightie current, and the Ice drawvery from whether we can be called a long by the ship, so that we were in search that wee should lose all the Cable that was without the ship, which was two hundred fatherne at the least, but God prouded well for vs, fo that in the end, we got to the place again from whence we put out.

The nineteenthit was indifferent good weather, the Windblowing South-weft, the Ice fill The Intercental A was made an indifferent gale of Wind, and paft by the point of Define, whereby we were once againe in good hope, and when we had gotten about the point we failed Whereby we were one again, in good nopy, and then again we entred into more Ice, whereby 30 wee were constrayned to turne backe againe, and fayled North-west vntill we came to the Land againe, which reacheth from the point of Defice, to the head point, South and by Weff fix miles: from the head point to Flubingers head, it reacheth South-weft, which are three miles one from the other: from the Flushingers head, it reacheth into the Sea, East South-east, and from Finishingers head to the point of the Hand, it reacheth South-week, and by South, and South-west three miles : and from the Hand point, to the point of the Ice Hauen, the Land rechethWest South-west foure miles: from the Ice Hauens point to the fal of Water, or the stream Bay, and the low Land, it reacheth West and by South, and East and by North seuen miles: from thence the Land reacheth East and West.

The one and twentieth, we fayled a great way into the Ice Hauen, and that night anchored 30 therein: next day the streame going exreame hard Eastward, wee haled out agains from thence, and sayled againe to the Hand point, but for that it was misty Weather, comming to a piece of Ice, wee made the ship fast thereunto, because the Wind beganne to blow hard South-west and Earthon the South South-west. There we went up upon the Ice, and wondred much thereat, it was such manner of Ice: For on the top it was full of Earth, and there wee found aboue fortie Egges, and it was not like other Ice, for it was of a perfect Azure colour like to the Skies, whereby there grew great contention in words amongst our men, some saying that it was Ice, others that it was frozen Land: for it lay vnreasonable high aboue the Water, it was at least eighteene fathom vnder the water close to the ground, and ten fathome aboue the water : there wee stayed all that fforme, the Wind being South-west and by West. The three and twentieth , wee sayled 40 againe from the Ice, South-eastward into the Sea, but entred prefently into it againe, and woond about to the Ice Hauen. The next day it blew hard North North-west, and the Ice came mightily driving in, whereby we were in a manner compassed about therewith, and withall the Wind beganne more and more to rife, and the Ice still draue harder and harder, so that the pinne of the Rother, and the Rother were shorne in pieces, and our Boat was shorne in pieces betweene the ship and the Ice, we expecting nothing else, but that the ship also would be prest

The fine and twentieth, the Weather began to be better, and we tooke great paines, and bestowed much labour to get the Ice, wherewith we were so inclosed, to goe from vs, but what meanes soeuer we vied it was all in vaine, but when the Sunne was South-west, the Ice began 50 to drive out againe with the streame, and we thought to faile Southward about Nona Zembla, to the Streights of Mergates, feeing we could there find no passage. Wee having past Nona Zembla, were of opinion that our labour was all in vaine, and that we could not get through, and fo agreed to goe that way home againe, but comming to the Streame Bay, wee were forced to goe backe againe, because of the Ice which lay so fast thereabouts, and the same night also it froze, that wee could hardly get through there, with the little wind that we had, the Wind then be-

The fix and twentieth, there blew a reasonable gale of Wind, at which time wee determined to fayle backe to the point of Defire, and so home againe, seeing that wee could not get through the Wergats, although we vied all the meanes and industry wee could to get forward, but when 69 we had past by the Ice Hanen, the Ice began to drive with such force, that wee were inclosed round about therewith, and yet we fought all the meanes we could to get out, but it was all in vaine : and at that time we had like to have lost three men that were vpon the Ice to make way for the ship, if the Ice had held the course it went, but as we draue backe againe, and that the

Boat broken

CHAP.S. S.I. Dangerous frosts. Strange escape. Ice Hauen. Icy Hills.

Ice also whereon our men flood, in like fort draue, they being nimble, as the ship draue by them. one of them caught hold of the beak head, another vpon the shrouds, and the third vpon the great brase that hung out behind, and so by great aduenture by the hold that they tooke, they got safe into the thip againe, for which they thanked God with all their hearts : for it was much likelier Escape of three that they should rather have beene carried away with the Ice, but God, by the numblenesse of men. their hands, deliuered them out of that danger which was a pitifull thing to behold, although it fellout for the best, for if they had not beene nimble, they had surely dyed for it. The fame day in the evening, wee got to the West-fide of the Ice Hanen, where wee were forced in great cold, pouertie, milerie, and griefe, to stay all that Winter, the winde then beeing East

10 North-eaft. The feuen and twentieth, the Ice draue round about the ship, and yet it was good weather, at which time we went on Land, and being there it began to blow South-east, with a reasonable gale, and then the Ice came with great force before the bough, and draue the thip vp foure foot high before, and behind it feemed as if the keele lay on the ground, to that it feemed that the thip would be overthrowne in the place, whereupon they that were in the thip, put out the Ship lifted vp. Boar, there with to faue their lives, and withall put out a flagge to make a figne to vs. to come and befet with aboard: which we perceiving, and beholding the ship to be lifted up in that fort, made all the Ice. hafte we could to get abourd, thinking that the ship was burst in pieces, but comming vnto it,

we found it to be in better case then we thought it had beene. The eight and twentieth, we got some of the Ice from it, and the ship beganne to sit vpright againe, but before it was fully vpright, as William Barents and the other Pilot went forward to the bough to fee how the thip lay, and how much it was rifen; and while they were buffe vpon their knees and elbowes to measure how much it was, the ship burst out of the Ice with such a noise, and so great a cracke, that they thought verily that they were all cast away, knowing not Anotherdanhow to faue themfelues.

The nine and twentieth, the ship lying voright againe, weevsed all the meanes wee could with Iron hookes and other inftruments, to breake the flakes of Ice that lay one heaped youn the other, but all in vaine; so that we determined to commit our selues to the mercy of God. and to attend aide from him, for that the Ice draue not away in any fuch fort that it could helpe 30 vs. The thirtieth, the Ice began to drive together one woon the other with greater force then before, and bare against the ship with a boystrous South-west winde, and a great snow, so that all the whole thin was borne up and enclosed, whereby all that was both about it and in it . began to cracke, so that it seemed to burst in an hundred pieces, which was most fearefull both to fee and heare, and made all the haire of our heads to rife vpright with feare; and after that, the ship (by the Ice on both sides that joyned and got vnder the same) was driven so vpright, in such fort, as if it had beene lifted vp with a Wrench or Vice.

The one and thirtieth of August, by force of the Ice, the ship was driven up foure or five foot high at the beake head, and the hinder part thereof lay in a clift of Ice , whereby wee thought that the Rother would bee freed from the force of the flakes of Ice, but notwithflanding, it Rother broken 40 brake in pieces staffe and all: and if that the hinder part of the ship had beene in the Ice that draue, as well as the fore part was, then all the ship would have beene driven wholly youn the Ice. or possibly have runne on ground, and for that cause were in great feare, and set our Scutes and our Boat out voon the Ice, if need were, to faue our felues, but within foure houres after, the Ice draue away of it felfe, wherewith wee were exceeding glad, as if wee had faued our lives, for that the ship was then on flote againe, and vpon that wemade a new Rother and a Staffe, and hung the Rother out voon the hookes, that if we chanced to bee borne voon the Ice againe, as we had beene, it migh: fo be freed from it.

The first of September being Sunday, while we were at prayer, the Ice began to gather toge- September. ther againe, so that the ship was I fred vp two foot at the least, but the Ice brake not. The same 50 evening the Ice continued in that fort still driving and gathering together, so that we made preparation to draw our Scute and the Boat ouer the Ice vpon the Land, the wind then blowing South-east. The second, it snowed hard with a North-east wind, and the ship began to rise vp higher voon the Ice, at which time the Ice burft and crackt with great force, fo that wee were of opinion to carrie our Scute on Land in that foule weather, with thirteene barrels of Bread, and two hogsheads of Wine, to sustaine our selves if need were.

The third, it blew hard but snowed not so much, the wind being North North-east, at which time we began to be loofe from the Ice, whereunto wee lay fast, to that the Scheck broke from the Steuen, but the plankes wherewith the ship was lined, held the Scheck fast, and made it hang on, but the Boutloofe and a new Cable (if we had falled upon the Ice) brake by forcible 60 prelling of the Ice, but held fast againe in the Ice, and yet the ship was staunch; which was wonder, in regard that the Ice draue so hard, and in great heapes, as big as the Salt-hils that are in Spaine, and within a Harquebuffe shot of the ship, betweene the which wee lay in great feare

The fourth, the weather began to cleare vp, and we faw the Sunne, but it was very cold, the

CHAP.S.S.I. Violent and incredible freezing, Ground not to be thaved.

wind being North-east we being forced to lie still. The fift, it was faire Sun-shine weather, and wint deing storted at we will all the former and store compaffed about vagaine, and wee very canne, and at the thing beginning to lie vpon the one fide, and leaked fore, but were nare encoured therewith, see any engineers are you the one one, and reaced tore, but by Gods grace it became flaunch agains, wherewith we were wholly in feare to lofe the flip, it by Good grace a Decame Admics against the work confell together, and carried our old locke was in fo great danger: at which time wee tooke counfell together, and carried our old locke was into great danger; at within the was tooke country together, and carried our old tocke Sayle, with Powder, Lead, Peeces, Muskers, and other furniture on Land, to make a Tent a-Sayle, with Powder, Leau, access, manness, and other minimum on Land, which a tent a bout our Scute that we had drawne upon the Land, and at that time we carried fome Bread, and Wine on Land alfo, with fome Timber, therewith to mend our Boat, that it might fence vs in

me of need.

The fixe, it was indifferent faire Sea-weather, and Sun-fhine, the wind being Weft, whereby the fixe, it was indifferent faire Sea-weather, and Sun-fhine, the wind being Weft, whereby the fixe supply and that were might are 10. The fixt, it was monitored, hoping that the Ice would drive away, and that wee night get we were somewhat communities, around a man away, and man were might get from thence againe. The feuenth, it was indifferent weather againe, but we perceived no opefrom stence againe, are reaction, it was mountain wearing againe, one we perceived no ope-ning of the water, but to the contrary, it lay hard enclosed with Ice, and no water at all about the ship, no not so much as a bucket full. The same day, sue of our men went on Land, but two of them came backe againe, the other three went forward about two miles into the Land, and or them came oache againe, the board where allothey found great flore of Wood that had beene

good, touching the carrying away of the Ice, to that we were full fafter in the Ice, which put was wholly enclosed with Ice, for the wind draue the Ice hard against it, so that we lay three or

The elementh, it was calme weather, and eight of vs went on Land, enery man armed, to be if that were true as our other three companions had faid, that there lay Wood about the Riser, for that feeing we had so long woond and turned about, sometime in the see, and then againe got out, and thereby were compelled to alter our courfe, and at last two that we could not get our of 30 the Ice, but rather became failer, and could not loose our ship, as at other times we had done, as also that it began to be Winter, we tooke counfell together what we were best to doe, according to the time, that we might winter there, and attend such adsenture as God would send ys; and after we had debated vpon the matter (to keepe and defend our felues both from the cold, and wilde beafts) we determined to build a houle vpon the Land, to keepe vs therein as well as wee could, and so to commit our selves vnto the tuition of God, and to that end we went further into the Land, to find out the convenientest place in our opinions, to raife our house vpon, and yet we had not much stuffe to make it withall, in regard that there grew no trees, nor any other we had not much naute to make the value, in the state of as our men went abroad to view the Countrey, and to fee what good fortune might happen vaas our men went around to view the comfort in our need, which was, that we found certaine to vs, at laft we found an vnexpected comfort in our need, which was, that we found certaine need, when we trees roots and all, (as our three companions had faid before) which had beene driven vpon the wereforced to tree rous and any tasks and three companions has been been been a grown vpon the healthe Win. Though the from Tartaria, Malcoula, or elle where; for there was none growing vpon that feelil the Win-ter you the Land, wherewith (a if God had purpofely fent them vntovs) we were much comforted, being Lind, fent vs. in good hope that God would shew vs some surther suour; for that Wood served vs not onely Wood to make to build out houfe, but allo to burne, and ferue vs all the Winter long, otherwise without all

The twelfth, it was calme weather, and then our men went anto the other side of the Land, to fee if they could find any Wood neerer vnto vs, but there was none. The thirteenth, it was calme but very mifty weather, so that we could doe nothing, because it was dangerous for vs to goe into the Land, in regard that we could not fee the wilde Beares, and yet they could finell vs, for they smell better then they see. The fourteenth, it was cleare Sun-shine weather, but very cold, and then we went into the Land, and layed the Wood in heapes one vpon the other, that it might not bee covered over with the Snow, and from thence meant to carrie it to the place

The fifteenth in the morning, as one of our men held watch, we faw three Beares, whereof the one lay still behind a piece of Ice, the other two came close to the ship; which wee perceiuing, made our Peeces ready to shoot at them, at which time there stood a Tub full of Beefe vpon the Ice, which lay in the water to be feationed, for that close by the ship there was no water: one of the Beares went vnto it, and put in his head to take out a piece of the Beefe, but she fa- 60 red therewith as the Dog did with the Pudding, for as she was snatching at the Beefe, shee was shot into the head, wherewith she fell downe dead, and neuer stirred: the other Beare stood still, and looked upon her fellow, and when shee had stood a good while, shee smelt her fellow,

River of fresh driven thither, and there they found the footfleps of Harts and Hinds, as they thought, for they were closen footed, tome greater footed then others, which made them indge them to be fo. The eight, it blew hard East North-east, which was a right contrary wind to doe vs any good, cooling are sarying array or the lew North-eaft, with a little fnow, whereby our hip 26

four foot deepe in the Ica, and our Sheck in the after Steuen, brake in pieces, and the fhip began tobe somewhat loofe before, but yet it was not much hurt. In the night time, two Beates came close to our ship side, but we sounded our Trumper, and shot at them, but hit them not, because it was darke, and they ranne away. The teath, the weather was somewhat better, because the wind blew not so hard, and yet all one wind.

Ship faitned

They deter-

burne in the cold Winter. 49I

and perceiuing that the was dead, thee ran away, but wee tooke Halberis and other Armes with vs. and followed her, and at last she came againe towards vs, and we prepared our selves to withfrand her, wherewith the role vp vpon her hinder feet, thinking to rampe at vs. but while thee reared her felfe vp, one of our men shot her into the bellie, and with that she fell vpon her forefeet againe, and roaring as loud as she could, ran away. Then we tooke the dead Bears, and rine her bellie open; and taking out her guts, we fet her vpon her fore-feet, that so she might freeze as thee flood, intending to carrie her with vs into Holland, if wee might get our thin loofe and when we had fet the Beare vpon her foure feet, we began to make a Sled, thereon to draw the Wood to the place where we went to build our house, at that time it froze two fingers thicke in It freezenhin to the falt water, and it was exceeding cold, the wind blowing North-east.

The fixteenth, the Sunne shone, but towards the evening it was misty, the wind being Easter-thicke in a ly, at which time we went to fetch Wood with our Sleds, and then wee drew foure beames about night. a mile youn the Ice and the Snow, that night agains it froze about two fingers thicke. The feuenteenth, thirteene of vs went where the Wood lay with our Sleds, and so drew fine and fine in a Sled, and the other three helped to lift the Wood behind, to make vs draw the better, and with more ease, and in that manner we drew Wood twice a day, and laid it on a heape by the place where we meant to build our house.

The three and twentieth, wee fetcht more Wood to build our house, which wee did twice a day, but it grew to be mifty and ftill weather againe, the wind blowing East, and East North-20 east, that day our Carpenter being of Purmernet died, as wee came abourd about evening. The foure and twentieth, we buried him vnder the fedges, in the clift of a hill, hard by the water. for we could not dig vp the earth, by reason of the great frost and cold , and that day wee went twice with our Sleds to fetch Wood.

The fige and twentieth, it was darke wether, the wind blowing West, & West South-west, and House builded. South-west, and the Ice began somwhat to open, and drive away; but it continued not long, for that having driven about the length of the shot of a great Peece, it lay three fathoms deepe vpon the ground: and where we lay the Ice draue not, for we lay in the middle of the Ice; but it we had layne in the mayne Sea, we would have hoyfed fayle, although it was then late in the veere. The same day we ray sed up the principles of our house, and began to worke hard thereon, but 30 if the ship had been eloose, we would have left our building, and have made our after Steven of our fhip, that we might have beene ready to fayle away if it had beene possible.

The fixe and twentieth, wee had a West wind and an open Sea, but our ship lay fast, wherewith we were not a little grieued, but it was Gods will, which we most patiently bare, and wee began to make vp our house, part of our men fetched Wood to burne, the rest played the Carpenters: and were bufie about the house, as then we were fixteene men in all, for our Carpenter was dead, and of our fixteene men there was still one or other ficke. The seuen and twentieth, it blew hard North-east, and it froze so hard, that as we put a nayle into our mouthes (as when men worke Carpenters worke they vie to doe) there would Ice hang thereon when we tooke it Hard and vioout againe, and make the bloud follow: the fame day there came an old Beare and a young one lent froft.

40 towards vs, as we were going to our house, being all together (for we durft not goe alone) which we thought to shoot at, but she ran away, at which time the Ice came forcibly driving in, and it was faire Sun-shine weather, but so extreme cold, that we could hardly worke, but extremity

The eight and twentieth, it was faire weather, and the Sunne shone, the Wind being West and very calme, the Sea as then being open, but our ship lay fast in the Ice and stirred not; the fame day there came a Beare to the fhip, but when she espyed vs, she ranne away, and we made asmuch hafte as wee could to build our House. The nine and swentieth in the morning , the Wind was West, and after-noone it blew Northerly, and then wee faw three Beares between vs and the House, an old one and two young; but we notwithstanding drew our goods from the so ship to the House, and so got before the Beares , and yet they followed vs : neuerthelesse, we would not flun the way for them, but hollowed out as loud as we could thinking that they wold baue gone away, but they would not once goe out of their foot-path, but got before vs, wherewith we and they that were at the house, made a great noyse, which made the Bezres run away, and we were not a little glad thereof. The thirtieth the Wind was East, and East South-east, and all that night and the next day it snowed so fast, that our men could fetch no Wood, it lay so close and high one voon the other: then wee made a great fire without the House, therewith to thaw the ground, that fo we might lay it about the House, that it might bee the closer; but it Ground not was all lost labour, for the Earth was so hard, and frozen so deepe into the ground, that wee to be thawed. could not thaw it, and it would have coft vs too much Wood, and therefore wee were forced to 60 leave off that labour.

♦. II.

ð. II.

Their cold, comfortlesse, darke and dreadfull Winter : the Sunnes absence, Moones light, Sunnes vnexpetted returne with miraculous Speed. Of Beares, Foxes, and many mamy Wonders.

He first of October, the Wind blew stiffe North-east, and after-noone it blew North, sentitor Deteoes, the value of Snow, whereby wee could hardly goe in the Wind, 10 with a great norms and draw his breath, the Snow draw fo hard in our faces at which and a man could not fee two fhips length from vs. The fecond before noone, the Sunne there, and after noone it was cloudie againe, and it finew, but the vecather was fiill, the Wind

May-pole of

being North, and then South, and wee fet vp our Houfe, and vpon it wee placed a May-pole The third before noone, it was calme Sun-shine vveather, but so cold, that it was hard to bee indured, and after-noone it blew hard out of the West, with so great extreme cold, that if it had continued, we should have been eforced to leave our worke. The fourth, the Wind was Well, and after-noone North, with great flore of Snow, whereby we could not worke; at that time and anter-mount realth, with given the Lee to lys the fafter, when wee lay but an Arrow thot from 20

The fifth, it blevv hard North-west, and the Sea was very open and vvithout Ice, as farress vve could discerne, but vve lay still frozen as vve did before, and our ship lay two or three foot were containering out we as it in rozen as the did ceroit; and on mip as two a cities too and then it was three fathome and a halfe deepe. The same day we brake vp the lower det of the fore-part of our ship, and with those Deales we courred our Houses, and made it slope o. uer head, that the Water might runne off, at which time it was very cold. The fixth, it blew hard West South-west, but towards Eeuening, West North-west, with a great Snow, that we could hardly thrust our heads out of the doore, by reason of the great cold. The seventh, it was indifferent good weather, but yet very cold, and wee calk't our House, and brake the 30

Hence it may

is from the

North.

Extreme Snow ground about it at the foot thereof : that day the Wind went round about the Compasse, The eight, all the night before it blew so hard, and the same day also, and snowed sofas, that we should have smothered, if we had gone out into the Ayre; and to speake truth, it had not beene pessible for any man to haue gone one ships length, though his life had layen thereon for it was not possible for vs to goe out of the House or ship. The ninth, the Wind still continued North, and blew, and snowed hard, all that day the Wind as then blowing from the Land, so that feeme, that the all that day we were forced to flay in the ship, the weather was so foule,

The tenth, the weather was somewhat fairer, and the Wind calmer, and blew South-west, Tides and Sea and West, and South-west, and that time the Water slowed two soote higher then ordinary, which we gheft to proceede from the first North-wind, which as then had blowne. The fame 40 day the weather began to be somewhat better, so that we began to go out of our ship againe : and as one of our men went out, he chanced to meet a Beare, and was almost at him before hee knew it, but prefently he ranne backe againe towards the ship, and the Beare after him, but the Beare comming to the place where before we had killed another Beare, and let her vpright, and there let her freeze (which was couered ouer with Ice, and yet one of her pawes reached about it) shee stood still, whereby our man got before her, and climbed up into the ship, in great feare, crying, A Beare, a Beare; which we hearing, came abone Harches to looke on her, and to shoot at her, but we could not fee her, by meanes of the exceeding great smoke, that had so fore tormented vs(while we lay under Hatches) in the fouls weather which we would not have indured for any money, but by reason of the cold and snow ie weather, wee were constrayned to doe it, if wee 50 would faue our lives, for aloft in the ship we must vindoubtedly have died! the Beare stayed not long there, but ranne away, the Wind then being North-east. The same day about Eeuening, it was faire weather, and we went out of our ship to the House, and carried the greatest part of

The eleuenth, it was calme weather, the Wind being South, and somewhat warme, and then we carried our Wine and other Victuals on Land : and as we were hoyfing the Wine ouer-boord, there came a Beare towards our ship, that had layen behind a piece of Ice, and it seemed that we had waked her with the noyle we made: for wee had feene her lye there, but wee thought her to be a piece of Ice; but as the came neere vs, we thot at her, and the ranne away, to we proceeded in our worke. The twelfth, it blew North, and somewhat Westerly, and then halfe of 60 our men kept in the House, and that was the first time that we lay in it, but wee indured great cold, because our Cabins were not made; and besides that wee had not Clothes enough, and we could keepe no fire because our Chimney was not made, whereby it smoked exceedingly.

The thirteenth, the Wind was North and North-west, and it began agains to blow hard, and

then three of vs went aboord the ship, and laded a Sled with Beere, but when wee had laden it; thinking to goe to our House with it, suddenly there rose such a Wind, and so great a storme and cold, that wee were forced to goe into the ship againe, because wee were not able to slay without, and wee could not get the Beere into the ship againe, but were forced to let it stand without vpon the Sled : being in the ship, wee indured extreame cold, because wee had but a few

The fourteenth, as wee came out of the ship, wee found the Barrell of Beere standing upon the Sled, but it was fall frozen at the heads, yet by reason of the great cold, the Beere that purged out, froze as hard vpon the fide of the Barrell as if it had bene glued thereon, and in purges one, truce as annu you can me us are on the purges on and dranke it first vp, but wee lette meked." were forced to melt the Beere, for there was feant any unfrozen Beere in the Barrell, bot in that thicke Yeaft that was unfrozen lay the strength of the Beere, so that it was too strong to drinke alone, and that which was frozen tafted like water, and being melted we mixt one with the other, and so dranke it, but it had neither strength nor taste.

The fifteenth, the Wind blew North and East, and East South-east, that day we made place to fet up our doore, and shoueled the Snow away. The eighteenth, the Wind blew hard East South-eaft, and then we fetched our Bread out of the Scute which wee had drawne up upon the Land, and the Wine also which as then was not much frozen, and yet it had layne fixe Weekes therein, and not withflanding that it had oftentimes frozen very hard. The fame day wee faw Sea concred 20 another Beare, and then the Sea was so couered ouer with Ice, that wee could fee no with Ice

The ninercenth, the Wind blew North-east, and then there was but two men and a Boy in the ship, at which time there came a Beare that fought forcibly to get into the ship, although Beate shall be a beate shall b the linp, at which time there came a near constanting a total and yet the ventured vpon them, whereby they the thip. were in an extreame feare, each of them feeking to faue themselues, the two men leape into the Ballaft, and the Boy climbed into the foot Mark top, to faue their lines, meane time, some of our men thot at her with a Musket, and then thee range away. The twentieth, it was calme Sunne-shine weather, and then againe wee faw the Sea open, at which time wee went Barrels and I. on boord to fetch the relt of our Beere out of the fhip, where wee found fome of the Bar- ron boor 30 rels frozen in pieces, and the Iron hoopes that were vpon the Iolam Barrels were also fro-broken with

The two and twentieth, the Winde blew coldly, and very stiffe North-east, with so great a Snow, that wee could not get out of our doores. The three and twentieth, it was calme weather, and the Winde blew North-east, then wee went aboord our ship, to see if the reft of our men would come home to the Houle; but wee feared that it would blow hard againe, and therefore durst not stirre with the ficke man, but let him lye still that day, for hee

The foure and twentieth, the rest of our men beeing eight persons, came to the House, Allcometer and drew the ficke man vpon a Sled, and then with great labour and paine, wee drew our the Houfe. 40 Boat home to our House, and turned the bottome thereof vpwards, that when time ferned vs (if God faued our lines in the Winter time) wee might vseit and after that, perceining that the thip lay fait, and that there was nothing left to be expedted then the opening of the water, wee put our Anchor into the ship againe, because it should not be covered over and lost in the Snow, that in the Spring time wee might vie it: for we alwayes trufted in God that hee would deliner vs from thence towards Summer time, cyther one way or other. The Sunne, when we might fee it best and highest, began to be very low, and we vied all the speed we could to feeth all things with Sleds out of our hip into our Houle, not onely meate and drinke, but all

The fine and twentieth, wee fetche all things that were necessary for the furnishing of our 30 Soure and our Boate : and when we had laden the last Sled, and stood readie to draw it to the House, our Master looked about him and saw three Beares behind the ship that were comming towards vs, whereupon hee cryed out aloud to feare them away, and wee prefently leaped forth to defend our felues as well as we could ; and, as good fortune was, there lay two fide berds vpon the Sled, whereof the Master tooke one, and I the other, and made resistance against them as well as we could; but the reft of our men ranne to faue themselves in the ship, and as they ranne, one of them fell into a Clift of Icc, which grieued vs much s for we thought verily that the Beares would have ranne yato him, to deuoure him, but God defended him; for the Beares fill made towardes the ship after the men that ranne thicher to saue themselues. Meane time, wee and the man that fell into the Clift of Ice, tooke our advantage, and 60 got into the ship on the other side, which the Beares perceiuing, they came servely to-Fight with

wards vs, that had no other Armes to defend vs withall, but onely the two Halberds, Bearen which wee doubting would not bee fufficient, wee fill gaue them worke to doe by throwing Billets and other things at them, and cuery time we threw, they ranne after them as a Dogge vieth to doe at a Stone that is cast at him. Meane time, wee fent a man

downe under Harches to strike Fire, and another to fetch Pikes, but wee could get no Fire, and so were had no meanes to shoote: at the last, as the Beares came siercely voon vs. wee strooke one of them with a Halberd vpon the Snowt, wherewith shee game backe. when flore felt her felfe burt, and went away, which the other two that were not fo great as shee. perceiving, ranne away : and wee thanked God that wee were so well deliuered from them, and so drew our Sled quietly to our House, and there shewed our men when had happened water us.

rent faire weather; then wee faw open Water hard by the Land, but wee perceiped the Ice to draue in the Sea, fill towards the ship. The seuen and twentieth, the Wind blew Northeast, and it snowed so fast, that wee could not worke without the doore. That day our men killed a White Foxe . which they flead ; and after they had rofted it, ate thereof, which taffed White Foxe. like Conies slesh : the fame day we fet vp our Dyall, and made the Clocke strike, and wee hang Beares fat for

> The nine and twentieth, the Wind still blew North-east, and then wee fetched Segges from the Sea-fide, and layd them vpon the Sayle that was spread vpon our House, that it might bee fo much the closer and warmer : for the Deales were not driven close together, and the foule weather would not permit vs to doe it. The thirtieth , the Winde yet continued North-caft. Winde still blew North-east, with great store of Snow, whereby wee durst not looke out

> The first of November, the Wind still continued North-east, and then wee faw the Moone rife in the East when it beganne to bee darke, and the Sunne was no higher aboue the Horizon great Snow that fell, and it was extreame cold, so that we could not goe out of the House,

The second, the Wind blew West, and somewhat South, but in the Ecuening it blew North. with calme weather, and that day we faw the Sunne rife South South-eaft, and it went downe South South-west, but it was not full aboue the Earth, but passed in the Horizon along by the Earth : and the fame day one of our men killed a Fox with a Hatchet, which was flayed, reafted 20 and eaten. Before the Sunne began to decline, wee faw no Foxes, and then the Beares yed to goe from vs.

The third, the Wind blew North-west with calme weather, and the Sunne rose South and by East, and somewhat more Southerly, and went downe South and by West, and somewhat more Southerly; and then we could fee nothing but the vpper part of the Sunne about the Horizon, and yet the Land where wee wereg: was as high as the Mast of our ship, then wee tooke the height of the Sunne, it being in the eleventh degree, and fortie eight minutes of Scorpie, his Declination being fifteene degrees and twentie foure minutes, on the South-fide of the E-

The fourth, it was calme weather, but then wee faw the Sunne no more, for it was no 40 Sun no more longer about the Horizon, then our Chirurgion made a Bath (to bathe vs in) of a Wineafter the third pipe, wherein wee entred one after the other, and it did vs much good; and was a great of November, meanes of our health. The same day wee tooke a White Foxe, that oftentimes came abroad, not as they vied at other times: for that when the Beares left vs at the fetting of the Sunne, and came not againe before it rose, the Foxe to the contrarie came abroad when they were gone.

The fifth, the Winde was North, and somewhat West, and then wee saw open water vpon the Sea, but our shippe lay still fast in the Ice, and when the Sunne had left vs, wee saw mually seenein the Moone continuall both day and night, and neuer went downe when it was in the the Sunnes ab- highest degree. The fixt, the Winde was North-west, still weather, and then our men 50 fetcht a Sled full of Fire-wood, but by reason that the Sunne was not seene, it was very darke weather.

The seventh , it was darke weather , and very ftill , the Winde West , at which time wee could hardly differne the Day from the Night, specially because at that time our Clocke stood still, and by that meanes weeknew not when it was day, although it was day, and our men rose not out of their Cabins all that day, but onely to make water, and therefore they knew not whether the light they faw, was the light of the day or of the Moone; whereupon, they were of seuerall opinions, some saying, it was the light of the day, the others of the night: but as wee tooke good regard thereunto, wee found it to bee the light of the day about twelve of the clocke at noone.

The eight, it was still weather, the Winde blowing South, and South-west. The fame day our men fetcht another Sled of Fire-wood, and then also wee tooke a White Bread shared Foxe, and saw open water in the Sea. The same day wee shared our Bread amongst vs, each man having foure pound and tenne ounces, for his allowance in eight dayes, fo that thea

- The fixe and twentieth, the Wind was North, and North North-west, with indiffe-VD a Lampe to burne in the night time, wherein we vied the fat of the Beare which wee melt. and burnt in the Lampe.

and the Sunne was full about the Earth, a little about the Horizon. Theone and thirtieth, the 20

Nouember. Sun & Moone, then we could well fee it, and yet that day we faw it not , because of the close weather, and the

Sun rifeth South South. east, and goeth South-weft. not full about the Earth. Foxes succeed Beares.

They feethe

Dackneffe,

we were eight dayes eating a Barrell of Bread, whereas before wee ate it up in fine or fix dayes; we were eight cayes caring a partial of a second more flore thereof; but our drinke failed vs. Retreftrength and therefore we were forced to share that also: but our best Beere was for the most part who-less with stosle Iv without any strength, so that it had no fauour at all : and besides all this, there was a great deale of it full. The ninth, the Wind blew North-east, and somewhat more Northerly, and then we had not much day light, but it was altogether darke. The tenth, it was calme weather, the Wind North-welt, and then our men went into the thip to fee how it lay, and wee Ship ballaft faw that there was a great deale of water in it, fo that the ballaft was couered ouer with water, couered with but that it was frozen, and so might not bee pumpt out. The eleventh, it was indifferent wear water. ther, the Wind North-west. The same day we made around thing of Cable yarne, and like to a Net, to catch Foxes withall, that wee might get them into the House, and it was made like a Foxure.

Trap, which fell vpon the Foxes as they came under it, and that day we caught one.

The tweltth, the Wind blew East, with a little light: that day wee began to share our Wine, Wine mared. euery man had two Glasses a day, but commonly our Drinke was water, which we melted out Drinke water, of Snow, which we gathered without the House. The thirteenth, it was foule weather, with great Snow, the Wind East. The fourteenth, it was faire cleere weather, with a cleere Skie full of Starres, and an East-wind. The fitteenth, it was darke weather, the Wind North-east, with a vading light. The fixteenth, it was weather with a temperate Ayre, and an East-wind. The feuenteenth, it was darke weather, and a close Ayre, the Wind East. The eighteenth, it was 20 foule weather, the wind South-east : then the Master cut vp a packe of course Clothes, and dinided it among to our men that needed it, therewith to defend vs better from the cold. The nineteenth, it was foule weather, with an East-wind, and then the Chilt with Linnen was opened, and divided amongst the men for shift, for they had need of them, for then our onely care was to find all the meanes we could to defend our bodie from the cold. The twentieth, it was faire ftill weather, the Wind Easterly, then wee washt our sheets, but it was so cold, that when wee had washt and wrung them, they presently frozeso stiffe, that although wee layed them by a great fire, the fide that lay next the fire thawed, but the other fide was hard frozen, so that wee should sooner haue torne them in sunder then haue opened them, whereby wee were forced to put them into the feething water agains to thaw them, it was so exceeding cold. The one and twentieth, it was indifferent weather with a North-east wind, then we agreed that every man 30 (flould take his turne to cleaue Wood, thereby to eafe our Cooke, that had more then workeenough to doe twice a day to dreffe meate, and to melt Snow for our Drinke, but our Master and

the Pilot were exempted from that Worke. The two and twentieth, the Wind was South-east, it was faire weather, then wee had but feuenteene Cheefes, whereof one we are amongst vs, and the rest were divided to every man one for his portion, which they might eate when he lift. The three and twentieth, it was indifferene good weather, the Wind South-east, and as we perceived that the Fox vsed to come oftner, and more then they were wont, to take them the better, wee made certaine Trappes of thicke Planckes, whereon wee laid flones, and round about them placed pieces of thards fast in the 40 ground, that they might not digge under them, and fo got fome of the Foxes. The foure and Bathing and twentieth, it was foule weather, and the Wind North-esft, and then wee prepared our felues to Purging. goe into the Bath, for some of vs were not very well at ease, and so source of vs went into it, and when we came out, our Surgeon gaue vs a Purgation, which did vs much good, and that day we tooke foure Foxes. The fine and twentieth, it was faire cleere weather, the Wind West; and

that day we tooke two Foxes with Springs that we had purposely fet vp. The fix and twentieth, it was foule weather, and a great storme with a South-west Wind, and great flore of Snow, whereby wee were so closed up in the House, that wee could not goe out, but were forced to ease our selues within the House. The seven and twentieth, it was faire cleere weather, the Wind South-west, and then we made more Spinges to get Foxes, for it stood 50 vs vpon to doe it, because they served vs for meate, as if God had sent them purposely forvs, for we had not much meate. The eight and twentieth of November, it was foule flormic weather, and the Winde blew hard out of the North, and it frew hard, whereby wee were shut vp againe in our House, the Snowlay so closed before the doores.

The nine and twentieth, it was faire cleere weather, and a good Ayre: the Wind Northerly, and we found meanes to open our doore by shoueling away the Snow, whereby wee got one of our doores open, and going out, wee found all our Traps and Springes cleane couered ouer with Store of Snow. Snow, which wee made cleane, and fet them vp againe to take Foxes : and that day wee tooke one, which as then ferued vs not onely for meate, but of the skinnes wee made Caps to weare Fox-ikin-caps. vpon our heads, wherewith to keepe them warms from the extreame cold. The thirtieth, it 60 was faire clere weather, the Wind Well, and fix of vs went to the ship, all well prouided of Armes to fee how it lay : and when wee went vnder the fore Decke, wee tooke a Foxe aliue

The fift of December, it was foule weather with a South-west Wind, and great store of December. Snow, whereby we were once againe flopt up in the House, and by that meanes there was so

Sone heated Coldand Smoake.

Ice in the

great a smoake in the House, that we could hardly make fre, and so were forced to lye all day in Lyefillin Ca- our Cabins, but the Cooke was forced to make fire to dreft our meate. The second, it was full our Carins, our the Cook was occurred to keepe full in the House, and yet wee could hardly it by the fire, because of the imoake, and therefore flayed fillin our Cabins, and then we heated from s, which we put in our Cabins to warme our feet, for that both the cold and the smoake were

The third, we had the like weather, at which time as we lay in our Cabins, wee might heare the Ice cracke in the Sea, and yet it was at the leaft halfe a mile from vs, which made a huse Le cracking noyfe, and we were of opinion, that as then the great Hils of Ice which wee had feen in the Sea, in Summer time, brake one from the other, and for that during those two or three dayes, be. cause of the extreame smoake, we made not so much fire as we commonly vsed to doe, it froze so fore within the House, that the Wals and the Roofe thereof were frozen two fingers thick with Ice, and also in our Cabins where we lay all those three dayes, while wee could not goe out the reason of the foule weather, we set up the Glasse of twelve houres, and when it was runne out, wee fet it vp againe, fill watching it left wee should misse our time. For the cold was so Clock frozen, great, that our Clocke was frozen, and might not goe, although we hung more weight on it then before.

The fourth, it was faire cleere weather, the Wind North-east, and then we began every man Deore digged by turne to digge open our doores that were closed up with Snow, for we saw that it would be often to doe, and therefore we agreed to worke by turnes, no man excepted but the Mafter 20 and the Pilot. The fifth, it was faire weather with an East-wind, and then we made our Springes cleane againe to take Foxes. The fixt, it was foule weather againe, with an Eafterly Wind. and extreame cold, almost not to bee indured, whereupon wee looks pittifully one vpon the other, being in great feare, that if the extreamitie of the cold grew to bee more and more, wee should all dye there with cold, for that what fire soener we made, it would not warme vs , yez, Cold stronger and our Sacke which is so hot, was frozen very hard, so that when wee were euery man to have his part, we were forced to melt it in the fire, which wee shared every second day about halfea pint for a man, wherewith we were forced to fuftayne our felues, and at other times wee dranke water, which agreed not well with the cold, and we needed not to coole it with Snow or Ice. but we were forced to melt it out of the Snow.

Sacke.

The feuenth, it was still foule weather, and we had a great storme with a North-east Wind. which brought an extreame cold with it, at which time weeknew not wist to doe, and while we fate confulting together, what were best for vs to doe, one of our companions gaue vs coun-Sea-coale fire, fell to burne some of the Sea-coales that we had brought out of the ship, which would cast a great heate and continue long, and so at Eeuening we made a great fire thereof, which cast a great heat: at which time wee were very carefull to keepe it in : for that the heate beeing fo great a comfort viito vs, we tooke care how to make it continue long : whereupon wee agreed to flop vp all the doores and the Chimney, thereby to keepe in the heate, and io went into our Cabinsto fleepe, well comforted with the heate, and fo lay a great while talking together; but at last we were ta-Swounding & ken with a great swounding and dazeling in our heads, yet some more then other some, which 40 fuffing by the we first perceived by a ficke man, and therefore the leffe able to beare it, and found our felues to Cole vapour be very ill at ease, so that some of vs that were strongest, start out of their Cabins, and first opened the Chimney, and then the doores, but he that opened the doore fell downe in a fwound vpon the Snow, which I hearing, as lying in my Cabin next to the doore, flart vp, and casting Vinegar in his face, recouered him againe, and to he rose vp : and when the doores were open, we all recouered our healths againe, by reason of the cold Ayre, and so the cold which before had beene to great an Enemy vnto vs, was then the onely reliefe that wee had, otherwife without doubt, we had dyed in a fudden fwound, after that the Master, when we were come to our schee againe, gaue every one of vs a little Wine to comfort our hearts.

The eight, it was foule weather, the winde Northerly, very sharpe and cold, but we durit lay no more coales on, as wee did the day before, for that our misfortune had taught vs, that to shunne one danger we should not runne into another. The ninth, it was faire cleare weather, the skie full of Starres, then we fet our doore wide open, which before was fast closed up with Snow, and made our Springes ready to take Foxes. The tenth, it was still faire Star-light weather, the winde North-east: then wee tooke two Foxes, which were good meate for vs, for as then our victuals began to bee scant, and the cold full increased, whereunto their Skinnes serued Shooes on fect vs for a good defence. The eleuenth, it was faire weather, and a cleere ayre but very old, which frozen within. hee that felt not would not beleeue, for our Shooes froze as hard as hornes upon our feete, and They weare no within they were white frozen, fo that we could not weare our shooes, but were forced to make great Pattents, the upper part being Sheepe-skinnes, which we put on ouer three or foure payre of Sockes, and so went in them to keepe our feet warme.

The twelfth, it was faire cleere weather with a North-west winde, but extreame cold, so that our House walls and Cabbins were frozen a finger thicke; yea, and the Cloathes spon our backes were white ouer with Frost, and although some of vs were of opinion, that wee should

Clotheson

CHAP.S. S.2. Cold blifters. Sunnes comfort. Foxes daintie at Venison.

lay more coles upon the fire to warme vs, and that we should let the chimney stand or en, yet we durit not doe it, fearing the like danger we had escaped. The thirteenth, it was faire cleere weather, with an East winde : then we tooke another Foxe, and tooke great paines about preparing and dreffing of our Springes, with no small trouble, for that if wee flayed too long without the Cold bliffers doores, there arose blisters upon our Faces and our Eares. The fourteenth, it was laire weather: the winde North-east, and the skie full of starres, then we tooke the height of the right shoulder of the Rens, when it was South South-west, and somewhat more Westerly (and then it was at the highest in our Compasse) and it was elevated about the Horizon 20. degrees and 28. minutes. his Declination being 6. degrees and 18. minutes, on the North-fide of the line, which Declina-10 tion being taken out of the height aforefayd, there rested 14. degrees, which being taken out of 90. degrees, then the height of the Pole was 76. degrees.

The fifteenth, it was still faire weather, the winde East: that day wee tooke two Foxes, and faw the Moone rife East South-east, when it was fixe and twentie dayes old, in the figne of Scorpio. The fixteenth, it was faire cleere weather, the winde East : at that time wee had no more Wood in the house, but had burnt it all : but round about our house there lay some courred ouer with Snow, which with great paine and labour we were forced to digge out, and fo shoull away with Snow, which wrea great panie and tabout the bode, which wee did by turnes, two and two together; the Snow, and fo brought it into the house, which wee did by turnes, two and two together; thereame and wherein we were forced to vie great speed, for wee could not long endure without the Houle, trinble free. because of the extreame cold, although we wore the Foxes skinnes about our heads, and double zing, 20 apparell vpon our backes.

The feuenteenth, the winde still held North-east, with faire weather and so great Frosts, that wee were of opinion, that if there stood a Barrell full of water without the doore, it would in one night freeze from the top to the bottome. The eighteenth, the winde fill held North-eaft, with faire weather : then feuen of vs went out vnto the Ship to fee how it lay, and being vnder the decke, thinking to finde a Foxe there, we fought all the holes but we found none; but when we entred into the Cabbin and had itricken fire to fee in what cafe the ship was, and whether the water role higher in it, there wee found a Foxe, which we tooke and carryed it home, and eate it, and then we found that in eighteene dayes absence (for it was so long since we had beene there) the water was rifen about a finger high, but yet it was all Ice, for it froze as fast as it 30 came in, and the veffels which wee had brought with vs full of fresh water out of Holland, were frozen to the ground.

The nineteenth, it was faire weather, the winde being South : then we put each other in good comfort, that the Sunne was then almost halfe over, and ready to come to vs againe, which wee Sunnes comfore longed for, it being a weary time for vs to bee without the Sunne, and to want the greatest fort. comfort that God lendeth vnto man heere vpon the earth, and that which rejoyceth euery liuing thing. The twentieth, before notine it was faire elecre weather, and then we had taken a Foxe, but towards Equening, there role such a storme in the South-west, with so great a frow, that all the house was inclosed therewith. The one and twentieth, it was faire cleere weather, with a North-east winde, then we made our doore cleane againe, and made a way to goe out, and fed with from 40 clenfed our Traps for the Foxes, which did vs great pleasure when we tooke them; for they seemed as daintie as Venison vnto vs. The two and ewentieth, it was foole weather, with great ftore of fnow, the winde South, welt, which flopt vp our doore againe, and wee were forced to digge it open againe, which was almost enery day to doe. The three and twentieth, it was foule weather, the wind South-well, with great store of snow, but wee were in good comfort that the Sunne would come agains to vs, for as we gheft, that day hee was in Tropics Capricorni, Sun in Tropics which is the furthest Signe that the Sunne passeth on the South-side of the line, and from thence Capitarni. 14. it turneth Northward againe. The foure and twentieth, being Christmasse Eeuen, it was faite Decem suite weather, then wee opened our doore againe, and saw much open water in the Sea : for we had heard the Ice cracke and drine : although it was not day, yet we could fee to farte. Towards

So Equaning it blew hard out of the North-east, with great flore of Snow, so that all the passage Cold Christ-Ecuching renew man on or the renewater, who great tops or other, to the the that wee had made open before, was flopt up againe. The fire and twentieth, being Christmaffe miffe, day, it was foule weather, with a North-west winde, and yet though it was foule weather, we heard the Foxes runne ouer our Houle, wherewith some of our men sayd, it was an ill signe; and Ill signe inwhile we fate disputing why it should bee an ill signe, some of our men made answer, that it was deed. an ill figne because wee could not take them, to put them into the Pot or roast them, for that had

The fixe and twentieth, it was foule weather, the winde North-west, and it was focold that we could not warme vs, although wee yied all the meanes we could with great fires, good itote Coldinaines of cloathes, and with hot stones and billets, layd vpon our feete and spon our bodies, as we lay, ble. 60 in our Cabbins; but notwithflanding all this, in the morning our Cabbins were frozen, which made vs behold one the other with fad countenance, but yet wee comforted our felues agains as well as we could, that the Sunne was then as low as it could goe, and that it now began to come to vs againe, and we found it to bee true : for that the Dayes beginning to lengthen, the Cold began to firengiben, but hope put vs in good comfort, and eafed our paine. The feuen and twentieth, it

was still foule weather, with a North-west wind, so that as then wee had not beene out in three was firm touc events out in three dayes together, nor durft not thrulf our heads out of doores, and within the house it was foexdayes rogerner, no want age to the state of Burne before, treame cous, tink as we see the second state of the Country men vie to bee, when they come in at the Country men vie to bee, when they come in at the gates of the Towne in Holland with their Sleds, and haue gone all night. regates of the about in 1200001 that still foule weather with a West wind, but about Ecuening it.

I neergns and weetness, at which time one of our men made a hole open at one of our doores, and began to creere vp, as writed that the description of the found it fo hard weather that hee flayed not long, and went out to fee wint news a wind, that the Snow lay higher then our house, and that if he had told vs that it had inowed to much make the state of the tayes our songer, me cases where any re, the wind being Southward : that day, he, whole turns it was calme weather, and a pleafant ayre, the wind being Southward : that day, he, whole turns it was carnet weather; and a geed a hole through the Snow, where we went out of the houfe it was, opened the moute of a Celler, at leaft feuen or eight steps high, each steps afoote vpon neps, as a transfer we made cleane our Springes for the Foxes, whereof for certaine days from the other, and the well as we made them cleane, one of our men found a dead Foxe in one of them, that was frozen as hard as a stone, which he brought into the house, and thawed it before the fire, and after flaying it, some of our meneate it. The thirtieth, it was foule weather agains, with a fforme out of the West, and great store of Snow, so that all the labour and paine that we had taken the day before to make steps to goe out of our house, and to clense our Springes, was all had taken one day october of many needs to be of our mone, and to term our optinger, was all in vaine, for it was all coursed our with Snow againe, higher then it was before. The one and 20 thirrieth, it was fill foule weather, with a fforme out of the North-weft, whereby we were fo faft flut vp into the house, as if wee had beene priloners, and it was so extreame cold, that the fire almost cast no heate : for as we put our feet to the fire, we burnt our hose before we could feelethe heate, fo that we had worke enough to doe to patch our hofe : and which is more, if we had not fooner finelt, then felt them, we should have burnt them ere we had knowne it.

Fire conque-

After that with great cold, danger, and difease, wee had brought this yeere vito an end, we An Dam. 1597. entred into the yeare of our Lord God 1597, the beginning whereof, was in the same manner as the end of Jamo 1596. had beene, for the weather continued as cold, foule, and Snowie, as it was before, so that vpon the first of January wee were inclosed in the House, the winde then being West : at the same time wee agreed to share our Wine every mana 30 small measure full, and that but once in two dayes : and as we were in great care and feare that it would bee long before we should get out from thence, (and we having but small hope therein) fome of vs spared to drinke wine as long as we could, that if we should stay long there, we might drinke it at our need. The second, it blew hard with a West wind, and a great storme with both Snow and Frost, so that in foure or fine dayes, we durst not put our heads out of the doores, and as then by reason of the great cold, we had almost burne all our Wood; notwithstanding, we dust not goe out to fetch more wood, because it froze so hard, and there was no being without the doore, but feeking about we found fome peeces of wood that lay ouer the doore, which we close, and withall cloue the blocker whereon we wied to beate our Stock-fift, and so holpe our seluce so well as we could. The third, it was all one weather, and we had little wood to burne. The 40 fourth, it was still foule stormie weather, with much Snow and great cold, the winde Southwest, and we were spreed to keepe in the house : and to know where the wind blew, we thrust a halfe-pike out at the Chimney with a little cloath or feather upon it, but as soone as wee thrust it out, it was presently frozen as hard as a peece of wood, and could not goe about nor ftirre with the wind.

Vene.

The fifth, it was somewhat still and calme weather: then wee digged our doore open again, that we might goe out, and carrie out all the fath that had beene made, during the time of our being flut in the house; and made every thing handsome, and fetched in Wood which we cleft, and it was all our dayes worke to further our felues as much as we could, fearing least we should be thus vp againe : and as there were three doores in our portall, and for that our house by coured ouer in Snow, wee tooke the middle doore thereof away, and digged a great hole in the show, that lay without the house, like to a side of a vault, wherein we might goe to ease our felues, and caft other filth into it : and when we had taken paines all day, we remembred our selves that it was Twelfth Eeuen, and then we prayed our Master that we might be merris that night, and fayd, that we were content to spend some of the Wine that night which we had spared, and which was our share every second day, and whereof for certayne dayes wee had not drunke, and so that night we made merrie, and drunke to the three Kings, and therewith we had two pound of Meale, whereof wee made pan-cakes with Oyle, and every man a white Bisket, which we fopt in Wine and so supposing that we were in our owne Country, and amongst our friends, it comforted vs as well as if we had made a great banquet in our owne house; and we al- 60 so made tickets, and our Gunner was King of Nova Zembia, which is at least two hundred miles

Three Kings

long, and lyeth betweene two Seas. The first, it was faire weather, the wind North-east, then wee went out and cleansed our Traps to take Foxes, which were our Venison, and we digged a hole in the Snow, where our fire-

wood lay, and left it clo fe aboue like a vault; and from thence fetched out our Wood as we needed it. The feuenth, it was foule weather againe, with a North-west wind, and some Snow. and very cold, which put vs in great feare to be shut vp in the house againe. The eight it was faire weather againe, the wind North: then wee made our Springes ready to get more Venifon: which wee longed for , and then wee might fee and marke day-light, which then began Day-light to encreale, that the Sunne as then began to come towards vs againe, which put vs in no little espeed.

CHAP. S.S. 2. Day-light efficd. Beares in the Ship. The Sunne appeareth.

The ninth, it was foule weather, with a North-west wind, but not so hard weather as it had beene before, so that we might goe out of the doore to make cleane our Springes. The tenth it was faire weather with a North wind : then seuen of vs went to our ship well armed, which Io we found in the same state wee lest it in, and in it wee saw many footsteps of Beares , both great Beares in the and small, whereby it seemed that there had beene more then one or two Beares therein; and ship, as we went under hatches, we ftrooke fire, and lighted a Candle, and found that the water was rifen a foot higher in the ship. The eleventh, it was faire weather, the wind North-east, and the cold began to be fomewhat leffe, fo that as then we were bold to goe out of the doores, and went about a quarter of a mile to a Hill, from thence we fetched certaine ftones, which we lave in the fire, therewith to warme vs in our Cabins.

The twelfth, it was cleare weather, the wind North-west: that evening it was very cleare. and the skie full of Starres, then wee tooke the height of Oculus Tauri, which is a bright and Oculus Tauri, well knowne Starre, and we found it to be eleuated about the Horizon 29. degrees and 54. mi-20 nutes, her declination being 14. degrees 54. minutes on the North fide of the Line. This declination being subtracted from the height aforesaid, then there rested 14. degrees, which subtra-Red from 90. degrees , then the height of the Pole was 76, degrees , and io by measuring the height of that Starre, and some others, wee gheffed that the Sunne was in the like height, and that we were there vnder 76. degrees, and rather higher then lower.

The thirteenth, it was faire still weather, the wind Westerly, and then wee perceined that day-light began more and more to encrease, and we went out and cast Bullets at the bale of the Flag-staffe, which before we could not see when it turned about. The fourteenth, it was faire weather and a cleare light, the wind Westerly, and that day we tooke a Foxe. The fifteenth, ao it was faire cleere weather, with a West wind, and axe of vs went abourd the ship, where wee found the Bolck-vanger (which the last time that we were in the ship, wee stucke in a hole in the fore decke, to take Foxes) pulled out of the hole and lay in the middle of the ship, and all torne in pieces by the Beares, as we perceived by their footsteps.

The fixteenth, it was faire weather, the wind Northerly, and then we went now and then out of the house to stretch out our joynts and our limbs with going and running, that we might not become lame, and about noone time we faw a cerraine redueffe in the shie, as a shew or mel- during blushed senger of the Sunne that began to come towards vs. The senenteenth, it was cleare weather to lie so long with a North wind, and then still more and more wee perceived that the Sunne began to come in bed. neerer vnto vs, for the day was somewhat warmer, so that when we had a good fire, there fell 40 great pieces of Ice downe from the walls of our house, and the Ice melted in our Cabins, and the Cold releases water dropped downe, which was not so before, how great soeuer our fire was; but that night it was cold againe.

The eighteenth, it was faire cleare weather, with a South-east wind, then our Wood began to confume, and fo we agreed to burne fome of our Sea-coles, and not to ftop vp the Chimney, and then we should not need to feare any hurt, which we did, and found no disease thereby, but we thought it better for vato keepe the Coles, and to burne our Wood more sparingly, for that the Coles would ferue vs better when we should fayle home in our open Scute.

The one and twentieth, it was faire weather, with a West wind: at that time taking of Foxes began to fayle vs, which was a figne that the Beares would come againe, as not long after we found it to be true, for as long as the Beares stay away, the Foxes came abroad, and not

much before the Beares come abroad, the Foxes were but little seene.

The two and twentieth, it was faire weather with a West wind : then we went out againe to cast the Bullet, and perceived that day-light began to appeare, whereby some of vs said, that the Sunne would foone appeare vnto vs, but William Barents to the contrary faid, that it was yet two weekes too soone. The three and twentieth, it was faire calme weather, with a Southwest wind : then foure of vs went to the ship, and comforted each other , giving God thankes that the hardest time of the Winter was past, being in good hope that we should live to talke of those things at home in our owne Countrey : and when we were in the ship, we found that the water role higher and higher in it, and so each of vs taking a Bisket or two with vs, wee went

The foure and twentieth, it was faire cleare weather, with a West wind : then I, and I acob Heemikerke, and another with vs went to the Sea-fide, on the South fide of None Zembla, where contrary to our expectation, I first faw the edge of the Sunne, wherewith wee went speedily Sunne appeahome againe, to tell William Barents, and the rest of our companions that toyfull newes : but

William Barents being a wife and well experienced Pilot, would not believe it, efterming it to be about fourteene dayes to foone for the Sunne to finne in that part of the World; but we exnessly affirmed the contrarie, and said, that we had seene the Sunne.

ftrange, and contriry to all learned mens

Opinions.

The flue and twentieth, and fixe and twentieth, it was mifty, and close weather, so that wee And not see any thing: then they that layed the contrary wag-r with vs. thought that they had won: but vpon the feuen and twentieth day it was cleare weather, and then wee faw the Sunne in his full roundnesse about the Horizon, whereby it manitefly appeared that wee had feene it upon the foure and twentieth day of Ianuary. And as we were of divers opinions toching the same, and that wee said, it was cleane contrary to the opinions of all old and new which they ching the fame, and that wee taid, it was cleare conducty of the openious of an out and new had loft the 4. Writers; yea, and contrary to the nature and roundnesses both of Heaten and Earth; fome of vs 10 Writers; yea, and contrary to the manufacture of day, that it is light be that we had curiflept our of southware 1210, that terming in tong time there are a second to day, that the property of the second the second that the second the second that the second them againe these, where we will referre that to his almightic power, and leanest vinto others to you the 14 of userius in an ins worker, we will all thinks we to be in doubt thereof, if wee thould let this pate dipute of our for that no man man and the we will make fome declaration thereof, whereby we may without diffourfing upon it, therefore we will make fome declaration thereof, whereby we may affure our felues that we kept good reckoning.

You must vinderstand, that when we first saw the Sun, it was in the fit degr. and 25. min, of Aquarius, and it should have staid according to our first ghesting, till it had entred into the 16.deg. and 27. min. of Aquarius, before he should have shewed there vnto vs, in the height of 76.deg. Which we ftriuing and contending about it amongft our felies, could not be fatisfied, bit won. 20 dred thereat, and some amongst vs were of opinion, that we had mistaken our selues, which neuer held fie we could not be perfuaded vnto, for that every day without fayle, wee noted what had pait, and also had vied our Clocke continually, and when that was frozen, wee vied our Houre-glasse of twelue houres long, whereupon wee argued with our felues, in divers wise, to know how we should finde out that difference, and leaue the trueth of the time, which to trie, know now we ment more out that under the fall of the f yeeres of our Lord 1 589 till A. 1600, and we found therein, that vpon the foure and twentieth day of Ianuary, (when the Sun first appeared vnto vs) that at Venice the Clocke being one in the night time, the Moone and Ispiter were in conjunction, whereupon we fought to know when the same conjunction should be ouer or about the house where wee then were, and at last wee 30 found that the foure and twentieth day of January was the same day whereon the commodion Difference of aforesaid happened in Venice, at one of the clocke in the night, and with vs in the morning, when the Sunne was in the East: for we faw manifestly that the two Planets aforesaid approached neere vnto each other, vntill such time as the Moone and Impuer flood one unit ouer the other, both in the figne of Tourse, and that was at fixe of the clocke in the morning, at which time the Moone and Impiter were found by our Compasse, to be in conjunction over our house, in the North and by East point, and the South part of the Compasse was South South-west, and there we had it right South, the Moone being eight dayes old, whereby it appeareth, that the

tring place.

Sunne and the Moone were eight points different, and this was about fixe of the clockein the morning: this place differeth from Venice fine houres in longitude, whereby we may gheffe how 40 much we were neerer East then the Citie of Venice, which was five houres, each houre being 15. degrees, which is in all 75. degrees, that we were more Easterly then Venice, by all which it is manifefly to be seene, that wee had not sayled in our account, and that also wee had found our right longitude, by the two Planets aforefaid, for the Towne of Venice lieth under 37. degrees and 25. minutes in longitude, and her declination is 46. degrees and 5. minutes, whereby it followeth that our place of Nona Zembla, lieth under 112. degrees and 25. minutes in longitude, and the height of the Pole 76 degrees, and so you have the right longitude and latitude but from the vetermost point of Nona Zembla to the point of Cape de Tahm, the vetermost point of Tartaria, where it windeth Southward, the longitude differeth 60. degrees; but you must vis-Note for deg derstand, that the degrees are not so great as they are vinder the Equinoctiall Line, for right vin- 50 der the Line a degree is fifteene mikes, but when you lease the Line, either Northward or Southward, then the degrees in longitude doe leffen, so that the neerer that a man is to the North or South Pole, so much the degrees are lesse: so that under the 75. degrees Northward, where we wintred, the degrees are but three miles and two third pares; whereby it is to be marked, that we had but 60. degrees to faile to the faid Cape de Tabin, which is, 220. miles, so the said Cape lieth in 172, degrees in long tude as it is thought; and being aboue it, it feemeth that we should be in the Streight of Anian, where we may fayle boldly into the South, as the Land reacheth. Now what further instructions are to be had to know, where wee lost the Sunne under the said 76. degrees upon the fourth of November, and faw it againe upon the foure and twentieth of January: I leaue that to be described, by such as make profession thereos, it sufficeth vs to have 60 shewed, that it failed vs not to appeare at the ordinary time.

The fine and twentieth of Ianuary, it was darke cloudy weather, the wind Westerly, so that Beatersetums the feeing of the Sunne the day before, was againe doubted of, and then many wagers were with the Sun. layd, and we fill looked out to fee if the Sunne appeared, the fame day we faw a Beare, (which as long as the Sunne appeared not vnto vs we faw not) comming out of the South-west towards our house, but when we shouted at her she came no neerer, but went away again. The six & twen rieth, it was faire cleare weather, but in the Hor zon there hung a white or darke cloude, whereby we could not see the Sunne, vvhereupon the rest of our companions, thought that we had mistaken our selues vpon the source and twentieth day, and that the Sunne appeared not vnto vs. and mocked vs, but vve were resolute in our former affirmation, that vve had seene the Sunne, but not in the full roundnesse: That Ecuening the Sicke man that was amongst vs, was very Sicke man vyeake, and felt himfelfe to bee extreame ficke, for he had layne long time, and vve comforted decidhim as well as vve might, and gaue him the best admonition that vve could, but hee dyed not

to long after midnight. The twentie feuen it was faire cleare weather, with a South-west wind, then in the morning we digged a hole in the snow hard by the house, but it was still so extreame cold, that we could not flay long at worke, and so wee digged by turnes, every man a little while, and then went to the fire, and another went and supplied his place, till at last wee digged seven foot depth where wee went to burie the dead man, after that when we had read certaine Chapters, and fung some Pfalmes, wee all went out and buried the man, which done we went in and brake our fafts, and while we were at meate, and discoursed amongst our selues, touching the great quantitie of snow that continually fell in that place, wee faid that if it fell out, that our house should bee closed vo againe with fnow, wee would finde the meanes to climbe out at the chimney, whereupon our 20 Maiter went to trie if hee could climbe vp through the chimney, and fo get out, and while hee

was climbing one of our men went forth of the doore, to fee if the Mafter were out or not, who The Summete ftanding upon the fnow, faw the Sunne, and called vs all out, wherewith we all went forth, and faw the Sun in his full roundnesse, a little aboue the Horizon, and then it was without all doubt. that wee had seene the Sunne vpon the foure and twentieth of Ianuary, which made vs all glad, and we gaue God heartie thankes, for his grace shewed vnto vs, that that glorious light appeared

vnto vs againe.

The eight and twentieth, it was faire weather, with a West wind, then we went out many times to exercise our relues, by going, running, casting of the ball, (for then we might see a good way from vs) and to refresh our joynes, for wee had long time fitten dull, whereby many of vs 20 were very loofe. The mine and twentieth, it was foule weather, with great flore of fnow, the wind North-west, whereby the house was closed up againe with snow. The thirtieth, it was darke weather, with an East wind; and we made a hole through the doore, but wee shouled not the snow very farre from the portall, for that as soone as we saw what weather it was, wee had no defire to goe abroad. The one and thirtieth, it was faire calme weather, with an East wind, then we made the doore cleane, and shoulled away the snow, and threw it voon the house, and went out, and wee faw the Sunne shine cleere, which comforted vs, meane time we faw a Beare, Beare, that came towards our house, but wee went foftly in, and watched for her till shee came neerer, and as soone as she was hard by we shot at her, but she ran away againe.

The first of February, being Candlemasse Eeue, it was boisterous weather, with a great storme, February, 40 and good store of snow, whereby the house was closed vp againe with snow, and we were constrained to stay within doors, the wind then being north-west. The second it was foule weather, and as then the Sunne had not rid vs of all the foule weather, whereby wee were somewhat difcomforted, for that being in good hope of better weather wee had not made so great prouision of wood as we did before. The third, it was faire weather, with an East wind, but very mystie, whereby wee could not fee the Sunne, which made vs tomewhat melancholy, to fee fo great a myst, and rather more then we had had in the Winter time, and then we digged our doore open againe, and fetched the wood that lay without about the doore into the house, which we were forced with great paine and labour to dig out of the snow. The fourth, it was foule weather, with great flore of fnow, the wind being South-weft, and then wee were close vp againe with fnow, but then wee tooke not fo much paines as we did before, to dig open the doore, but when we had 50 occasion to goe out we climbed out at the chimney, and eased our selues, and went in againe the

The fifth, it was still foule weather, the wind being East, with great store of snow, whereby They go would wee were flut vp againe into the house, and had no other way to get out but by the chimney, at the chimand those that could not climbe out, were faine to helpe themselves within as well as they could. ney. The fixth, it was still foule stormy weather, with store of show, and we still went out at the chimney, (and troubled not our felues with the doore,) for some of vs made it an easie matter to climbe out at the chimney. The feuenth, it was still toule weather, with much snow, and a South-west wind, and we thereby forced to keep the house, which grieued vs more then when the Sun shined not, for that having feene it, and felt the heate thereof, yet wee were forced not to imov it. The eight, it began to be fairer weather the wind being South-west, then wee law the Sun rife South, South-east, and went downe South South-west, by the Compasse that we had made of Lead, and placed according to the Meridian of that place, but by our common Compaffe it differed two points. The ninth, it was faire cleere weather, the wind South, west, but as then wee could not

Heat of the Sunne

fee the Sunne, because it was close weather in the South , where the Sunne should goe downe, fee the sunne, occasion is was tione was in a most of the sunne, occasion and the sunner occasion is a sunner occasion. The tenth, it was faire cleare weather, so that wee could not tell where the wind blew, and then The tenth, it was saire cleare weather, to that the Ecurning it began to blow femewhat cold out we began to feele fome heat of the Sun, but in the Ecurning it began to blow femewhat cold out

The eleuenth, it was faire weather, the wind South, that day about noone, there came a Beare towards our house, and wee watched her with our Muskets, but shee came not so necreas wee could reach her, the same night wee heard some Foxes stirring, which since the Beares began to come abroad againe we had not much feene. The twelfth, it was cleere weather and very calme, the winde South-west, then we made our Traps cleane againe, meane-time there came a great the winde South-weit, men we made out it agoe in, and wee leuelled at her with our Muskets, 10 and as thee came right before our doore, we shot her into the brest, cleane through the heart, the bullet passing through her body, and went out againe at her tayle, and was as flatte as a Counter, the Beare feeling the blow, leapt backwards, and ranne twentie or thirtie foot from the house, and there lay downe, wherewith wee leapt all out of the house, and ranne to her, and found her fill aliue, and when the faw vs, thee rear'd vp her head, as if the would gladly have done vs fome mifchiefe, but we trufted her not, for that we had tryed their firength suffciently before, and therefore wee flot her twice into the body againe, and therewith fiee dyed ? Then we ript up her belly, and taking out her guttes, drew her home to the House where we flayed her, and tooke at terragen out belly, and taking out ner guttes, unevent and make the state of the st Greafe did vs great good feruice, for by that meanes we fill kept a Lampe burning all night 10 long, which before wee could not doe, for want of Greate, and enery man had meanes to burnea Lampe in his Cabbin, for such necessaries as hee had to doe. The Beares skinne vvas nine foe long, and feuen foot broad.

The thirteenth, it was faire cleere weather with a hard West winde, at whith time we had more light in our house by burning of Lampes, whereby we had meanes to passe the time away, by reading and other exercites, which before (when we could not diffinguish Day from Night, by reason of the darkenesse, and had not Lamps continually burning) were could not doe. The foureteenth, it was faire cleere weather, with a hard West wind before noone, but after noone, it was still weather, then fue of vs went to the Ship to see how it lay, and found the waterto increase in it, but not much. The fifteenth, it was foule weather, with a great storme out of the 30 South-west, with great store of Snow, whereby the House was closed up againe, that Night the Foxes came to denoure the dead body of the Beare, whereby we were in great feare, that all the Beares thereabouts would come thither, and therefore wee agreed, as foone as we could toget out of the honfe to burie the dead Beare deepe vnder the Snow.

The fixteenth of February, it was foule weather, with great store of Snow and a South-west wind, that day was Shroue-tuelday, then wee made our felues somewhat metric in our great griefe and trouble, and every one of vs dranke a draught of Wine.

The nineteenth, it was faire cleere v veather, with a South-west winde, then we tooke the height of the Sunne, which in long time before wee could not doe, because the Horizon was not cleere; as also for that it mounted not to high, nor gaue not so much shadow, as we were to 40 haue in our Astrolabinen, and therefore we made an Instrument that was halfe round, at the one end having 90. degrees marked thereon, vyhereon we hung a thread vyith a Plumet of Lead, as the water Compasses have, and therewith we tooke the height of the Sunne, when it was at the highest, and found that it was 3. degrees elevated about the Horizon, his Declination 11. degrees and 16. minutes, which being added to the height aforefayd, made 14. degrees and 16. minutes, which substracted from 90. degrees, there refted 75. degrees and 44. minutes for the height of the Pole, but the aforesayd 3 degrees of height, being taken at the lowest fide of the Sunne, the 16. minutes might well be added to the height of the Pole, and fo it was just 76. degrees, as we had measured it before. The twentieth, it was foule weather, with great store of Snow, the wind South-west, whereby we were shut wp againe in the house.

The two and twentieth, it was cleere faire vveather, with a South-west wind, then we made ready a Sled to fetch more Wood, for need compelled vs thereunto; for as they fay, hunger driveth the Wolfe out of his denne, and eleven of vs went together, all well appointed with our Armes, but comming to the place where we should have the Wood, we could not come by it, by reason it lay so deepe vnder the Snow, whereby of necessitie we were compelled to goe further, where with great labour and trouble we got some : but as vve returned backe againe therewith, it was fo fore labour vnto vs, that we were almost out of comfort, for that by reason of the long cold and trouble that we had indured, vve vvere become so vveake and feeble, that vve had little strength, and we began to bee in doubt, that we should not recour our strengths againe, and should not beable to fetch any more Wood, and so we should have dyed with cold, but the pre- 60 fent necessitie and the hope wee had of better weather, increased our forces, and made vs doe more then our ftrengths afforded, and when we came neere to our house, we saw much open vvater in the Sea, which in long time we had not feene, which also put vs in good comfort, that things would bee better.

CHAP. S.S. 2. Tartarian Sea. Shooes of Felt and Ruoge. Shooes fozen.

The fine and twentieth, it was foule weather againe, and much Snow, with a North winde. whereby we were closed vp with Snow againe, and could not get out of our House.

The eight and twentieth of February, it was still weather, with a South-west wind, then ten of vs went and fetched another Sled full of Wood, with no leffe paine and labour then wee did before, for one of our companions could not helpe vs, because that the first joyne of one of his great Toes was frozen off, and so her could doe nothing.

The first of March, it was faire still weather, the wind West but very cold, and we were forced March. to fore our Wood, because it was so great labour for ws to fetch it, so that when it was day, we exercifed our felues as much as we might, with running, going, and leaping, and to them that To lay in their Cabins, wee gaue hot stones to warme them, and towards night we made a good fire, which we were forced to endure. The second, it was cold cleere weather, with a West wind, the same day we tooke the height of the Sunne, and found that it was cleusted about the Horizon 6. degrees and 48. minutes, and his Declination was 7. degrees and 12. minutes, which Substracted from 90. degrees, refteth 76. degrees for the height of the Pole. The third, it was faire weather with a West wind, at which time our Sicke men were fornewhat better, and sate voright in their Cabins, to doe some thing to passe the time away, but after they found that they were too ready to flirre before their times. The fourth, it was faire weather, with a West wind. the same day there came a Bears to our House, whom we watcht with our Pieces, as wee did before and hot at her, and hit her, but thee runne away, at that time fine of vs went to our Ship, 20 where we found that the Beares had made worke, and had opened our Cookes cupbord, that was conered over with frow, thinking to finde fome thing in it, and had drawne it out of the Ship

The seventh, it was still soule weather and as great a winde, so that wee were that vp in our Note. House, and they that would goe out, must climbe up through the Chimney, which was a common thing with vs, and still we saw more open water in the Sea, and about the Land, whereby wee were in doubt that the Ship in that foule weather, and driving of the Ice, would be look (for as then the Ice draue) while we were flut vp in our Houfe, and wee fhould have no meanes to helpe it. The eight, it was still foule vveather, with a South-west storme, and great store of Snow, whereby we could fee no Ice in the North-eaft, nor round about in the Sea, whereby we 30 were of opinion, that North-east from vs there was a great Sea. The minth, it was foule vveather, but not fo forle as the day before, and leffe fnow, and then we could fee further from vs.and perceiue that the vvater vvas open in the North-east, but not from vs towards Tariaria, for there we could fill fee Ice in the Tartarian Sea, otherwise called the Ice Sea, so that we were of opinion, that there it was not very wide, for when it was cleere weather, we thought many times that wee faw the Land and thewed it to our companions, South and South-east from our house, like a hilly Land, as land commonly showeth it selfe, when we see it.

The eleventh, it was cold, but faire Sun-thine vventher, the wind North-east, then we tooks the height of the Sunne with our Aftrolabium, and found it to bee elevated about the Harizon 10. degrees and 19. minutes, his Declination was 3 degrees and 41. minutes, which being added 40 to the height aforelayd, made I 4. degrees, which substracted from 90. degrees, there resteth 76. degrees for the height of the Pole. Then twelve of vs went to the place where wee vied to goe. to fetch a Sled of Wood, but still we had more prine and labour therewith, because we were vveaker, and when we came home with it, and were very vvearie, we prayed the Mafter to give each of vs a draught of Wine, which hee did, vvherewith we were somewhat releeued and comforted, and after that were the willinger to labour, which was vnfupportable for vs. if meere extremitie had not compelled vs thereunto, faving oftentimes one vnto the other. That if the Wood yvere to be bought for Money, we would give all our Earnings or Wages for it.

The twelfth, it was foule weather, the Winde North-east, then the Ice came mightily denine in, which the South-west Wind had beene driven out, and it was then as cold, as it so had bin before in the coldeft time of Winter.

The fifteenth, it was faire weather, the Wind North, that day wee opened our doore to goe out, but the cold rather increased then diminished, and was bitterer then before it

The fixteenth, it was faire cleere weather, but extreame cold with a North Wind, which put vs to great extreamitie, for that vve had almost taken our leaves of the cold, and then it bee gan to come againe. his continued till the one and twentieth.

The one and twentieth, it was faire weather, but ftill very cold, the Wind North, the fame day the Sunne entred into Ares in the Equinoctiall Line, and at noone were tooke the beight of the Sunne, and found it to be eleuated 14. degrees about the Horizon, but for that the Sunne Salin dries. 60 was in the middle Line, and of the like distance from both the Tropickes, there was no declination, neither on the South nor North fide, and fo the 14. degrees aforefayd being fubftracted Shoots of Felt from 90, degrees, there refted 76, degrees for the height of the Pole. The fame day, we made and Rugge, shooes of Felt or Rugge, which we drew voon our feete, for vve could not goe in our shooes, by reason of the great cold, for the shooes on our feet were as hard as hornes, and then we fetcht a

Sled full of Wood home to our house, with fore and extreame labour, and with extremitien Sted that or wood nome to our name, which one and conference and which we indured, as if March means to bid vs farewell, for our hope and comfort was, cold writen we moured, as it means means to one was a length the firength thereof would that the cold could not fall continue in that force, but that at length the firength thereof would

ze Droken. The three and twentieth, it was very foule weather, with infernall bitter cold, the wind North-east, so that we were forced to make more fire, as we had beene at other times, forther North-eart, to that we were roced to make more rate, as we had seen at vener times, for then it was as cold as ener it had beene, and it froze very hard in the floore and voon the walls of our it was as cold as ever it had beene, and it stock very man a second and a Post size want of our house. The foure and twentieth, it was alike cold, with great flore of fnow, and a North wind, whereby we were once againe that up into the houfe, and then the Coles ferned us well, which whereby we were once against interpretable to them, we difficed of. The fixe and twentieth, it was fair to perore by reason of our pan vinig or chem, we digd our feliuss out of the house again, and went out, and cleare weather, and very calme, then we digd our feliuss out of the house again, and went out, and cleare weather, and very canne, then we are cold had made vs burne vp all that we had,

The eight and twentieth, it was faire weather, the wind South-west, whereby the Icedrave I ne eight and twentiering it was raife weekers, the writer Southin-well, while toy the Icedrane away very fail. The same day, fixe of vs went abound the ship to see how it lay, and found it away very rait. I ne same usy, the usy very specific account the map to see now it say, and tout fall in one fort; but we perceived that the Beares had kept an cuill fanoured house therein.

The fecond of Aprill, it was faire weather, the wind North-east and very calme, then we tooke the height of the Sunne, and found it to be eleuated about the Horizon 18. degrees and tooke the neighbor as the Sunney and Found to the Sunning and Foundation being 4. degrees and 40. minutes, which being fubfiracted from the 40. minutes, in accumation being 4. acgress and 40. minutes, which reing industracted from the height aforefaid, there refled 14. degrees, which taken from 90. degrees, the height of the Pole

Beare affaule

Aprill.

The fixt, it was still soule weather, with a sliffe North-west wind, that night there came a Beare to our house, and we did the best we could to shoot at her, but because it was mois we-Deare to our moute, and we do not we could not give fire, wherewith the Bearecame holdly to tuer, and the county, one and would not give me, where when the polar came bounty to ward the houle, and came downe the flaires dole to the doore, feeking to breake into the houle, but our Master held the doore fast to, and being in great haste and searc, could not barre it with the piece of Wood that wee vied thereunto; but the Beare feeing that the doore was flut, file went backe againe, and within two hourse after shee came againe, and went round about and when the top of the house, and made such a roaring, that it was fearfull to heare, and at last you the copy of the nouse, and made such works there, that wee thought she would have broken it downe, and tore the sayle that was made saft about it in many pieces, with a great and fearfull so noise, but for that it was night, we made no resistance against her, because wee could not see her, at laft the went away and left vs.

The fourteenth, it was faire cleare weather, with a West wind, then we saw greater hills of Ice round about the thip, then ever we had leene before, which was a fearefull thing to beheld, and much to be wondred at, that the ship was not smitten in pieces. The fifteenth, it was sure calme weather with a North wind, then feuen of vs went aboord the ship, to fee in what cale it was, and found it to be all in one fort, and as wee came backe againe, there came a great Bere toward vs. against whom we began to make defence, but she perceiving that, made away from vs. and we went to the place from whence shee came to see her Den, where we found a great hole made in the Ice, about a mans length in depth, the entrie the reof being very narrow, and with 40 in wide, there we thrust in our Pikes to feele if there was any thing within it, but perceiving it was empty, one of our men crept into it, but not too farre, for it was fearefull to behold, after that we went along by the Sea-fide, and there we faw, that in the end of March, and the beginning of Aprill, the Ice was in fuch wonderful manner rifen and piled up one upon the other, that it was wonderfull, in such manner as if there had beene whole Townes made of Ice, with Towres and Bulwarkes round about them.

The faxteenth, it was foule weather, the wind North-west, whereby the Ice began somewhat to breake. The lauenteenth, it was faire cleare weather, with a South-weft wind, and then feuen of vs went to the ship, and there we saw open water in the Sea, and then we went ouer the Ice-hills as well as we could, to the water, for in fixe or fever moneths we had not gone 50 fo neere vnto it, and when we got to the water, there we saw a little bird swimming therein, but as foone as it espied vs. it dired wider the water, which we tooke for a figne, that there was more open water in the Sea then there had beene before, and that the time approached that the

The eighteenth of Aprill, it was faire weather, the wind South-west, then wee tooke the height of the Sunne, and it was elevated above the Horizon 25. degrees and 10. minutes, his declination 11. degrees and 12. minutes, which being taken from the height aforefaid, there refled 13. degrees and 58. minutes, which fubitracted from 90. degrees, the height of the Pole was found to be 75, degrees \$8, minutes; then eleven of vs went with a Sled to ferchmore Wood, and brought it to the house, in the night there came another Beare upon our house, which so we hearing, went all out with our Armes, but the Beare ran away.

The eight and twentieth, it was faire weather, with a North wind, then we took the height of the Sume againe, and found it to bee eleuateed 28. degrees and 8. minutes, his declination 14. degrees and 8. minutes, which substracted from 90. degrees, there refled 76. degrees for the

CHAP.S.S.2. Their many dangers by Beares, Ice, Famine, Scorbute.

height of the Pole. The nine and twentieth, it was faire weather, with a South-west wind. then we played at Colfe, both to the ship, and from thence agains homewards, to exercise our felues. The thirtieth, it was faire weather, the wind South-welt, then in the night wee could fee the Sunne in the North (when it was in the highest) iust about the Horizon, so that from that time wee faw the Sunne both night and day.

ð. ÍII.

Their preparation to goe from thence : they depart in a Boat and Scute both open. and come to Cola, 1143. miles. Their many dangers by Beares, Ice, Famine, Scorbute, in the way.

He first of May, it was faire weather with a West wind, then wee sod our last flesh, May, which for a long time we had spared, and it was still very good, and the last morfell tafted as well as the first, and we found no fault therein , but onely that it would last no longer. The second, it was foule weather, with a storme out of the South-west. whereby the Sea was almost cleare of Ice, and then wee beganne to speake about getting from thence, for we had kept house long enough there. The third, it was still foule weather, with a 20 South-west wind, whereby the Ice began wholly to drive away, but it lay fast about the ship, and when our best meate, as fielh, and other things beganne to faile vs, which was our greatest full enance, and that it behooved vs to be somewhat strong, to sustaine the labour that wee were to vindergoe, when we went from thence, the Master shared the rest of the Bacon amongst vs. which was a small Barrell with salt Bacon in pickle, whereof every one of vs had two ounces a day, which continued for the space of three weekes, and then it was eaten yo.

The fourth, it was indifferent faire weather, the wind South-west, that day five of vs went to the ship, and found it lying still as fast in the Ice as it did before, for about the middle of March it was but feuenty fine paces from the open water, and then it was fine hundred paces from the water, and enclosed round about with high hills of Ice, which put vs in no small feare, 20 how wee should bring our Scute and our Boat through or ouer that way into the water, when wee went to leave that place. That night there came a Beare to our house, but as soone as shee heard vs make a novie, the ranne away againe, one of our men that climbed vp in the Chimney, faw when shee ranne away, so that it seemed that as then they were afraid of vs, and durst not bee so bold to set vpon vs, as they were at the first. The fift, it was faire weather, with fome fnow, the wind East, that Ecuening, and at night wee faw the Sunne when it was at the lowest , a good way about the Earth. The fixt, it was faire cleare weather, with a great Southwest wind, whereby we saw the Sea open both in the East and in the West, which made our men exceeding glad, longing fore to be gone from thence. The feuenth, it was foule weather, and fnew hard, with a North wind, whereby we were closed up againe in our house.

40 The tenth, it was faire weather with a North-west wind, that night the Sunne by our common Compaffe being North North-east, and at the lowest, we tooke the height thereof, and it was elevated 3. degrees and 45. minutes, his declination was 17. degrees and 45. minutes, from whence taking the height aforefaid, there refted 14. degrees, which fubitracted from 90. degrees, there rested 76. degrees for the height of the Pole.

The fourteenth, wee fetcht our last Sled with fire-wood, and still ware our shooes made of Rugge on our feet.

The fine and twentieth, it was faire weather, with an East wind, then at noone time wee tooke the height of the Sunne, that was eleuated about the Horizon 34. degrees and 46. minutes, his declination 20. degrees and 46. minutes, which taken from the height aforefaid, there refted 14. degrees, which taken from 90. degrees, refted 76. degrees for the height of the Pole. 50 The fixe and twentieth, it was faire weather, with a great North-east wind, whereby the Ice

came in againe. The feuen and twentieth, it was foule weather, with a great North-east wind, which draue the Ice mightily in againe, whereupon the Master, at the motion of the companie, willed vs to make preparation to be gone.

The nine and twentieth in the morning, it was reasonable faire weather, with a West wind, then ten of vs went vnto the Scute to bring it to the house to dresse it, and make it ready to fayle, but wee found it deepe hidden under the fnow, and were fayne with great payne and labour to digge it out, but when wee had gotten it out of the snow, and thought to draw it to the house, wee could not doe it; because wee were too weake, wherewith wee became wholgo ly out of heart, doubting that wee should not bee able to goe forward with our labour, but the Master encouraging vs , bade vs strine to doe more then wee were able ; saying , that both our lines and our well-fare confifted therein: and that if wee could not get the Scute from thence, and make it ready, then heefaid wee must dwell there as Burgers of Nona Zembla, and Burgers of No. make our Graues in that place: but there wanted no good-will in vs but onely strength, ua Zembla.

which made vs for that time to leaue off worke and let the Scute lie ftill, which was no small griefe vnto vs, and trouble to thinke what were best for vs to doe; but after noone being thus comfortlesse come home, wee tooke hearts againe, and determined to turne the Boat that lav by the house with her keele vowards, and to amend it, that it might bee the fitter to carrie ve ouer the Sea, for wee made full account that we had a long troublesome Voyage in hand, where in wee might have many croffes, and wherein wee should not bee sufficiently provided for all things necessarie, although wee tooke neuer so much care, and while wee were busie about our worke, there came a great Beare vnto vs, wherewith wee went into our house, and flood to watch her in our three doores, with Harquebusses, and one stood in the Chimney with a Musket, this Beare came boldlier vnto vs then euer any had done before, for shee came to the nea- 10 ther ften that went to one of our doores, and the man that ftood in the doore faw her not because hee looked towards the other doore, but they that stood within saw her, and in great feare called to him, wherewith he turned about, and although he was in a maze, he shot ather and the Bullet past cleane through her body, whereupon she ranne away. Yet it was a feartful thing to fee, for the Beare was almost vpon him before hee saw her, so that if the Peece had fayled to give fire (as oftentimes they doe) it had coft him his life, and it may bee, that the Beare would have gotten into the house: the Beare being gone somewhat from the house lay downe, wherewith wee went all armed and killed her out right, and when wee had ript open her bellie: we found a piece of a Bucke therein, with haire, skinne and all, which not long before thee had torne and deuoured.

The one and thirtieth of May, it was faire weather, but somewhat colder then before, the wind being South-west, whereby the Ice draue away, and we wrought hard about our Boat, but when wee were in the chiefest part of worke, there came another Beare, as if they had finely that wee would be gone, and that therefore they defired to talte a piece of some of vs, for that was the third day, one after the other, that they fet so fiercely voon vs, so that wee were forced to leave our worke, and goe into the house, and shee followed vs, but we stood with our Peeces to watch her, and shot three Peeces at her, two from our doores, and one out of the Chimney. which all three hit her : but her death did vs more hurt then her life, for after we ript her belly, we dreft her Liner and eate it, which in the tafte liked vs well, but it made vs all ficke, specially three that were exceeding ficke, and wee verily thought that wee should have lost them, for all 30 their skins came off, from the foot to the head, but yet they recourred againe.

The third of Iune, in the morning it was faire cleare weather the wind West, and then wee were somewhat better, and tooke great paines with the Boat, that at last we got it ready, after we had wrought fixe dayes upon it : about evening it began to blow hard , and therewith the water was very open, which put vs in good comfort that our deliuerance would foone follow, and that we should once get out of that desolate and fearefull place.

The fourth, it was faire cleare weather, and indifferent warme, and about the South-east Sunne, eleuen of vs went to our Scute where it then lay, and drew it to the ship, at which time the labour feemed lighter unto vs then it did before, when wee tooke it in hand and were forced to leave it off againe. The reason thereof was, the opinion that wee had that the snow as 40 then lay harder upon the ground, and so was become stronger; and it may be that our courages were better, to fee that the time gane vs open water, and that our hope was that wee should get from thence; and fo three of our men stayed by the Scute to build her to our minds: and for that it was a Herring Scute, which are made narrow behind, therefore they fawed it off behind, and made it a broad stearne: and better to brooke the Seas, they built it also somewhat higher, and drest it vp as well as they could, the rest of our men were busie in the house to make all other things ready for our Voyage, and that day drew two Sleds with victuals and other goods vnto the ship, that lay about halfe way betweene the house and the open water, that after they might have fo much the shorter way, to carrie the goods unto the water side, when wee should goe away: at which time all the labour and paines that wee tooke seemed 50 light and easie vnto vs, because of the hope that wee had to get out of that wilde Desart, inkefome, fearefull, and cold Countrey.

The fift, it was foule weather, with great store of haile and snow, the wind West, which made an open water, but as then we could doe nothing without the house, but within we made all things ready, as Sayles, Oares, Masts, Sprit, Rother, Swerd, and all other necessarie things. The fixt, in the morning it was faire weather, the wind North-east, then wee went with our Carpenters to the ship, to build vp our Scute, and carried two sleds full of goods into the ship, both victuals and Merchandise, with other things, which wee meant to take with vs; after that there rofe very foule weather in the South-west, with snow, haile, and raine, which wee in long time had not had, whereby the Carpenters were forced to leave their worke, and goe home 60 to the house with vs, whereby also we could not be drie, because wee had taken of the Deales, therewith to amend our Boat and our Scute, there lay but a fayle ouer it, which would not hold out the water, and the way that lay full of fnow began to be foft, so that wee left off our shoots made of Rugge and Felt, and put on our Leather shooes.

The eight, it was faire weather, and wee drew the wares to the ship, which wee had packed and made ready, and the Carpenters made ready the Scure, so that the same evening it was almost done, the same day all our men went to draw our Boat to the ship, and made ropes to draw withall, fuch as wee vie to draw with in Scutes, which wee cast ouer our shoulders, and held fast with all our hands, and so drew both with our hands and our shoulders, which gave vs more force, and specially the desire and great pleasure wee tooke to worke at that time made vs ftronger.

The tenth, wee carried foure Sleds of goods into the ship, the wind then being variable, and at evening it was Northerly, and wee were busie in the house to make all things ready, the 10 Wine that was left we put into little veffels, that fo wee might divide it into both our veffels. and that as wee were enclosed by the Ice, (which wee well knew would happen vnto vs) wee might eafilier cast the goods upon the Ice, both out and into the Scutes, as time and place ferued vs. The eleuenth, it was foule weather, and it blew hard North North-west, so that all that day we could doe nothing, and we were in great feare left the storme would carrie the Ice and the ship both away together, (which might well have come to passe) then wee should have beene in greater milerie then euer wee were , for that our goods both victuals and others, were then all in the ship, but God prouided so well for vs. that it fell not out so vnfortunatly. The twelfth, it was indifferent faire weather, then we went with Hatchets, Halberds, Shouels, and other instruments, to make the way plaine, where we should draw the Scute and the Boat to 20 the water lide, along the way that lay full of knobs and hills of Ice, where wee wrought fore with our Hatchets and other instruments, and while we were in the chiefest of our worke, there came a great Jeane Beare out of the Sea vpon the Ice towards vs, which we judged to come out of Tartaria: for we had seene of them twenty or thirty miles within the Sea, and for that wee had no Muskets, but onely one, which our Surgeon carried, I ranne in great hafte towards the ship to fetch one or two, which the Beare perceiting ranne after mee, and was very likely to haue ouer taken me, but our companie seeing that , left their worke and ranne after her, which made the Beare turne towards them, and left me, but when the ran towards them, the was thor into the body by the Surgeon, and ranne away; but because the Ice was so vneuen and hilly, she eculi not goe farre, but being by vs ouertaken, we killed her out right, and smote her teeth out Beare styre; 30 of her head, while the was yet living.

The thirteenth, it was faire weather, then the Master and the Carpenters went to the ship. and there made the Scute and the Boat ready, fo that there refted nothing as then, but onely to bring it downe to the water fide, the Mafter and those that were with him , seeing that it was open water, and a good West wind, came backe to the house againe, and there hee spake vnto William Barents (that had been elong ficke) and shewed him, that he thought it good, (seeing it They depairs Was a fit time) to goe from thence, and so willed the companie to drive the Boat and the Scute downe to the water fide, and in the name of God to beginne our Voyage, to fayle from None Zembla: then William Barents wrote a Letter, which he put in a Muskets charge, and hanged

it up in the Chimney, shewing how he came out of Holland, to sayle to the Kingdome of China, 40 and what had happened vnto vs being there on Land, with all our croffes, that if any man chanced to come thither, they might know what had happened vnto vs, and how we had beene forced in our extremitie to make that house, and had dwelt ten moneths therein, and for that wee were put to Sea in two small open Boats, and to vndertake a dangerous and aduenturous Voyage in hand, the Master wrote two Letters, which most of vs subscribed vnto, signifying how wee had flayed there vpon the Land in great trouble and miserie, in hope that our ship would bee freed from the Ice, and that we should sayle away with it againe, and how it fell out to the contrary, and that the ship lay fast in the Ice, so that in the end the time passing away, and our vi-Stuals beginning to faile vs, we were forced for the fauing of our owne lines, to leave the ship, and to fayle away in our open Boats, and so to commit our selues into the hands of God. Which 50 done, he put into each of our Scutes a Letter, that if wee chanced to lofe one another, or that

by fformes or any other misaduenture we happened to be cast away, that then by the Scute that escaped, men might know how we left each other, and so having finished all things as we determined, we drew the Boat to the water fide, and left a man in it, and went and fetcht the Scute, and after that eleuen Sleds with goods, as Victuals, with some Wine that yet remayned, and the Merchants goods, which we preferred as well as we could, vz. fixe packes with fine woollen Cloth, a Cheft of Linnen, two packets with Veluet, two small Chests with Money, two Dri-fats with mens Clothes and other things, thirteene Barrels of Bread, a Barrell of Cheefe, a flitch of Bacon, two Runlets of Oyle, fixe small Runlets of Wine, two Runlets of Vineger, with other packes belonging to the Saylers, fo that when they lay all together upon a heape, a 60 man would have judged that they would not have gone into the Scutes, which being all put into them, we went to the house, and first drew William Barens vpon a Sled to the place where our Scutes lay, and after that we fetcht Claes Adrian fon, both of them having beene long ficke, and so we entred into the Scutes, and divided our selves into each of them alike, and put into either of thema licke man, then the Mafter caufed both the Soutes to lie close one by the other,

The

The Letter is omitted. It

and there we subscribed to the Letters which he had written, and so committing our selnes to and there we among the best of the wild, and an indifferent open water, we was subscribed fet fayle and put to Sea.

The fourteenth of June in the morning, the Sunne Easterly, wee put off from the Land of by 1000 1001.

Note Zembla, and the fast Ice thereunto adjoyning, with our Boat and our Scute, having a West. wind , and fayled East North-east all that day to the Ilands point , which was five miles, bet our first beginning was not very good, for we entred fast into the Ice agrine, which there lay very hard and falt, which put vs into no small feare and trouble, and being there, foure of vs went Canalylon, 10'm on Land, to know the fituation thereof, and there we tooke many Birds, which wee kild with

The fixteenth, we let sayle againe, and got to the Iland of Orange, with a South wind which 10 is eight miles distant from the Point of Defire, there we went on Land with two small Barrels. and a Kettle, to melt snow, and to put the water into the Barrels, as also to seeke for Birds and Egges, to make meate for our ficke men. We put to the Sea againe with a South-east wind and drowlie miseling weather, whereby we were all dankish and wet, for wee had no shelter in our open Scutes, and fayled West, and West and by South, to the Ice-point, and wee made our Scutes fast to a great piece of Ice, and there eate somewhat, but the weather was still souler and souler. to that we were once againe enclosed with Ice, and forced to flay there.

The seventeenth in the morning, when we had broken our fasts, the Ice came so fast vpon vs that it made our haires stare vpright vpon our heads, it was so fearefull to behold: by which 20 meanes we could not make fast our Scutes, so that we thought verily that it was a fore-shewing of our last end, for wee draue away so hard with the Ice, and were so fore prest betweene a flake of Ice, that we thought verily the Scutes would burft in a hundred pieces, at laft, being in this discomfort, and extreme necessitie, the Master said, if we could take hold with a rope vpon the fast Ice, we might therewith draw the Scute vp, and so get it out of the great drift of Ice, but as this counsell was good, yet it was so full of danger, that it was the hazard of his life that should take voon him to doe it, and without doing it, was it most certaine, that it would cost vs all our lives: this counfell as I faid was good, but no man (like to the tale of the Mice) durft hang the Bell about the Cats necke, fearing to bee drowned, yet necessitie required to have it done, and the most danger made vs choose the least, so that being in that perplexitie, I being 30 Dangerous at- the lightest of all our companie, tooke on me to fasten a rope vpon the fast ice, and so creeping from one piece of driving Ice to another, by Gods helpe got to the fast Ice, where I made a tope fast to a high howell, and they that were in the Scute, drew it thereby vnto the faid fast Ice, and then one man alone could draw more then all of them could have done before, and when we had gotten thither, in all hafte wee tooke our ficke men out, and layed them voon the Ice, laying clothes and other things under them, and then tookeall our goods out of the Scutes, and fo drew them upon the Ice, whereby for that time we were delinered from that great danger, amaking account that we had escaped out of deaths clawes, as it was most true.

The eighteenth, we repaired and amended our Scutes againe, being much bruifed and crushed with the racking of the Ice, and were forced to drive all the nayles fast againe and to piece ma-40 ny things about them. God fending vs Wood, wherewith we molt our Pitch, and did all other things that belonged thereunto, that done, some of vs went vpon the Land to seeke for Egges, which the ficke men longed for, but we could finde none, but we found foure Birds, not without great danger of our lines, betweene the Ice and the firme Land, wherein wee often fell, and were in no small danger.

The nineteenth, it was indifferent weather, the wind North-west, and West South-west, but we wereftill shut up in the Ice, and saw no opening, which made us thinke that there would be our last abode, and that we should neuer get from thence.

The twentieth, Claes Adrianson and William Barents died, the death of William Barents put vs in no small discomfort, as being the chiefe Guide, and onely Pilot on whom wee reposed our 50

The two and twentieth in the morning, it blew a good gale out of the South-eaft, and then the Sea was reasonable open, but we were forced to draw our Scutes ouer the Ice to get vnto it, which was great paine and labour vnto vs; for, first we were forced to draw our Scutes ouer a piece of Ice of fifty paces long, and there put them into the water, and then againe to draw them Vp vpon other Ice, and after drew them at the least an hundred paces more over the Ice, before we could bring them to a good place where we might easily get out, and being gotten vnto the open water we committed our selues to God, and set sayle the Sun being about East North-east, with an indifferent gale of wind out of the South, and South South-east, and sayled West, and Eficioled again West and by South, till the Sunne was South, and then we were round about enclosed with Ice 69 againe, and could not get out, but were forced to lie still, but not long after the Ice opened againe like to a fluce, and we past through it and set sayle againe, and so sayled along by the Land, but were presently encloted with Ice, but being in hope of opening againe, meane time weecate Somewhat, for the Ice went not away as it did before : after that wee vied all the meanes wee

W. Barents

could to breake it, but all in vayne, and yet a good while after, the Ice opened againe, and we got out, and fayled along by the Land, West and by South, with a South wind.

The three and twentieth, wee fayled still forward West and by South, till the Sunne was South-east, and got to the Trust-point, which is distant from the les-point five and twentie miles, Trust-point, and then could goe no furtheer, because the Ice lay so hard and so close together, and yet it was faire weather : the same day we tooke the height of the Sunne with the Astrolabium, and also with our Astronomicall Ring, and found his height to be 37.degrees, and his Declination 23.degrees and 30 minutes, which taken from the height aforefayd; there refted 13. degrees and 20. minutes, which substracted out of 90, degrees, the height of the Pole was 76, degrees and 20, min nutes, and it was faire Sun-thine weather, and yet it was not fo ftrong as to melt the Snow than we might have water to drinke, fo that wee fet all our Tinne platters and other things full of Extreame cold Snow to melt, and so molt it, and put snow in our mouthes, to mele it downe into our throates, but all was not enough, to that we were compelled to endure great thirly

So that wee sayled in the two open Scutes, sometimes in the Ice, then oner the Ice, and through the 50 Sea, three hundred and cightie one miles Flemith, which is one thou fand one hundred fortje and three

The foure and twentieth of Iune, the Sunne being Easterly, we rowed heere and there in the Ice, to fee where we might best goe out, but wee saw no opening, but when the Sunne was South, we got into the Sea, for the which we thanked God most heartily, that hee had sent vs an vnexpected opening, and then we fayled with an East winde, and went luftily forward, fo that we made our account to get about the point of Nassauss close by the land, and wee could easily see the point of Nassawes, and made our account to bee about three miles from it.

The fixe and twentieth, it still blew hard out of the South, and broke the Ice whereunto we were fast in pieces, and we thereby draue into the Sea, and could get no more to the fast Ice, 60 whereby we were in a thousand dangers to bee all cast away, and driving in that fort in the Sea, wee rowed as much as we could, but we could not get neere vnto the Land, therefore we hovfed vp our Focke, and so made vp with our sayle, but our Fock-mast brake twice in peeces, and then it was worfe for vs then before, and not with flanding that there blew a great gale of Wind, yet we were forced to hoyfe vp our great Sayle, but the winde blew fo hard into it, that if wee

SII

had not prefently taken it in againe, we had funke in the Sea, or elfe our Boate would have been filled with water, for the water began to leape ouer-boord, and wee were a good way in the Sea, at which time the wauer went fo hollow, that it was most fearefull, and wee thereby faw nothing but death beforeoureyes, and every twinckling of an eye looked when wee should inke-But God that had delinered we cut of fo many dangers of Death, holpe we once againe, and contrary to our expectations, tent vs a North-west wind, and so with great danger wee got to the fast Ice againe, when we were deliuered out of that danger, and knew not where our other Sure was, wee fayled one mile along by the fast Ice, but found it not, whereby we were wholly our of heart, and in great feare that they were drowned, at which time it was mystic weather, and fo fayling along, and hearing no newes of our other Scure, we shot off a Musket, which they hesring shot off another, but yet we could not see each other, meane time approching necess to each other, and the weather waxing somewhat cleerer, as wee and they shot once againe, we say the smoake of their Piece, and at last we met together againe, and saw them lye fast, betweene drining and fast Ice, and when we got neere vnto them, we went ouer the Ice, and holpe them to wnlade the goods out of their Scute, and drew it ouer the Ice, and with much paine and trouble brought it into the open water againe, and while they were fast in the Ice, wee found fome Wood voon the Land by the Sea fide, and when we lay by each other, we fod some Bread and Water together, and eat it vp warme, which did vs much good.

The eight and twentieth, when the Sunne was in the East, wee layd all our goods vpon the Ice, and then drew the Scutes vpon the Ice also, because we were so hardly prest on all sides, with an the Ice, and the wind came out of the Sea vpon the Land, and therefore were were in feare to be wholly inclosed with the Ice, and should not be able to get out thereof againe, and being you the Ice, we layd fayles ouer our Scutes, and lay downe to rest, appointing one of our men to keepe watch, and when the Sunne was North, there came three Beares towards our Scutes, where-Three Beares, with hee that kept the Watch cryed, three Beares, three Beares, at which novie wee leapt out of our Boates with our Muskets, that were laden with hayle-shot to shoote at Birds, and had no time to discharge them, and therefore shot at them therewith, and although that kinde of shot could not hart them much, yet they ranne away, and in the meane time they gave vs leafore to lade our Muskets with bullets, and by that meanes wee that one of the three dead. which the other two perceiuing ranne away, but within two houres after they came againe, but when they 30 were almost at vs and heard vs.make a noyse, they ranne away, at which time the winds was Well, and Well and by North, which made the leaf three with great force into the East.

The nine and twentieth of Iune, the Sunne being South South well, the two Beares cameagaine to the place where the deal Beare lay, where one of them tooke the dead Beare in his

One Beare

mouth, and went a great way with it oues the nigged Ice, and then began to eate it, which we mouth and ear perceiuing fhot a Musket at her, but she hearing the neyfe thereof ranne away, and let the dead Beare lye, then foure of vs went thither, and faw that in so hort time the had eaten almost the halie of her, we tooke the dead Beare and layd it upon a high heape of Ice, that we might fee it out of our Scute, that if the Beare came againe we might shoot at her, at which time we try-Strong Beare. ed the great Arength of the Beare, that carryed the dead Beare as lightly in her mouth, as if 40 it had beene nothing, whereas wee foure had enough to doe to carry away the halfe dead Beare

The first of July, it was indifferent faire vveather, with a West North-west wind, and in the Morning the Sunne being East, there came a Beare from the driving Ice towards vs, and fwam ouer the water to the fast Ice whereon we by, but when she heard ve, she came no neerer but rm away, and when the Sunne was South-east, the Ice came so fast in towards vs. that all the Ice whereon we lay with our Scutes and our goods, brake and ran one peece voon another, whereby we were in no small feare, for at that time most of our goods fell into the water, but wee with great diligence drew our Scutes further vpon the Ice towards the Land, where we thought to be better defended from the driving of the Ice, and as we went to tetch our goods, we fell into the greatest trouble that ever we had before, for that wee endured so great danger in the saving thereof, that as we layd hold vpon one peece thereof, the reft funke downe with the Ice, and many times the Ice brake vader our owne feete, vyhereby we were wholly difcomforted, and in a manner cleane out of all hope, expecting no iffue thereof, in such fort that our trouble at that time firmounted all our former cares and impeachments, and when wee thought to draw vp our Boates upon the Ice, the Ice brake under vs, and we were carryed away with the Scute, and all by the driving Ice, and when we thought to faue the goods, the Ice brake under our feet, and with that the Scute brake in many places, especially that which wee had mended, as the Malt, the mast planke, and almost all the Scute, wherein one of our men that vvas ficke, and a Cheft of money lay, which we with great danger of our lives got out from it for as we were doing it, the 60 Ice that was under our feet draue from vs, and flid vpon other Ice, vvhereby we were indanger to built both our armes and our legges, at which time, thinking that wee had beene cleane quit of our Scute, we beheld each other in pittifull manner, knowing not what we should doe, our lines depending thereon, but God made so good pronision for vs, that the peeces of Ice draws from

each other, wherewith we ranne in great hafte vnto the Scute, and draw it to vs againe in such case as it was, and laid it woon the fait Ice by the Boate, where it was in more fecuritie, which put vs vnto an exceeding and great and dangerous labour, from the time that the Sumne was South-east, vntill it was West South-west, and in all that time wee rested not, which made vs extreame wearie, and wholy out of comfort, for that it troubled ve fore, and it was much more fearefull wnto ve, then at that time when William Barents dyed, for there we were almost drown ned, and that day we lott (which was funke in the Sea) two Barrels of Bread, a Chift with Linnen-Cloth, a Dry Fat with the Saylors Clothes, our Aftronomical Ring, a packe of Scarler Cloth, 2 Rundlet of Oyle, and some Cheetes, and a Rundlet of Wine, which bouged with the To ke fo that there was not any thing thereof faued.

The fourth, it was fo faire cleere weather, that from the time we were first in None Zemble. we had not the like. The fifth, it was faire weather, the Wind West, South-west, the same day

dyed lobe Branfon of Harlem.

The fewenth, it was faire weather with some Raine, the Winde West, South-west, and at Etiening VVeft, and by North, then we went to the open water, and there killed thirteene Birds. which we tooke vpon a piece of driving Ice, and laid them vpon the fast Ice.

The minth, in the morning, the Ice began to drive, whereby we got open water on the Land fide, and then also the fast Ice whereon we lay, beganne to drive whereupon the Master and the men went to fetch the Packe and the Chift, that flood wpon the Ice; to put them into the Scute, 20 and then drew the Scutes to the water, at least three hundred and fortie paces, which was hard for vs to doe, in regard that the labour was great, and we very weake, and when the Sunne was South South-east we fet fayle with an East-wind, but when the Sunne was West, we were forced to make towards the fast Ice againe, because thereabouts it was not yet gone, the Winde being South, and came right from the Land, whereby wee were in good hope that it would drive away, and that we should proceed in our Voyage. The tenth, from the time that the Sunne was East North-east, till it was East, westooke great paines and labour to get through the Ice, and at last we got through, and rowed forth, untill we happened to fall betweene two great flakes of Ice that closed one with the other, so that we could not get through, but were forced to draw the Scutes voon them, and to valede the goods, and then to draw them ouer to the open water

30 on the other lide, and then we must goe fetch the goods also to the same place, being at least one hundred paces long, and when we were in open water againe, we rowed forward as well as we could, but we had not rowed long, before wee fell betweene two great flakes of Ice, that came driving one against the other, but by Gods helpe, and our speedy rowing, we got from betweene them, before they closed up, and being through we had a hard West Winde, right in our Teeth, so that of force we were confirmed to make towards the fast Ice that lay by the shoare.

The eleventh, in the morning as we fate fast upon the Ice, the Sunnebeing North-east, there came a great Beare out of the water running towards vs, but we watcht for her with three Mul- Huge Beare. kets, and when she came within thirtie paces of vs, wee shot all the three Muskets at her, and killed her out-right, fo that the stirred not a foot, and we might see the fat runne out at the holes

40 of her skinne, that was shot in with the Muskets, swimme vpon the water like Oyle, and so draing dead voon the water, we went voon a flake of Ice to her, and putting a Rope about her necke, drew her vp vpon the Ice, and imit out her Teeth, at which time we measured her bodie. and found it to be eight foot thicke, then we had a West Wind with close weather, but when the Sunne was South it began to cleere vp, then three of our men went to the Iland that lay before vs, and being there, they faw the Croffe Iland, lying West-ward from them, and went this ther to fee if that Summer there had beene any Ruffier there, and went thither vpon the fall Ice, that lay betweene the two Ilands, and being in the Iland, they could not perceive that any man had beene in it fince were were there, there they got feuentie Egges, but when they had them, they knew not wherein to carrie them, at last one of them put off his Breeches, and tying them fast below, they carried them betweene two of them, and the third bare the Musket and fo

50 came to vs againe, after they had beene twelue houres out, which put vs no small feare to thinke what was become of them, they told vs that they had many times gone vp to the knees in water, vpon the Ice betweene both the Ilands : and it was at least fixe mile to and fro, that they had gone, which made vs wonder how they could indure it, feeing we were all fo weake. With the Egges that they had brought, wee were all well comforted, and fared like Lords, to that we found some reliefe in our great miserie, and then wee shared our last Wine amongst vs, whereof euery one had three Glaffes.

The twelfth, in the morning, when the Sunne was East, the Wind began to blow East, and East North-east, with mystic weather, and at Equening fixe of our men went into the Land, to feeke certayne stones, and found some, but none of the best fort, and comming backe againe, eyfeeke certayne tiones, and round some, our none or the best total, and any, then seum of our men there of them brought some Wood. The thirteenth, it was a faire day, then seum of our men went to the firme Land to feeke for more stones, and found tome, at which time the VV ind was South-east. The fourteenth, it was faire vveather, with a good South VVind, and then the Ice began to drive from the Land, whereby were were in good hope to have an open water, but the

Wind turning Westerly againe, it lay still, when the Sunne was South-west, three of our men event to the next lland that lay before ve, and there that a Bercheyner, which they brought to the Scute, and gaue it among ft vs, for all our goods were common.

The fixteenth, there came a Beare from the firme Land, that came very neere vntows, by reafon that it was as white as Snow, whereby at first we could not diferre it tobe a Bear, because it shewed so like the snow, but by her stirring at last we perceived her, and as she came neere wnto vs, we shot at her and hit her, but shee ranne away : that morning the Wind was VVell. and after that againe, East North-east with cloic weather. The seuenteenth, about the South South-east Sunne, fine of our men went agains to the necessit Iland, to fee if there appeared any open water, for our long staying there was no small griefe vnto vs, perceium nochow wee 10 thould get from thence, who being halfe way thither, they found a Beare lying behind a piece of Ice, which the day before had beene shot by vs, but shee hearing vs swent away, but one of our men following her with a Boat-hooke, thrust her into the skinne, wherewith the Bearerole up woon her hinder feet, and as the man thrust at her againe, she strocke the Iron of the Boat-hooke in pieces, wherewith the man fell downe vpon his buttockes, which our other two men feeing, two of them shot the Beare into the bodie, and with that she ranne away, but the other man went after her with his broken staffe, and strooke the Beare vpon the backe, wherewith the Beare turned about against the man three times one after the other, and then the other two came to her and shot her into the bodie againe, wherewith shee fat downe vpon her buttockes, and could feart rinne any further, and then they shot once againe, wherewith shee fell downe, 20 and they smote her Teeth out of her head : all that day the Winde was North-cast, and East North-caft.

The eighteenth, about the East Sun, three of our men went vp vpon the highest part of the land to fee if there was any open water in the Sea, at which time they law much open water, but it was so far from the land, that they were almost out of comfort, because it lay so far from the land, and the fast Ice, being of opinion that we should not be able to draw the Scutes and the goods so farre thither, because our strengthes still beganne to decrease : and the fore labour and paine that we were forced to indure more and more increased, and comming to our Scutes, they brought vs that newes, but we being compelled thereunto by necessitie abandoned all wearinesse and faintheartednesse, and determined with our selves to bring the Boats and the goods to the water side, 30 and throw vitto that Ice, where wee must passe over so get to the open water, and when wee got toit . wee valaded our Scutes, and drew them fift ouer the Ice to the open water, and after that the goods ; it beeing at the least one khouland paces, then wee let layle, till the Summe was West and by South; and presently fell amongst the Ice againe, where wee were forced to draw up the Scutes agains upon the Ice, and beeing uponit, weecould fee the Croffe Hand, which wee gheft to bee about a mile from vs, the Wind then being East, and East North-east.

The nineteenth, lying in that manner voon the Ice, about the East Sunne, seuen of our men went to the Groffe Hand, and being there they faw great store of open water in the West, wherewith they much reioyced, and made as great halfe as they could to get to the Scutes againe, but 40 before they came away they got 100. Egges, and brought them away with them, and comming to the Scates, they shewed vs that they had seene as much open water in the Sea as they could discerne, being in good hope, that that would be the last time that they should draw the Scutes ouer the Ice, and that it should bee no more measured by vs, and in that fort put vs in good comfort, whereupon we made speed to dresse our Egges, and shared them amongst vs, and presently the Sunne being South South-west we fell to worke, to make all things ready to bring the Scutes to the water, which were to be drawne at least two hundred paces oner the Ice, which wee did with a good courage, because we were in good hope that it would be the last time, and getting anothe water, wa put to Sea with Gods helpe, with an East, and East North-east Wind, and a good gale, fo that with the West Sunne, we past by the Croffe Hand, which is distant from Cape 50 de Nassauer ten miles, and presently after that the Ice left vs, and wee got cleere out of it, yet wee faw some in the Sea, but it troubled vs not, and so wee held our course West and by South, with a good gale of Wind out of the East, and East North-east, so that wee ghest that betweene euery meale-tyde we fayled eighteene miles. .

The twentieth, having still a good gale about the South east Sunne, wee past along by the Blacke Point, which is twelve miles distant from the Croffe Iland , and fayled West South-west, and about the Eeuening with the West Sunne, we saw the Admirals Hand, and about the North Sunne past along by it, which is distant from the Blacke Point eight miles, and passing along by it, we law about two hundred Sea-horses, lying vpon a flake of Ice, and wee layled clote by them, and draue them from thence, which had almost cost vs deere, for they beeing mightie 60 firing filhes, and of great force, fwamme towards vs. (as if they would be reuenged on vs for the despight that we had done them (round about our Scutes) with a great noyse, as if they would have denoured vs, but we escaped from them, by reason that we had a good gale of Wind, yet it was not wifely done of vs to wake ileeping Wolues. The one and twentieth, we past by Cape

Plancie, about the East North-east Sunne, which lyeth West South-west eight miles from the Cape Plancie Admirals Iland, and with the good gale that we had about the South-weft Sonne, we fayled by Langenes, nine miles from Cape Plancio: there the Land reacheth meft South-west, and we had Langeness a good North-east wind.

The two and twentieth, we having fo good a gale of wind when wee came to Cape de Cant. Cape Cant. there we went on land to feeke for some Birds and Egges, but we found none, so we tayled forwards, but after that about the South Sunne we faw a Clift that was full of Birds , thither wee fayled and casting stones at them, we killed two and twentie Birds, and got fifteene Egges. which one of our men fetcht from the Clift, and if we would have stayed there any longer wee To might have taken alrundred or two hundred Birds at leaft, but because the Master was somewhat further into Sea-ward then we, and flayed for vs , and for that wee would not loofe that faire fore-wind, we tayled forwards along by the Land, and about the South-west Sunne, wee came Strange Birds to another point, where wee got a hundred twentie and fine Birds, which wee tooke with our breeding in hands out of their Nefts, and some wee killed with stones, and made them fall downe into the strong cold, water, for it is a thing certayne that those Birds never vied to fee men, and that no man had ever fought or vied to take them, for else they would have flowne away, and that they feared no hadie, but the Foxes and other wild beasts, that could not climbe up the high Chites, and that therefore they had made their Ness thereon, where they were out of feare of any beasts comming vato them, for we were in no small danger of breaking of our legges and armes, especially

as we came downe againe, because the Clift was so high and so steepe, those Birds had enery one but one Egge in their Neits, and that lay voon the bate Clife without any fraw or other thing which is to be wondred at, to thinke how they could breed their young ones in fo great cold, but it is to be thought and believed, that they therefore fit but woon one Egge, that fo the heate which they give in breeding fo many, may be wholly given vinto one Egge.

The foure and twentieth, it was faire weather, but the winde fill Northerly, whereby wee were forced to lye fill, and about noone we tooke the height of the Sunne with our Astrolabium, and found it to be elevated about the Horizon 37. degrees and 20. minutes, his declination 20. degrees and 10. minutes which fubftracted from the height aforefaid refted 17. degrees and 10. minutes, which taken from 90. degrees, the height of the Pole was 72. degrees and 10. mi-30 nutes, and for that we lay ftill there, some of our men went oftentimes on Land to feeke ftones, and found some that were as good as ever any that we found.

The feuen and twentieth, were had layled from Cape de Cont, along by Constinfarke, to the Croffe Point, twentie miles, our course South South-east, the Wind North-west.

The right and twentieth, it was faire weather with a North-east wind, then we fayled along Two Ruffler by the Land, and with the South-west Sunne, got before Saint Laurence Bay, or Sconce Point, Ledies or Ledand fayled South South-east fix miles, and being there, wee found two Ruffians Lodgies, or ships gies. beyond the Point, wherewith we were not a little comforted, to thinke that we were come to the place where we found men, but were in some doubt of them, because they were so many, for at that time we faw at least thirtie men, and knew not what they were, there with much paine 40 and labour we got to Land, which they perceiuing, left off their worke, and came towards vs. but without any Armes, and we also went on shoare, as many as were well, for divers of vs were very ill at ease, and weake by reason of a great scouring in their bodies, and when wee met together, wee faluted each other in friendly wife, they after theirs, and wee after our manner, and when we were met, both they and wee lookt each other stedfastly in the face, for that some of them knew vs, and wee them, to bee the fame men which the yeere before, when wee past through the Wer-gates had beene in our ship : at which time wee perceived that they were abasht and wondred at vs, to remember that at that time wee were so well furnished with a great thin, that was exceedingly prouided of all things necessary, and then to fee vs to leane and bare. with fo small Scutes in that Countrey : and amongst them there were two, that in friendly so manner clapt the Master and me vpon the shoulder, as knowing vs fince that Voyage: for there was none of all our men that was as then in that Voyage, but we two only, and asked vs for our Crable, meaning our thip, and we thewed them by tignes as well as we could (for we had no Interpreter) that we had loft our ship in the Ice, wherewith they faid, Crable propal (which wee understood to bee, Haue you lost your ship?) and we made antiwere, Crable pro pal, which was as

had now, wherewith one of our men went into the Scute and drew some water, and let them 6c take thereof, but they shak't their heads, and said, No dobbre (that is, It is not good) then our Mafter went neerer vnto them, and shewed them his mouth, to give them to vnderstand that we were troubled with a loofenesse in our bellies, and to know if they could give vs any counsell to helpe it, but they thought wee made shew that wee had great hunger wherewith one of them went vnto their Lodging, and fetcht a round Rie Loafe, weighing about eight pounds, with

much as to fay, That we had loft our thip, and many more words we could not yfe, because we

understood not each other, then they made flew to be forrie for our loffe, and to be grieved that

we the yeere before had beene there with fo many ships, and then to see vs in so simple manner,

and made vs fignes that then they had drunke Wine in our fhip, and asked vs what drinke wee

CHAP.5. \$.2.

fome fmored Fowles which we accepted thankfully, and gaue them in exchange halfe a doozen fome incore a covies which we accepted challenging, and good men in exchange naire a dozzen of Mulchuye, then our Mafter led two of the chiefe of them with him into his Scate, and gate or Municipy, then our manter two ends of the Gallon, for it was so neere out and while them some of the Wine that we had, being almost a Gallon, for it was so neere out and while them some or the write that we man, being amont a Calon, not at wes so here out : and write we flayed there, we were very familiar with them, and went to the place where they lay, and we rayed there, we were very samular when them, and went to the place where they key, and fod fome of our Mischayt with water by their fire, that we might earlome warmething downe into our bodies, and wee were much comforted to fee the Ruffiness for that in thirteene moneths into our nonressant were were more consistent to the control of th

The nine and twentieth, it was reasonable faire weather, and that morning the Russians be-A ne name and eventuetts, it was resonant to fee fayle; at which time they digged certayne 10 Barrels with Trayne Cyle out of the fieges which they had buried there, and put it into

their flips.

The thirtieth lying at Anchor, the Wind fill blew North-west, with great store of Raine, and a fore florme, so that although we had covered our Scutes with our Sayles, yet we could not Lyedry, which was an vnaccultomed thing vntovs : for wee had had no Raine in long time before, and yet we were forced to flay there all that day.

The one and thirtieth, in the morning, about the North-east Sunne, wee rowed from that Hand to another Hand, whereon there flood two Croffes, wee thought that fome men had layne hand to apprie usua, whiteou had not root to the Ruffiers that wee faw before had done, but wee found no man there, the Wind as then beeing North-weft , whereby the Ice drawe full towards 30 Scumy graffe, the 1975 gates 2 there to our great good wee went on Land, for in that Iland wee found great care flore of Leple Isanes, which ferued we exceeding well, and it feemed that God had purpolely leaser cure their forwing feart s thirther; for as then wee had many ficke men, and most of vs were fo troubled with a mad Scarbani foouring in our bodies, and were thereby become fo weake, that wee could hardly row, but by and Scorous. Additionally in the appropriate the second se prefently cafed and healed, whereat wee could not choose but wonder, and therefore wee gaue God great thankes for that, and for many other his mercies she wed vnto vs, by his great and vnexpected aide lent ys, in that our dangerous Voyage : and fo as I faid before, wee cate them by

whole handfuls together, because in Holland we had heard much spoken of their great force, and as then found it to be much more then we expected.

The first of August, the Wind blew hard North-west, and the Ice that for a while had driven towards the entry of the Wey-gates, stayed and draue no more, but the Sea went very hollow, whereby we were forced to remoue our Scutes on the other fide of the Hand, to defend them from the wanes of the Sea, and lying there wee went on Land agains to fetch more Leple leanes, whereby we had beene to well hotpen, and still more and more recourred our healths, and in fo thort time, that we could not choof but wonder thereat, fo that as then some of vs could eate Bisket againe, which not long before they could not doe. The second, it was darke mistic weather, the Winde still blowing stiffe North-west, at which time our victuals beganne to decrafe, for as then wee had nothing but a little Bread and Water, and fome of vs a little

The third, about the North Sunne, the weather being somewhat better, wee agreed amongst our felues to leave Nous Zembla and to crosse over to Russia, and so committing our selves to God, we fet fayle with a North-west Wind, and sayled South South-west till the Sunne was East, and then we entred into Ice againe, which put vs in great feare, and about the South-west Sunne got eleere thereof, and entred into the large Sea, where we saw Ice, and then what with sayling and rowing we had made twentie miles, and so failing forwards wee thought to approch neere vnto the Ruffien Coaft; but about the North-west Sunne we entred into Ice againe, and then it

The fourth, about the South-east Sunne, being gotten out of the Ice, we sayled forward with a North-weft Wind, and held our course Southerly, and when the Sunne was South, at noone 50 time we faw the Coaft of Raffia lying before vs, whereat we were exceeding glad, and going neerer vato it, we ftrooke our fayles and rowed on Land, and found it to be very low Land, like a bare Strand that might be flowed ouer with the water, there we lay till the Sunne was Southweft, but perceining that there wee could not much further our felices, having as then fayled from the Point of Nosa Zembla (from whence we put off) thither full thirtie miles, wee fayled forward along by the Coast of Russia, with an indifferent gale of Winde, and when the Sunne was North, we saw another Rassian lake or ship, which we sayled unto to speake with them, and being hard by them, they came all aboue Hatches, and wee cryed unto them Candinaes Candimass (whereby we asked if we were about Candinaes) but they cryed againe and faid, Prizora, Pizzora, (to shew vs that wee were there abouts) and for that wee sayled along by the Coast, 60 where it was very dry, supposing that we held our course West and by North, that so we might get beyond the Point of Candinaes, we were wholy deceited by our Compaffe, that flood vpon Chift bound with Iron bands which made vs vary at least two Points, whereby we were much more Southerly then wee thought our course had beene, and also farre more Easterly, for wee

thought verily that we had not beene farre from Candinaes, and wee were three dayes fayling from it as after we perceived, and for that we found our felues to bee fo much out of our way, we flaved there all night till day appeared.

The twelfth of August, it was faire weather, at which time the Sunne being Raft. wee faw a Ruffia Lodgie come towards vs, with all his fayles vp, wherewith we were not a little comforted, which we perceiuing from the Strand, where we lay with our Scutes, we defired the Malter that we might goe voto him, to speake with him, and to get some victuals of them and to that end we made as much hafte as we could, to launch out our Scutes and fayled toward them, and when we got to them, the Master went into the Lodgie, to aske them how farre wee had to Cardinaes, which we could not well learne of them, because wee vnderstood them not, they held up their fine Fingers vnto vs, but we knew not what they meant thereby, but after we perceived, that thereby they would shew vs, that there stood five Crosses vpon it, and they brought their Compasse out and shewed vs that it lay North-west from vs, which our Compasse Russian Comalso shewed vs, which reckoning also we had made : but when we saw we could have no better pas intelligence from them, the Malter went further into their Ship, and pointed to a barrell of Fifth that he faw therein, making fignes to know, whether they would fell it vnto vs, shewing them a peece of eight Rials, which they understanding gane vs one hundred and two Fishes, with fale Cakes which they had made of Meale, when they fodde their Fish, and about the South Sunne wee left them.

The fixteenth of August in the Morning, sayling forward North-west, we perceived that we were in a Creeke, and so made towards the Ruffian Lodgie, which we had seene on our starreboord, which at last with great labour and much paine wee got vnto, and comming to them about the South-east Sunne, with a hard winde, we asked them how farre we were from Sembla de Cool or Kilduin, but they shooke their heads, and shewed vs that wee were on the East-side of Zembla de Candinaes.

The seventeenth lying at Anchor, in the Morning at breake of day, wee saw a Roffian Lodgie that came fayling out of the white Sea, to vvhom we rowed, that vve might have some instruction from him, and when we boorded him, vvithout asking or speaking vnto him, he gaue vsa loafe of Bread, and by fignes shewed vs as well as he could, that hee had seene our Companions, and that there was feuen men in the Boate, but wee not knowing well what they fayd, noins, and that there ver beleeuing them, they made other fignes vnto vs, and held vp their feuen Fingers, and pointed to our Scute, thereby shewing that there was so many men in the Boate, and that they had fold them Bread, Flesh, Fish and other victuals : and while wee stayed in their Lodgie, vve faw a small Compasse therin, which we knew that they had bought of our chiefe Boatson, which they likewise acknowledged. About mid-night wee found a fall of fresh Water, and then we went on Land to fetch some, and there also wee got some Leple-leaues, and as wee thought to row forward, we were forced to fayle, because the flood was past, and still we lookt earnestly out for the point of Cardinaes, and the fine Croffes, whereof we had beene instructed by the Rullians, but we could not fee it.

The Eighteenth, in the Morning the Sunne being East, we puld vp our Stone, (which we vsed in fleed of an Anchor) and rowed along by the Land, till the Sunne was South, and then we faw a point of Land reaching into the Sea, and on it certayne fignes of Croffes, which as vve went neerer vnto we law perfectly, and when the Sunne was West, we perceived that the Land reached West and South-west, so that thereby we knew it certainely to bee the point of Candinaes, lying at the mouth of the white Sea which we were to croffe, and had long defired to fee it. This Point is eafily to bee knowne, having fine Crosses standing vpon it, which are perfectly to be discerned, and having a good North-east vvind (which was not for vs to slacke) we let forward in the Name of God, and when the Sunne was North-west we past the Point, and all that night and the next day sayled with a good Wind, and all that time rowed but while three Glasses were 50 runne out, and the next Night after enfuing, having still a good wind, in the Morning about the East North-east Sunne, we saw Land on the West-side of the white Sea, which we found by the rushing of the Sea vpon the Land before we saw it, and perceining it to bee full of Clifts, and not low fandie ground with some Hills, as it is on the East-side of the white See, wee affured our felues that we were on the West-fide of the white Sea, vpon the Coast of Lapland, for the which Lapland. we thanked God, that he had helped vs to fayle ouer the white Sea in thirtie houres, it being for-

tie Dutch miles at the leaft, our course being West with a North-east winde. The twentieth, we espied certayne Crosses, with Warders vpon them, whereby we vnderflood that it was a good way, and so put into it, and being entred a little way within it, we saw a great Ruffan Lodgie lying at Anchor, whereunto we rowed as fast as we could, and there also 60 we saw certayne Houses wherein men dwelt, and when wee got to the Lodgie, we made our selves falt vnto it and cast our tent over the Scute, for as then it began to rayne, then we went on land into the Houses that stood upon the shoare, where they showed vs great friendship, leading vs into their Stones and there dryed our wet Cloathes, and then feething some Fish, bade vs fit downe and eate somewhat with them. In those little houles wee found thirteene Russians, Russan House

August.

Action.

316

who every morning event out to Fish in the Sea, whereof two of them had charge over the rest, who every meaning the continuity eate nothing but Fifth and Bread; at Ecuening when we they niced very positivy and to make your property of the Mafter and me to flay which them prepared our reuses to goe to our outstanding them for, would not doe, but I stayed with them all In their acousts, values the state of the st with a Child, that lived very poorely of the overpluffe which the Ruffers gave them, as a peece with a china, that includes pooling to the Roffiens threw away, and they with great thankfulon a funi, and rouns and the in respect of their poperties, we hought our felices to bee well furni-

thed; and yet we had little enough, but as it feemed their or dinary living was in that manner, and we were forced to stay there, for that the vv and being North-west, it was against vs. The one and twentieth, wee met our other Companie wherewith we rejoyced, and shewed each other of our proceedings, and how wee had sayled too and fro in great necessitie and hunger, and yet they had beene in greater necessistic and danger then we, and gaue God thanker that bee had preserved vs aline, and brought vs together againe, and then we eate something toge-

ther and dranke of the cleere Water, fisch as runneth along by Collen through the Rhone, and then we agreed that they should come vnto vs, that we might fayle together.

The two and twentieth, the rest of our men with the Boate came unto vs, about the East South-east Sunne, whereat wee much rejoyced, and then we prayed the Ruffians Cooke to bake southern summer whereas we make it Bread, paying him for it, which hee did, and in the meane time, when the Rither-men came with their Rith one of the Sea, our Mafter bought foure Cods 20 of them, which we fodde and eate, and while we were at meate, the chiefe of the Raffiers came vario vs, and perceining that we had not much Bread, hee fetched a Loafe and gaue it vs, and although we defined them to fit downe and eate some meate with vs, yet we could by no meanes get them to grant thereunto, because it was their Fafting day, and for that we had powred But-Source afaft ter and fat into our Fish: nor wee could not get them once to drinke with vs, because our Cup was somewhat greasie, they were so superflitious touching their Rasting and Religion, neither would they lend vs any of their Cups to drinke in, leaft they (hould likewife bee greated, at that

The foure and twentieth, the wind blew East, and then the Sunne being East, we got to the feuen Hands, where we found many Fither-men, of whom we enquired after Cool and Kildnin, 30 and they made fignes that they lay West from vs. (which we likewise ghest to bee so) and withall they shewed vs great friendship, and cast a Codde into our Scute, but for that wee had a good gale of wind, we could not stay to pay them for it, but game them great thankes, much wondering at their great courtesie, and so with a good gale of wind we arrived before the senen Hands, ring at their great countering, and to with a good gate of value we arrive before the federal inlands, when the Sunne was South-week, and past betweene them and the Land, and there found certayne Fifner-men that rowed to vs., and asked vs. where our Crable (meaning our Ship) was, whereunto we made answer, with as much Ruffian language as wee had learned; and sayd, Crable pro Pal, (that is, our Ship is loft) which they understanding, sayd unto us, Cool Brabonse (rable, whereby we understood, that at Cool there was certayne Netberland Ships, but wee made no great account thereof, became our intent was to fayle to Ware-boufe, fearing leaft the Ruffler: 40

or great Prince of the Countrey would flay vs there. The fine and twentieth, fayling along by the Land with a South-east wind, about the South Sunne, we had a fight of Kildsin, at which time we held our course West North-west, and sayling in that manner betweene Kildmin and the firme Land, about the South South-west Sunne, we got to the West end of Kildnin, and being there looked if we could see any Houses or people therein, and at last we saw certayne Russian Lodgies that lay vpon the Strand, and there finding a conuenient place for vs to Anchot with our Scutes, while wee went to know if any people were to bee found, our Master put in with the Land, and there found fine or sixe small Houles, wherein the Laplanders dwelt, of whom we asked if that were Kildsin, whereunto they made watering the control of the control bles or Ships, whereof two were that day to let layle : wee found a small House vpon the shoare, wherein there was three Men and a great Dogge, which received vs very friendly, asking vs of our affaires, and how we got thither, whereunto we made answer, and shewed them that we had loft our Ship, and that wee were come thither to fee if we could get a Ship that would bring vs into Holland: whereunto they made vs answer as the other Russians, had done, that there was three Ships at Coola, whereof two vvere to let fayle from thence that day, then wee asked them if they would goe with one of our men by Land to Cools, to looke for a Ship, wherewith wee might get into Holland, and layd we would reward them well for their paines, but they excused themselues, and sayd, that they could not goe from thence, but they sayd they would bring vs ouer the Hill, where we should finde certayne Laplanders whom they thought would goe with vs, as they did: for the Master and one of our men going with them ouer the Hill, found certaine Laplanders there, whereof they got one to goe with our man, promising him two Ryals of eight for his paines, and so the Laplander going with him, tooke a Piece on his necke, and our man a Boat-hooke, and about Ecuening they let forward, the vvinde as then being East, and East

The fixe and twentieth, it was faire weather, the wind South-east, at which time we drew vo both our Scutes vpon the Land, and tookeall the goods out of them, to make them the lighter: which done, we went to the Ruffians and wvarmed vs, and there dreffed fuch meates as wee had, and then againe we began to make two meales a day, when we perceived that we should enery day finde more people, and vvedranke of their drinke which they call Qualle, which was made of broken peeces of Bread, and it tasted well : for in long time wee had drunke nothing elle but Water. Some of our men went further into the Land, and there found blew Berries and bramble Berries, which they plucked and eate, and they did vs much good, for we found that they healed vs of our loofenesse, the wind still blew South-east.

CHAP.S. S. 2. Quaste drinke. Friends meeting together cause of great Ioy.

The eight and twentieth, it was indifferent good weather, and then we drew the Scutes vpon the Land againe, that we might take the reft of the goods out of them, because the wind still blew hard North, and North North-west, and having drawne the Scutes vp, wespred our sayles voon them, to shelter vs vnder them, for it was still mystie and raynie weather, much defiring

to heare some newes of our man, that was gone to Cools with the Laplander.

The nine and twentieth, wee fpyed the Laplander comming alone without our man, whereat we wondred, and were somewhat in doubt, but when hee came vnto vs; he shewed vs a Letter that was writen vnto our Master, which he opened before vs, the Contents thereof being, that hee that had written the Letter wondred much at our arrivall in that place, and that long fince hee verily thought that we had beene all cast away, being exceeding glad of our happie fortune, and how that he would prefently come vnto vs with victuals, and all other necessaries to fuccour vs withall, we being in no small admiration who it might bee, that shewed vs so great fanour and friendship, could not imagine what he was, for it appeared by the Letter that he knew vs well : and although the Letter was subscribed, by me lobn Cornelson Rip, yet wee could not bee perswaded that it was the same lohn Cornelison, who the yeere before had beene set out in the other hip with vs, & left vs about the Beare Hand : for those good newes we payd the Laplander his hyer; and besides that, gaue him Hose, Breeches, and other furniture, so that hee was apparelled like a Hollander: for as then wee thought our felues to bee wholly out of danger, and fo being of good comfort, we layd vs downe to reit. Heere I cannot chuse but shew you how faft the Laplander went : for when he went to Coola, as our Companion told vs, they were two Daves and two Nights on the way, and yet went apace, and when he came backe againe he was but a Day and a Night comming to vs, which was wonderfull, it being but halfe the time, fo that we fayd, and verily thought that hee was halfe a Conjurer, and he brought vs a Partridge, which hee had killed by the way as he went.

The thirtieth, wee faw a Ruffian Ioll come rowing with Iohn Cornelifon, and our Companion that we had fent to Coola, who being landed, wee received and welcommed each other, with great joy and exceeding gladnesse, as if either of vs on both sides had seene each other rise from death to life againe : for we esteemed him, and hee vs to bee dead long fince : hee brought vs a Barrell of Refwicke Beere, Wine, Aqua vice, Bread, Flesh, Bacon, Salmon, Suger, and other things. which comforted and relieued vs much, and we rejoyced together for our fo vnexpected meeting:

at that time giving God great thankes, for his Mercie shewed vnto vs.

The first of September, in the Morning with the East Sun, we got to the West-side of the Ri- September. uer of Cools, and entred into it, where we rowed till the Flood was pail, and then wee cast the Stones that ferued vs for Anchors vpon the ground, at a point of Land till the Flood came in againe : and when the Sunne was South, wee fer fayle againe with the Flood, and fo fayled and rowed till mid-night, and then wee cast Anchor againe till morning. The second, in the Mor- Trees arare ning, we rowed up the River, and as we past along wee faw some Trees on the River side, which fight, comforted vs, and made vs glad as if we had then come into a new world, for in all the time that wee had beene out, we had not feene any Trees, and when we were by the Salt Kettles, which is about three miles from Cools, we stayed there a while, and made merrie, and then went forward Cools. 30 againe, and with the West North-west Sunne, got to lobn Cornelsons Ship, wherein we entred and drunke: there wee began to make merrie againe, with the Saylers that were therein, and that had beene in the Voyage with Iobn Cornelison the yeere before, and bad each other welcome: then we rowed forward, and late in the Eeuening got to Coola, where some of vs went on Land, and some stayed in the Scutes to looke to the goods: to whom we fent Milke and other things to comfort and refresh them, and we were all exceeding glad that God of his mercie had delivered vs out of so many dangers and troubles, and had brought vs thither in safetie.

The third, wee valaded all our goods, and there refreshed our selnes after our toylesome and wearie Iourney, and the great hunger wee had endured, thereby to recouer our healths and strengths againe.

The eleventh, by leave and confent of the Bayart, Governour of the great Prince of Makes and Box layd mia, we brought our Scute and our Boate into the Merchants House, and there let them Rand for vp for a Monu a remembrance of our long, farre (and never before fayled way) and that wee had fayled in those ment bow open Scutes, almost foure hundred Dutch miles, chrough, and along by the Sea Coasts to the muchmore Towne of Cools.

the old worlds

The feuenteenth of September, John Cornelison and our Master being come aboord, the next day about the East Sunne, we fet fayle out of the River Coola, and with Gods grace put to Sea, to fayle homewards, and being out of the River, wee fayled along by the Land North-weft and by North, the winde being South.

Vpon the nine and twentieth of October, wee arrived in the Maje, with an East North-east wind, and the next morning got to Mafeland Sluce, and there going on Land, from thence rowed to Delfe, and then to the Hage, and from thence to Harlem. And vpon the first of November about Noone, got to Amfterdam, in the fame Clothes that wee wore in Nona Zembla, with our Caps furr'd with white Foxes skinnes. The newes thereof being spred abroad in the Towne, it Caps for a with white Poxes schools. In the West stretch being spice and the Towner in the Hoge, at which time the Lord Chancellour of Des. 10 marks, Ambassadour for the sayd King, was then at Dinner with Prince Manrice : for the which cause we were presently fetcht thither by the Scout, and two of the Burgers of the Towne, and there in the presence of those Ambassadours, and the Burger-masters, wee made rehearfall of our Iourney both forwards and backwards.

I stought good to adde bitber for Barents or Barentsons sake, certaine Notes which I baue found (the one Translated, the other Written by him) among st Master Hakhuyts Paper.

This was Written by William Barentson in a loose Paper, which was lent mee by the Renerend Peter Planting in Amsterdam, March the feuen and twentieth, 1600.

Intelligence from Samojeds. 1494. Barkes going from Pechora to Gielbfidi : Wintering Gielblidi won from the Tar*tars* 1592.

15920 No Ebbe nor

"He foure and twentieth of August, Stilo nouo 1505, wee space with the Samoieds, and asked shem how the Land and Sea did lye to the East of Way-gates. They fayd after fine dayer ioning A tree now to Lana and trea units to toe Lana y tray fects. Less joyn aper jun anger towing going North-Carl, me flould come to a great See, going South-east. This Sea to the Left of Way-getts, they fought accelled Marmoria, that is to foy, A calmo See. And they of Ward-love base talk us the Jame. I asked them, if at any time of the yeere it was frozen ouer? They Jaya it was. And that sometimes they palled it with Sleds. And the first of September 1595. Stilo nouo, the Russes of the Lodie or Barke affirmed the fame ; saying that the Sea is sometimes so Frozen, that the Lodies or Barkes going Sometimes to Gielhfidi from Pechora, are forced there to Winter : which Gielhfidi was wonnefrom 20 the Tartars, three yeeres past.

For the Ebbe and Flood there I can finde nome; but with the Winde so runneth the Greame. The third of September, Stilo 11000, the winde was South-west, and then I found the water higher, then with the there were a Fland and Ebbe, the nimb of September, Stilo nouo, I went on Sheare on the South end of the States I land, where the Croffe flandeth, and layd a Stone on the brinke of the Water, to prome when ther there were a Tide, and went round about the Iland to Spoote at a Have, and returning, I found the Stone as I left it, and the Water neither higher nor lower : which product has afore, that there is no Flood nor Ebbe.

CHAP. VI.

A Treatise of IVER BOTY a Gronlander, translated out of the North Language into High Dutch, in the yeere 1560. And after out of High Dutch into Low Dutch, by WILLIAM BARENTSON of Amsterdam, who was chiefe Pilot aforesaid. The fame Copie in High Dutch, is in the hands of I o Docvs Hondivs, which I bauescene. And this was trauslated out of Low Dutch, by Master WILLIAM STERE, Marchant, in the yeere 1608. for the vice of me HENRIE HYDSON. WILLIAM BARENTSONS Booke is in the

hands of Master PETER PLANTIVS, who lent the fame unto me

Norma, it is reported by men of Wisedome and Vnderstanding borne in Growland, That from Stad in Norway to the East part of Island, called Horn-ness, is feuen dayes fayling right West.

Item, men shall know, that betweene Island and Gronland, lyoth a Riffe called Gombornse-skare. There were they wont to have there passage for Gronland. But 69 as they report there is Ice vpon the same Riffe, come out of the long North Bot-

tome, so that we cannot vie the same old Passage as they thinke. Item, from Long-nesse on the East tide of Island to the aboutlaid Horn-nesse, is two dayes sayle to the Brimftone Mount.

CHAP.6. Fishing for Whales. Hunting of white Beares. Hot waters.

Item, if you goe from Bergen in Norway, the course is right West, till you bee South of Rokeselle in Ifland : and diftant from it thirteene miles, or leagues. And with this course you shall come under that high Land that lyeth in the East part of Groneland, and is called Swafiler. A Swafiter. day before you come there, you shall have fight of a high Mount, called Huit-farke : and betweene Whitfarke and Groneland, lyeth a Head-land called Hernoldus Hooke; and thereby Whitfarke. leeth an Hauen, where the Norman Merchants Ships were wont to come : and it is called

Item, it a man will sayle from Island to Granland, hee shall set his course to Snofnesse, which is in Grandand. by Welt Rokeneffe thirteene miles, or leagues right West, one day and nights fayling, and after South-west to thun the Ice, that lyeth on Gombornse-skare; and after that one day and melit

10 North-west. So shall hee with this course fall right with the abouelayd Smafiter, which is high Land, under which lyeth the aforefayd Head-land, called Hornoldus Hooke, and the Sound

lauen.

Item. the Easter Dorpe of Groneland lyeth East from Hernoldus booke, but neere it, and is calSkaten Ford. led Skagen Ford, and is a great Village .-

Item, from Skagen Ford East, lyeth a Hauen called Beare Ford : it is not dwelt in . In the Beare Ford. mouth thereof lyeth a Riffe, fo that great Ships cannot harbour in it. Item, there is great abundance of Whales: and there is a great Fathing for the killing of them A great fifting

there : but not without the Bilhops confent, which keepeth the fame for the benefit of the Ca- for Whales. thedrall Church. In the Hauen is a great Smalth ; and when the Fide doch runne out, all the A great Smalth 20 Whales doe runne into the fay! Swalib.

Item. East of Beare Ford, lyeth another Hauen called Allabong Sound : and it is at the mouth Allabong Sound narrow, but farther in, very wide : The length whereof is fuch, that the end thereof is not yet knowne. There rumeth no Streame, to lyeth full of lettle Iles. Fawle and Oxen are there com- Store of Oxen.

mon ; and it is playne Land on both fides, growne ouer with greene Graffe. Item, East from the Icie Mountayne, lyste an Hauen called Fendehorber; fo named, because in The Icie Saint Olafes time there was a Ship caft away, as the fpeach hath beene in Groneland; In which Mountayne. Ship was drowned one of Saint Olafes men, with others : and those that were faued did The Hauen of burie those that were drowned, and on their Granes did fer great stone Crosses, which wee see No.e.

at thisday and an arrange and on their Granes d term, form what more East toward the Live Mountayne, lyeth a high Land, called Corfe Hought. Crife Hought vport which they Hunt white Bears, but not we hour the Beshops leave, for it belongeth to the white Bears, Cathedrall Church. And from thence more Easterly, men fee nothing but the and Snow; both More Easterly

by land and water.

Now wice shall return against to Hernoldus Hooks, where we first began to come to the first. The Towner Towner har tyech on the East fide of Hernoldus Hooke, called Stager Ford; and to we will write from Hernolde the Names of all that I we en the Wort-fide or the Ford or Sound.

Item, West from Hernoldus Hooke, lyeth a Dorpe called Kodosfurd, and it is well built : and as ward. you fayle into the Sound, you shall see on the right hand a great Sea and a Marsh : and into this The Towne of 40 Sea runneth a great streame : and by the March and Sea standeth a great Church, on which the Godayford , Sea runneth a great itreame: and by the Marin and Sea Handshin great chunch, on which the Agreat Holy Croste is drawne, of colour white: it is belongeth to Employer de Hokefong, and the Land Church with a to Peters Wike. 1 a say of meers of brook it and by hours.

Item, by Peters Wike, lyeth a great Dorpe called Wart falle, by which lyeth a water or Sea of on it. ewelne miles or leagues ouer : in which is much Fifal : And to Peters wife Church belongeth Wattdell. Wart dale Boy or Towne, and the Villages. the to start to

Item, neere this Boy or Towne, lyeth a Cloy for or Abbey in which are Canous Regular, it is tongue fignifi-Dedicated to Saint Olafes, and Saine Augustines parie. And to it belongeth all the Land to the eifa Towne, Sea fide, and toward the other fide of the Cloyther. in agr. Geralia an Interheur 🗥 🗀

Item, next Godorford, lyeth a Ford called Rompnes Ford : And these lyeth a Clouder of Nuns Anunerica of Saint Benedits Order. helde Hills Minari Armae which

50 Item, this Cloyfter to the bottome of the Sea and to Wegen Kerkelwas Dediensed to Saint Q- Het waters in Lafe the King. In this Ford lye mady fmall lies. Andro this Cloyster belong the falte the Ford Grandand. and the Church. In this Sound are many, warne Wastess. In the Minter they fac, intollerable. A place called horz but in the Summer more moderate; and many Bathing, in them are cured of many distalts. They better they face the state of the

Item, betweene Rampus and the next Sound, lyeth a great Garden called Hofe, belonging to King, the King. There is alto a coffly Church dedicated to Saine Nicolas. This Church had tite King Saint Nicolas before this. Neere it lyeth a Sea of Fresh water, called in which is great abundance Chuich. of Fish, without number. And when there falleth much Rayne, that the Waters doe rile therewith, and after fall againe, there romayneth ypon the Land much Fifh drie.

Item, when you sayle out of Emestines Ford, there lyeth an Inlet, called South-woders Wike : Bloming. 60 and forewhat higher in the fame Sound, and on the fame fide, lyether little Cape salled Bloming: Grannicke and beyond that lyeth another Inwike called Grannike, and about that lyeth a Garden called Daleth Garden, Daletb, which belongeth to the Cathedrall Church. And on the right hand as you tayle one of Agreet Wood the firm Sound liveth access Wood over King. the same Sound, lyeth a great Wood, which persayneth to the Church, where they Bede all and Horses

their Cattell, as Oxen, Kine, and Horses: And to the Church pertayneth the Sound of Emelimes Ford. The high Land lying by Emessines Ford, is called The Ramos banb : So called, because that on those Hills doe runne many Roe Deere, or Reyne Deere, which they vie to Hunt, but not without the Bishops leaue. And on this high Land is the best Stone in all Groneland. Stone, that fire They make thereof Pots, because fire cannot hurt it. And they make of the same stone Fattes or Cifternes, that will hold ten or twelue Tunnes of water.

Eight great Orchardsbe. led Cathedrall Swalfter Ford,

Item. West from this lyeth another high Land, called The long bigh Land: and by another calwhereon are eight great Orchards, all belonging to the Cathedrall Church, longing to the But the Tenths thereof they give to Warfedall Church. Item, next to this Sound lyeth another Sound called Swalfter Ford, wherin Randeth a Church to called Swalfer. This Church belongeth to all this Sound, and to Romfe Ford, lying next it. In

Ericks Hought.

chieu omagier. Ints countencerongen out an inspound and counter counter out, ying near it. In this Sound is a great Garden belonging to the King, called Saint Houleflass. Item, next to that lyeth Ericky Ford, and entring therein lyeth an high Land called Ericky Hought; which pertayneth the one halfe to Deuers Kerke, and is the first Parish Church on Groneland, and lyeth on the left hand as you fayle into Ericks Ford : and Deners Kerke belonget fall to Meydon Ford, which lyeth North-west from Ericks Ford.

Skogel Kerke.

Item, farther out then Erseks Ford, standeth a Church called Skegel Kerke, which belongeth to all Medford : And farther in the Sound standeth a Church called Leader Korke. To this Church belongeth all thereabout to the Sea; and also on the other side as farre as Boulets. There lyeth alfo a great Orchard called Grose Lead, in which the Gufman (that is a chiefe or Bayliffe ones the 20

Folfa Sound.

And farther out then Ericks Ford, lyeth a Ford or Sound called Foffa, which belongeth to the Cathedrall Church : and the fayd Foffa Sound lyeth as mentayle out towards Ericks Ford ; and to the North of it lye two Villages, the one called Ener-boy, and the other Forther-boy, because Item, from thence farelier North lyeth Brede Ford, and after that Lormont Ford from that

Breda Ford. Larmut Ford. Ice Dorpe. The Sherles-

West, and from Larmone Ford to the West is Ice Dorpe. All these are places built, and in them Item, from the Easter builded Land to the Wester Dorpe, is twelve miles or leagues ; and the rest is all waste land. In the Dorpe in the West standeth a Church, which in times past belonged 30 to the Cathedrall Church, and the Bilhop did dwell there. But now the Sketlenger rhaue all the West Lands and Dorps. And there are now many Horses, Oxen, and Kine, but no people neis-

gers. Many Horics. Oxen, and Kine.

they Chriftian nor Hemben; butthey were all carryed away by the Enemie, the Skerlengers. All this before Written was done by one Iner Boty borne in Gronland, a principall man in the Iner Boty the Bishops Court : who dwelt there many yeeres, and faw and knew all these places. He was chofer by the whole Land for Captayne, to goe with Ships to the West land, to drive away their Enemies the Speringers. But the commission there, found no people neither Christian nor Hea-then, but found there many Sheepe running being wilde, of which Sheepe they cooks with them as many as they could carrie, and with them returned to there Houses. This before named Indo Bory was himselfe with them.

A great Wil. derneffe called Hemel Hat felt. to the North of the West

To the North of the West Land, Iyeth a great Wildernesse with Chies or Rockes, called Hemel Hatsfelt. Farther can no man fayle, because there lye many Swalgen or Whirle-pooles" and also for the Water and the See. Item, in Groneland are many Silver Hills, and many white Beares with red patches on their

Mines of Silner, white Beares, whire Hawkes, all fores of Fifh.

heads; and also white Hawkes, and all forts of Fish, as in other Countries. item, there is Marole stone of all colours, also Zeuell stone or the Load stone, which the Fire cannot hurt, whereof they make many veffels, as Pots, and other great veffels. Items, in Groneland runneth great streames, and there is much Snow and Ice : But it is not fo

cold, as it is its flood or Norman. land or Nerway.

Item, there grow on the high Hills, Nuts and Acornes, which are as great as Apples, and good 50 coeate. There groweth alfo the best Wheate, that can grow in the whole Land.

Fruits.

Grentland not

fo cold as Ife-

This Sea Card was found in the lles of Fore or farre, lying betweene Shot-last and Iffiend, in an old reckoning Booke, wraten aboue one hundred yeeres agoo : out of which this was all taken. Page and Page I tems, Page and Pother fe, have inhabited I fland certainty yeeres, and formetimes have gone to Sea, and hatte had their trade in Groneland. Alio Pumnis did give the I flanders their Lawes, and caufed them to bee written. Which Lawes doe continue to this day in Hand, and are called by name Punna Laves. Labered

The Course from Island to Groneland.

F men bee South from the Hauen of Bred Ford in Island, they shall fayle West, tall they see Whiffarke spon Groneland; and then fayle fomewhat South-west till Whiffarke bee North off you, and to you need not feare Ice, but may boldly fayle to Whitfarke, and from thence to Ericks Hagen

CHAP.6. Gronland Commodities. Counsell for Gronland Travellers.

If men be North the Hauen of Bredford in Island, then sayle South-west, till Whit sarke beare North: then tayle to it, and to come to Ericks Hauen. If you see Ice, that commeth out of Tralebothon, you shall got more Southerly, but not too Tralebothon

farre South for feare of Freefland, for there runneth an hard streame. And it is fifteene miles or leagues from Freefland.

Isem, Freefland Iveth South, and Island East from Grenland.

Item. From the Ice that hangeth on the Hilles in Gronland, commeth's great Fosse, Fiold and Cold. And fuch a Fogge commeth out of the Ice of Trolebothon: and it is a great Wil- Trolebothon. There are Sables, Marternes, Hermelins, or Ermins, White Beares, and White Hawkes, neffe.

The Commo-Seales, White and Gray, Gold and Silver Hills, alto Fish dryed and salted, and thousands dities of Greeof Salmons: also store of Losh Hides and other Hides. There are Hares, Foxes, Wolues, Ot- land ters, and Veltfraien. Now if it please God they come to Gronland, then shall they set but two men on shoare; Good counseli who shall take with them divers kindes of Marchandize : and let them deale with good for travelling

order, and let them bee such as can make good Report, what they there doe see or finder to Gronland.

and let them obserue whether men may there Land or no, with the loue of the Inhabitants. And I counfaile and charge those that shall Trade for Gronland, that they set no more folke on Land, but they keepe men enough to man the Ship. And looke well to the courfe you hold to Grendand, that if those that bee set on shore bee taken, they may come home againe with Gods helpe. For if shipping returne, they may come home or bee relecued in a yeere and a day. And in your living there fo demeane your selves to them, that in time

you may winne the Countrey and the people. Remember my Scholler and Clearke, which shall bee there appointed as Commander, that you fend those on Land, that will shew themselves diligent Writers, and that they carrie themselves so, that they may learne thereby the State of the Countrey. They shall take with them two Boars and eight Oares, and take Tynder-boxes for fire if there be no Habitation. Also Tynder-boxes fet vp Croffes of Wood or Stone, if need be.

This Note following was found in an old Booke of Accompts, in the Teere I 506.

[Normis, From Gtad in Normay, standing neere the Latitude of fixtie three Degrees, you Courfes for I shall hold your course due West: and that course will bring you von Swartnesse in Gron- Gronland. land. And in this course is the least streame and least perill of Swalesn or Indrastis. There is leffe perill this way, then is on the North-side; you shall keepe ? of the Sea on Freefand side, and one third on Island fide. And if it bee cleere weather, and you have kept your course right A florme in Welt, you shall see the Mount of Snewel John in the South-well part of Jland. And if you have the North a storme in the North, you must shunne it as you can, till sibilarly be North of you. Then while the

40 shall you sayle right with it, and seeke the Land ; and you shall finde a good Hauen, called Ericks Ford: Ericks Ford.

Item, If you bee betweene Gronland and Island , you may see Snenels lokul on Island, and Whitfarke on Gronland, if it be cleere weather. Therefore men of experience doe affirme, that it is but thirtie leagues betweene both.

Alfo if you have a storme betweene Gronland and Island, you must have care you bee not laid on Freefland with the streame and Winde; for the streame or Current doth fun strong vpon Freefland, out of the North.

Also if you have a storme out of the South, you shall not sayle out of your course, but A storme in keepe it as neere as you can possibly, till Whit farke in Gronland beare North off you: then the South 30 fayle toward it, and you shall come into Ericks Ford, as it is afore-faid in the first Article.

CHAP. VII.

A Defeription of the Countries of Siberia, Samoicda, and Tingoesia.

Together with the lourneyes leading who the same Countries toward the East and North-east, so they are daily frequented by the Moscouites.

The first and fecond Paragraph: were rublithed in Latine by Hellell Gener. dus An.: 611. here a little contracted : the laft I found in M. Hakligts Pipers. Wichida. Woite Sea :0 the North of Ruffia. Samoieds. for the Sa-The first Vovace warm the.

Discouerie of Siberia, and the subjecting of the same

Here is in Mosconie, a Kindred called the Sonnes of Oneeko, of a rusticke or base

descent, and first sprung from one Oneeke a Husband-man. He being very rich in

Lands, dwelt vpon a certaine River called Wichida, or Winfogda, falling into the

Riner Duma, which about one hundred leagues heratth, neere vato the calle 2 called S. Michael the Archangel, which falleth into the White Sca. This Oneckobeing rich (as is faid) had also many Children, God having largely bleffed and prounded him with plentic of all things. Yet neuertheleile, hee had an earnest delire and affection. Arra or Onteks to know what Countreyes were possessed and inhabited by those people, which yeerely came into Russia to trassicke, bringing with them costly Furres, and divers other Merchandizes, much diffring in Language, Apparel, Religion, and Behauiour, calling themselves Samoieds, and by other vnknowne names. These people came enery yeare downe the Riner Wichida, and exchanged their Commodities with the Ruffes and Mosconites, in the Townes of Ofel and Vstrug, on the River Offel and Villag Duina; which at that time were the Receits and chiefe Mart Townes of all kind of Marchandizes, but especially of costly Furres. Onecke therefore (as hath beene faid) was most desirous to 30 know, from whence these people came, or what Countreyes they did inhabit, easily conjecturing, That great wealth was there to be gotten; fince the Furres yeerely brought them amounted to a great fumme of Money. Wherefore secretly hee got acquaintance and conforted him-Samuel coun-felfe with divers of them, and fent in their company about tenne or twelve of his owne people into those parts; enjoyning them, that through what Countreyes so ever they should travell they should make diligent fearch of enery particular thing therein, and fully observe the Manners, Rices, Dwellings, and whole course of life of those Nations; that are their returns they might bring from thence perfect knowledge thereof. Which they having at length performed, he enbring from theme period another street and flewed them all fanour, but with especiall 40 charge to keepe filence. Hee likewife kept all thefe things close to himfelfe, not reuealing them

The fecond Voyage.

and diuers great Riuers. River Obi. Great wealth the prople. No Bread Shooting, Apparell.

Houtes. Now when as Oneeko understood by their report, that which he so much longed to know, he together with certayne others of his Friends, continued his Trafficke into those Countreyes for 60 diuers yeares together : by meanes whereof the Oneekos grew very mightie, and bought great continuance of Poffestions in all parts. Those that dwelled neere vnto them beeing ignorant from whence all this Voyage. this wealth arofe, greatly wonded at it. For the Oncelor builded Churches in some of their

to any man. And the next yeere following, he fent thither a greater number of his people, joyning with them certaine of his Kindred and Alliance. These carried with them divers base Marchandize; as small Bels, and other like Dutch small Wares; and tooke diligent notice of every thing in those pares; and after they had palled many Deferts, and divers great Rivers, they came to the River Obi; Many Deferts where making Acquaintance and Friendship with the Samoieds, they found that Furres were to be had for a small price, and that great wealth was there easily to be gotten; and further, that this people had not any Cities, but fixed together in Companies, and peaceably, and governed by tome of the ancientest among them; that they were lothsome in their feeding, and lived on the fieth of fuch beafts as they tooke : that they had no knowledge of Corne or Bread, were cunby the Tr de ning and skilfull Archers, making their Bowes of a gentle and flexible kind of Wood, and that to the Ruser of their Arrowes were headed with sharpened stones or fish bones; with those they killed wilde Conditions of heafts, which are exceeding plentifull in those places: that they sowed also with bones of fishes. feruing them for Needles; their thred being made of the finewes of certaine small beasts, and so Gournment. they tew together the Furres, wherewith they cloath themselves : the Furrie side in Summer turned outward, and in Winter inward. That they couered their Houses with the Skins of Elkes and such like beaits, little esteemed among them. Finally, these Messengers of Oneeko, searched curiously into every matter, and returned home flored with coffly Farres.

CHAP.7. S.I. Osoil. Imperial Priviledge, River Wichida, Oneekos.

Villages. Yea, afterward they erected in the Towne or Ofoil upon the Wichida, where at that time they dwelt, an exceeding faire Church, which was rayled from the very roundations or newen flone. Finally, they knew no end of their goods.

Now among the Ruffes it goeth for a common Proverbe, that Hee which bath no friends in Court, is fearce to be accounted in the number of the living. For most commonly it happeneth, that they that excell others in any thing, are prefently enuyed and falily accused in the Princes Court, where if they have not a friend to fuccour them, they are forth-with without hearing the cause, oppressed; yea, and veterly ruined. For which cause the Oneekos beeing growne to L. Eoris, that * much wealth, as is faid, got into the fauour of one of the greatest in the Court, which was Bo- These date Em-

to risodanoua, Brother to the Wife of the Emperour Pheodor Enanousch then reigning; to whom perous. The TROMANONA, District to the White Miles promatter : who first presenting him with gifts after the custome of the Countrey , prayed him to sh. grant them hearing in a matter, which they had to deliuer for the benefit of the whole Empire. Boris prefently liftning to this Petition, received them with extraordinary kindnesse : and after they had declared vnto him the fituation of the Countreyes of Samoiedia, and Siberia, then what they had seene and observed therein, and how great Riches might thence arise vnto the Empire of Molcouia. Boris presently grew into an ardent delire to fet forward this businesse, entertayning them as his Children, and gracing them to the vttermost of his power, procuring them from the Emperour a most ample Printledge, by which it was ordayned, That they should for e- Imperiall-ri-20 uerenjoy the Lands which they possessed, and might dispose of them vnto their Herres at their sideden

plealure. And farther, it it happened they were abiding in the Citie of Molena, he tooke them into his owne Sled : which among the Mosconites is the greatest kind of honour, especially being offered by principall Noblemen, such as then was Boris, a man of the greatest power, and in whom the chiefe authoritie of the Empire refted. Boris pondering these things attentiuely, signified the whole matter to the Emperour, to whom it was very pleasing; And not sleeping about the matter, employed therein certayne Captaynes, and Gentlemen of small abilitie of his owne followers: commanding them to prepare themselues to goe to that Iourney, in company of fuch as the Oneekas should appoint vnto them, and that they should apparell themselves gallantly, and like voto Ambastadors, adding further certayne Souldiers, and Presents of small value to 30 be distributed among the people, to which they should come : enjoyning them further to note diligently all Paffages, Rivers, High-wayes, Woods, and what elfe they should meete with in

their travell; as also to commit to memorie the names of them; that at their returne they might make a faithfull and true report thereof : adding further that they should intreat the people with all courtelle, and that they should feeke out some convenient place for building of Caltles and Fortreffes, and that in any case (if it were possible) they should bring backe with them into Molconia, some of the Inhabitants of those Countryes.

These Messengers being sufficiently furnished with all things necessary for the Journey, name - The first Voyly, Apparell, Weapons, Money, and Prelents, departing from the Molena, not long after came age fet out by to the River Wichida, and to the Omekos: who also fent some of their owne people with them. Baris Gudsnows.

40 Alloone as they were arrived into those parts, they began to performe what was given them in charge, shewing freely all tokens of courteile vnto the barbarous people, and carefully obseruing who were of greatest authoritie among them, to whom they vied reuerence and gaue gifts, such as were of small and almost no value to themselves, but which seemed so precious vnto the other, that when the Moscouites were comming a farre off towards them, they would stay for them with great dancings and clapping of their hands, and cast themselves downe at the feet of the Givers, being so gallantly attyred, accounting them altogether as Gods. The Mosconites vfing the Samoieds for their Interpretors, which had continued certayne yeeres in the Villages of Moscoma, to learne their Language, began to discourse with the Barbarians concerning their Emperour of Moscouie, whom they wonderfully extolled, and made him little leffe then an Earthly God, enterlacing other things with all, whereby those people were stirred up to wish

50 that they might behold thesethings with their eyes. These their desires were pleasing to the Molcoustes, who fignified that they were likewife well contented therewithall : Adding, that they would leave certayne pledges among them, which during the Samoieds abode in Mosconia, might learne their Language: And by this meanes they drew vnto their purpose the good will of many of the people on the Well-fide of Obs, who of their owne accord fibjected themselves to the authoritie of the Moscourtes, and suffered them to lay a Taxation upon them, promiting They fel mit yeerely of enery head (not excepting the Boyes that were but yet learning to handle the Bow) themselves of two skinnes of Sables; which to themselves were of no value, but esteemed of the Moscounes the Moscounes as precious as Iewels. These they promised to deliuer to such a Treasurer as the Emperour should ordavne. Neither did they faile to performe the fame.

After this the Mellengers pailed over the River Obi, and travelled beyond it almost two hundred leagues toward the East and North-east, having seene by the way many wild beasts of Travil be-Arong thapes, moit cleare Countaynes, extraordinary Plants and Trees, pleatant Woods, and Sa- youd Out. moved or divers forts, whereof fome did ride on Elkes or Loftes, other were drawne in Sleds by Elkes or L free

Ruine Deere.

Raine Decre, and others also were drawne by Dogges, which are equall to Harts for swiftnesse, Raine Dette, and others and west cleaving by Dogges, which are equal to traits for invittedite, Finally, many other chings in their whole lourney they met with, not before seene, and thereremains many or metamogram that whose country and truly noted downer, that they might more certainly fore to be margement at a winten orderly and thus noted now me, that only might more certainly report the fame at their returne. And fo at length taking with them some voluntarie Sameieds, report the anneal countries of their owne people to learne their Language, they returned backe into and returns there due to their owne people to rearise then hangoogs, they returned backe into Moleonia; where at their first conveniencie they made knowne to Boru, and by him vato the

Samoieds thoo.

Imperior the whole fuccine of their voyage.

They maruelled at the Samoieds which were brought vinto them, commanding them to make I ney matteriet at the samoutest without west enought who chem, commanding them to make form of their cunning in flootings which they did so perfectly, that almost it fremed to fome shew of their cunning in shooting; which they use to perfectly, that amount accements any man incredible. For taking a piece of Coynelesse then our * Pennie, and fashing it to the our standard standard to the country of the co any man increasion. For taking a piece of Coyne sene then one from the fame, as they could very lardly differe it, they did enery time that they did froot fo affuredly hit the fame, that they did not one mife it. Where at many of the beholders did aboue measure wonder.

And on the other fide, the Samoieds as greatly wondred both at the Moscountes manner of liuing and fashions, as also at the statelinesse of the Citie: neither did they without a certayne ung and rannons, as and actue naterinene of the order, mention one deep without a certayne terrour behold the Emperour himselfe, so richy attired and mounted either on Horse-backe, or in terrour period one Emperour imments, to many active and insulated that of many Nobles most gallantly adorned. Then with admiration they beheld the Guards furnified with their Caluers of acorned. Anen with samination may nonemaking control to minimed with their canners, or whom about foure hundred waited on the Emperour at his going abroad. So of allo as they whom about foure hundred waited on the Emperous at many among the Mosesnites, and saw to many 20 feare the ranging or the series, which are very many among the Component, are naw to many faire shops, and the reft of the Cities beautie, they were altogether aftensshed, and thought themselves to bee in some Mansion of the Gods; wishing withall, that they were a while among their Countrey-men to tell them of all things. Yes, they reported themselues to be hapning their country-mento tect their of an enings. As, any reported mentions to be map-pie, that they had the fortune to ferue fo glorious an Emperour, whom they altogether accounted as a Diuine power. The Meates which the Mosconites did set before them, they did greethe same have a sum measured that the same were more pleasant to their tase, then the raw flesh, or fish dried in the winde, wherewith they feed themselves at home. Finally, the raw nem, or mn orice in the winner, where with they recall the miniments at home. Finally, they promifed to receine the Emperour for their Lord; and to perfivade their Countrey-men, they promise to receive the superiors to the state of the property of the Emperous to vouchinhabiting farreand whole to doe the same. They manusty and prayed the Emperous to volunt. After them the favour, to fend them certaine Governours to rule over them, and to whom they might pay the aforefaid Tribute. Concerning their Idolatrie, there was no speech made thereof, but they were left to their owne customes. Notwithstanding, I thinke that the Christian Faith would easilyhe spred among them, if they had sufficient and godly Teachers. Neither doubt I but the Mofemies would have taken order therein, if they had not beene hindred by their moft

These things so done as is declared, the Oncekes were raised to great Honours, and endowed And the trings to come as in Supreme Authoritic over many places, adjoyning vinco their with great Priviledges, as allowith Supreme Authoritic over many places, adjoyning vinco their Lands, enjoying Postessions lying one hundred miles a funder upon the Rivers of Dinna Whebida, and Suchana: fo that they are very mighty and rich, and increase daily in greater Honours.

It was further orday ned by the Mofemiter, that there should bee places chosen by the River 40 Ob, and in the fields addoping vnto it, fortified by the natural lituation for the building of Catiles thereon, and furnishing them with Garrisons, and that there should be sent thither a chiefe Gouernour, principally for further discourring the Countrey, and bringing it under subiection. These things so ordayned, did likewise take effect. And first or all, there were builded certaine Cailles enclosed with certaine strong beames, cut out of the Woods thereby, and fastned one in another in double rewes, filled betweene with earth, and fortified with Carrifons; And so great a multitude of men is duely sent thither, that in some places there are Cities affembled, confilling of Poles, Tatas, Ruffes, and other Nations mingled together. For, into these parts are sent all that are banished, Murtherers, Traitors, Theeues, and the scumme of fuch as deferue death: fome of which are for a time kept in prilon, others enforced to continue 50 there for certaine yeers, enery one according to the rate of his offence: whereby there are very populous affemblies of people growne together, who with the Cattles already builded, doe alpopulation and the state of the meane fort, daily flocking thither, the rather most make a pretie Kingdome: Many men of the meane fort, daily flocking thither, the rather

Siberia and

Caftles buil.

for that they enjoy great priuledges, neither pay any thing for the Lands which they posterie.

The whole Countrey is called Siberia, the Citie builded therein Siber. And in deed at the first, the Offenders among the Mosconies, did no less tremble at the name of Siberia, then doe Then Male coill perfons in Landon, when they are threatned with New-gate: for they were forth-with after not as event persons an ememory were easy as consistent and the end of the consistency of the position of the form of th fields at the Prince difference of the Contempt, But Noblemen and great Perfonges, if at any time they incurre the Prince diff. pleasure, doe as yet very much loath the name of Siberia. For many times both them- 60 felues, with their Wiues and Families are fent away into those parts : where some Office is committed unto them, till the Emperours anger bee asswaged, and they called home into

I will now shew the way by which they travell out of Mosconia into those parts, and that

in the best manner that I could get notice thereof. Which whatsoeuer it shall feeme to bee, I This Tournall have not attayned vinto it, without great paines and ready furtherance of some friends, which to the North-I found in the Court, while I continued in Ruffia: who though they were ready to pleafure me. east was harde and that I had been every instant with them about it, yet with much adoe were brought to com- ly obrayned by municate this particular lournall vnto me. For if at any time after, when the land should bee at lome frends quiet, it should any way come to light, doubtlesse it would cost them all their lives. ≱. II.

A briefe Description of the wayes and Rivers, leading out of Moscouia toward the East and North-east into Siberia, Samoiedia, and Tingoesia, as they are daily frequented by the Ruffes : with further Discoueries sowards Tartaria and China.

Rom the Citie Ofoil vpon the River Wiehide, where the Oneekos dwell, they goe a- Ofoil. gainst the fireame, untill they come to laninis, 2 little Towne built by the Ruffes, laninis in daice and it is diftant from Ofoil almost seventeene dayes journey. Whither before they journey diffant and it is diffant from Ujot almost seuenteene way to sound;

come, they paffe many Rivers and Woods. The River Wiebida springeth out of the trom Ojot, accome, they paffe many Rivers and Woods. The grant from the trom Ojot, accome, they paffe many Rivers and form the trom Ojot, accome to the trom Mountaines of Ingeria, which to the South ioyne vpon Tartarie, and from thence runne Northwards to the Ocean Sea. Out of the same Mountaines issueth the River Perfora, which falleth Interia. into the Ocean Sea on this fide the Streight of Waygats. From laumis, after three weekes jour- River Petora. nev, they come to Neem; a River so named of the gentle gliding of her streames through the Neem River 3. Woods. For Neem in English fignifieth Still or Dumbe. On this River they proceed about weekes jourfine dayes space with their Boats; and then, for that the Neem taketh his course another way, nie for shortning their journey, they must of force cause their stuffe to be carried by Land, the space of aleague: And so they come to the Wifers, a River isluing out of certaine Rockes adiopning From Neem to of a league. And to they come to the ways and the Males call Camenas. From hence they are journey. carried downe the River Wifers, for the full space of nine dayes, vntill they come to Soil Cam- From Wifes to Goy, a small Towne builded by the Moscouites, for refreshing of Trauellers for a short space, Soil Camson which hence forward are to proceed on their lourney by Land. As for the Wifers, it keeping 9- dayes. on his course somewhat farther, at length falleth into the Cam, which passing by Viateann, a Volga by the Towns of Mofcours, falleth into the great River Ross, commonly called Volgs, which entreth Tatter called with feuenty branches into the Cafrian Sea, as I have received from eye witnesses.

The Towne of Soil Campeon is reasonably inhabited, having many Villages round about it. The Soil compley. Inhabitants, for the most part are Russes or Tartars. Here is great store of Cattell, and chiefly of Horses. Transellers having here some what refreshed themselves, doe lade their carriages on Horses. 40 and travell for the most part through Mountaines full of Firres, Pines, and other trees of strange forts. Betweene these Mountaines they passe ouer the Rivers Soibs, and from thence over Cof. The River

na, both running toward the North-east. Now these Mountaines are divided into three parts; whereof the two first are passed over costs. each of them in two dayes, and the third in foure dayes. The first part is called Coofining Ca- Mountaines in men: The fecond Gir sin for Camen: The third Podain for Camen. And doubtleffe all their mounthere parts. tainous Countries are much different from the other Countries out of which they enter into Comingon Cathem. For the Woods upon them, are fairer and thicker growne with trees, bearing enery where Circuiter Care diners forts of Plants. These three Defarts are frequented by none in a manner but Tartars, and and Samoieds, who onely hunt after those coffly Furres, which are to pay their tribute to the Podminson Ca-50 Emperour of Mofconia. The Mountaines of Podninfoy Camen are higher then the reft, and for mon. the most part covered with Snow and Cloudes, and therefore difficult for Travellers to passe ouer: but by little and little they have a gentle descent. From thence they come to Vergateria, Vergateria.

not farre from thence, is all the rest of the yeere very shallow. But the Spring approaching, when the Snow melts from the hoary Hills, and the Land waters arife, it is paffed ouer with Skiffes and small Boats, Vergateria is the first Towne of the Vergateria the Countrey of Siberia, and was begun to be builded with some other Townes within these one first Towne of and twenty yeeres. It is reasonably full of buildings, and the lands about it are tilled as in Molconia. Heere there is retident for the Emperour of Molconia 2 Gouernour, which yeerely Ruffian Gouer. 60 at the beginning of the Spring, by way of the Rivers doth distribute great store of Corne, and nour. Victuals among the Caftles with Garrisons throughout all Siberia: furnishing also in like manner the Moscowites, which remayne beyond the River Oby. For in those places the ground is not yet tilled; and the Samoieds, as before is faid, for the most part feed on the flesh of

wilde beafts.

Downe

in which Towne they must abide vntill the Spring, by reason of the River Toers, which arising Toers River.

by fled.

of Siberia.

Downe the River Toers, in fine dayes they come to Isphanis, a Towne builded and inhabited within their two yeeres. Thence againe they paffe downe the Teers, and having proceeded two dayes thereon, they are enforced by reason of the often windings and turnings of the Ritwo dayes districting that a contract of the way. In their places there now dwell uer, to cut ouer it in certaine places, for shortning of the way. In their places there now dwell

here and there, Tartars and Samoieds, living for the most part upon Cattell and Fishing. At length leaving Toers, they come to the mighty River Tabab, diftant from Vergateria about Tabab a mich-Actengent reasons and the state of the state ty River 200 leagues from builded by those about mentioned. But many trauell alio from Isphanis to Times, by Sleas in the Winter time, in the space of twelve dayes. And here is vied much buying and selling of From Iashania the whiten time, at the pace of cross cayes, and Samoieds, And this is a very comment 16 to Times va dayes iourney place, for such as determine to stay in the Countrey not aboue sixe moneths. But many doe fearch the further parts, and trauell farre beyond the Oby, toward the East and South, Many travell farre beyond

From Times they come to Tobalfon, the chiefe of all the Townes of Siberia: wherein is the farre beyond Of toward the feat of the chiefe Governour of Siberia, and of the Moscowies that are in the same. To this Cortomard the East & South. place yearely are brought from the other Townes of the whole Countrey, as well on this fale, as beyond Oby the tributes, which being brought together, and guarded with Souldiers, are after carried into Moscomis to the Emperour. Here also the Law is most seuerely administred: and all the other Gouernours in Samoiedsa, and Stheria, are bound to obey him onely. In this Citie befides is the chiefe Market of commodities brought out of Mofeonia; the Tartar: out of the South parts, and almost farthest parts of Tartare, and men of other Nations repairing thither: 20 who, the farther that the report of these Countries reacheth, doe in so much the greater number affemble thither: whereby there arifeth great profit to the Mofcounter. Furthermore, in diuers places there are Churches and Chappels crected, wherein the Greeke Religion is exercifed, which among the Ruffer, and other Northerne People is most vsed, although corrupted with divers Superfittions. But how soeuer, no man is forced against his will to their Religion: but certaine gentle meanes are vied by the Ruffer, by which these people are perswaded and

They travell

The Citie Tobolfes is situated on the River Tris, which with a most forcible streame, and as it were another Danubius, rifing from the South, taketh his course toward the Oby, through which it feemeth to runne with the fame courfe. On the other fide is the Riner Tolor, of which the Citie taketh her name. Into this falleth the Ruer 72/4, which feemeth to fpring from the North-eaft, and from certaine Mountaines there vpon the Coaft. On the fide of this River the Moleonites have of late builded a Towne, called Pobers, inhabited with dwellers drawne out of Siberia, for no other cause, but that it is enurroned with an exceeding fertile soyle, as also with very pleafant Woods, wherein dauers forts of wilde beafts doe breed, as Panthers, Ounces, Foxes, Sables, and Marterns. Nowe Poberty is diffant from Tobalfes, about two weekes Journey toward the North-east. Tris with almost the diffance from Tobelfea, falleth into the Obj. And at the mouth of it was builded a Towne calle: Oljeogorod, but afterward razed downe by commandement of the Gouernour of Siberia . The cause whereof was not then knowne: which notwithilanding I gueffe to have been either the excremity of the cold or that the Towne flood 40 rer vnto the Seathen they thought fit, and feared left tome inconvenience might grow thereby. for which cause about fitte leagues about that razed Towns, they builded another upon an Iland Zergolia a town of the River Oty, called Zergolia. From hence fayling up the River, they vie small layles, either because winds blow faintly, or for the highnesse of the shoare : fo that, though the Obybee almost every where very broad; notwithstanding, they drew their Boats in it with ropes, altogether after the same fort that they trauell vp the Rivers of Mosconia.

Two hundred leagues aboue Zergolia, they came to Normfooi, a Cafile builded thirteene yeers agoe, at which time the Gouernour fent certaine men thither out of Suberia, to feeke tus Counleagues aboue tries profitable for mankind, and fie to build Townes in. Wherefore at that time they builded this Caftle, and furnished it with a certaine Garrison, in a very pleasant, wholsome, warme, and fertile foyle, and wherein were great store of Beasts and Fowles of rare kinds. The very Castle being situated toward the South-east, by little and little grew to be a Citie. The Inhabitants whereof were enjoyned to proceed by degrees into further and more temperate Countries, and to trafficke truely in every place, and courteoully and kindly to entreat all people that they met withall: whereby at length they might more largely extend the Dominion, and ipread abroad the Rassian Name. Wherefore flocking thither in great numbers, and piercing into the Inland foure hundred leagues, they found goodly Countries, but not inhabited. And whereas ten yeeres past, having fayled two hundred leagues up the River Oby, they lighted upon a Countrey very fruitfull and pleasant, which was very temperate, and free from all discommodities, and the Winters very short, and in a manner none at all. They tooke occasion thereupon to returne into The Reigne of Siberia, & to find word of these things into Moscouns. Born Godonous was then Emperor there, 60 Pera Codemost. who having received fuch good tidings, forthwith commanded the Governour of Secreta, that with all speed hee should cause a Citie to bee builded there. The Governour obeyed, and there was a Caille builded upon his commandement, with certaine houses adjoyned; so that now it

is a large Citie. The name thereof is Tooma, because they understood, that a great multitude of Tartars in times patt were feated there, of whom this Citie tooke that name for the pleafant. The Cide nesse of the fituation thereof. And is is reported that their Tartars had at that time a King. whose name was Alias: Whereby it came to passe, that the Citie which was first builded, held Tarrer King. out many affaults of fundry people that dwelt in those Champion Countreyes. And now this Citie is fo mightie, that in procede of time, some reasonable great Kingdome is likely to grow

Furthermore, betweene this Castle of Noxinscoi, and the Citie Tooma, and Siberia, the Mosconites daily doe difcouer many people dwelling in the In-land parts, fome of whom call themto felues Offachies, and now are growne into one bodie with the Tartars, Samoleds, and Ruffes, li- Offachies a uing friendly together; they have many Kings among them, almost like vinto the Indians (I Pcople. speake of the pettie Kings, not of the greater Kings of India.) And to bee briefe, the Molcounter have proceeded to farre into that mayne Land, that we have just cause to marriell thereat. Mores ouer, there are many Castles and Townes betweene the Riners of Obsand Tris, builded almost at the same time when Tobolfes was, and are now proper Townes: whose Inhabitants are Mof. conites, Tartars, and Samoieds of their kind, which we call, The tame Samoieds, in scipe of of those which are altogether wild.

And the first of the Townesis Tara : from which place it is neere ten dayes sourney between Inguerum. Objand Trijs. Then forgoetum, builded about fifteene yeares past. Befobia, and Mangarofoifeoi. Befobia. 20 gorod, both of them builded about lorgoetum toward the South. The Inhabitants that dwell on Manganfaifeir the west fide of the River Obi, seeke daily to discover more and more. On this side of Obiare Nationand feated the Civies Tobolfea, Siberia, Berefaia, and certaine others, builded voon certaine Rivers : Toma bevond and more are builded dayy. Beyond Obs are Naring, Tooms, and divers other Cities, the Inhabia, Obs. tants whereof infreed of Horfes vf. Reyne Deere, or exceeding fwift Dogs, which they fatten Reyne Deere tants whereof infleed of Hories vi. Reyne Deere, or exceeding with Dogs, which ency factor and exceeding with diners kinds of fifthes, and especially with Thomebacks; because they thinke they be made in fifth Dogs. the stronger with that kinde of food. lorgoetam, whereof I spake before, is builded in an Hand vied infleed of of the River Obi.

Alfo about Narim as men travaile toward the East, they meete withthe River Teles: on the fed with banke whereof they have builded a Castle, named Composition The gartison Souldiers of which Fisher in 30 Caitle, together with the Inhabitants of Narm, about fearn yeeres paft, were commanded by the Fallban the Gouernoor of Siberia to travell East, and diligently to learch what voknowne Nations youd Obidwelt in those parts. Therefore travelling through certaine wast Deferts, for the space of tenne Comsof lies weekes or there abouts, passing in the way through many faite Countreys, many Woods, and Castle Rivers, at length they espied certaine Cottages set up in the fields, and certaine Hords or travell Each Companies of people. But because they had Samoreds and Tarters for their guides, which were ward from Obe. acquainted with those places, they were not afraid. The people came vnto them reuerently, wherein the and with humble behaviour, and fignified by the Samoieds and Tartars, that they were called Tingoefes were Tingoefi, and that their dwelling was vpon the banke of the great River Iemfee, which they faid first discouedid ipring from the South South-east, but that they knew not the head thereof. These people Tinggessea peop 40 were deformed with swellings under their throats, and in their speech they thratled like ple dweiling Turkie-cocks. Their language feemed not much to differ from the Samoieds, which also vinder- in Companies flood many of their words.

Jenifee being a River farre bigger then Obi, hath high mountaines on the East, among which The Timesies are some that cast out nice and brimstone. The Countrey is plaine to the West, and exceeding deformed fertile, flored with plants, flowers, and trees of divers kinds. Also many strange fruits do grow with swellings therein, and there is great abundance of rare Fowles. Ienifee in the ipring overfloweth the vader their fields about feuentic leagues, in like manner as they report vinto vs. as Nilus doth Egipt. Whereste attending with the Tingoes being well acquainted, doe keepe beyond the River, and in the mountaines, drinkers of untill it decrease, and then returne, and bring downe their heards of Cattell into the plaines.

50 The Togoef being a very gentle people, by the perswasion of the Sommeds, without delay Mountaines fubmitted themselves to the tame Governours which they obeyed, whom they reverenced as a on the East kind of Gods. But what God they worship, or with what rites, it is vincertaine, neither as yet cashing out fire can bee knowne, the Moscowites being negligent fearchers into fuch things.

Neither hereaf er will I maruell, though the Streight of Wangars bee ftopped up to the The ouerflow-North-east, with such huge Mountaines of Ice, since the Rivers Obs and lenifee, and very many ing of lenifee more, whose names are not yet knowne, powre out so huge a quantitie thereof, that in a man. in the springs ner it is incredible. For it commeth to palle in the beginning of the fpring, that in places neere from melted vnto the Sea, the Ice through the excessive thicknesse and multitude thereof, doth carriedowne Snow whole woods before it. And without doubt this is the cause, that about the shoares of Reason why. 60 the Streight of Wayfats, fo great abundance of floting wood is every where feene. And where- "agasts is flopas in that Streight neere vnto Noua Zembla, it is extreame cold, it is no maruell, if in regard of pid with Ice. the narrownesse of the Streight, so huge heapes of Ice are gathered and frozen together, that in justions the the end they grow to fixtie, or at least to fiftie fathoms thicknesse, as this present yeere (1612) in the Streight

rurti-ermore, those whom I mentioned before, vindertooke a long Journey beyond the Riner Lenifee Esitward, and were somewhat afraid to turne to the South, taking with them certaine Tingoestes, by whom they were informed, that many Nations dwelt toward the South which differed much from them, whose Kings were most commonly in warre one with another, But having travelled certaine dayes to no great purpose, at length they returned home; Yet be-But naming transmitted to the Timpoffer, to learch those Countreys more thorowly; 10 who promife that they would doe fo : And they renewed the league which formerly they had warre one with make with the Mofemites. The Mofemites at their departure, left diners of their people in are the Zagatay those parts, and also certaine Samojeds and Tartars their confederates, after they had beflowed fome small gifts among the Tingoefies,

The yeers following, the Tingoesies sent diners of their owne people Eastward : who trauelling somewhat farther then they had done before, at length found another mightie River. fomewhat leffer then lenifee, but as fwift as it : And following the course thereof some few dayes, they lighted upon certaine people whom they tooke, being switter a foot then they: Burthey could not understand their language, fauing that by certaine figures and words of the Saluages, which often repeated om om, they coniectured that on the other fide of the Riner, they 20 heard it often thunder. They added also, that they had often heard the noyse of men in those parts: And pointing to the River with their fingers, they often repeated the word Pifids: whereby the Tingaesses gathered, that that should bee the name of the River; but by the voyces om om, the Moscowites did afterward gather, that they were knollings of Bells. The Tingogfierat their returns from thence, carried with them divers of the people of that Country, which died all by the way, either for feare, or through change of ayre. The Tingoe fies were verie sorrie for their deaths. For at their returne they : firmed, that they were men of good vnderstanding, well fet, with small eyes; flat faced, browne colour, and enclining to tawnic.

When the Moscouitat wnderstood these things by the Samoiest, which returned into Siberia out of the Country, of the Imgosfee, efticones they were flirred vp with a great defire to learch 30 out the farther parts of that Countrey, wherefore they became futors to the Gouernour, that they might bee fene thither with some others soyned with them. Hee presently yeelded to their request, granting vnto them a certaine companie of Souldiers, and enioyned them curiously to fearch out all things, and to take with them Tinguefies, Samoieds, and Tartars. So beeing about senen hundred men, they passed the Riner Obi, and came to the Riner Ienifes, through the countreys of the Samoieds and Tingoefiers: And paffing the River, they marched forth Eaftward, hauing the Tingeefes for their guides : which did not onely ferue them as guides, but also plentifully prouided all the company with victuals, taking with wonderfull dexteritie, Fowles, Goats, Reyne Deere, and such like wilde beasts: as also no small quantitie of fish out of the Rivers which they met in the way. Having travailed as farre as the River Pofids, they pitched their 40 Tents on the banks thereof; with purpose to stay there till it were passable, the Ice being short-Penson the same tiers of with purpose of any tiers of the write paints, the new being morn-ly to breake vp. because the forms waste hand, at which time they came hither, yet they durft not paffe our the Riner Photos, having now plainly heard the found, whereof they were adurtified before: which they certainly judged to bee nothing elfe but the towling of Brazen Bells; and when the wind blew from the farther fide of Pifide, they fometimes heard the noyle of men and horses. Moreouer they saw certayne sayles, though but a few; whereby they conicctured that they were veffels, which fayled downe the streame. They fayd further, that the fayles were square, like the Indian sayles, as wee suppose. But seeing no people at all on that fide of the Riner where they remained, after they had stated there a certaine space, and had perceited that in the spring time the River did greatly swell (which neverthelesse they can hardly 50 affirme for a certaintie, fince the shoare is high on both sides:) At length by very great iourneys, and yet not before Autumne they returned home to Siberia; reporting, and that vpon their Weffels fayling oathes, That in the moneths of Aprill and May, they were very much delighted with the exceeding faire shew of that Countrey; And that they had seene therein many rare Plants, Flowers, Fruits, Trees, Fowles, and wild Beafts. But the Mojeounes are nothing curious in fuch things, as men that feeke after nothing but gaine, in all things else very negligent and rude,

These newes being brought to the Court of Moscoma, the Emperour Boris , and the Noblemen that were with him, much wondering thereat, and inflamed with a great defire to fearch out exactly all particulars, refolued the yeere next enfuing, to fend Ambaffadours thither, which should carrie presents with them, and should take Tartars, Samoieds, and Tingoesies in their com- 60 panie. And they were enjoyned to fearch out the further fide of the River Pifida, and to make a league of friendship with the Kings if they foundary, and set downe in writing all things that they could observe by the way, and should make report of them most exactly. But these things did not take effect, because of the breaking out of the civill warres, among the Mosconites in the

I am of opinion, that in this countrey is the beginning, and the bounds of the Kingdome of Theoring of Cataia, which bordereth vpon China. Yet I feare the Moscouites will lose their labour, if they the Author of

Catala, which borderecth your China. Yet I feare the Majorantes will lofe their labour, if they it handbord euer returns thicher. But time will declare the august hereoff.

Yet for all this, by the commandement of the Governours, even in the time of this warre. The fourth there was a voyage made into those parts, many lahabitants of Subria being employed in the Voyage to the firm, who patting over the River longs, travelled further or roots, there or Whom titled by the Ruser 1966, wary, being not accurbance to handless! A Kojege made to Pechora 1611. Written by WILLIAM The sales of Governon of Hull, appointed chiefe Pilet, for Diferente to Obyera. Silver to the transfer of the transfer of

Lucis, not Vide N His decemba of Aprill we weighed Anchor as Blacks well in the River of Themer, in a thin called the America whereon leave Hodes was Mafter, and fayling anising the Confine of England Scaland, Norwey, and Formwerk, on the decembre of the next moneth of May, wee found our felues in the latitude of 71. degrees 40.

The twelfth, wee ranne fortie eight leagues North North-east, the wind being at South South-east, and found our felices in the latitude of 73, degrees 42, minutes, and at 70 night wee had shouldings of Cherie Hand for wee were entoyined by our Commission to touch

there, alchough it were there degrees to the North out of our way.

The thirtoenth, being Whit-funday it cleared up, and then we did fee. Chew Hand fix leagues

The fourteenth, being faire weather, we flood to the Northwards, thinking to have gone on shoare, but we could not for Ice, and labouring to Land on the South side of the Iland, wee met With Ionas Poole about Ecuening in the Elizabeth , who came as then to the Iland , and was fet forth by the Right Worthipfull Company of our Rufficon Merchants, to difcouer further Northward, from eightie degrees toward the North Pole. Then we flood to the Eastward, where wee found great store of Ice.

The fifteenth, we frent on the South-fide of the Iland, in hope of the arrivall of the Marie Margant, which being a ship of nine score Tunnes , was set forth very chargeably by the aforefaid Ruffian Company, and had in her fixe Barker, being excellent Whale-killers of Saint low de Laz, for the killing of the Whale on the Coaft of Greenland, in a Road called Croffe Road,

standing exceeding farre to the North, even in the latitude of 79. degrees and better. The same day at night, feeing that there we could doe no good, we determined to proceed on our Voyage for the River of Pechora: and Letters being given one to the other for Teltimoniall of our meeting in that place, we left Ionae Pooley, and directed our course to the Eastward.

The two and twentieth of May, we came to a small Iland, called Bigs Hole by Tapani Harbour. Bigs Hole? The three and twentieth, we arrived at the Ile of Kildin in Lappia.

The foure and twentieth, loftas Logan, which was appointed Factor for Pechora, and my felfe Olena, with two more, went to Olena, and stayed there all the fine and twentieth, being Saturday, where wee found a flip of Tarmouth, whereof James Wright of Hull was Master, of whom we learned to the proceeding of the Hollanders.

The feuenth of Iune, in the morning we had fight of the Coast of Lappia, a little short of Cape Iune. Comfort, and met with a thip of Amfterdam, by which we fent Letters to Matter John Mericke Cape Comfort our English Agent, then Refident in Colmogro; and we had two Hogsheads of Beere of them. The eight, we plyed to Cape Comfort, the wind at South-east.

The ninth being Sunday, in the morning wee put off from the Coast of Lappia, to crosse over the White Sea, to the Cape of Callinos corruptly, and commonly called Candines. At noone we passed through some Ice, the weather being thicke and foggie.

The eleventh, we plyed to the Cape of Callinos, passing through much Ice, the wind at North North-east. And therefore wee thought it better to goe to the Southward againe; and in the 20 Feuening we came to an Anchor in ten fathomes. This night wee had a fore fforme; the winde at North-eaft.

The twelfth, in the morning we weighed, and in weighing brake our Anchor: and then wee flood to the Southward, and came to an Anchor; and at night wee went on shoare for Wood, shoare, and Water, where was good flore of Drift Wood: And within a ledge of Rockes on the West- Ten Ledias of tide of Callines there lay ten Lodias or Ruffe small shippes, some fourteene or fifteene Tunnes the Pinega bound biggeft (of a Towne called Pinega) all which were bound for Nona Zembla , to kill the Morfle : for Nona Zembla with the men of which Fleete wee had some conference, and did see their Prouisions : which bla, were Launces of their fashion, and Harping Irons; their Victuals were Salt-fish, Butter, Bacon, Meale, their Drinke Quaffe.

The fixteenth, in the morning wee weighed and flood our course for the He of Colgoiene, the wind being at South South-weit, and did find the Ice that was close to the shoare to bee open: but at night finding that we could not layle our course for the Ice, we thought it better to stay. and so came to an Anchor.

The seventeenth, wee weighed in the morning, and stood along the shoare, which did lye South-east by East, and North-west by West. And in the after-moone, wee went on shoare with our shallop, and came to a River, which we called Hableyes River, where wee did see certayne Samoieds, with their Deere: but when they perceived vs, they fled into the Land, carrying with them fuch things as in halte they could get together : but left most of their necessaries, as Bowes, Arrowes, long Speares, wanting Iron heads burnt at the epd, Harping Irons, Wimbles, 40 and Morsse-skinnes, lying hid, some in one place, some in another; which were caused our men to vuccuer, and would not suffer them to take anything away; only I tooke the Pizzell of a Morfie which they had lately killed; and Iofias Logan left a Knife, that they might not shunne

vs hereafter. The same Ecuening we anchored and stayed all night. The eighteenth, wee weighed, and at noone wee came to an Harbour; which, as wee thinke, A good Harwas the very fame where Master Stephen Barrow was in his Discouerie of Unigatz, and None b Zembla, 1556, where there is twelue, or thirteene foot at high water voon the Barre, and Suppen Burrent within fix or feuen fathomes. Also in this place were three Lodias of Pinega, which when they Three Lodias faw vs come in, rowed out, and at night returned, and some of their men came abourd of vs, and of Pinesa. told withat they could not paffe for Ice; and faid, that they were bound for Sharshai Gooba, or Sharkai Gooba, 50 Shar Bay to fish for certayne fishes; which they call Omilie, which are somewhat like a Shad, and which is the

The twentieth, Iostan 2nd my selfe went ouer to the Mayne, which was distant two leagues, and came to a great River in 67. degrees and 40. minutes, where there had beene people : and there we faw foure or fine great white fifnes swimming, which are foure or fine yards They land the long, and called by the Ruffer Belluga, whereof they make Oyle, whereof afterward we found A exeat River. at Pechora, great store to be spoyled.

The one and twentieth, we fent our men for Wood, for there was good frore of Flore-wood Flore-wood. as we had found all the Coast along ; but none growing.

The two and twentieth, in the morning we came ouer the Barre, the winde at South South-60 east, directing our course for the lie of Colgiene; and at noone wee passed through much Ice, which lay so thicke that wee could not sayle, but tooke in our sayles, and made fast our ship to

The three and twentieth, in the morning wee fet (ayle, and plyed to the Wind-ward, the wind at South-east, with raine : and at night wee mored to a Cake of Ice.

The foure and twentieth, in the morning we fet fayle, and pyled to wind-ward, the wind at The route and twentieth, in the monanty we objected and found our felues to be in 67. South-well to get cleere of the Ice; and at noone we objected and found our felues to be in 67. South-west to get steele on the seep and as moone we had fight of the Land agains, being four legues 12 minutes, and in the after-noone we had fight of the Land agains, being four legues Aforenyde vs. to the Southwards of the aforefaul Harbour; and finding the Tyde to fet very fore vpon the Afterendery. Court continuation to the automatic particles, and anomaly through the Ice, and attwelle at

The fine and twentieth, we loosed and fayled to the Eastward, till we found the Ice so thick, that we could not paffe further: then we made faff to a piece of Ice: the wind at North North. east, thicke fogge, and fome raine. The fix and twentieth, we fet our fore top-fayle, the wind eart, tricke rogge, and some rause. The state and tricke fogge are flood fometimes one way, fometimes 10 another, as we could find the Ice open; and at noone we had fight of the shoare, being source fine leagues off, and the Ice lying fo thicke, that we could make no meanes to get farther from the shoare; wherefore weemade fast to a great Cake of Ice. The feuen and twentieth, wee lay still, the Ice lying very close, with thicke foggie weather: the wind at North North-west,

The eight and twentieth, in the morning it was cleere, and the Land did beare North by West seuen leagues off, and then we fet sayle, passing to the Eastward till noone: then we made fast to a piece of Ice, it being very foggie: the wind at West North-west. And the same day at eight in the after-noone wee loofed from the Ice, it being cleere, the wind at North-west. And at mid-night we got cleere of the Ice, keeping our course East North-east.

time.

The nine and twentieth, at eight in the morning, we had light of Cape Swetinos, the winde 20 at North North-west, with thicke foggie weather: At noone, finding the Ice to lye close to the William Courshoare, we cast about to the Westward. And at eight in the Ecuening, wee came to an Anchorin tenne fathomes; and then I went on shoare, where there were two Rassian Crosses: the Land was I mooth, and full of fresh Ponds, being a kind of white Chalke Cliffes. At our commings. boord, we weighed and flood neerer to the shoare because of the Ice.

The chirtieth, in the morning the Ice came so extreamely upon vs, that we could not weigh; for our men being cast from the Capstan, our Cable brake, and so wee lost an Anchor. Then feeing wee could not passe to the Eastward, wee stood to the Westward of Cape Surviva, Weimirage into the afore-faid deepe Bay in seuen fathomes; the wind at East Northeast, cleere weather.

The first of July, we went on shoare to see if there were any thing to take notice of : but wee 30 Land agrine found nothing worth the going. For only we faw a wild Deere, and an House of Wood after the Roffe fathion, where people had beene. The fecond, likewife we rode still, and going againe on finare we did see the Ice all gone to the Eastward; and so came aboord. The third, at fixe in the morning we weighed, theiwind at East North-east, and plyed through some Ice : and at foure in the after-noone we gov cleere of it : and at eight of the clocke wee came to an Anchor, it being calme and cleere weather: then I went on shoare, where we were first and came about because of the great abundance of Muskitos or Gnats. At our comming having the windeat South-west, we set sayle and stood along the snoare.

A undince of The fourth, we fayled along the shoare with faire weather, having the windevariable. The fifth, wee plyed to the Eastward, wind at North-east by East faire weather. The fixth, wee 40 plyed along the shoare, the wind at North by East. And in the after-noone wee passed through much Ice. The fruenth, we plyed through the Ice to the Eastward, the winde at East Northeast, thicke and foggie. The eight, with cleere weather, the winde at North North-east, we plyed to the Eastward; and at noone observed the Sanne having 69. degrees 40. minutes: At Equening we had fight of the Land to the Eastward of the River of Pechora; and thinking to

get into the shoare we could not for the shoald water.

The ninth, in the morning we flood backe to find the Barre or entrance of the River of Pe-Croffes found chora. And in the after-noone, seeing the Sand over the Ice, which was not broken off from the and cer ayne shoare, I went thither with my shallop, and going on shoare, we espeed three Crosses, and certayne Ruffes walking upon the Sand; who told vs, that that was the place that we defired : and 50 one of them came abcord our ship to bring vs ouer the Barre. But comming to should water, The depth of wee durst not trust his skill, but stood backe againe, and came to an Anchor in four fathomes.

The teach, in the morning I went to found the Barre; where we had eleuen and tenne, and in one place but nine foot water. And comming aboord wee fet fayle to come in. And in going ouer the Barre we were on ground; but, God be thanked, wee got well ouer, and came to an An-

uerth. Baire, chor in fix fathomes,

The eleuenth, the Ice brake off from the shoare, and came so fast vpon vs, that we could not shift fathons water from it, but were put on ground vpon a Sand; vet God be thanked without any harme. The fame day leaving our ship lying to, Iosias Logan our Factor, my selfe William Parfelque, being rowed in our Skiffe by fix of our Mariners, tooke our way toward the Towne ouer a sheald Sea, which the 60 Ruffes cal, The Dry Sea: which may very well be fo called. For on the starboord or West side going Diggi is freen up is a low dry Sand, and on the Larboord or East fide is all shoald water, as two, three, or source foote water. And feuen leagues within to the South-west is an Iland called Dolgoi, that is to lay, from the Barre The long lland, which you must keep on the Larboard or East fide, & then steer away South South

west, neere voon twentie leagues, all in shoald water; and then you shall come to the sight of an high Land called The Bolnan; which in the Ruffe Tongue tignifieth, a Blocke: which you must The Bolnan, or leaue on the Larboord, or East fide. And be fure to keepe the channell, which doth trend South- East bead land west, and South-west by West. By report of the Inhabitants the River hath two and seven-

The twelfth, we passed ouer the Drie Sea, (which the Russes call in their Language, Suchoi trenocth Morie,) to the mouth of the River Pecbora: where we found many small Hands, some a mile, South west. fome two miles in length, and to should water, that wee could not get to the shoare with our Shallon, but lay in her all night at an anchor, being vincertaine which way to take: and feeing To fo many entrances before vs, we could hit right at none. The thirteenth, in the morning wee An Hand neere

fo many entrances before vs, we could hit right at none. The time tent the mouth of the mouth of the Riuer, where wee flayed all the day, having much the Riuer. wind and forge. The fourteenth, being Sunday, we fet fayle from the Hand, the Sea going very They find one high: and at noone we came by Gods direction, into one of the chiefest entrances of the River of the chiefest high: and at noone we came by Gods direction, into one of their families, who made with entrances of the Ruser. best entertaynment that they could, and gaue vs directions how to goe to the Towne.

The fifteenth, we came to a Sari or Ferme house of one of the principall men of the Towne: They come to who bid vskindly welcome: and as the place and feafon affoorded, hee made vs good cheere. a Ferme house of a principall He lay there at this time, to take Duckes, Swannes, Geefe, and other Fowles: for then was man of the the time of the yeere. Their feathers they fell, and their bodies they falt for winter promison. Towne.

He also gaue vs a man to bring vs to the Towne.

The fixteenth, we came to the Towne of Pullotera, which standeth young Lake. There was The Towne is no Gentleman or Gouernour in the Towne at our arrivall ! for he had deftroyed the Caffle, and called Puffefled away the last Winter. For certaine dayes wee could have no answer, whether wee might flay or no, all the chiefe men being abroad for their Winters prouision. But the chiefe Customer Marphe, sending men to know their mindes, the three and twentieth day of the same moneth of July, we were embraced of them, and defired to stay, and they appointed vs an house to dwell in. Furthermore, they told vs that the River Pechora was more convenient for vs, then the River of Duyna: and that a great part of the goods, which come to Colmogro vpon Dwina: doe passe in one place or other by the River Pechera, which, they say, runneth through Siberia; and how much farther they themselves know not. The five and twentieth, in the morning, ha-

30 and now intentare they themienes anow not. The nue and twentiern, in the morning, naneth through
ning one of their Boats full with feathers, weedeparted from the Towne, taking our leaues of Sibria and fat-Iofias Logan, who staved behind.

The fixe and twentieth, we came downe to the Boluan, where wee went abourd of two Co- Two Coches ches of some fifteene tunnes a piece , bound for Mongunzea. Here I went on shoare, and bought or Lodias, an airie of Slight-falcons, being very young. The feuen and twentieth, in the Eeuening wee Movement came aboord our ship, and the same night tooke in the Feathers, and laded their Boat againe Hebuyeth two with Meale, fending her vp to the Towne by the Ruffes that brought her downe.

The eight and twentieth, we got out our goods, which were appointed to be left at Pechora, The flocke of winder the charge of Mafter Logan, and made ready our flip. The nine and twentieth, wee goods left in 40 weighed anchor, and fell lower downe, the wind North North-east. The thirtieth, wee rode fill, and in the after-noone two Lodias that were fifthing for Omulais, went out to Sea, the wind at North-weft by Weft. The one and thirtieth, the wind being at Weft North-weft, there 24. Lodias or Coches, all bound for Maginacas, but the yeere being fare forest they are given their Younger, and went to the Townson Beautiful State of the Company of the Com being farre ipent they gave over their Voyage, and went to the Towne of Puffozera, to winter. isto the East-Out of one of the which Lodias we hired a man belonging to the Towne, to flay with William ward of Ob. Purfglone and Marmadake Wilson, by our goods, till the Lodia came, which we had hired. Which two were to winter with Malter Logan in the Countrey. The aforefaid foure and twentie Lodias were of Colmogro, Pinega, Mezen, and Puftozera.

The first of August, the wind at West, we weighed, and, God bee thanked, came safely over They safely the Barre of Pechora. From thence wee directed our course for Noua Zembla: and at noone passethe Birre 50 we came to Ice: where having fayled many points of our Compafe, at mid-night wee tooke in of Pethna, our sayles, and made fait to a piece of Ice; the weather being very thicke and foggie. The second being very cleere, and feeing no way to paffe to the Northward for Ice, we determined to return; and because the yeere was so farre spent to go for Cherie Hand, to see if it pleased God to giue vs there any good successe, for the bearing of the charges of this Voyage. So wee loosed, and at eight in the Eevening wee got cleere off the Ice, keeping our course by the edge of it, which did lie East by North, and East North-east. The third, at noone we had fight of Colgoiene Hand, Colgoiene Hand and tooke the latitude, being on the North fide of the Iland which was 69, degrees 20. minutes: and at night I went on shoare to see the Land, which was high clay ground: and I came where there was an airie of Slight-falcons: but they did flie all away faue one, which I tooke vp, and Falcons 60 brought aboord. This Ile of Colgoiene is but thirtie leagues from the Barre of Pechora.

The fourth, we passed through some Ice, and at noone wee got cleere off it, and stood to the Northward, Colgoiene bearing South-weft fixe leagues, the wind at East North-east. The fire. we had faire weather, the wind at East South-east, wee sayled two and thirtie leagues North

and ride in fix the Rust of Pichara, ouer Th: Day Sea.

70 degrees 40. minues 72. degrees 24

North-weff, we observed, and found our selves in 70, degrees and 40 minutes. The fixt, the North-weit, we conclude, and tourne out return to Joseph and Administration and use, the wind being at South South-well, we fleered North North-well fortic leagues, and were in 72. degrees 34. minutes. The feuenth, the wind was variable, the weather faire: we steered North by Welt, eight and thirtie leagues, and at noone had the latitude of 74 degrees 30. minutes. 74. digrees 30. And at eight in the Eeuening we founded, and had eightie fathomes greene Oze, The eight, the wind at West, we sayled North twenty leagues: in the morning we sounded, and had seventy fathoms Oze: and at three in the afternoone, the wind comming North, wee cast about to the

The ninth, faire weather, we sayled thirteene leagues West, the wind at North. At noone we founded, and had an hundred and twentie fathomes, greene slime. The tenth, the wind ya- 10 riable, with fogge and raine: wee fleered West North-west flue and twentie leagues: and at 74. degrees 57. noone we observed, and had the latitude of 74. degrees 57. minutes. The eleventh, was thicke foggie weather; wee layled foure and twentie leagues West: and at eight in the Ecuening wee founded, and had ninety fathomes, foft Oze. The thirteenth, at noone wee had fight of Chris Cherie Iland. Hand, being within a mile of it, before we did see it : and the same Bevening wee got into the Cone, and mored our ship. Here we stayed twelue dayes, taking what it pleased God to send,

The fixe and twentieth of August, we left the Iland, because the time of the yeere was fare spent, and returned for England, where (blessed be God) we safely arrived in Saint Cathering Poole, in the River of Thames, on Saturday being Saint Masshews day, and the one and twee- 20

There were in the Hauen of the River Pechora, at our being there, about thirtie Lodias, or fmall Raffe thips , having ten, twelve, fourteene , and fixteene men in each of them : which purposed to haue gone, some to Nona Zembla, some to Taffe gorodoe, and some to other places in Mongamifey, to the East of the River Ob. Their Louis for the most part, were of Ufing, Cal.

Co. Cavucks or

to. Lodiar.

Alio, we that went up to the Towne, found about fiftie Cayucks, or Boats of foure, five, fix, filling Boats, and feuen tunnes a piece, filling in the River of Pechera for Salmons, and other kinds of fill; most of which Cayucks come from the great Towne of Viting, and the Townes thereunto adioyning, by the River Ing, through the Land into the River Pecbora, and at the Bolman, at the Riv 30 uers mouth they tooke most part of their Salmon.

CHAP. IX.

A Letter of RICHARD FINCH to the Right Worshipfull Sir THOMAS SMITH, Governour; and to the rest of the Worshipfull Companie of English Merchants, trading into Ruffia : touching the former Voyage, and other observations.

Sa Ight Worshipfull, my dutie remembred vnto you, with prayer to God for the preservation of your healths and prosperous successe in all your worthie affaires. My last Letters vnto you were from Typani in Lapland, by Thomas Hare-castle of Hall, dated the foure and twentieth of May, 1611. The other, the nine and twentieth of May from Kyldin neere Camen, by a thip of Hamburg : which forefaid Letters were directed to our Gouernour, the right Worthipfull Sir Thomas

Two Croffes flanding on the land. Pinega.

Smith, Knight. May it now please you further to understand, That the ninth day of July, wee They arriue in came to the mouth of the River of Pechora, which the Ruffes call Pechorstoi Zanores with our 50 the Fortor Pe. Ship. And being entred into the aforesaid Harbour, it was full of Ice, and hard to finde : for we found no mayne Land, faue a small Sound behind the Ice. And labouring to and fro along the fame, we fent William Gourdon in our Shallop manned to the shoare : who, as soone as they were landed, espied two Crosses standing on the sand : and presently our men espied three men comming toward them. These men belonged to three Boats of Pinega, which Boats had beene in our companie not long before, at a place called by them, Promora, by vs, Observe, but by other Writers , Morfoomiz. One of thele Ruffes came on board of our ship, and told vs, that wee could go en of arther with our flip, then the place, that their Velfels, called fonctor, rid in; and that to the Towne we must goe in small Velfels; giuing vs directions to slayle by, for the better finding of the Towne. After our getting ouer the Barre of the Pecborskei Zamoret, and that we 60 were come to an anchor, we rode in great danger by the abundance of Ice, and the strong tide Ship endange were come to an anchor, we rode in great ganger by the abundance of ite, and the chief red by ic.

both of the ebbe and floud, which droue the fame to forcibly againft our fhip. For, the elementh of July, lying in foure fathomes water, a piece of an Iland of Ice, fet with Juch a power against our ship, that it droue vs out of our riding into eight foot and an halfe, and nine foot water.

The eleventh of July, Master Iofias Logan , William Gourdon , and William Purseloue, with our Shallop went vp to the Towne of Pechera, taking directions of the Ruffes for the finding of the same. Neuerthelesse, two dayes after their departure from our ship, they had mistaken their way, if by chance they had not met with a small Russe Boat, in which were Russes that directed them. Being about thirty Verits from the Towne, they came to the house of one Valili Deadonlose, who that this present is one of the chiefest Customers : by which Customers the Towne of Pechora is now gouerned, fince there was no Gentleman fent from the Mofco. This man gaue them good entertaynment, and fent up with them a man of his owne, fearing that the people would bee amazed at our mens fudden and vnexpected comming. Yet as foone as they Our men ar-10 espied our people, they were all exceedingly afraid. Divers of them with their women fied in- rive at Towne to the Woods, vntill that one of the chiefest Customers had sent for them other Customers, who of Pectors. at that time were all out of Towne. But being met together, Master Logan shewed them the of the English. Priviledges, of feuerall of their Emperours granted to your Worships. After the peruling of which, with the good report given of Matter Mericke, your Agent, and our Nation by one of Colmogro, with whom Mafter Logan was acquainted ; the Townel-men were well fatisfied: and appointed our people an House. And many of them sent Bread, Pies, Ducks, Fish, and such like

tinual admiration how they found the Towne. Touching the Inhabitants, there is no doubt, but that they will be glad of our trading thi-20 ther. Neuerthelesse, by that which I have heard and perceived, it is very likely, that the same will be distassfull to the Merchants of the Countrey, and others that travell thirther in the Winter time, out of many parts of Rullia: and also, to them that trade in the Summer time, by Sea to Mongofey, and through the River of Peoza in Cayucks to Perm, Ouft-zilme, and Pechora.

vnto them, entertayning them very well, according to the fashion of the Countrey, with con-

The seuen and twentieth of July, our Shallop with a small Ruffe Boat , returned to our ship from Pechara Towne, departing from the fame the Thursday before, being the fine and twentieth of Iuly, in our foresaid Shallop, and Rasse Boat, were sent downe by Jossa Logan, fine and fortie bags of white Partridges feathers, and an hundred and seventie white Foxe skinnes. These White Par-Feathers and Foxe skinnes, are bought of a Colsmogro man, to be payd for the lame in Russia by Fraxes. Mafter Mericke; and, as I vnderstand, not so cheape as others dee buy there of the Fowlers 30 themselves. But if two men were left, one at Pecbora, another at Ouft-zilme, and Perm, with

ready money and a little commodities, much good might be done in the Winter time by buying of Sables, Beuers, Beuers wombs, Squerrils, Foxe skinnes white and dunne, Losh hides, and Deere skinnes. And for the transportation of your goods to Peebers, or bringing of your goods from Pechera; the fame may be done from Archanged upon the Dunna to Mezen, and from Mezen to Pechera, Ouff-zilme, and Perm, both by Winter ouer Land, and in Summer through fresh water Riuers, or alongst the shoare with speed, and with a little charge : as by the manner of their ordinary travell appeareth, as it hath beene of a trueth delivered mee, from the mouthes of men of long experience.

The last of August, came into Pechorikoi Zameret, or the Hauen of Pechora, fixe and twentie The Fleet of 40 Lodias or Boats, which was the Fleet let out from Ouffing, Colmogre, Pinega, and Mex.en: all of Mongofers but having been croffed with contrary winds, & the time of the Occupant plant pl yeere being spent, they gaue ouer their intended Voyage; purposing with the next faire wind, to sayle to the Towne of Pecbora, there to lay up their Lodias and commodities till the next Spring, and themselves with their small Boats or Wherries to goe home, passing from thence up the River of Peoza, which they told me they could easily doe in a moneths time. As soone From Peopara as this Fleet of Lodias was come to an anchor, many of them came aboord of our thip, wondring to colmegrois to fee a ship there. They demanded of me, how wee came thither, and what the intent of our moneth comming was : and whither we purposed to sayle from thence. Among these were some which by Ruuer.

feemed to be Merchants, who asked to buy Lifts, remnants of Cloth, Cap-clothes, Aqua vita, 50 especially, they asked for small Pewter D shes, which I understand to be a commoditie fold by SmallPewter them to the Samoyeds, at a great rate. I answered them, that the goods which wee had brought, Diffee, a great were part already at Pechora, and the rest was to be transported thither, as soone as the Vessell came that was hired to carrie the same up : so that, if any of them were minded to buy of our commodities, they might have it of one of our Countrey-men there. After which, two or three of them demanded of me, whether I would buy any Sables, or Squerrils: which was but a brag. At this time many of them being on boord together, some of them were in private talke, which was my chance to ouer-heare, and was as followeth : If these Neamchines, or Strangers refort to these places, it will be an occasion in short time to make vs to be without Bread. The like speeches I heard a little before, of two men of Pinega; and of an old man remayning in

60 Pechora, that came downe to our ship with the Feathers. Touching the goods left with William Pursglone, Marmaduke Willon, and the Ruffe, in regard the same lay in no good place, we were desirous to have hired one of their Russe Boats, to have carried the same to the Towne at a reasonable rate; the rather because it was on their way, and their Boats were not overladen: which they with two Boats might have done with ease; yet

they would not, valeffe wee would give them thirtie or fine and twentie Rubbels at the leaft,

and that with Condition, that they might diffribute into each Boate formewhat thereof. Therefore vinderstanding their vireasonable demand, having a Boate already hyred, wee viterly refused to talke with them any further thereof : especially when they were minded to diuide the goods into all the fixe and twentie Lodias or Boates : which had beene a tricketo

The first of August, leaving Master Iosas Logan, William Pursaloue, and Marmadake Walson, at Pechora, wee sayled ouer the Barre of Pechorabie Zaurous, directing our course for Nona Zaurous. bla, till that wee had runne fo farre, and were fo inclosed in huge Ice, that in a Day and a Night on, the true wee had tunne to latte, and well to inclose in large tee, that he Day and a raight we could goe neither backward nor forward: And finding no meanes to proceed on our intended Voyage for Nona Zembia, wee cleared our felues out of that place. Truth it is, that this hath beene an hard Summer to all the Rufer, both to them which were bound for Mangazen, and Omeli Fishing: those that went to kill Morses, and fishing of a certayne Fish called Omeli. From the forelayd place wee fet our course for Cherie Hand, intending to meete with the He of Colgoione, and wil-

loughbies Land. With Colgoiene wee met, but we miffed of the other. The feuenth of August, Villiam Gourdon and I with our Shallop went on shoare. This Colgoiene, is a very long and broad Iland with many Vallies in it. On the same are many Geese, which the Russes vie to take with Nets in the time of the yeere, before they becouer fledge. In this Iland feemeth to bee flore of Hawkes. Heere William Gowrdon and our Cooper, caught two Hawkes, whereof one was spoyled in the taking, the other remayneth aline. The thirteenth of August, wee arrived at Cherie Hand, standing in 74. degrees and odde mia 20

nutes, and Anchored in the South Coue, finding the same very cleare of Ice. And presently after our Ship was at an Anchor, lames Vadin the Mafter, Willian Gondon, and I, went on shoare on the Coue to looke for Morfes. Here we found a certayne Note, which was left thereby Thomas Edge: the effect of which was: That he arrived there with three Shalops from Greenland, and that there he had found the Ship called the Elizabeth, and that hee was gone in her to Greenland the foure and twentieth of July, hoping to finde the goods which hee had left there : and that hee did purpose to returne againe to Cherie Iland with as much speed as could be made. Subscribed:

At our comming to the Hand, wee had three or foure dayes together very fine weather : in which time came in reasonable ftore of Morses, both at the South Coue and at the North-fide: 30 and wee were in good hope we should have made a fauing Voyage. Neuerthelesse, though there were store of Beasts, yet by no meanes would they goe on those beaches and places, that formerly they have beene killed on. But fortie or fiftie of them together, went into little holes within the Rocke, which were so little, steepe and slipperie, that as soone as wee did approach towards them, they would tumble all into the Sea. The like whereof by the Masters and William Gourdons report, was neuer done. For lying as they did, and being so shey as they were, it was not possible to doe any good voon them. Moreover, to get them off these foresaid Rockes to make them come on shoare vpon their accustomed places, the Master and our men on both sides of the Hand went to drive them away, yet they would not. But by often driving of them out of their 40 holes, we killed as many as wee could. In the end the weather growing stormie and cold, there were few or none of them left. Wherefore seeing all hope of good to be done of them to be paft, wee departed from thence the fixe and twenneth of August, 1611. for England. We did not perceiue any Ship of Hull to haue beene there this Summer.

Hauing touched the chiefest points of our Voyage, I thinke it meete to set downe somewhat of the State, Commodities, and Trade of Pechora, Oust Zilma, and Parmia.

The Towne of Pechora is imall, having three Churches in it : and the most part of the people are poore. In the Spring and a great part of the Summer, they live by catching of Partridges, Geefe, Duckes, and Swannes, of which they every Summer take a great number. The Helh of these Fowles they salt, and line of them the most part of the Winter. But the feathers of the said Fowle they gather together, and fell to the men of Colmogro, Oufing, and others, that come e- 50 uerie yeere ont of Ruffia to buy the same : Some of them give a little money before hand to the Fowlers. Which must be done with great care as the times are now. One Meafed a mans sonne of Pechora, whose Father is a man of great dealings, told mee, That they fold white Partridge feathers to men of Colmogro for readie money, at fine Altines the Poul, and Duckes feathers (among which was Downe) they fold now for feuen or eight Altines the Poud. Likewise hee told me that in former times the Ruffes that vied to trade thicker, before the people of the Countrey knew what Commodities were worth, had commonly a Poud of Partridge feathers for oftheir Pence, two pence of their money, and a peece of cake Sope worth at Colmogro ten pence of their money. So that the chiefest Commoditie and best cheape is Feathers, being bought at Pecbera with reache Ruffe money of the Fowlers themselues, and not of the Ligers there, that vie to sell them 60 A great filhing to vs at Archangel on the River of Duyna.

Moreover one hundred English miles on this side of the Towne of Pechora, is a place called by furifof August, them the Boluano, where they take great store of Salmons. But it is alwayes the first of August before they begin to cast out their Nets. And oftentimes toward the later part of the Summer. they have such store, that they are sold ordinarily for foure-pencea Fish, and sometimes for a penie a Fish of their money. Yea, in a plentifull yeere, I haue beene told, one may buy whole draughts of Salmons for a very small summe of money. The Salmons heere are fat: three Fishes weighing commonly a Powd and no more. The best fort of the people of Pechora, vie to preserve a great quantitie of their Salmon with a little falt. For they falt eightie, or one hundred Fishes with a Powd of Salt and many times in plentiful yeres, much Fish is cast away for want of falt:

CHAP.O. Trauelling Deere. Ruffe Merchants. Commodities, Provisions.

which they are loath to bestow when Salt is deare. This Salmon is carryed by the Pechora men to Mozen in Sleds, drawne with Reyne Deere. Ic But if they be minded to carrie the faid Fish from Mezen to Colmogro, then they carrie the same from thence with Sleds drawne with Horses.

Also many men of Colmogro, Pinega, and Mezen, buy Salmons at Pechora, and carrie it in the Winter time to Mezen, to which place they pay from Pechora for the hyer of a Sled and a Reyne Deere, ordinarily ten Altines, being twelue dayes journey : and from Mezen to Colmogro, being fixe dayes journey, they pay foure-pence a Powd at the most. The Deere that travell from Pechors to Mezen, will not draw about feuen Powd weight. This way is trauelled every Winter twice. The first is fixe or eight weekes before Christmaile. And the second time is two or three weekes before Shrouetide: which bee the times that they very diligently observe to sell the Salmon in. Most part of the men of Pechora, have every one his owne Deere to travell with. And 20 Some particular men of the better fort haue twentie or thirtie Deere, which they let out to hver Travelling in the Winter time; and in the Summer time they put them foorth to the Samoyeds to keepe. Deere, Also when the Winter way is set and beaten, many Merchants and others come out of Rullis to buy Sables, Beuers, Beuers wombes, Squirrels, blacke, white and dunne Foxes, of which in the Winter time is flore, brought thither by the Samoieds round about those parts : which Trading

is in the Winter time and not elfe. The chiefest Ruffe Merchants or Furriers that vie thele parts, I have beene told, are the Obleazones, the Shepeikins, and the Yeadomskoies. The Commodities carryed by them, are red, and yellow Cloathes; but chiefly Ruffe money, with which they buy Commodities there of the Russes, as well as that which they buy of the Samoieds

The Commodities carryed from Volochda, Onfling, Colmogro, Pinega, and Mezen, to Pechora and Mongozei, are Meale, Bacon, Butter, Ote-meale, Tolockno, and Salt, with some small quan-

titie of Yeafts and tanned Leather, with some Cloath, and other of our Commodities. These Commodities at Mongozei are fold at great rates. But at Pechora. Commodities are fold sometimes deare and sometimes cheape, in respect of profit. For if the Fleet, being at least thirtie Boates that fet out every Summer for Mongozey, laden with thele Provisions and Commodities aforesaid, bee croffed with contrarie windes; and that by the latenesse of the yeere they cannot reach to Mongozes, but are constrayned to leave the same and come for Pechora, (as this yeere 1611, they were:) Then commonly Meale, Bacon, and fuch like Commodities with them are not deare. For by report a little quantitie of Meale doth serue all those parts. For the greater Fishin stead part of them live of fresh Fish fod and dryed in stead of Bread, of which Fish they have plentie. of Bread. Likewise, there vieth not to goe from Colmogro with these Prouisions, aboue two Boates in a Summer directly to the Towne of Pechora: especially fince the Towne was burnt, and that there was no Gouernour in the same.

Allo by the Mongozey men it did appeare, that there was no likelihood for them to veter that quantitie of Commodities at Pechora, at any rate. For it there had, there would not have resolved to lay vp their goods in Ware-houses till the next Spring, and then to proceed for Mongazer.

Further from the Towne of Pechora, is a place called by the Ruffes, Ouft Zuma. This is, by Ouf Zuma. the description given vnto me in distance from Pechara, as Oussing is from Colmogro; and is likewife to bee trauelled by water against the streame: And in Winter time it is to bee trauelled in 50 Sleds drawne with Reyne Deere. In this place of Onft Zilma, is great store of Squirrels, Beuers, and Beuers wombes, Foxe skinnes white and dunne, and other Furres, but chiefly Squirrels, of which is great flore by all mens report, that I have talked withall. So that having a man in the Winter time at this place, a good quantitie of Squirrels and other Furres, may bee prouided at a reasonable rate. Moreouer, heere are to be bought Losh-hydes, and Deere-skinnes, which in the Winter time are brought to this Towne of Ouf Zilma from Perm, which is not farre from thence. But to buy Losh-hydes and Deere-skinnes, the best course it to goe from Oust Zilma to Perm, and to buy them there, where one should bee fure to have Chorse, and at a farre better Perm, rate. Also those that wie to come out of Ruffia in the Winter time to Perm, to buy these foresaid Hydes stoward the later part of Winter carrie all these Hydes by Sleds, some two or three dayes 60 Journey from Perm to the fide of a certayne River, neere vnto which is a small Towne or Village; where as foone as the Ice is gone, they have small Dorshenicks and Floates, on which they

lade their Hydes, and being out of this River, they enter into Disyna, and transport them to Colmogro and Archangell. Likewise being at Pechora, Oust Zilma, or any of those parts, there is in the Winter time to

way.

Ι.

bee had among the Samoyeds, Elephants teeth, which they fell in pieces according as they get teeth, whence, it, and not by weight. And I have beene told, they fell the same at a very small rate. It is called in Ruffe, Mamanta Kaoft. Thus much may suffice at this time to bee spoken of Pechera, Ouf-

Now I will fet downe as I have beene enformed by divers Ruffes, the Names of the chiefest places which they vie to fayle vnto from Slobodca, an Hauen fo called in the Prouince of Mezen, to the Pechorikoie Zamorot, or the Hauen of the River of Pechora, and the Diffances to each place : with a Direction how to fayle from Pechorskoie Zauoros up to the Towne of Pechors,

I will also set downe the Russes layling from the forelayd Pechorskoic Zanorot, to the Tomborskoie-share. And from thence to the River of Ob: and thence to Mongozer,

I will likewise set downe a true Direction, to goe by water in their Boates called Capoks, through the River of Peoza, and other Rivers, till they come from Mezen to Ouft Zilma,

Likewise I meane to write of the Samoieds, travelling from Vargats to the parts of Mongozes, in the Winter time, and from thence backe agains to the forelayd Towns of Mezen,

Lastly. I will intreate of such Commodities as are to bee had at Mezen, with the speedie pass fage from thence to Colmogro by Sea, or by Land in the Sommer time. And it is as followeth,

The things aboue mentioned, that I have not seene my selfe, I have not sleightly set downe from the mouthes of one or two, but from the mouthes of many ancient men, well experienced 20 in the Trauels and Trades of all these parts, which Master I ames V adam the Master of our Ship can likewise witnesse. Therefore if the same may bee any way beneficiall voto the Company, and that thereby I have discharged my dutie vnto your Worships, I shall bee heartily glad thereof, Thus fearing I have beene ouer tedious by my rude Letter, I reft, with my heartie prayer vato Almightie God, for the happie preferuations of your felues, and all yours. Written on Shipboord, the last of August, 1611.

> Your Worships bumble Sernant to command, RICHARD FINCE.

The Names of the principall places, which the Russes sayle by from Mezen to the Pechorskoie Zauorot, or the Hauen of Pechora, 1611.

Rom Mezen to Candinos, with a faire wind and stiffe gale, is thirtie houres sayle: They say-Fling commonly almost 40. leagues in foure and twentie houres, according to which it is 50. leagues. From Candinos to the Ile of Colgoie, is as before thirtie houres fayling, and after 40. leagues in foure and twentie houres, is 50. leagues. From Candinos to Promoja or Obsene, is twentie houres fayling, or 35. leagues. From the Ile of Colgoie to Colocol cona, is fifteene houres 40 fayling, and reckoned as about appeareth, is 25. leagues. Along the shoare of this place are heapes of Sand, in the forme of Bells. Therefore the Ruffes call this place Colocol-com, being derived from Colocol, which in English fignifieth a Bell. From Colocol coma to the Peasaneetsa, is three houres fayle, or 5. leagues. This place is onely a small Brooke which they vie for a Sea-marke, more then for any benefit is to bee reaped at the same. From Peafancetsa to the Peeborskoie Zamoret, is fixe houres fayle, or 10. leagues. So that from Colgoie lland to this forefayd Pechorskeie Zaworot, is not aboue 40. leagues at the most.

A direction to sayle from the Pechorskoie Zauorot, where wee rode with our Ship in August 1611. to the Towne of Pechora,

Rom this Pechorskoie Zauoros, they fayle into the Sooboie Mora, or Drie Sea, and not before: firring away from hence South-west and by South, and in a faire gale of Winde, in source Dolgoi-Handin A firring away from nence South-west and by South, and in a laste gate of vender, the Social Ma. houres they come to an Hand called Dolgoir. This Hand is reported to bee three of purk soft the Social Ma. Versts long, having on it in some time of the yeere many Geele, which the men of Pechora take before they bee able to flie. From this Dolgoie, they flire away South South-west; and sayling this course with a faire gale of wind, in eight or nine houres sayle they come in sight of the maine Land, being an indifferent high Land. This Land is called the Bolnanon; and this is 20 leagues at the most. This Boluanou they have on their Larboord side. Neere this place are divers that inhabite in Ruffe Houses: where in the Summer time they lye a Fowling, and fishing of a certayne Fish called Omeli, which are like our Maccarels. If need bee, heere a man may have a guide or

CHAP.O. Greene Hands, Thicke or troubled River, Greene Lake.

good infructions to conduct him to Pechora Towne. Hard by this Bolnanon, is the Ouflia or barre of the entring of Pecbora River. For as soone as you are over this barre, you come into the Rivers mouth, which leadeth to Pechora To wne. If if bee thicke foggie weather, then one of them continually foundeth the depth of the Channell, keeping as neere as they can in the deepeft water : and in fostoing, they feldome mistake their way, so that they stirre away West from the Belian men to the Rivers mouth, keeping the Land on there Starboard fide. And by all mens report. from the Balasson to Parbers Towne, is with a faire winde and fliffe gale, not about twentie houses layle: which according to their layling, is about three and thirtie leagues. And it is not about fiftieleagues from the Pecharibie Zanarot, where our Ship lay, to Pechara Towne.

The names of the places that the Rulles fayle by, from Pecherskoie Zaugrot, to Mongozey : with the manner of their Tranell, and Distance betweene each place, or time of Sayling, Halling, and Rowing Unto the Came.

Rom Pecter their Zampot to Marpheyone Offrens, or Hand, is with a faire wind and fiffe gale, Mulpheyone G. Tat the most thirtie houres sayle, which being rackoned as before; after fortic leagues in four from and twentie houres is fiftie leagues to which they furre away Eaft From Marphyone Offrone to Tanharibeit the Yoularskoie-hare, is nine hourestayle or fitteene leagues. When they are come to this Iland, Share, they fir away rom thongs East to the faid Touborshois fhore. Also in cleere weather from Mai. The Meedous beyong Offices, they can be the maint Laul, with the Mendonetichoit Zamers: where the two the Zamers: where the two the Zamers is the Laul with the Mendonetichoit Zamers: where the two the Zamers is the Laul with the Mendonetichoit Zamers: where the way that the Laul with the Laul take a kinde of Fishes, called Omels, which are like Maccarels : of which heere are flore. This The owo Imaine Landthey have on their right hand or S arboard ide, lying South from Marpheyone O. lands called Grone. Alio to the Southward of the Marpheyone Offrene, is another Hand which the Ruffes call Zelentfee, or Dalgore, that is, the long land, So that there are two Dolgore : the one, within the Pecbershoe the Greene I-Zaugrot, entring into the Saskey Mora, or Dru Sen : The other is this, which is betwire the Datese Officere. Marpherone Offrene, and the Tongarkere-bare; lying as before was layd, South from the fayd or the Lord. 30 Marberone Offrone. From which fland in a cleere day they can feet he Land of Vajgats, which land. lyeth on the Larboord fide, being very high Land. So that flurring out-right, in the middle betweene the Mondantshow Land on their Starboord, and the Land of Vagents on their Larboord fide, they fayle directly into the Tonger heis bare. Likewife there is not much of this Tonger fees bare. We or they fay, that being at one end, they tan fee the Ses at the other end thereof, Alfo, whom the Land of Kayans are neither Flats not Stoalds. Projecthe Tongorshon Share to the Karteis Goods Caricois Gala, is twelve boures fayle, or twentielesques. In this Bay or Goods, is the Meaf. Healing O. may Offrone, or Meaftury Hand. Further it is to bee immembred, that as foone as they enter this nor Hand. Carriese Goods or B y, they layle up a Ruer, leaving this Bay on their Starboard : which Riuer Any Hand. A Mostney a Rees, which figuation the thicke or troubled Riuer. From Mostney Rees, Dringert them made the transparents are as a final figuration the transparent and the transparents of the transparents are transpar zereb. And being over the Mostneya Reca, which they are eight dayes and eight nights in halling along the shoare by the Rope or Beachana, they come into two Lakes, which two Lakes from one end to the other they commonly row over in one Day or two Tides : the fame not being about ten or twelue leagues. Having gotten to the end of those two Lakes, they come to a The Newlise. place called the Nanolog, which fignifieth an Ouer-hall. And it is almost two hundred fathous, or Ouer-hall. or foure hundred paces in length: And having emptyed their Veffels, called Cosches, laying poles under them, with the Companies or men of foure or fine Boates, having twelne or thurteene men in a Boate, they hall their Veffels over, launching them into a third Lake, which they call the Zelesey Ofers, that is, the Greene Lake. These Querahalls constraine them to confort Lake. themselves into Companies : otherwayes they could not get this way to Mongozey. At the and of this Zelenoy Ofera, or Greene Lake, they come into the Zelenaya Reca, or Greene River, in- Zelenoya Reca, to which they runne with the fireame, being often compelled to emptie their great Boates with or The Green their Lodias, or Wherries, laying their Goods vpon the shoare : which being done they row into 06. their great Lodias ouer the shoalds emptie; and having got over the shoalds, they bring their 20 ods on boord againe, And thus they doe in divers places of this Zelenora Reca. or Greene River:

by reason whereof they are commonly ten dayes from the Ouer-hall, before they can get through this forelayd River, which is all with the streame; but the Distance hereof cannot yet 60 bee perfectly learned. Being come to the end of this Zeleneya Reca, they enter into the River of The River Ob. Ob; and having rowed a little way up the same, they come to a place which they likewise call Zanorot: which fignifieth a turning, winding, or entring into a place. From this Zanorot, they The Zanorot in turne into the Tamze Reca, flirring away South to Tamze River; but it is foure and twentie houres fayle, or fortie leagues from the River of Ob, before they come into any part of the Tanze Tanze Reco.

as followerb.

Having embarqued themselves at Moden, in these small Cayooks or Boats, covered with the Latties of trees, they sayle to a River called Pages Rees. From themse they sayle, or draw The Appears of the states and a state to the residence of the states of Veffels over at times with Horfes, that come from Meson of purpole; lying there the most part of the Summer, to that intent: and they pay fixe pence Raff, for drawing outran empty Boat. Being ouer this Ouer-hall, they drite with the freame in three dayes to the Towned Only-fames: and with the fireame in four dayes they drive to a place called Pullsares; and from Politeres against the fireame in four dayes they drive to a place called Pullsares; and Townson's Debug Alle Services against the fireame they come to the Bolissons, and from the Bolissons to the Towne of Peebers. Also, many of these Boats very often in their returne home with their fore-Gid Cayooks, carrie Furres to Uffing, and divers other places into the Countrey of Ruffia. All

CHAP. X.

The Voyage of Master Iost As Loo AN to Pechora, and bu wintering there, with Master WILLIAM PVRSGLOVE, and
MARMADVRE WILSON. Anno 1611.

He first of July, William Gardon, Richard Fach, and William Pursglone, went on The former shoare at Snatinole, where two Crosses stand. The second, wee weighed anchor part of the againe, and stood into the Bay because of the Ice: and that night wee went on Voyage is spaine, and tood into the day because of the feet and flood it about Statings. The omitted, to avoide tedious fift, we stood to the Eastwards fine leagues more, and about twelve of the clocke reperition. at night, wee were thwart of the lland of Toxar. The tenth, at eight of the Toxar.

clocke at night, we weighed, and went ouer a Barre, at two fathomes, and came into Harbour. where wee anchored at ten of the clocke in the morning in fine fathoms, having fands round ahout vs being land-locked. The eleventh, my felte, William Gurdon, and William Purfoloue. with fixe of our men more, departed from the ship with our Shallop, to goe up to the Towne The fourteenth, wee arrived at the fifthing house of one Enan Vasition sone Somban, where the Puffores.

people were afraid of vs, and were ready to runne away: but we spake to them, and gaue them

some Biscuit and Aqua vita, and they fod vs some fish, and shewed vs our way to another Fishery : but they ran away from vs, so we departed on our way. The fifteenth day, at soure of the clocke in the afternoone wee met with a Rufe, that was borne at Ufting, who gave vs Milke, and such things as he had, and we gave him some Biscuit, and some Aqua visa, and hee directed vs vnto another Fishery, about some fine miles from that place where wee arrived, about sixe of the clocke the same night. But comming alabare, we found not any, same one man, who after fome conference had with vs, and giving him some Bread, and some of our Aqua vite, hee told vs. that the Mafter of the house, with three of his sonnes were hunting of Ducker, and that 30 their wines were afraid, and were runne into the Woods to hide themselves, leaving a young childe behind them for hafte. So he brought vs into the house, where by that time that we had flaved an houre (because there were so many Muschines, which are like vnto a Midge, and fling most horribly, so that we were not able to fray without) the Master of the house, and his somnes came thither, who at the first were afraid, thinking we came to rob them. And they were about to shoot our men in the Boat; but one of our men holding vp a Biscuit cake, they then came to them, and spake voto them; but our men not voderstanding them, made them signes to the house, where my felfe, William Gurdon, and William Purfelone were: who, when they came into the house, being yet afraid, they came in one after another. Now, when we had faluted them after the Ruffe manner, they asked vs of whence we were, and for what cause we came thither: 40 whereunto I made answere, that wee were English-men, who because of the troubles in Russia, came thicker to feeke a Trade, having heard divers times of the fame of those parts. Then hee replied, that in times past those places had beene good for trading : but now, by reason of a bad Gouernour, in those troublesome times, vpon a spleene he had fired the Towne, and burned above an hundred houses: and so by that meanes they were fallen into pouerty, and trading decayed, by reason of his great exactions. Yet hee faid, that they have great store of Salmon, and that the last yeere they got about 15000. Salmons, and in the Winter is their chiefest Mart, For then the Samojeds come thither from divers places, and bring Sables , and Beavers , white Foxes, Rofamackes, Feathers, and some Squerrils. So having supped with him, we gave him a

gallon of our Aqua vita, and some fortie cakes of our white Biscuit; and three or foure pound of Raisins: for we heard, that he was one of the principallest men in the Towne. Then desiring 50 his fauour, he holpe vs to a man to goe with vs vp to the Towne, because of the fearefulnesse of the people, which they conceive through the Warres of the Poles: and fo wee departed from thence that night to the Towne.

The fixteenth, in the afternoone we arrived at the Towne of Puffozera, where wee found not many people, confidering the number of houses there, which are bet wixt fourescore and an hundred, being of wood, built after the Ruffian manner, and they are subject voto the Ruffe, obseruing all their Rites as doe the Ruffer. The people were all abroad (tome, in getting of Morfes Oyle, and Belougaes Oyle, and some fishing of a fish called Ometta, which is a very sweet fish, and some hunting Duckes) saving the Customers, and three or soure more, who were likewise afraid of vs, although we had one of their owne people with vs, and were ready to flee away. 60 So we feeing their fearefulnesse, caused their man to goe first on shoare with vs three about mentioned, not permitting the rest of our men to come on Land as yet : then hee calling to them, they stayed, still perping from behind the corners of their houses, vntill at the last there was a Ruffe, one of Colmogro, that had wintred with them, who knew me, and had seene me some two

veeres before at Cola in Lappia, at his Vncles house. And so he encouraged them, speaking greatly in our commendation, thewing them, that I was a Merchant, and came to trade with them, and not with any intene of harme: for hee knew mee very well, and told them, that I was at Cola foure or fine yeeres together, and lay at his Vncles house. So he came to me, and tooke me by the hand, asking me how I did, and told me his name, and how hee had seene mee with his Vincle at Cola. Then I called to mind, that I had feene him there, and fo we grew acquainted and he went with vs to the Custome-house, where staying an houre, at length the Customer came; and after many questions had concerning our comming thicher, I craued licence, that some of ws might winter with them: which they denyed, alledging that they durst not without the Emperour of Roffis his licence. Whereupon I answered, that the Emperours Maiestie, when he was 10 raigning, was very gracious vnto our Nation, aboue all other strangers; and shewed what great raigning, was very grantous visio on tweeton, about an object strangers, and newed what great priniledges hee had befrowed on our people: and how by the English-mens meanes at the fift, what a trade is now at Arkania, and what profit came, not onely into his Maieflier Treasure, but also into all parts of his Dominions, which in time might be brought hither: and withall shewed the Emperours printledge. Wherefore then they began to put away feare, and willed vs to flay fine or fixe dayes, vntill he had fent for the chiefest men of the Townes-men, who were abroad and then they would give vs an answer. Then I desired, that we might have an house to be in, and not to ftay without doores. So he gaue libertie to any that would, to entertayne vs, where to there was one Calless that made answer, that he would: whereupon wee went with him, and were in an Ambar of his, vntill wee received answer from them. In the meane time wee 20 made much of them, and feasted them with our Aqua vite, Biscuit, and Figs, that we might the

The foure and twentieth, the Customers came to give vs our answere, and told vs, that they had concluded that we might stay if wee would : but they must write up to the Marke of our being here. So we thanked them, and gaue them such entertaynment as we could, and sent prefents to fixe of them of the chiefest, which they tooke very thankfully, and promised what fauour they could. So this night I made ready my Letters to fend for England.

Molgomfey.

The fourth of August, fine and twentie Lodyas arrived at the Towne laden with Meale, and others which were bound for Molgomfey: but by reason of contrary winds, they were forced into Pechora, and came up to the Towne of Puffexer, and vnladed to make fale,

The fixe and twentieth, we removed from the house where we were at the first, vnto a Poles house, who is christened Ruffe, where we are to remayne all the Winter.

Pele baptized Froft in Au-

The nine and twentieth, the frost was so strong, that the Ozers was frozen ouer, and the Ice drining in the River to and againe, brake all the nets, so that they got no Salmon, no not so much as for their owne victuals. The second of September, the frost brake vp againe, and it was open weather. The eight of September, there was a Soyma, which the Towns-men bought, that went downs the River to have gone for Ingoria, and had a faire wind: but they neglecting two dayes fayling, that would have carried them forth of the River to the Sea, the wind came contrary, fo that they were wind-bound, and could not get any further: and on the nineteenth, gaue ouer their Voyage, and came up to the Towne.

The thirteenth of October, the frost was so extreme, that the Ozers stood in one night, that men did walke on it the next day, and so continued all the Winter after.

The twelfth of November, there went two men of Penega to Uf-zilma, to buy Squerrils, and Beauers, and other commodities. The thirteenth, the Sunne arole at South and by East by the Compasse, and set at South-west and by West,

The foure and twentieth, there went divers men, with at the least, three or fourescore Sleds Slobeden Mart. drawne with Deere, to a place called Slobeden, where they hold a Mart, from the beginning of December to the middle thereof : and they carried fresh-water fish thither, with whom William Purs glone went into Russia. The fixe and twentieth, the Sunne arose at South and by West by the Compasse, and fet at South-west and by West.

The first of December, the Sunne arose at South and by West Westerly by the Compasse, and fet South-west and by West Southerly. The fourth, the Towns-men of Pecbers went over land into Ingoria, to trade with the Inhabitants there, and the Samojeds.

The eleventh, Marmaduke Wilfon faid that he faw the Sunne, but it was but the way of the Sunnes beames. The thirteenth, I faw the Sunnes beames my felfe, but I could not fee the Sun it felfe, although I watched it very strictly. The fourteenth, it was snowie, and stormic weather, and continued so vntill the foure and twentieth day, which was close weather also. Sunne retur-

The flue and twentieth, being Christmas day, I saw the Sunne, and it rose at South and by West, and set at South-west and by South, it having the neathermost part of it all the way init with the Horizon. The fixe and twentieth, it was flormy and fnowy weather, and fo conti- 60 nued vntill the end of the moneth.

The second of Ianuarie, the Sunne arose at South somewhat Westerly, and set South-west

The fift, William Pursalone returned from Colmogro. The eleventh, the Sunne arose at South by East by the Compasse, and fet at South-west and by West.

The twelfth, there came a command from the Patriarch, that there should bee a generall Fast, Generall Fast both for young and old, not exempting the fucking babes; which began the thirteenth, continu- for three days ing three dayes space, they neither eating nor drinking, so much as water, neither admitted they very fria. their fucking Babes, faue those that fainted, to whom they gaue a few Figs and a little water.

The nineteenth, the Inhabitants of Pultozer that went into Ingeria, returned from thence. baning had but an hard Voyage, by reason of the Warres which the Samoyeds had amone it themselves : so that they durit not goe into Molgomsey, where they catch the most part of the Sables which come into Rullia.

The three and twentieth, came the Carratchey, which is the chiefe of the Samoreds, but they In had no commodities to speake of, by reason of the Warres: so that they neither durst trade with the Samoreds of Moleomier, neither hunt for the Sables themselves, which at other times they were wont to doe. The thirtieth, I had the chiefe Carratcher, his fonne, his fonnes fonne, and his brothers sonne at Dinner, and had some conference with him, who told mee. that they had feene ships in the Vaggats, two yeeres one after another : but they durft not bee feene of them, but fled from them : for the Ruffes told them, that they would kill them, or carrie them Ruffes frend. away prisoners. Yet they seemed to be glad of our comming, when they saw our behaulour, and the entertay mene that they had of vs: Neuertheleffe, they are very timerous, and vnreafonable couetous, as by more acquaintance I perceived by them.

The fecond of February, the most part of the Samojeds went to Slobodes with their commo- February 20 dities, because in the Summer they had beene together by the eares with the Samoyeds of Calle-Samoyeds nofe, and had flayne one or two of them: wherefore they went to agree with them, and to quiriell.

pay ranfome for fome of their men that were taken afterwards. The fifteenth, the Sunne arofe at South-cast, a little Southerly, and fet at West and by South Westerly. The fixteenth, the Sunne arose at South-east, and set at West due by the Compasse as I could fet it, the variation being two points Westerly : for, at a South South-west, the Sunne Veriation

commeth to the Meridian.

The twentieth, I had conference with a Rufe, concerning their trade of Molgomfer, who had The reportof beene there twice, and he was the first that euer attempted it, and none hath beene farther then a Ruffe, a great he to the Eastwards. And he told me, that their course from Medenskey Zanorot, at the mouth Traveller of the way from 30 of Pechora to the Eastward, to the two Ilands called Zyelenfa, is two dayes and three nights diflance, fayling with a faire wind. From thence to Breit-vinnese, three dayes and three nights Medemster Zefailing with a faire wind, which is within the Streight of Vaygats. And from thence by an Iland, worst. or rather a Rocke, called Socolia Londia, leaving it on the Starboord fide for feare of Rockes, Zylenja two fill keeping your coarse North-east, vntill you come to a long Point on the Starboard side, Breit-vimase. with a fand lying off into the Sea three miles, some five or fixe dayes fayling. Which when you Social India. have gotten about, you must hold your course somewhat more enclining to the South, five or fix A long Point. dayes more : and then you shall come to the Riner of Ob; against the mouth whereof lieth an From Medemdayes more: and then you mail come to the more of or, seemit to most which Mayne, 140 Zaumetto
Hand: but you must keepe the Sea-boord of it, by reason it is should betwit it and the Mayne, 140 Zaumetto The Land all along ft the shoare is a fine lowe Land, and the going into the River, is on the East 40 fide of the Hand. The River is reported to be a Summer dayes fayling ouer in bredth, and is full Antland.

of Ilands: whereby they report it to be should. Yet, in my opinion, so great a River cannot be Obisfullof I. without a mayne channell; which as yet they have not fought for : and therefore they judge it lands, broad innauigable. Also they report it to bee very plentifull of Fish of divers forts: but the people and should. here, and the Ruffes are vinwilling that wee should goe thither. Moreover, hee told mee, that from the River Ob to the Eastwards, the Land stretcheth East, some fixe or eight dayes fayling The people of more. To the Eastward of the River Ob lieth another great River as large as Ob, and is very Pethora, and the Ruffe are deepe water, and runneth from the South, how farre as yet it is worknowne. Although that hee vowilling that affirmed, that he himselfe had sayled at the least three weekes up the River: and all along as we should goe they went , they met with fundry forts of People, differing in Language one from another, to 06.

50 which they call Sameyeds. Yea, and the People there did cervifie them, that vp more to- The River wards the South, there are Tarters inhabiting, who ride vpon Horses. And hee affirmed, that Samonds. they found pieces of Ploughes that had beene driven downe the River by the flouds, caused Hories. by the Snow melting from the Mountaines. This River is very high Land, and deepe water on Ploughes, both fides. The

yeeres before at Cola in Lappia, at his Vncles house. And so he encouraged them, speaking greatly in our commendation, thewing them, that I was a Merchant, and came to trade with them. and not with any intend of harme: for hee knew mee very well, and told them, that I was at Cola foure or fine yeeres together, and lay at his Vncles house. So he came to me, and tooke me by the hand, asking me how I did, and told me his name, and how hee had feene mee with his Vincle at Cola. Then I called to mind, that I had feene him there, and fo we grew acquainted; and he went with vs to the Custome-house, where staying an houre, at length the Customer came: and after many questions had concerning our comming thither, I craued licence, that foure of vs might winter with them: which they denyed, alledging that they durft not without the Emperour of Ruffia his licence. Whereupon I answered, that the Emperours Maiestie, when he was 10 raigning, was very gracious vnto our Nation, aboue all other strangers; and shewed what great priviledges hee had bestowed on our people : and how by the English-mens meanes at the first: what a trade is now at Arkania, and what profit came, not onely into his Maieflies Treasurie but also into all parts of his Dominions, which in time might be brought hither: and withall shewed the Emperours priviledge. Wherefore then they began to put away feare, and willed vs to stay fine or fixe dayes, vntill he had fent for the chiefest men of the Townes-men, who were abroad and then they would give vs an answer. Then I defired, that we might have an house to be in. and not to flay without doores. So he gaue libertie to any that would, to entertayne vs, whereto there was one Callers that made answer, that he would: whereupon wee went with him. and were in an Ambar of his, vntill wee received answer from them. In the meane time wee 20 made much of them, and feasted them with our Aqua vite, Biscuit, and Figs, that we might the better obtavne their loue.

The foure and twentieth, the Customers came to give vs our answere, and told vs, that they had concluded that we might flay if wee would : but they must write up to the Muske of our being here. So we thanked them, and gaue them such entertaynment as we could, and sent prefents to fixe of them of the chiefest, which they tooke very thankfully, and promised what fauour they could. So this night I made ready my Letters to fend for England.

Moltomicy.

Froft in Au-

The fourth of August, five and twentie Lodyas arrived at the Towne laden with Meale, and others which were bound for Molgomfey : but by reason of contrary winds, they were forced into Pechera, and came up to the Towne of Puffezer; and unladed to make fale. The fixe and twentieth, we removed from the house where we were at the first, vnto a Poles Pele baprized

house, who is christened Russe, where we are to remayne all the Winter.

The nine and twentieth, the frost was so strong, that the Ozers was frozen ouer, and the Ice driving in the River to and againe, brake all the nets, fo that they got no Salmon, no not fo much as for their owne victuals. The second of September, the frost brake vp againe, and it was open weather. The eight of September, there was a Soyma, which the Towns-men bought, that went downs the River to have gone for Ingoria, and had a faire wind: but they neglecting two dayes fayling, that would have carried them forth of the River to the Sea, the wind came contrary, fo that they were wind-bound, and could not get any further: and on the nineteenth, gaue ouer their Voyage, and came vo to the Towne.

The thirteenth of October, the frost was so extreme, that the Ozers flood in one night, that men did walke on it the next day, and so continued all the Winter after.

The twelfth of Nouember, there went two men of Penega to Uft-zilma, to buy Squerrils. and Beauers, and other commodities. The thirteenth, the Sunne arole at South and by East by the Compasse, and set at South-west and by West.

The foure and twentieth, there went divers men, with at the least, three or fourescore Sleds Slobodes Mart. drawne with Deere, to a place called Slobodes, where they hold a Mart, from the beginning of December to the middle thereof : and they carried fresh-water fish thither, with whom William Purigione went into Ruffis. The fixe and twentieth, the Sunne arose at South and by West by the Compasse, and set at South-west and by West.

The first of December, the Sunne arose at South and by West Westerly by the Compasse, and fet South-west and by West Southerly. The fourth, the Towns-men of Pechera went over land into Ingeria, to trade with the Inhabitants there, and the Samoreds.

The eleventh, Marmaduke Wilfon faid that he faw the Sunne, but it was but the way of the Sunnes beames. The thirteenth, I faw the Sunnes beames my felfe, but I could not fee the Sun it selfe, although I watched it very strictly. The fourteenth, it was snowie, and stormie weather, and continued so vntill the foure and twentieth day, which was close weather also.

Lugoria,

The fine and twentieth, being Christmas day, I saw the Sunne, and it rose at South and by West, and set at South-west and by South, it having the neathermost part of it all the way inst with the Horizon. The fixe and twentieth, it was flormy and fnowy weather, and fo conti- 60 nued vntill the end of the moneth.

The second of Ianuarie, the Sunne arose at South somewhat Westerly, and set South-west a little Southerly, it mounting a pretie height about the Horizon.

The fift, William Purfglone returned from Colmogro. The eleventh, the Sunne arofe at South by East by the Compasse, and fet at South-west and by West.

The twelfth, there came a command from the Patriarch, that there should bee a generall Fast, Generall Fast both for young and old, not exempting the fucking babes; which began the thirteenth, continu- for three dayes ing three dayes space, they neither eating nor drinking, so much as water, neither admitted they very frist. their fucking Babes, faue those that fainted, to whom they gaue a few Figs and a little water.

The nineteenth, the Inhabitants of Puftozer that went into Ingeria, returned from thence, hauing had but an hard Voyage, by reason of the Warres which the Samoyeds had amonest themselues; so that they durft not goe into Molgomsey, where they catch the most part of the

Sables which come into Ruffia.

The three and twentieth, came the Carratcher, which is the chiefe of the Samoreds, but they Io had no commodities to speake of, by reason of the Warres: so that they neither durit trade with the Samojeds of Moleomfer, neither hunt for the Sables themselves, which at other times they were wont to doe. The thirtieth, I had the chiefe Carratches, his fonne, his fonnes fonne, and his brothers fonne at Dinner, and had fome conference with him, who told mee, that they had feene ships in the Vaygats, two yeeres one after another: but they durst not bee feene of them, but fled from them : for the Ruffes told them, that they would kill them, or carrie them Ruffes fraud. away prisoners. Yet they seemed to be glad of our comming, when they saw our behaulour, and the entertay ment that they had of vs: Neuerthelesse, they are very timerous, and vnreasonable couetous, as by more acquaintance I perceived by them.

The fecond of February, the most part of the Samojeds went to Slobodes with their commo- February. 20 dities, because in the Summer they had beene together by the eares with the Samojeds of Calle- Samojeds note, and had flavne one or two of them; wherefore they went to agree with them, and to quiriell pay ransome for some of their men that were taken afterwards.

The fifteenth, the Sunne arole at South-east, a little Southerly, and fet at West and by South Westerly. The fixteenth, the Sunne arose at South-east, and set at West due by the Compasse as I could fet it, the variation being two points Westerly : for, at a South South-west, the Sunne Variation.

commeth to the Meridian.

The twentieth, I had conference with a Ruffe, concerning their trade of Molgomfer, who had The report of beene there twice, and he was the first that euer attempted it, and none hath beene farther then 2 Ruffe, 2 great he to the Eastwards. And he told me, that their courie from Medenskey Zamoro, at the mouth Traueller of the way from 30 of Pechera to the Eastward, to the two Ilands called Zyelenfa, is two dayes and three nights diflance. fayling with a faire wind. From thence to Broin-vinnofe, three dayes and three nights Medenthen Zefailing with a faire wind, which is within the Streight of Vaggats. And from thence by an Iland, worst. or rather a Rocke, called Social Landia, leaving it on the Starboord fide for feare of Rockes, Zyelenja two of lattice a courte North-east, vntill you come to a long Point on the Starboard side, Breit-vinnose, with a fand lying off into the Sea three miles, some sine or sixe dayes sayling. Tangut in Cathay. These Tinguifes report, that there is another hage River, that trendeth to Tangut mentithe Southwards, which the necke of a Land parteth from the River of Tinguffey: wherein oned by Polo, a the Southwards, which the necke of a Land parteen from the Ruler of Impanyer, which the large Kingdom there are great thins, not valide who the Ruler thips, that tayle in it, having many Malts and Northward Northward Gunnes, which when they are shot off, make all the earth shake with the noyle: which should from Cashes, or 60 feeme to be the Chinians, that trade thither in the Summer, and returne backe againe ere the China.

Winter doth come. The like also affirmeth another, being a Ruffe, who hath beene in the River The River of Tinguffey, where the people make this report.

The first of March, the Ruffes tooke their Tourney from hence, from Puffozer into Ruffia, with March fuch commodities as they bought.

The twelfth, the Sunnes altitude by the Que irant was 67. degrees and 40. minutes; and the P. Morrain 69, declination, no degrees 52. minutes, which being added, maketh 68. degrees and 30. minutes. degrees 30, or being the true heigth of Puffezer.

The thirteenth, the Sun arose at East and by South a little Southerly, and set at West Northwest. This day the Sunnes altitude by the Quadrant was 67, degrees 20. minutes; and the declination, 1. degree 14. minutes : which added together, maketh 68. degrees 35. minutes : fo that I conclude, that Puffoxer standeth in about 68, degrees 30, minutes. The eight and twentieth, the Sunne arose at East and by North, and set at North-west and by West.

The eleuenth of Aprill, the Inhabitants of this Towne returned from Slobedca, bringing with

them Rie, Rie-meale, and other provisions.

The one and twentieth, having conference with a Permack, concerning what commodities were to be had at the Towne of Uft-zilma, he told me, that there were Losh hides, Squerrils, Sa-The report of bles, white Foxes, and Rosomackes. Moreouer, he told me, that beyond the River of Teniles, the Land trendeth due East, and then there is a River called Peaseda, and beyond that another. called (aurga, which runneth into Cathay: whole King, thele Parmete and Rufes call Truthe sfar. The Ruser lieth North and South as they of Tenffey fay, but they cannot tell how farre: land trendeth for, there hath not any beene up the River, by reason they are afraid of their shot. And this Pelida Riner. Permach told me, that on the Sea coaft betwixt thefe two Rivers , Peafeda and Catonga, they Catonga Riuer tunneth out of found certaine stones like vnto Gold, and some like Siluer, being about the halfe way betwixe Gold and Sil-

The two and twentieth, we had newes brought that the Ice was broken, in the Pechora all uer in the mid- along it by the fides.

way betweene The ninth of May, the Sunne arose at North-east somwhat Easterly, and set at North som-Pilide and Cawhat Westerly, it being iust foure houres by the Houre-glasse under the Horizon.

The three and twentieth, the Sun did not goe under the Horizon, for it was a pretie height aboue the Horizon, at a North North-east point of the Compasse: it then being at the lowest. The foure and twentieth, we had newes that the Pechora brake vp, vpon the twentieth day of The River Ice this instant moneth. The fixe and twentieth, at foure of the clocke in the after-noone, I departed from Pufozer, to goe to Uf-zeilma, where I arrived the thirtieth day inflant. And the Ri-uer of Pechora lieth most part North North-east, and South South-west, and sometimes North 30 and South. Uft-zilma, is a Village of some thirtie or fortie houses , and flandeth in the height of 66, degrees and 30, minutes. They have Corne growing there, both Barley and Rie; and zilma. Ouft-zilma is in their Barley is passing faire and white almost as Rice.

The ninth of Iune, I departed from Vft-zilma backe againe to Puflozer, where I arrived the 66. degrees eleventh of June. The one and twentieth, seventeene Sommas departed from hence to see to 30. minutes, Molgomfey : some belonging to this place, some to Vft-zilma, and some to Mezen, and Penega. & there grow The two and twentieth, divers Boats went from hence to the Sea, to fish for Omelyes and Bealowgaes Oyle, The foure and twentieth, I fent downe William Puriglone to the Sea fide, to 17. Somas de- buy the Oyle which God shall fend them.

The third of Iuly, I received a Letter forth of England, by the way of Colmogro.

The fift, we had newes that the Gotternour and Souldiers of Tom have burnt the Towne. and fled from thence, by reason they wanted victuals, and their pay : and about three hundred of them intended to come to Uft-zalma, to rob the Inhabitants thereof. This day I was told, that from Pullozer vp Pecbora with a faire wind, to the River of Oufe, is three weekes travell: and then vp the River of Onfe, to Podcamen , ten dayes , and from thence to Ob, eight dayes. drawne by Deere: and from thence to Berefona, fixteene dayes, which is a Towne of trading, This mine Host told me, that he was a prisoner at Berejons, and at Tabelfee: and hee affirmeth, that Tobelfee is a Citie of great trade, and that the Toferty, Bowhars, and Tarter, comercially to trade, who bring Silkes, Veluets, Grogran, Sendames, and Kindackes, and that great store of Cloth, Pewter, and Copper may be vented there. Also there is great store of Furres, as Sables, Squerrils, Foxes, Blacke, Rosamackes, and Beauers. He sayth, that from Pullouir to Vade in Ingoria, which is on this fide Ob, with carriage vpon Deere, it is a moneths Lourney, and Notone is on the other fide of Ob; and it is two weekes and an halfe with light carriage or polt. Moreouer, he told me, that Pechora runneth into Veleka permia, fine weekes journey from Puffozer, and from Veleca permia to Verho touria, nine dayes journey by Horse and Sleds : and from thence to Tamen by River, ten dayes : and from Tomen to Tobolico, fixe dayes by the Riuer Irtifh, and is the chiefe Citie of all Siberia. And from Tobolfeo to Sourgout, is fixe weekes Intelligence of Iourney up the River Ob, from whence come all the rich Furres which come to Arcania. From the Country. Sourgout to Tome, which is among it the Tartars, is three weekes up the River Ob: and vet none knoweth how farre the Ob runneth further, as he fayth, he was carried these wayes to the Muske, in the beginning of Rollries his time.

The fixteenth, I was told by a Permack, having some speech with him concerning the Vargats, that from Medniskey Zamorot to the Vayeats, is one day and a nights layle with a faire wind. And as you goe forth of the Vargats, there lieth an Iland Galled Meafino Offrone, not

being farre from Socolia Londy : and from Vaygats through Tongorskoy four into Ourskey gomba, Scula Londia. (which is a great Bay and deepe) is two dayes and one nights layling into Mountay River, the Youngaries flar. course East, somewhat Southerly. And from Mommey to Sharrappa shar, which is an Inlet, is Mommey a Riv halfe a dayes fayling: and from thence to Tomeonone is halfe a dayes fayling, which is an high uer. Land : and from thence to Naromaia is a dayes fayling. And there are three little Rivers be Sharraspa Shar. twixt them : and there are Morfes all alongst that shoare, and farther he knew not by Sea. But Yourcean he fayth, that the River Ob is a dayes fayling right over. And from Zylena reca to the Taz sauoros, the course is South-east, a dayes layling : and from the Zauoros of Tax to the Rivers Ob mouth, is a day and a nights fayling : and there is an Hand in the mouth thereof, being high land. Zilens River. To And from thence up the River, the course is South-east to the Towne eight dayes journey, to Tax Zaueros. be haled with a rope, there runneth fuch a ftreame. But, ere you come to the Taz River, there Taz River, behaled with a rope, there runners man a remember by the revolutions of the raw files, there is another River on the Starboord fide, called Power, where they get of the beth Sables that come; and you must leave the lland at the Taw on the Larboord fide. And from Taw Towns up the River Volochanco, is fixe dayes journey Easterly against the streame, vntill' you come to a The Towne. Vollocke, about a mile and an halfe long. Marifi ground, and fo into another River, some foure Power River, dayes rowing with the freame, to the River that is called Trowbay, which is a great River, and falleth into Teniffer, fome three dayes journey more with the streame : at the entrance whereof The Biner lieth an illand; called by the fame name; whereon there is a little Towne of the fame name, From Haustern.

CHAP. 10. Mowmoy River. Indiga River ; deepe water, good Harbour.

Kishayskoy Tsarrstua. The fift of August, my selfe, and the Boy, went abourd the Lodia departing from Pullozer. August. The tenth, we arrived at the Glombocke, which are the deepe water, whither William Purfeglone They depart was come with the Oyle, where we melted what we could, before we departed. The twelfth, I observed in the Gloubocke, and had it on the Quadrant co. degrees 20. minutes : and the Declination was 1 2, degrees 42, minutes, fo it standeth in 60, degrees 12, minutes,

thence downe the River Teniffer to the River Hauthe, is twelve daves fayling and it is a great ne houtofce.

The eighteenth, we departed from the Gloubocke, and entred the Dry Sea, and arrived at the Zawret the one and twentieth.

The two and twentieth, we weighed and went out to Sea, the wind at East North-east, but the Giosbette in 60 20. wind comming to the North-weit, we put roomer againe, and came to an Anchor at the Zano- degrees 12. rot againe. The foure and twentieth, I observed at the Zaweret, and had it on the Quadrant 62. minutes. degrees no minutes, and the Declination was 7. degrees 26. minutes, foit flandeth in about 70. degrees 30. minutes.

The fix and twentieth, we departed from the Zanorot about noon, the wind being at East, the land trending betwixt it & Collections Eaft & Welt, being two Voadaes, or fixty Verits distance. Collections. The feuen and twentieth, we came to an Handcalled Mezzon Sharry, being fixtie Verits to Mezzon Sharry, the Eastwards of Snatinofe, and it is about ten Verfts in length, and two Verits broad. At the

East end thereof, Oliner Brunell was carried into Harbour by a Ruffe, where he was Land-locked, Oliner Brunell,

having the lland on the one fide, and the Mayne on the other.

The eight and twentieth, we departed from Mezyon Sharry, the wind at North-cast, a little gale, but before night it fell thicke, and wee steered away North-west, and about mid-night, it came to the North North-east blowing a very fore florme : so that we were not able to beare our fayle abor, and having floud under foot, we were fogged into the Bay, and put alhoure fome two houres before day, voon the long point of the obscure Harbour, about three miles to the Westwards, the wind being at North: where we got all our goods on Land, alwayes looking when the Lodia would have split. But, by Gods Almightie Providence, she beate over that Sand, and lay betwixt it and the beach: fo that when the ty de was fallen, she fate on ground, as if she had beene in a creeke, the Sands all dry round about her. Also on the Welt fide of Swatinofe, in the Bay is a great River, called Indiga, which is, deepe Water, and a good Harbour for a flip, as Indiga, the Ruffes doe report.

The thirtieth, the storme continued all the day long. The one and thirtieth, about noone it blew leffe wind, and at hight we stopped our leakes as well as we could.

The first of September, in the morning weegot our goods againe aboord. The second, in the September, morning, we went roomer with the obscure Harbour, the wind being at the North-west, but at noone, it came to the South-east and East South-east, so we weighed , and flood to the Westwards againe, vntill wee came to the River , where wee came on shoare the last yeere: which is called Zenones, where wee anchored a little to the Eastwards, and ridde the most part of that night.

The third, in the morning we weighed, and stood to the Westwards, but the wind comming 60 to the West South-west blowing hard, and having the tyde against vs, we archored againe about ten of the clocke on Thursday, being the third day : yet within two hours after, we were forced to weigh, and put roomer to a little River or Creeke, that is, called Creeftone where wee ridde untill the ninth day. Then we loofed, thinking to have gone forth to Sea, the wind being Eafterly; but it blowing hard, and there running a great streame of fresh water, that it put vs

20 River, and runneth to the East (as it is thought) into Cathay, which of the Permacks, is called they.

Course of Pe-

CHAP. II. Voyage ouer Land, Mountagnes, Rocks: Marish ground.

on ground againe, wee were in great danger againe of losing all. So wee were forced to get all things on floare againe, and then got her off the elementh day, and wene into the Creakesgaine : and stopping our leakes as well as we could, we got our goods abourd againe.

The fourteenth, the winde comming to the East South-east, wee got forth to Sea with much adoe; and fogue after, the winde came to the East North-east, a faire gale; and wee stood italongst the Land South-east and by South, and North-west, and by North all that after-noone votill mid-night; at what time we were thwart of Callenge. The fifteenth, about three of the clocke in the morning, the winde came to the North-eaft, and blew very hard, so we steered away South South west, and at night weesfell with a shoald, which they faid, is thwart of the Mezen mouth; but I take it, it was Knocke John.

The fixteenth, in the morning about eight or nine of the clocke, haping carried but an hullocke of our fayle all night, we fell with Danielene Stelle on the Coaft of Lappia, the Mind being at South, and blowing hard, so that we went into Harbour at the West of the Hand, there standing flue Crosses on it, it being a Rocke: And there are foure Warlocks on the Mayne, and another on a Rocke to the Westwards : yet it is but for Lodyes, and that a bad one also, beeing full of Rockes round about, where we rid vnfill the fix and twentieth. Then we departed forth of Daniela Stolbe about noone, and at night we came to Sofnouets, where we rid all night, The feuen and twentieth, in the morning we fell with Churus Nofe. The eight and twentieth, wee arrived at Arkania, where wee landed our Oyle. The nine and twentieth, wee arrived at

Churna Note.

Extracts taken out of two Letters of Iofias Logan from Pechora, to Mafter Hakluy: Prebend of Westminster. Here vse to come but ber in the Winter about two thousand Samoteds with their Commodities, which

may be such as we dreamed not on yet. For by chance one came to Vs with a piece of an Elephants This piece of Inis piece of Tooth, which he faid he bought of a Samoied. And heere are men called Tinguifies, whose Committees beyond the Rivers of Obi, and Taes; and bordereth upon the great River Yeniste: which is a good Ri-The Sea Naromzie.

Letter from

Peccera, Au-

guft 16.

wer and a deepe, and falleth into the Sea Naromzie : And it foodd feeme it he not farre from China, 30 Therefore you may conceine what bope there is if this Enterprize, if it please God it may be followed as it ought to be. Thus be feething Almighte God to bleffe you and us, I romanit you to the protestion of bim, who is the giver of all goodneffe, Iul. 24. 1611. In another

Herecome two or three thousand Samoieds bither to trade with their Sables, Beauers, Blacke Forces, Squirrels, Wolfes, Resomacks, Ermines. And here is caught in September, good flore of Salmon, Traine of a certayne great file, called a Bealonga, and Morfies, and Seales Oyle in the Sommer time, and White Foxes and Feathers. I had some conference with a Russe, who told meethat the Samoieds told him, that there lye Minchins, which in their Language is ftrangers , buried in the Sand in Coffins, with their armes agroffe their bretts which they eftimate to be about fixtie yeeres ago: And 40 that they found Writing Tables in one of their pockets, and other final Trifles which they rocke away. The Vaygats is sometimes open and sometimes that : and upon them groweth Christall of the Mount. Chryshil roon The Ruites and Permacks predayered with plane of the Ruites and Permacks program to Christate of the Monte, the Light to the great Exploying on Permacks produced permacks program to the produce to the great Exploying Pechona, called Youngarsky Shaz into which there fall four Ruets; The Eastermost mbereof they call Cara Reca, enthe Blacke River ; beyond which they passe unto another, Sustantia Reca. talled Moetnaja Reca; then shey come to a Voloc, or necke of Land, which continues but three Verfix: The Volce of our which they draw their Boats and goods, and fo come to another River, called Zelena Reca, or The necke of Land. Greene River, which bringeth them into Obi: Into which on the Easter fide, the River Taes falleth. making but one mouth with the Riner Obi, being should, and they report at to bec as broad toward the mouth, as a man can discerne oner, bauing many Ilands therein.

Taes River. Yenifey River. Tinguiffey 2

Zelena Reca.

ObiRiuer.

Moreour, there is another great River, called Yenisley beyond Taes: which they fay, is rather bigger and deeper then Ohi; and it runneth up into the Land no man knoweth bom farre : Although ther bane disconcred some fourteene dayes rowing up therein: neither can they learne of the enhabitants thereof bem farre it firetcheth; whom they call I inguffey under are a proper people of themfelates. And People.

A white Citie. the Samoieds report that they have travelled fo farre, that they came within fight of a White Citie or Greatinging Towns : which floudd ferme to be builded of flone, for they durft not goe to make trial : and they heard great ringing of Bels . Alfo they fay, that they faw beafts, but they were not like their Doeres; for they had a great Mane, along Tatle, no Hornes, and their footing was round, not clouen, as their Deeres Ma . and they wife sortide upon their backs; and not to draw in Sieds as their Deere wife to doe: Thefe I af-People in Ar- Jure my felfe and Horfes. And further they report, that there came people unto them all made of Iron, 60 their heads, armes, bands, and legges: fo that neither Arrows, Swords, nor Speares, could enter; which, They are not 41 I consections, were people in Armour. For they faid, that the bundred of them they thought were farre from Ca- gole to conquer all their Realow. By this year may gather, that they are not fare from Catain and Chitile and thine. 30. Thus have I thewed must you the greatest facest, and the merett to the truth that I know Requesting

you, if you thinke it meet, that the Right Houserable the Earle of Salisburie might base a Conie thereof. Thus wilking you bealth and profestive in this World, and felicitie in the World to come. I cease.

CHAP. XL

A briefe Relation of a Voyage to Pechora, and wintering there, began in the neere 1611. Written by WILLIAM

After Iosias Logan, and William Gourdon, having received directions from the Right Worthipfuli Company of English Merchants, Trading Russia. The eleventh of Aprill, 1611. departed from Blacke well in the River of Thomes, in a good thip, called the Amitie; whereof Iames Vadem of Radriffe was Mafter.

The fixteenth of July, we arrived at Puffeners, being much wondred at by the Inhabitants, a Permae receiued vs into his Houfe, and ler vs haue a Ware- They were fuft

house for our goods. We all continued there vntill the fine and twentieth of July. Then wee received into returned in our Shallop agains to our ship, having a small Ruffe Boate in our company, to carrie Permachi 20 some of the Feathers and Downe, which we brought there, our owne Boat not beeing able to House. carrie all, being pettered with our Prouision, and some Feathers, and White Foxes. Wee came aboord our thin the feuen and twentieth of July, where wee delivered those White Foxes, Feathers, and Downe, and an exceeding rich blacke Foxe skinne, having laded the Ruffe Boate with part of our goods. The reft of our goods they laid upon the Sand to be fent up afterward, leaving mee and Marmaduke Wilfon, and an hired Ruffe with them, where wee attended to heare of Be from the Towne. But Mafter Lagan not hearing of any about a tunne and an haife, could not get any to come downe to vs; because they feared to goe over the dry or should Seain their

little Boates being laden.

The one and thirtieth, our fhip departed over the Barre, purposing to make their Moyage in 30 Nona Zembla, or some Ilands not farre diftant from thence. At their departure there were five and twentie Coaches or Soymer, in that Road of Pecbers , with at least two hundred men in them bound for Moleomfey; but hindered by contrary Windes and Ice, our shippes being over the Barre, they all came on house to vs; fome threatning, others flattering vs , but after I had bestowed two Bottles of Beereamong some of the best of them, they all went up to Pastezera; where most of them that had any goods to fell stayed all Winter, and fold their Commodities in barter with the Inhabitants, and when they could happen fecretly upon any Samoieds, they would be trading with them also : which is contratte to the Printledges granted by the Emperour to the Puffezarits. Their Wintering there was no little hinderance to vs for the fale of our goods.

We arrived at the Towne the feventh of August. In mine absence Master Zogas had hired August. part of an House of one, called Toffon Vrianich, a Polo ian, who was turned Russe.

The three and twentieth of November, I departed from Pullozers to goe for Ruffis, at three November. of the clocke in the afternoone, in the Company of certayne Ruffes, Permacks, and Samoieds, His Voyage of which Samoieds were our Guides over the Mountaynes: and one dayes journey over the Rocks, Stebergs and which they call Camens, which are not Rockie Hills, as in Norway, buthigh Lands, yet in most Cotingre. places smooth, and most marith grounds full of little Hillocks, which being couered with Snow Mountaynes & and frozen, did not much annoy vs. Our Argeshey or Caravan were about two hundred and ten Lament, or Sleds, drawne the most part with two Deere in a Sled. They had also about two hundred spare Rockes. Deere, to ease the wearied. We kept company untill the fourth of December together, having 50 passed two third parts of our way to Slobotca, being the first Towne in the Country of Melen,

that we faw. And then in company of foure Sleds, haning each two choice Buckes, with a Samoied in the fift for our Guide, we left the Argeliey, and rid polt for Sloboten, where were arrived He serioeth at the ninth of December, at ten of the clocke at night. In this Towne I found one Thomas Ligan of December an Englifeman, who had ferued Matter Ruchard Cackes of London, who faluting mee in Englife, maruelled much to meet me there: and carried me from the rest of my company to his Lodging, Thomas Ligan. and gaue me there very kind entertaynment. The next morning I departed thence in his Sled, hauing over night hired an Horse to the next Towne, which was fifteenth Verits off : And to travelling day and night, changing Horfes at every convenient place, I came to Colmogro the twelfth of December : and delivered my Letters from Mafter lofias Logan our Factor in Puffere. He arriveth at

60 ra, to Mafter Fabian Smith, then Agent for the English Company. Having refted my felfe foure Colmogro, the dayes there, and received certayne Money to helpe to put off some of our goods at Pechora, I 12.0f December departed from Colmogro the seventeenth of December, and came to Slobotca the nineteenth day; the height of the Pole being there some fixtie fine degrees. I stayed there till the two and twentieth of the faid moneth, by which time the Permacks and the Inhabitants of Puffoxers,

were readie to returne to Pecbora with their goods, being Rie, Malt, Hops, Salt, Aqua-vite, and forme course Cloth. Moreouer, divers Ruffes having their Sonnes or Kinlmen Leigers there, in Winter doe fend Cloth and Money ouer Land.

Hauing made my prouision for my journey, and taken my leaue of Master Thomas Ligon, wee

fet forward that night, and rid not aboue fine and twentie Verits, to a place where wee found the Argestey which set out from Sloboica the two and twentieth day in the morning by breake of day. We had better passage in our returne, then we had in our journey from Pustozera by rearetatheir Tra. fon of much Snow fallen in the time of our being in Ruffia, and frozen fo hard, that it bare both Deere and Sleds in all places. Wee kept together with the Argeshey, being then two hundred

and fiftie Sleds, till we had passed more then two thirds of our way ouer the Mountaynes : and 10 The fourth of then long before day having cholen Buckes of the best, wee departed the fourth of Ianuarie, being eight Sleds in company, and rid post all that day and night following, beeing Moone-light. faue fornetimes for the space of an houre that wee stayed where, the Samoied our Guide knew Mosse food for there was good store of Mosse, (which is white) to refresh our Deere. The fifth of Lamarie. we came to Puffezera, having in forcie houres travelled three hundred and fittie Versts with our choice Buckes. Our Argelley or Carauan arrived there after vs the twelfthof Ianuarie.

The manner with the Sa-

The Samoieds being the onely Guides in Winter, either from Paffozera to Slobotca, or to any other places Eastward, as Ongoria, Siberia, or Molgemfer; know, by their continuall travell, the way, though it be neuer fo thick weather, as also where most store of white Mossie is growing: and according as they find themselves neere vato some mossie place, be it somthing before night, 20 or within night foure or fine houres before they can come thither : there for that Night they pitch their Tents, being for the most part made of Deere and Elkes skinnes : we had in our companie foute great Tents fet vp, and some twentie under each Tent. This worke of pitching the Tents belongeth vnto the Women. In the meane time the men vnyoakethe Deere, and turne

them loofe to digge through the Snow, bee it neuer so deepe, for their food and suffenace. Then the Samoinds (of every Tent one) out of the next Wood, provide as much Fuell as shall serve in turnes for their abode there. First, they set on Kettles full of Snow water, which being welted, Hard foft lod. they drinke thereof euery one a good draught : then they feeth their Supper, vfing as before Snow water melted for their Drinke. Our lodgings were vpon the Snow within our Tents, round about the Fire, hauing vnder vs for our Beds the skinnes of Deere, conered with our day 30 apparell. For all the time of our journey, the Merchants, whether Stranger, Ruffe, or Permac, according to the number of them, make prouision of Victuals to feed the whole familie in every Poore Samoied: Tent, every man his day about, together with the Samoieds, their Wives and Children; who carrieall their Houshold every where with them ; and out of their Sonnes and Daughters, they appoint a watch ouer their Deere, for feare of the Wolfe and other Beafts, which notwithftan-

Dangerous Wolues, Slobotca.

ding their watch sometimes kill in a night one or two of their Deere, as it fell out two nights in our journey to Slobotca. This Slobotca is a pretie Towne, having in December and Ianuarie, great refort of people repaying thither, as well Rich Ruffes out of many places, with money to buy Furres, as others with proussion of Meale and Malt, and other Commodities, to furnish the Puffozerits, as also to buy Fish, to wit, Salmons, Oyle of Bealugo, Deere skinnes, 40 and Furres of them.

Trade with the

Pufterera.

The tenth of Ianuary, the Inhabitants of Puffozera, returned from Trading with the Sa-Samuels of Ou-moieds of Ougaria, on which Journey they fet forward the five and twentieth of November : and within three dayes after, came betwixt eight or nine hundred Samoieds with a small quantitie of their Commodities, in respect of former yeeres, by reason of Warre betweene the Samoieds of maids come to Ougaria, and Molgamses, who were wont to Trade one with another, and not to warre one against another. So Sables, and other Commodities being scant, the inhabitants fold them very deare : yet notwithstanding, the Ruffer bought vp all, striuing one to have them before another. So that after that little money, which we had was bestowed, wee could not doe any thing in barter. Moreouer, the Ruffer did not onely informe against vs to the Inhabitants to ftirre them The falle fugvp against vs, but also vsed the like meanes to the Samoieds to disting determine with vs, either in their owne Countries, or elfe-where; alleadging that wee would betray them, and not onely carrie them away to make them Slaues, and robbe them, but also would murther and destroy all therest, wherefoeuer wee should come. The Inhabitants also of Passozera, being incenfed by the Ruffer, doubting wee would enter farther into their Trade Eastward, began also to hinder, and forbid the Samoieds to come to vs. Yet by meanes of our Hoast being a Polac borne, we spake with divers of the principall of the Samoieds, hee being our Interpreter, and weeour felues vnderstood certayne Samoieds speaking broken Ruffe, and by these means we found out more at large the despitefulnesse of the Russes, and the enuie of some of the Inhabitants against vs ; as also their feare, least wee or any other Stranger, should enter into further Discouerie of their trafficking toward the East, but especially about the River Ob. Some fayd we were sent as 60 spyes to betray their Land to the Pole or the Swethen, with whom they then had warre. Some gaue counsell to put vs under the Water : others adulfed to fet vs upon the Sand, where wee should have beene without all doubt drowned in short space, others thought best to send vs vp

CHAP.O. Fishing for Bealugos, how taken, Commodious Rivers, Traffique.

to the Nobilitie, and to feaze on all our goods to the vie of the State. But divers of the helf in the Towne, with whom wee kept all friendship that possible we could, withstood those bloudie practifes. The Lord therefore bee bleffed. The fifth of March, the Inhabitants of Pufforer went agains to Slobotca, carrying the Ruffes March.

with their Commodities thither.

They returned home the eleventh of Aprill, 1612. The one and twentieth of Aprill, water Aprill, 1612: Was first seene you the maine River Perhana about the Ice, descending from about Onstanting.

May so, the Ice.

habitants of Puffozer, went by water vnto Ouft-zilma.

The fixe and twentieth, Iofias Logan with our Hoaft the Polonian, hired a Boate and went to ward Oult-zilms, carrying with him certayne Cloath and Copper Kettles, in hope to fell them well there, being intreated in the Summer before by one of their Townesmen to come thither, or to fend one to Winter there : alledging that they got great flore of Loft-hydes, Squirrels, Sables and Beuers, Which some yeeres indeed, as we were credibly informed, falleth out according to his report. But at his arrivall there, divers of the Townelmen came against him, and would not suffer Our men in. him nor any of his Boate to Land for the space of ten houres : but in the end, they let him goe on treated to wind shoare, after, as wee suppose, the Inhabitants of Pustazer had bought most of their Commodities. ter at Ouf. So that hee staying there two dayes, could get but nine Losh-hydes, and halfe a timber of course 31/ma. Sables, in batter for some Cloath and Copper. The principall cause of his going thither, was to 20 meete with some of the Permacks-out of Permia, who some yeeres come downe with Rie, and Rie-meale, and thought to have given notice to thole Permacks of our being at Pufforer, and to

haue willed them to have perswaded their Countrey-men to bring thit her the next Spring following all their Commodities, being Waxe, Honey, Losh-hydes, and Furres, which they might doe for halfe the charge that they are at in bringing them to Archangell, on the River Dning. Ouff-zilms is a pretie Towne of some uxtie Houles : and is three or foure dayes fayling with Ouff-zilms.

a faire wind against the fireame from Pullower, but backe againe they may sayle it in two dayes. The third of Iune, came the first Ruffes in their Cayooks by River out of Ruffes to Puffozer. Iune z.

These Cayooks, be small Boates of two tunnes, having two men in each Boate.

The twentieth of Iune, nine Ruffe Coaches or Soymas, passed by Puspecer from Oust-zisma for Sixteene Ser-Molgomfey. The one and twentieth, fixe Ruffe Soymas more departed from Puffoxer: all the man depart for rest having given over their Voyage, which came thither the Summer before, 1611. The two Melcomies. and twentieth, one Soyma belonging to the Towne of Puffozer, departed for Molgomfey.

The three and twentieth, and four and twentieth, the Inhabitants of Pufforer, went to Fish Fishing for for Bealugos under the Boluan, being the highest Land necre unto the Drie Sea, and two dayes Bealugos under the Bolusa.

fayling from the Towne.

The fine and twentieth, I departed after them, and arrived there the feven and twentieths hoping to have provided good store of Bealingos Oyle. But it fell out contrarie : though there were aboue fiftie Boates, having in every Boate three men, and in many foure, by reason it pleafed God to fend fuch windie and stormie weather, that the Boates could not goe to Sea in many dayes together, during their wonted time of Fishing for those Beatls; being till the twentieth of July. Then every man leaveth that Fishing, and repaire to their owne Fisherie, to hunt Ducks. Greefe, and Swannes, which most yeeres they get in abundance, and make good profit of their Feathers and Downe : as also of their Flesh, which they falt vp in Caske for Winter prouision, feruing them also all the Summer for Flesh dayes. These Bealuges they catch with harping Irons, Manner of kiltyed fast to a long rope of ninetie or an hundred fathoms, with a flasse of the length of two lingthem. yards or somewhat longer, being put loose into the Iron, wherewith when the bealt commeth. The Ruffer up. within the reach of him that ftriketh, he fmiteth him with the Iron, leaving it in the Beaft : then on the Ice vie the rope being layed out cleere to vere out, the man holding his Staffe still in his hand; but the Morfe assister Beaft being wounded hafteneth to the bottome, where having beate himfelfe neare to death, doesheir Resto they hall in their rope by little and little, the Beaft afcending thereby. And if they finde him lugo: but their not neere death, they strike him againe : and being dead they cut off his skinne with the far on rope is longer, it in hany parts, fome the breadth of two hands, some more or leffe. Then comming on shoare, made for the mad they take the Fat from the skinne, and cut it in small peeces to dissolue it to Oyle, casting away one end to the Flesh which isred, to the Fowles of the Sea; except fome poore Samoied come that way, buoyir, who taketh it, though it have lyen putrifying two or three dayes, and dryeth it, and maketh Samueds po-good chare with it with his Familie. This Beaft is as bigge as two good Sturgions. Moreouer, Between middle I was informed by an ancient Traueller, that the Flesh and Fat of that Bealt, being cut as Beefe meate in Italie and falled in Caske, is a great and rich Commoditie in Lette a which the same a the law and the same and sales and the same as the sa and falted in Caske, is a great and rich Commoditie in Italie; which cannot chuse but to bee much better then young Whales, which I have heard that the Biskayners vie to preferue for good 60 meate. With the Fat of some one of these Beafts, they will fill three Barrels, of some lefter two barrels, and some yeeld but one barrell of Blubber, which they call Shilliga. In that Summer

when I was there, by reason of Northerly windes blowing hard, they killed by all their Boates not aboue fortie Beails : with fome Boate they killed two, with other three, with fome foure. But with most not one.

And the Lagar
and his Com

Pufforers in a Lodia to goe for Ruffin, and Anchored in the Glowbue, which is a deepe place of the pany into Rof. River. Heere wee stayed ten dayes to make vp our Oyle. In the meane time the Lodia got her full lading with Omelies, and Seegies falted in Caske, attending a faire winde.

The minth of August, wee set sayle out of the Glowbue, and entred the Suchei-morie, that is,

The Drie or Sheald Sea, and stirred away next hand North North-east,

The nine and twentieth, a little before day, not thinking wee had beene so neere the Landwe were on the Breches of Promoi Coskoi, or the Sands of Promoi, a bad Harbour so called by the Ruffer, and beate ouer one Sand by Gods prouidence onely, to high, being halfefull of water, that in dispaire of euer getting her off againe, wee villaded most of the goods, as Fish, Oyle, Feathers, Downe, and Losh-hydes, as soone as it began to bee day-light, and that the Russes knew vs to bee vpon the mayne Land. The thirtieth day, being somewhat calme, and the wind Easterly, but thicke weather still, there came three men from Vafilie Beregen his Lodia, who was our Confort, while wee were working to get our Lodia a floate againe, and told vs, that their Lodia was beaten in peeces upon the mayne Land, some seven or eight Versts to the Westward off ws. The one and thirtieth, wee laboured againe, and by Gods affiftance got her a floate, having 20 taken out almost all her goods: and that night laded some part againe.

The first of September, wee got all our goods aboord, and at Night-tide being faire weather, the winde North-west and Moone-light, wee put from that comfortlesse place, and went into the Promoi Harbour, having on the Barre nine or ten foote water; but within foure or five fathoms. A South-west Moone maketh there a full Sea. It is in the great Bay betweene Suetinos and Candinos. The second, the winde at East North-east faire weather, wee set sayle with our leake Lodia, the Pumpe neuer resting.

The third, the winde variable, wee fayled along the the shoare till about Noone : then the wind comming to the West, wee put backe againe for Christona Stanonecha, which is the Crosse Harbour, where wee rode in a fine River, having a bad Barre,

The ninth, in the Morning wee purpoid to put to Sea agains, the winde Easterly: but the Barre was so growne and warped vp with sands, when wee came vpon the entrance of it, that we could not passe ouer, neither with Wind nor Oares, but were forced vpon the mayne : where our Lodia was beaten so high vpon the sand, that all hope of sauing her was past. That day wee got out of her an hundred Barrels of Fish and Oyle, and yet we could not get her off againe.

The tenth, the winde being at North-west, caused high Tides, by which meanes we got her off, and brought her againe into Harbour. The cleuenth wee had so much winde and Snow, that we could not get our goods aboord all that day. The twelfth, we got all aboord, having stopped most of our leakes with Mosse and old Cloutes. Much Snow.

The thirteenth, the wind at East, faire weather, wee put to Sea out of that bad Harbour, lea- 40 uing one of our Boates there, and eight Barrels of Fish to ease our leake Lodia. The fourteenth, about mid-night we were thwart of Candinos, and stirred South-west, and South South-west all the next day : but the Night following being much winde, the Ruffes effeeming themselves to bee on the Westerne shoare, strooke sayle, and by Day-light we saw Land to the Westward of the White Sea, being the fixteenth day : and wee were forced againe into another bad Harbour. called Danilo Stolb, that is, Daniels Piller, on the Coast of Lapland, where we made our Lodia fast among the Rockes : where shee lay drie halfe-tide, and lay there beenept and wind-bound untill the fixe and twentieth day : and then at Tide-time weegot out of that place.

The eight and twentieth, wee entred into the River of Dayna, and landed that night at the Caftle of Archangel in the English House, all our Oyle, Losh-hydes, and other goods; as Fea- 50

The nine and twentieth, about mid-night we came to the English House at Colmogro, and there continued all the Winter.

The three and twentieth of Aprill 1613. the River of Duyna brake vp at Archangel.

it, but within it is very deepe. Within two dayes fayling within the Tau, the Ruffe hath builded a Towne and a Cattle, being called Molgomfey; where all the Hunters of Beatts affemble, Molgomfeya and bring their Furs with them. Also the Ruffe Soymas or Boats and thole of Puffezera come this great Marc. ther with their Meale and other Merchandizes. And having fold or bartered their Commodities. enery one returneth home, fome to Puftozera, and others to Ruffia. The Hunters also provide against the next Winter for Hunting againe.

There are three Rivers under the high Land of Ougoria and Naramzes, and great flore of Ougoia and Morfles about the point of Naramzei, whither the Inhabitants of Puffozera doe fend a Naramzei. Lodia in the Autumne, with divers Commodities to trade with the Ongersan Samoieds. Also

10 they kill many Morsses, onely taking their Teeth, and trauell among the Samoied all the Win. Store of Morsthey kill many Morites, onely taxing their rectin, and traude among the sext following. Some feat tere to trade with them, and returne ouer Land to Pullocera in Ianuarie next following. Some feat They returns veeres, if the winde doe not ferue them inflantly, they are glad to give over that Voyage by Sea. They returns As for example, in the yeere 1611, when we wintered there, the frost came vpon them before in lanuarie they had wind to ferue them; whereupon they were forced to give ouer that Voyage. And affoone as they could trauell by Sled fome of the richeft of the Sonnes and Servants of the Town men, were fent with certayne Commodities to barter with the Samoieds, against their Fathers or other Friends should come after in the Winter, and to buy vp all the best Furs and other Com-

The Ruffes when they fayle for Molgemfey in their Soymas, goe not about Naramzes point to 20 the mouth of the River Ob, but fayle vp a narrow River, called Moetnaia Reca, that is to fay, the Moetnaia Reca, Muddie River, & at the head therof they hale their Boats over a little neck of land into the River Zelenai, that is, the Green River, & fo fall down into the River Ob: and fo faile Southward up the Zelenai Reca, River Ob till they come to the River Tus. From the Barre of Tus to the Rivers mouth, is about a Ob Reca. daies & a nights failing. There is an Iland in the mouth of Tas, being very high land. From thence Anlland in the the Riner to the Towne, leaving the Hand on the left hand are eight dayes fayling. But ere you mouth of Tai, come to the Tas River, there is a finall River called Power , or Pier; where they get the best Sa. A Towne. bles of all Molgomfey. And up the River Tas to Volochanko, against the streame are fixe dayes A necke of fayling Eastward, till you come to a Voloc, or necke of Land a mile and an halfe ouer, beeing Land. marish ground, over which the Russes and Pustozerits hale their Boats into another River, called 30 Toronham, and rowing downe with the ftreame three dayes, they fall into the mightie River Te- The River Te-

Toronban, and rowing downe with the treatment three days, and you had been remoted and land, having builded them remote.

At the mouth of the River Toronban, there dwell people on an Iland, having builded them The Rivet a little Towns and a Church. And from thence they fayle downs the River to Hawtick, which Hawtick is a great River, and runneth voto the East.

The River of the Tinguffies, is three dayes and three nights fayling within the River Tenifeey. The River of There are no Woods necrevato the mouth of lenifee. But in the River of Tinguffie are great flore the Tinguffies. of Woods. There are two or three Rivers betweene the mouth of Temifee and Tinguifie, but not Two or three fo large as the Tinguistic Riner is; neere vinto which the Russes doe fish: and associate to their ald read of investing the Sallar Bound and Form zeth, they go againe to their old trade of hunting the Sables, Beuers, and Foxes. And having in mouth of Ye two winters folaboured for themselues, those that be good Husbands return rich into Rassia-And nise. 40 except they fall againe into pouertie through fire or other wayes, neuer returne thither againe.

The Tinguffus are a taller people then the Samoieds, and weare their Garments made of skins shorter, and made closer to their bodies then the Samoieds. They be a very gentle people to conuerse withall.

From the mouth of Ob to the great River lenifee, as a Ruffe told mee, is foure dayes and foure nights fayling. Betwixt Ob and Tenifee, is high blacke Land.

Beyond lenifce Eastward is another great River, called Pifda. The Land trendeth due East The River Pife beyond the River Ienifee to Pifida: and to another River, called Catonga, which commeth out of da, Cashay, whose King the Permackes call Tentha Tfar. The River Iyeth North and South, they The River Caknow not how farre. For the Tinguffies, of whom they had intelligence of this River, are afraid towge. 50 of Gun-shot that they doe heare, which they vie on the South part of that Riner, and dare not trauell vp it. In it they faw Veffels with two or three fayles; which in the Spring, fayle downe Ships with two the River Northward, and in the Autumne, returne agains to the South. But they know not or three failes, whether they fish, or goe to gather some Mynes, which are supposed to be in those Countreyes, not daring to goe neere them. It was told me, that betwixe Tifida and Catonga, about the midway vpon the Sea-coaft were found diners Stones, some like vnto Gold in colour, other white and like Silter. Allo the Traggles haug feen people show that great Ruer, called Caterga, the River carding on Horfes: and it is faid, that there is great flore of Corne, Beefes, Horfes, Sheepe, and toward.

Moreouer, he told me, that the people of Cathay doe trade to Surgent, and people from divers The Country other Kingdomes, as from Alteen Tear, or King Alteen, who among other things bring Plates of 20 of King Alteen. Silver and fell them. Another Ruffe named Philat, who had travelled farther among the Tinguf-An Aline is for, then any other Ruffe, and speaketh their Language, told mee he had bought of a Tinguiffe, a nence, a Din.

Plate of Silver weighing in Ruffe Money fortie two Alteens, four Dingoes, for twenties to

Berefous vpon the Ob, before you come neere Tobolfos, is a Towne of Trade for Furres, but especially for Losh-hides; which are bought for tenne Alteenes a piece. I was told by a Permae, that there was a Ruffe which bought foure thousand Elkes, or Losh-hides, there for a fourth part of a Roble or Marke a piece.

To the Eastward of Pechora are store of Hawkes, which I hold to bee as good as the Turkie Hawkes, namely, slight Falcons, Goshawkes, and Ier-falcons, whereof some are as white as 30 Snow, others speckled White and Red, Likewise, there are all kinds of the richest Sables white as from, brought from Molgomfey, and black Foxes. There is also Christall of the Mountayne, If we might haue libertie to trauell those Countreyes, wee might haue these Commodities cheaper there then at Pechora. And within the Ob we might vent our Commodities at a better rate.

> Commodities for Pechora, Siberia, Permia, Ougoria, and among the Tinguffies.

[Irit, at Pechora readie Money, being Raffe Money, is the best and principallest both to put off 40 Tother goods to profit, as also to get credit among the Merchants strangers at our first comming thicher, till Trade be fetled and knowne through Permia, and Stheria. Salt, Rie, Meale, white Danie Nie Kil-dryed for hearing in the flip, Oct-meile and Butter for the Samsdajill forts of course Cloth, fome fine Cloth, Copper, and Brasse Kettles of the middle fize, from two pound to thirtie, or thirtie fiue. But Brasse not aboue sitteene pound with eares of Brasse, all the Kettles and eares of one piece. Also Files to sharpe Arrowes and other things, small Horse-bels, course Canuasse for vpper Gownes. Foure peny, fixe peny, and ten peny Nayles: small Anchors of foure and twentie pound a piece. Frankincense for their Churches and Hontes.

Commodities for the Tinguffies.

Thewter, Pewter Sawcers, Little Platters, Flat Poringers, some grauen, some vngrauen. Nets of Cups, some grauen, others ungrauen, Salt-sellers. Plates, or sheets of Latten being white. Hamberough Lichenaes, Blue, Red, and Tawny. But I think our course Northerne dozens, and course Kersies Northerne dyed into those colours, would vent as well and better then they: they being thicker walked. And the Samoteds delight altogether in thicke Cloth. Grey doozens of an easie price would vent well among the Permicks, which were much grey or mingled coloured course Cloth. And some course doozens died Yellow, or Northerne course Cloth Red and Yellow, would bee no bad Commoditie.

Aquavite of two forts, the best and indifferent for the Sameieds. Glisse Beades, Skie coloured. Needles round and three square. Braffe Basons, Ruffe Linnen Cloth, or Polifb Linnen Cloth. Hops, Mault, Ruffe Sope. All forts of strong Wines, as Sacke and Canarie Wine. Bacon is a good Commoditie in Siberia.

CHAP. XII.

Later Observations of WILLIAM GOVEDON, in bis Wintering at Pustozera, in the yeares 1614. and 1615. with a Description of the Samoveds life.

He twentieth of November, I departed from Puffozera, to goe to Tongorie, at foure November: in the after-noone, and did ride most of the Night, before wee came to the 1614. Choome, going East South-east. The one and twentieth, Mibig returned His louney to the Towne, and we remoued and went our lourney, faire and little wind. The within 30. two and twentieth, little wind North, wee kept on our course East South-east, and necre to having gone from the Towne 50 miles, at night Mibiles came to vs. The three Berfone, and twentieth, little wind, we went on our Lourney, and at Noone passed ouer a little River, cal- The River cor.

led Coy, falling North into Pechora, 14. leagues below the Towne, and at Night came all the falling into Pe-Ruffes from the Towne, having gone 24. miles East South-east. The foure and twentieth, wee removed on our Journey being very cold, and went not a-

boue ten miles East South-east, at Night wee broke one of our Sleds, which went laden with

The fine and twentieth, wee went forward very flowly, at Noone I received a Letter from Mafter Comman by Forma Creticone, this after-noone another had his Sled broken, we went 10. or Maiter Common by come present, this according do nour Journey, and at Eeuen we passed over a 12. miles. The fixe and twentieth, we continued on our Journey, and at Eeuen we passed over a The River River, called Shapkina, falling South into Pechora; halfe way betwixt Puffozer and Ouft-zilma, The River Shapkina, fall a Sled broken and mended out of hand, going East South-east 15, miles. The seuen and twentieth ling into Prebeing Sunday, the wind at South-well, did blow very hard, and Snow all the day, the fnow dri- chora uing that wee could hardly see which way to goe, yet we kept on East South-east 18.miles.

The eight and twentieth, in the Morning, wee paffed ouer Nongorotka River, which falleth The River West South-west into Shapkina River, fixe dayes lourney above Oust-zilma, the wind South- Nougeroika falwest, and Snow all day, wee kept on still East South-east 15. miles. The nine and twentieth, ling mto Shep. 30 the wind South, with Snow all day, being not cold, we went on East South-east 20. miles. The the wind south, with solver and process the street, the wind East South-east, very cold in the after-moone, we passed ouer Habeaga River, falling mo Per which falleth into Pechera, fixe dayes Journey about Ouff-zilma, going 20.miles.

The first of December, the wind East blowing very hard, the Snow did drive so hard, that we could not goe forward, but flood still all day and did not remoue. The second, calme and not so December. cold, wee went on East South-east 10 miles. The third, in the Morning it was very warme, at Noone the wind North, it was extreame cold, the Snow driving very thicke, in the after-noone The River Hawe passed ouer the River Haryena, which falleth into Columy South-east, having gone East South-into Column. east I c.miles.

The fourth day warme, we went East, at Eenen we came to a River called Colur, which fal- The River Col-40 leth South into the River Oufe, where wee flayed all Night, having gone 20. miles. The fift, any falling inin the Morning we went on vpon the River fix or feven miles East and by North, and came where to ONS. it parted in two, the one keeping North-eaft, the other being called Sandanets; from the Southeast wee went betwixt them both East and by South 12 miles, and tooke vp our lodging vpon 2 Playne where no Wood is to bee seene.

The fixt, being Saint Niebolas day, which with the Ruffes is held a principall day, in the morning they caused their Images to bee brought into the Choome, lighting Wax-candles be- Bay, fore them, making their Prayers to them, according to their order; after which, I gave them a bottle of Aqua vita, wherewith the Guides were drunke, that they could not guide their Deeres, but fet me to direct the way by Compasse, which I did all the day, although I had but little skill,

50 we went South-east and by East 20. miles. The seventh, being very faire weather, our Guides lay all the day with Pohmeall, and could not goe forward. The eight, faire and calme, we went forward South-east and by East 10.miles, and A small River tooke vpour lodging by a small River which falleth into Sandauers River. The ninth, very cold, Sandauers that we had much adoe to keepe our felues from freezing, going on foot all the day ouer a playne where no Wood groweth, going South-east 15. miles, and lay by a Wood side all night. The tenth, the Frost was so extreame, that wee lay still and could not proceed. The eleuenth, being Terrible Frost. Sunday, the Frost continued extreame, we remouing, there were few in the Companie that had not some part of their faces frozen, and my selfe, although I was something better provided then any of them, yet I had fomething to doe to keepe my felte from freezing, going on foot most

60 part South-east and by East 15. miles. The twelith, the Frost was so extreame, that there was no looking forth, but lay still all day. The thirteenth, not altogether so cold, wee proceeded on our The River He-Iourney 20. miles South-east & by East, and at night we passed ouer the River Hosada, which fal- seda, falling the leth South-east into the River Azua. The fourteenth, the winde South, with Snow and not fo to Azua. cold, we went thorow Woods 20. miles, East South-east. The fifteenth, the wind South, with

The fixteenth, the wind South, in the Morning we fet forth East South-east, ouer a high ridge to Out.

The Mountain or Mountayne, called Yangoda and you the top of the fame the wind shirling North, with Snow fo thicke, that our Guides did not know well which way to goe, yet fometimes backe and fom-The Ruser reguess temps,

Meniba, falling South into Oule, where we flaved all Niehe huire. Meniba, falling South into Oufe, where we stayed all Night, having gone 20, miles.

The feuenteenth, faire and warme, wee passed thorow Woods, where the Snow was very The sequencement, take and wallet, wee pained about without, where the Show was very deepe, and came to a Playne, called Correspon Tundrs, where a Rufe whose name was Correspondent to the control of th deepe, and came to a Frayine, cance to represent a man, such a family of the control of the came was buried, therefore they gaue that place that Name) fome thirtie yeers pall, 10 where we stayed all Night, hauing gone 15 miles South-east and by East. The eighteenth, in the The Ruer Re Morning wee went on thorow Woods, the Snow being very deepe, and at Mid-night we came Morning wee went on thorour viscous, the show being very seeps, and a mineright we came to the Romer Regauss Balba, where the Ruffer had a Gorodocke, and bettering with the Sament, having gone 30. miles East South-east, the River falleth with turnings to the Southward into

The thirtieth of December, I observed with my Astrolobia, and had the Sun 2. degrees above the Horizon, Latitude 65 degrees and 48 minuts, the variation of the Compafe being 20, degrees, The fixth of January, at three in the after-noone, wee departed from the Gorodocke, the wind South South-weft blowing very hard, going North-weft 30 miles, and at mid-night came to the South South-well olowing very have going south-well, blowing very hard, the Snow driving 20 fo thicke, that we could not goe over the Mountayne, called Tangode, but flayed by a Wood fide,

hauing gone West North-west 15. miles. The eight, in the Morning wee passed over the River, naming gone were reasonable to a state of the Tangada, keeping backe our way 30. miles West North-west, hire and warme. The ninth, little wind North but sharpe, we went on North-west. and by West, at Noone we passed ouer Azua River, and in the after-noone came to a Herd of wilde Deere, the Samoits killed three, giving me a haunch ; going in all 30.miles,

The tenth, calme and very cold, we went on 20.miles, Weft North-weft. The eleuenth little The tenen, came and very con, we went on 200 mins, went thought went, the elementarities wind South-eaft; at Noone we paffed ouer Hofoda River, which falleth South-eaft into Acad, we went 30.miles North-west & by West. The twelfth, the wind South and cold, we went West we went 30. must receive the by real and by South, ouer many Creeks & Ponds 25. miles. The thirteenth, this day the wind South and 30 not cold, we went West & by South 30. miles, thorow many woods and plaines. The sourcenth, faire and warme, at Noone we passed ouer Saudaet; River, which falleth South-west into Colory, we went West and by North 30. miles.

The fifteenth, being Sunday, we went West North-west ouer a broad playne, with many great Ponds, at Night we palled ouer Columny River, going South into the River Onfe, which falleth into Pechora, nine dayes journey from Ouft- zitms, we went 30 miles, having most of our Deere tyred, the Snow was so deepe. The fixteenth, little wind, we went on West North-west, at noone we passed ouer Haryens River, which falleth South-east into Colney, going 20. miles. The seuenteenth, the wind South, blowing very hard, the Snow driving, wee went West North-west 25.miles, at Night we tooke vp our lodging vpon the Riuer Habeaga, which falleth into Pecho- 40

The eighteenth, we went on West North-west 10, miles, where the Townesmen over-tooke vs, riding post to the Towne, where making our felues ready, wee followed, the fame Eeuening we passed ouer Nongorotha River, which falleth West South-west into Shapkina River, which falleth South-west into Pechora, halfe way betwixt Pufferer and Onst-zisma, and in the Morning we passed ouer Con River, which falleth into Pecbera 14. leagues Northward from Pussour; and the fame day, being the nineteenth day in the after-noone, wee came to the Towne, having rid about 150. miles without reft. The last of Aprill, 1615. being Sunday, was the first appearing of the water, increasing at Pullozera. The seventh of May, Enan Croticone, had almost saine with a knife his two Vncles, Forma Croticome, and Erasmi Croticome.

The eighteenth, the water was at the highest, being so extreame that many were forced out of their Houses, and we our selves in like manner, having the water a foot deepe in our bed Chamber. The twentieth, the water did a little begin to fall, and so continued falling by degrees.

The minth of Iune, my servant Marmaduke Wilson came from Oust-zilma, haung Wintered . there, to buy and fell goods, bringing with him fuch Commodities as the place doth affoord, as Sables, Rolomacks, Wolues, Ermins, Squirrils, &c.

The fifteenth, we laded three small Lodias with goods, to carrie downe to the Glouboka. The three and twentieth, I departed from Puffozer, and came to the Glouboka the fine and twentieth, Charles is 47. With two small Lodias laden with goods. The eight and twentieth of June, I observed at the Glassda, which I found to lye in the height of 67 degrees 5, minutes, and the Compaffe varyed 60 18 degrees. The laft of lune, I went from the Glassda, to paffe ouer the Drie Sta, the windat South, but the wind comming to the North, I returned backe the next day. The second of July, being Sunday, the wind at South South-east, I departed the second time, to come to the Zamers, but comming neere Dolger, an Ilandlying in the Drie Sea, the Ice lay fo firme, that we could not paffe but returned backe to the Glauboka.

CH AP. 12. Samoyeds apparell, Sleds, Deere, Women, Polygamie, Religion, &c. 555

The fourth of Iuly, Iohn Copman came to the Glouboka, bringing with him all our goods for fayle, having payed all Customes and duties for the same. The fixth of the same, I departed the third time from the Glauboka, the wind at South, but did not continue, but came to the East, and East North-east, so rowing along it the shoare, wee passed to the West side between the shoalds and the shoare, and having passed the Wester Hand, called Lenerstoy, we came to the Zachbara reoueberoge or Coast, which doth lye South-west and North-east, and put into a small River, where we stayed (the seventh) all night, and the next day with Sayle and Oares, wee came to a Bay to the South of Cafners Note, where we flayed all right, the wind East South-east.

The eight, in the Morning we pasted by Cuznerf-Note among it the Ice, having much adoe to To get cleare, the wind at North North-west, and at Night we came to the Zauorot, where were fine and twentie layle of small Lodias, some going for Mangantes, other for Fish, and some going to Pullozer, who told me they had beene aboord our Ship at Sea. The ninth, this day being Sunday, our Ship came ouer the Barre, where I was received, nor looked for. The eleventh, at Night we departed from the thip, and went to get downe our goods from the Glonboke and the Towne.

The fixeeenth, I departed from the Glouboks, with three small Lodias laden with goods, but the wind at East North-east, two of them returned backe, but I kept on and came abourd our Ship the eighteenth in the morning. The twentieth, the other two came with the goods aboord. and the one and twentieth, we returned to the Glomboka with three Boates, and got thither that night. The three and twentieth, I came the second time from the Glouboke, with three Boates with goods, and the next morning came to our Ship, where I remayned, lending vp all the Boats the fixe and twentieth of Inly.

The eight of August, came John Copman with Thomas Dogget, bringing two Boats laden with goods, fitting to fet layle for Holland, but did not depart till the 21. of August. And the three and twentieth of September, (giuing heartie thankes to God) we arrived at Dort in Holland.

Ow for the manner of the Samoist in their Lourney, their vpper Coas is called a Parka, Apparellossai which is for the most part of Deere-skin, and some of white Foxe or Woluerin, which they moreds. wearethe hayre or futre outward, under that they have another Coat, which is called a Mallek, made of young Fawne-skins, or Hare-akins, or Swan-skins, very foft and well dreffed, a Cap of Beuer, double and close to their heads, with two flaps for their Eares, tyed vinder their Chin, a payre of Breeches of Deere-skin with the hayre inwards, vpon their Feete they have fockes or payre of Breecuss of Leger-skin what the nayre invaries, you their neete they have lockes or flockins of Decre-skin, the layer to their skin, your that long Boores which they call Prinjer, made of the legges of Decre-skins, thus apparelled, they fire you their bleed croffe-legged) with Sleds. a Deere-skin under them. Two Deere being yoaked toa Sled, they will runne with fuch fwift- Deere wift. nesse, and so long to continue, as is not to be beleeved, except to those that have seene the same, nesse. For riding post, they will ride without rest or sleepe, two hundred miles in four and twentie houres; but with their Argish or ituste, thirtie miles in twelue houres; their Women vsully doe Women, guide their Argish, which is ten Sleds, and to euery Sled's Bicke, all made fast one airer another, the Men in the way doe prouide Wood for firing, and doe hunt for all manner of Beafts & Fowle, 40 which the women dreffe. It is the Womans labour to fet vp the Choome or Tent, making one Tentand place therein alwayes Holy, which the woman must not set her foot into, neither goe about the Chappell. Tent round; which if they chance to doe, they will prefently remoue all, for feare of the Wolfe Superflitton,

or Beare, which they fay, would denoure them if they did not remoue. Their Tent or Choome, is made in this manner; first, they set vp long Firre-poles, then they haue fixe quarters double of Deere-skin; which being fet vp, they throw Snow round about the edges a yard thicknesse, leauing the top open for to vent smoake, making a Fire in the middle, foreading Deere-skins, vpon which they lye, in which manner, it is altogether as warme as the Stoues in Raffia, they have no Townes, neither any certaine place of abode, but with their

Deere they travell from place to place, where they finde the best Mosse for their Deere. Their Wines they buy for Deere, and will have if hee have abilitie foure or fine Wines, with Marrie Wines, whom he lyeth by turn every night feveral; he is the richeft man that hath most Deere or Daugh bought and ters, selling them to any that will give most for them. In their Marriages having agreed of price, sold. they vie not great Ceremonies; onely they make a Feast to their friends, after which the Wo- Marriages. they vietne great termoures, outer vietness and the lifetons, after windows are maintained and is brought to the Man that hot boght her, there being hung with many Iron Rings and Brazen Bels, all departing out of the Tent faue they two till the next Morning, and then he Bels. departeth; but if he bee one of wealth, they will continue their Feaft feuen dayes. It falleth out many times, that after they have had their Wines halfe a yeere or a yeere, they will turne them backe to their Friends, taking their Detres againe, paying for the charge of the Fealt, which Disorce. is alwayes to bee made at her Fathers charge, and losing the increase of his Deere.

They have not knowledge of the true God, but worthip Blocks and Images of the Deuill, vnto Religion. which, they will strangle tame Deere, rebbing the blond on the Idols, and eating the meate

When a Rich man dyeth, because hee should not travell on foot, his friends will kill three Funerals Deere to draw him in the new World, and they will strangle a Slaue to tend on him. The Deere

talling into Altitude and Ianuarie. Returne.

River increa-

Their vecre bur halfe a

they kill in this manner to ferme the dead man, they make a Stake sharpe, which they thrust into the Beatts fundament, with many howlings and cryings, till they be dead. The Mailet with the Slaue they barie, the Deere they eate as well raw, as boyled or roaft, although they vie all, three If a young Child dye under foureteene of their yeeres, which is feuen of ours, they doe hang It by the nacke on some Tree, faying, it must flie to Heaven.

If any Controuersie bee, which cannot bee decided or the truth knowne, then one of the two betwixt whom the Controuerfie is, must bee fworne, which is in this manner; they will make an Image of a Man of Snow, bringing a Wolves noie, delivering a Sword to him that must fweare, he rehearing by name all his Friends, defiring that they might all bee cut in peeces in fuveare, he reheating by name an in execute, which he himleff, doth out the Imageot Snow 10 that manner, as hee doth out that Image of Snow. Then he himleff, doth out the Imageot Snow 10 all to peaces with the Sword; then after, the Wolues nose being layd before him, he defires that the Wolfe may destroy all his tame Deere, and that hee may neuer more take or kill any wilde Deere after that, if hee speake not the Truth, so cutting the Wolues nose in peeces, there is no more to bee fayd of that Controversie.

Their persons. The Samoir is stout and bold of Spirit, not very tall but broad Brested, broad Faces, with hollow Eyes. Their ordinary infitruments for Warre, are Bowes and Arrowes, very dangerous, they have long Speares, (the heads bee made in Monganes, by another fort of Samoits) and flort Swords, not much vnlike tome that I have feene brought from East India.

Digination.

When they would know any thing to come, they fend for their Priest or Witch to converse When they would know any turns of the Tent, having before his face a peece of an old finite of the the Deuill, fitting in one fide of the Tent, having before his face a peece of an old finite of the tent of the Mayle, hung with Bels and peeces of Braffe, in his right hand a great Tabor made with a Wolucs skinne, bearing vpon the same with a Hares foot, making a very dolefull found, with singing and calling for the Deuill, to answer his demand, which being ended, they strangle a Deere for a Sacrifice, making merrie with the Fleth.

Womens har-

The Women be very hard of Nature; for at their Child-bearing, the Husband must play the Midwife, and being delivered, the Child is washed with cold water or Snow, and the next day the Woman able to conduct her Argish.

The Rulles have a yeerely Trade with the Merchants of Bogbar, at a place called Tomes in Tortarie, whither they of Boghar come with Camels every yeere.

From Tumen in Tobal in Subersa, they come in foureteene dayes, From Tobal, they come to Berefone in nine dayes, all downe the River Ob.

From Berefous, partly by the River Ob, then over a necke of Land of halfe a mile over, into the River Oufe, and downe the River Oufe into the River Pectors, and fo to Puffezers in three weekes. At Puffozera, the Englifb'haue Wintered three yeeres.

CHAP. XIII.

Divers Voyages to Cherie Iland, in the geeres 1604. 1605. 1606. 1608. 1609. Written by IONAS POOLE.

" This was Mafter Bennets fecond Voyage thither. age thither 6. 1602.I have added at the end of this Chapter, after Pooles Relacions: this be-

Ee set sayle * from London the fifteenth of Aprill 1604. in a Ship called the God Speed, of fixtie Tunnes, with thirteene Men and a Boy ; our Merchant was one Mafter Thomas Welden, our Mafter was one Stenen Bennit of Saint Catherins. We arrived at Cols in Lapland, the first of May, where weetarried till the last of the fame Moneth, at which time wee set sayle from Cola, and went to an Harbour called Pechingo, which lyeth betweene Cola and Ward bonfe. In which Harbour of Peshings, we continued untill the thirtieth of June. At which time wee let fayle from thence. of Peshings, we continued virtue are time to the party of the put into Ward-bomfs, where we tooke in and through contrarie winders and foule weather, were put into Ward-bomfs, where we tooke in 30

The fame day, the wind came Southerly, and we fleered away Northwest and by North about ing setbefore I 56. leagues, wee observed the Sunne at twelve of the clocke at Noone, and found our selves to be in 73. degrees 5. minutes of Northerly Latitude. The feuenth of Iuly, it was all day calme, and wee founded, but had no ground in two hundred and fiftie fathoms. The eight day, we had little winde, which was at South-east, and foggie weather; and at eight of the clocke at Night, wee faw great flockes of Sea-fowles, which we call Willockes : fome of these Fowles had each of them a small Fish in their bills, and slew toward the North-west and by North. The other without Fish, some of them slew contrarie to the former, and some sate in the Sea very

About twelue of the clocke at night we founded, and had ground atone hundred and twen- 60 tiefathomes. We steered away North-west and by North, till soure of the clocke the eight day in the morning, then it fell calme : and as the ship lay still, our Master spied a Morsse, which same to our ship and swamme round about it. While we were all gazing at this Monster, I spied

the Hand san leagues off, bearing North North-west halfe a point Westerly, which shewed very high Land, and much Snow vpon it. The wind came to the North-east. The ninth day, wee there Hand came to an Ancher onthe South South east fide, influe and twentie fathomes ftreamie ground, deferibed. We howied out our Boare, and Matter Wolden went toward the Land : but thinking to have landeci he copyld not, because there went a great Sea, and great flore of 'kee all along the thoares fide.
Within one house the Bothe pame aboard; and they first, there were for many Powles, that they Store of conesed the Rockes, and flow in fuch great flockes, that they thewer file a Cloud. While this toules they were talking close by the Boate, rose vous tinge Merite, putting his head about the water. looking assaulty at the Boate, and made with an horrible moyle and foating, that they in the Mornistania

CHARLE.

To Boate thought be would have funke it. The fame day, at eight of the clocke at night, we weighed and flood away South-well and by South about four miles, where wee doubled the Southermost point of the Hand, and found the Land to trend North North-west, and all along the shoare some scattering see. We say led along the shoare, finding seventeene, sight stars, and sometimes twentie fathomes, firming ground with white shels. We held this course till wee faw all the Northermost part of the lland ; and being within three miles of it, and about thirteene miles from the Point, wee came round about it. And some two miles from the Land, we anchored in sixteene fathomes, streamie ground, We had not ridden one houre to arrend, but a great piece of Ice came directly with the tyde voon vs:

and before wee could weigh, it ftrooke the flip, with foch force, that it hilded on the one fide. 20 Affoone as it was paft, we went on thoare, where we found abundance of Sea Fowles, as Wil-locks, Gulles, Noddies, Sea-mewes, a small Fowle like a Willocke, and diners others, as wilde Sea-towles Geefe, Sea-pidgeons, Oxbirds, and fuch like : whereof Matter Thomas Welden killed fo many found on with his Peece, that we almost laded our Beate with them. The same night we shoe three heaps shoare. of fifthing-lines, but when we haled them, wee found neither fifth nos bayte : for the Seales had eaten them all off.

ten them all off.

The ninth day, Mafter Welden and our Matter went on hoare, to see what they could finde, In the internation, make a result of the clocke, and came again about four; in the after-noone very weary, feeing nothing but finall fracts, almost like Dogges in overy idipetifular their finell and their tayles. In the meant some, the Matters Mass, and my. faller observed the 30 Sunne, and found that pare of the Hand to be in 74.degrees and 45. minuter.

The tenth day we weighed, having the wind Southerly, and found the Land to trend away Non. and centurary we regard the state of the fide is about ten miles, good ground. We had not failed part fixe miles, but we faw a fandic Bay againf which we came to an Auchor is most fathorist. We had not furled our Sayles, but we faw many Morfes (winnings by our flips, and heard, with all fo buge a noyie of roaring, as if there had beene an hundred Lions. Immediately were manned our Boate, wherein was Mafter Weden and fixe men more: we handed and flew abundance of Morffes on the shoare, close by the Sea-side; and drawing neare water them, were perceived that they were all of the func company, which we had sense between the formed very strange to we to be fushed a multitude of Monthers of the Sea, lye like Hogges vpan heapes: 1, a the end wiee five at them, not knowing whither they could runne faultly or leaze vpon vaor no. To be briefs, wee had but three Perces, Market Weden a Fowling Perce, buy felts a Hushet, and another a Musket. They said the Perces were spoyled instantly. For Mastler Wedens, was closed, the other man where he mains. had that one by himselfe, thought to knocke him on the head with the fleck but folithis Peece. I shot still, and some when they were wounded in the fieth, would but looke vp and lye downe againe. Some were killed with the first shots and some would goe into the Sea with five or fixe thot : they are of fuch an incredible strength. When all our Powder and show was frent, wee would blow their eyes out with a little Peafe thot, and then come on the bland fide of them, and withour Carpenters Axe cleave their heads. But for all that, we could der, of aboue a thourand we killed buf fifteene. We tooke off their heads, and when we had done, we went drawing we so and downe to fee what we could find. I found the first Took that was carbypose the lind, and going a little farther alone, I found as many Teeth more, as hand three men more confidential

going a that satisfact all which would deliver to Matter of the world being the clean the world being the world fixe more : And afterward wee went up into the Land, and faw nothing but Fowloand Force. I perceived in deed a great print of a Beares foote; and after that many other footings, bus yet faw no Beare or other wild heaft.

The twelfth, wee weighed from thence, and flood to the Eastward: wee had not gone past four miles, but we found the Land to fall away South-east and by South. The length of this fide is about twelue miles. All this fide we went close by the thoate with our Boate, and the Ge (hip fayled along about three miles off. We went oftentimes on shoare, but could see meeting on Abundance of all that side but Fowle, and abundance of Drift Wood, the most part whereof was Firres, which Drift Wood have beene beaten up and downe the Sea. This day being Sunday, about sight of the clocke at night, we anchored within two miles of the place where we arrived at the first. The same right wee went on shoare, and in a Bay under an huge Cliffe of a Rocke, upon the Beach, wee found

74HOSTONES minutes.

The fight

Athousand

Cola.

neere a thousand Morfen; wee killed thattie or thereabouts, and when wee had taken off their Mortes found heads, we went aboord.

The thirteenth, wee went on shoare againe, and with our Pieces fell a killing of the beafts. One of our company named Richard Lang. caffle splitthis Piece, and with all his handibut Master Welden with Salues of his owne, healed it to skillelly, that he hath the vie of it againe. We killed that day fixtic Morfes, all the heads whereof were very principall. When we had done, wee went about a mile to the Eastward, to see what wee could finde : And landing at a Bay where went apour a mue to one garward, so see what were some more around sealing as a day where see went apour a mue to one garward where the yeere before, and found a piece of Lead Vre, wee looked for the Matter Deman nau Decrie une yecte omore, and roman proven fet fayle for Pechinge in Lapland, which found none. The time day returning about , were fet fayle for Pechinge in Lapland, where wee arrived the fine and twentieth of July; and flayed these foure dayes: at which time 10 we feetlayle for Cole, and arrived there the eight of August, where wee continued till the fixteenth day, at which time we departed thence for Hagland, and arrived in the Thomes the fif-

Why the land teenth of October, of the yeere atorefaid 1604. When wee came to Landon, because Sir Francis Cherie Knight and Merchant was at the charges of this Discoucrie, this Iland was called Cherie Illand.

The third Voyage to Cheric Iland, performed by Mafter WELDEN Merchant, and STEPHEN BENNET Mafter, in the yeere 1605.

TN the yeere about hid, wee fet fayle from London, the first of May, with one ship of fixtie turner, and two and twentie men and boyes. The three and twentieth of the faid moneth, we were taken by a fifty of Dunkerke. They tooke from vs two Hogheads of firong Beere, our Muskets, a Fowling Peece of Marker Weldows, which coft three pounds fterling. After the Captayne had misufed was his pleasure, though we were in peace with his Country, he let vs goe.

Assumption. Cherie Hand.

The fight of

Eleven mans of

eayne nac mauned was in pressure, mough we were in pease with gir. Country, ne let w sgot. The eight and twentieth of lune; we put off from Affamption Poor, which is a place not fare from the North Cape; and about 70. degrees in latitude, but by contrare winds wee were put backs agains. Yet the second of July, we came to Cherie Hand, and anchored on the South-east to fide: and haung a Shallbp in pieces to fet ry, we carried it on floare, and went to worke vpon its and the tine day after we had it on flote. The fixth day we entred into a Cone, haung all four men on thouse with thot and jaurings, and the abundance of Morfes. The yeare before we Many Mortes that me to the contract with more and parameter, and the administration of the contract with the likely with the all with those, one thinking eight at pitelling could pierce their skinners which we found not the maliane contrarie, if they be well handled, for otherwise, a man may thrust with all his force and not enters out in education, the final fleyle his Lance you their bones; for they will first with the therefore feet, and bend a Lance round, and breake it, if it bee not all the better plated. They will alfo firike with their Teeth at him that is next them : but because their Teeth grow downward, their strokes are of small force and danger, After we had opened the beasts which we kind flaine, we cooke out the blubber, and carried it a mile into the Bay, where weelet up the 40 shallop. The reason why we carried it thirder, was, because we thought that the fire of our Furnase would feare them away : for wee did boyle all their facto bring it into Oyle. Thus wee followed our businesse till the foureand twentieth of Inly, at which time weehad very foule weather with fogs. Now the ship riding in the same Coue, where we killed our Morfes, had taken in eleuen tunnes of Oile, and the teeth of all the beafts aforesaid. Then we made preparation to be gone home: and I was fent with our shallop, and eight men with me to fetch our Tent, and our boyling Coppers, our mens Clothes and some Teeth. At my returne, when I was almost abound, comming through a place betweene the Hand and a Rocke, which of necessitie we must needs paffe, the tyde being against vs, and a stiffe gale of winde blowing out of the Sea, made the Scales very high woon the Rocker, whereby we had like to have beene funker for our Boat 30 was almost full of water; and if weehad not speedily rowed backe againe, weehad dyed each manof vs. To make fort, we got into a Cone, where the Rockes did keepe the growne Seas from vs, & we lighted our Boat. In this Coue I found a Myne of Lead Vre, and digged vp about this is plunds weight of it, which I brought into England. And calling to mind that wee were in fight of our fhip, when we shipped the water which I spake of before, I misstusted that they thought, as they did indeed, that we were all drowned. Therefore I demanded who would goe with me, to the top of a Cliffe which stood ouer against the ship! And one lobin Tening: faid, that he would goe : he had not gone halfe way, but hee would goe no farther because it was so cold, and the fill flood flooring very freepe toward the Sea; and all the file of it was loofe Earth, which we must need paste. Then I went forward all alone, and found all our men on floore, fauingan old man, and a ficke man. But the Cliffe being fo high and fleep, that they under it could feance understand what I said, nor I what they said, but with much adoe : They demanded, as I tooke it, it all our men were wel: I told them yea, as loud as I could: And then I threw downe a Piece of the lead Vre which I had found, which Marrelden took vp: And when I was going away

CHAP. 13 Extreame cold. Driving Ice. Mount Miferie. Unbolesome fogge. 559

I heard them shout, and looking behind me, I saw them all point coward the Skiffe that lay at anchor hard by the shoare; whereby I perceived that the rope was broken, which made it fast to the fineare, and the Skiffe was gone off to the length of her ropt ifo that they could not go abourd except one of them did I wim to the Skiffe, which was exceeding dangerous, both because it was extreame cold, and allo for frare of being killed by the Moffes; that were in the Sea all about Extreame cold the Boar. Whereupon with all free dopfiled it ame to helpe our men in that diffrelle; and comming to the Shallop, tome where willings; and fome rowilling; But I faid that out I would; and taking nothing aboutd with me but a few treeth, wee got out : and in the place where we had like to have beene funke before, wee had a great hollow See? but our Boat being light, and the tyde IO with vs, was got through: whereat Il Welden, and Stenen Bennet our Mafter, with all the com-

pany were not a little loyfull, and gaue God humble thankes, that had of his great mercy defen-ded ve from a great many of dangers that day. For that day wee faw abundance of yee driving Abundance of toward the Hand, but the winde and tyde fhifting, put it another wiy. Likewife two boyes drining lee. had like to haue beene flaine with the fall of a rockle, which fell close by them, they being but newly flepped out of the place where the rocke fell./

In the time that we were in this diffreffe, I called the Mountaine by the name of Mount min. Mount Mifery ferie, which is fo called at this day. Likewife there is a very high Mountaine on the East Southeast point of this Hand: which, because Master Welden and I got two Foxes neere it . I called it Mount maleperdus, alluding to the name in the merrie booke of Remold the Fox.

The fixe and twentieth of Iulie, wee got out of the Coue with the Ship, having fuch a fogge, A montrous that although wee ridde fo neere the land, that we could heare the fewle that were on shoare, ver wee could not fee the land. This fogge continued vitill the eight and twentieth of July : on which day having cleerer weather, wee got our water and other provision abourd; and fet fayle for England, and passing by the coast of Finmarke and Normay, we arrived at London the foure and twentieth of Anguilt. 1605.

The fourth Popage to Chery Hand, 1606.

VV E fet fayle from London in a Ship and a Pinnoffe; the Ship being of burden fixtie Tuns, August 14, and the fame due I was in the Summer before; Mafter Thomas Welden was Merchant, Pinnoff fer Pinnoff fer the Market Was Merchant, Pinnoff fer the Market Was Merchant Was Mercha and Mafter Bennet Mafter having in all two and ewencie men and boyes. The Pinnalle was of twentie Tunnes, and had eight men in her, and I Jones Pool was Mafter of her : we were fer out by Mafter Ruffell, one of the Mofeonie Company.

The eight and twentieth, wet had fight of land on the coast of Norway, in the latitude of fixtie degrees and a halfe; nine leagues off.

degrees and a mane; nume regression.

The fixeness he of une, we fell with the Assumption, it bearing South and by West eight leagues The Assumption of and we lay bearing betweene the North Cape and it, till the eighteenth of June: At what the control of the co time wee put off, and steered away North North-west about fiftie fine leagues, and found Much Leass. 40 much Ice : wee thought to have gotten through it, but could not : and when wee had fpent lesques from twelue houres in it, and having the wind Northerly, we put backe againe. The two and twen- Cape. tieth, we fell with the North Cape agains; at twelve of the clock at noone. The foure and twentieth, we put off againe, and being flue and fortie leagues from the Cape, wee met with Ice, and lea wahin 45. wpon a piece office we faw a Beare. The Ship being on head of vs, bare close to the Ice and Ma-leagues of the fier welden those the faid Reary dead at the fad hoe. This Bar vs, bare close to the Ice and Ma-North Cape. fler Welden frot the faid Beare dead at the first shot. This Beare was from the neerest land about A Beareon Ice feuen and twentie leagues, and lived of Seales or other fifth that he could prey vpon.

The second of July, we saw Cherie Hand at a North found : the land bearing North and by from any lands West about ten leagues off. The same time we founded and had ground at feuentie sine fathoms, laif at white small shelly ground with small blacke stones,

50 The third of Iuly wee anchored on the West side of the Hand in twentie fathoms, having veries much Ice. I observed the Sunne at the lowest , and found the latitude of that place to bee in 74 degrees, 55. minutes. It followeth where South-west and by South and the floud commeth lisadin 74de

The fifth and fixth dayes, we were troubled with much Ice; but it being broken, we brought misutes, the ends of our Cables to our maine Masta; and having a good tyde, we did sheere, as wee tearme The floud it, cleere off the Ice. We ridde thus in Ice fixe dayes, to wit, vntill the thirteenth day; at what commeth time the Ice began to goe way, and the Morfes came on thoure. For their nature is fuch, that they from the will not come on land as long as any los is house the hand will not come on land as long as any Ice is about the land .

The fourteenth, we went on land; Mafter Welden, and Mafter Bennet, with the Ships company, of July. 60 and I with the company of the Pinnasse. And being altogether on shoare, and seeing of the Thenature of beafts sufficient to make our voyage, wee prepared to goe to killing. Master Welden and Master the Morks. Benner appointed mee to take eleuen men with mee, and to goe beyond the brafts where they lay; that they and wee might meet at the middeft of them, and so inclose them, that none of them should get into the Sea.

The thirteenth

A great white

flayne in fixe A great Froft

As I serched a compalle about, before we were aware, rose a great white Beare within a Pikee length of vs : whereupon we made a fland, and my felfe having both a Musker and a Lance, chought to have shot him : but remembring my selfe, chartele repose of my Peece might make all the Mories goe into the Sea, and in basard our Voyage, I went to him with my Lance. All this while he late forming at the mouth, and would not flure, but gaped and roared as though he would have eaten ysall; but prefently wee prickerhim in the most ; and then with an eafe pace we proceeded on with our bufineffe; and before has hours were ended, we had flay ne about pace Mr. pioperate on with our pumpine; and beaute mg mouse were conce, we not myne about Scuen or eight leuen or eight hundred Benths. And siter that Matter William flue the Beare. Forem dayer pace fourn or eight hundred heatts. And after the changes of the state of t

Not long after it fell sicke and died. As the beast in 60 shape is very strange, so is it of strange docilitie, and apt to be taught, as by good experience we

The leventh Voyage to Cherie Iland, made in the yeere 1600.

VEe were furnished with two ships, determining to goe to Topany in Lapland, to buy fish of the Lappes and Russes, and afterward to goe to Cherie lland: the one was called the Lionelle, in which I went for Mafter, the other, the Pant, which was there the last yeere. 1608. The one and twentieth day of March, we weighed anchor at Granefend: and the fixe and twentieth . we came to Harwich: where it was concluded, that the Limeffe should goe directly to Cherie Hand. The fifteenth of Aprill, we weighed at Horewich: and the laft of the fame mo-

neth we fell betweene Lofos and Zenam vpon the Coast of Finnark.

Lase.

The second of May, we came to the North Cape; and the same day wee stood for Cheris I. Zenam. land : but meeting with contrary winds and foule weather, we have backe agains for the Cape, May 1. and fell with the Land the fourth day. The fift day in the morning, we put the fecond time from the North Cape; and the eight day wee anchored at Cherie Hand. It did freeze very hard, but They arrive at we found no Ice about the lland, faue that which claue to the Rockes. We went into the Coue Cheric lland with our Shallop, and found eight Morfes on the Ice hard by the shoares side: And we also found the s. of May; all the beafts that were killed the last yeere not washed away with the Sea , couered ouer with Snow and Ice. Wee thought to have gotten abundance of Fowle as wee had done in the yeeres Fowle. before ; but they would not fit; the reason was, because they were but new come to the Iland, 20 and not fetled as then : yet some Fowle we got, and came aboord. And because the wind was Northerly, that we could not conveniently goe to the North fide with the ship, we determined to fend fome men ouer Land, to fee if there were any Morfes on shoare voon that side. The ninth day, I prepared to goe over Land to the North fide, about a North-east Sunne, with three men in my companie. I my felfe had a Musket, and about a quarter of a pound of Powder, and fixe Bullets; an Halfe-pike in mine hand, and an Hatchet at my backe. One of the men had a birding Peece; the other two had each of them a lauelin. Wee went over the Snow and Ice apace outward; but came wearily homeward, by reason we rested not any where. And when we were within a mile of the other fide, one of my companie faid, he faw a Beare : whereupon we looked up, and faw three great ones. Whereupon I made a ftand, and gaue each of my com- Three Beares. 30 panie some Aquavite, and a little Bread, and told them, that wee must not in any cafe seeme Qualitie of fearefull , because the nature of them is such , that who oeuer seemeth fearefull , or offereth to Beares runneaway, they will feize voon him. In this time I made my Musket readie : and the Beares Feare a Trais

feeing vs to come toward them, flood vpon their feet, and two of them went toward the Sea : tor. The third flood still champing and forming, as though hee would have eaten vs. When I was within flot of him, he beganne to follow his fellowes, still looking behind him with his former gesture: In the meane while I got ground of him, the three men following mee with their weapons. In the end the angry deuill turned backe, and came directly toward mee : Het him come within two long Pikes lengths, and gaue him such a welcome, that hee fell downe stone dead. A Beare flahe. 40 The company that were with me were glad as well as I: yet I had beene at the killing of Beares before. After this Beare was flayne, we told feuenteene more, whereof three were young ones. 17. Beares in This done, we went on to the Sea fide, where we found the Shallop which we left the yeere be- fight fore. Wee were no fooner fet to eate a little food, but there came a Beare with two young ones as big as Lambes of a moneth old: they skipped about their dams necke, and played with one Young Bette

another very wantonly. The dame came so neere that I shot at her, and being loth to hurt the whelp young ones, being playing about her fore-parts, I shot her through the top of the shoulder; then the wentaway. Immediatly we faw another Beare comming toward vs, which before he came to vs, flood vpon his hinder feet twice or thrice, vfing the fame countenance that the first did, which I flue. I let him come very neere, and thinking to give him his pasport, the flint of my Musket was broken, which made him come very neere vs. Then the fellow that had the bir-50 ding piece shot him into the foot : whereupon he ran away faster then wee could follow him. Wee feeing fo many Beares, and haning no store of Powder nor Shot, bent our journey toward

our ship againe. Wee had not come a quarter of a mile, but wee faw a huge Beare fast a sleepe on the Snow. I went foftly toward him, and gave him fuch a filip, that he never rose out of the place where helay. His skin when he was flayed was thirteene foot long. A neere neighbour A Beare flaye, of his hearing the report of my Peece came toward me: and him I flue also. Now, having but the skin when one shot left, I thought it not best to bestow it there, although I faw another lie voon the Snow of was 13, foot. hard by. While we fate downe to reft vs in the mid-way, there came toward vs another Beare flavne. with one young one: they came almost within shot, and went backe againe: presently shee

turned againe, and came within hot of me, and flood on her hinder legs directly vpright, and so fo did the young one. I made account they would have come neerer; but they to the contrarie ran away. Wee came being very wearie aboord our ship about a North-west Sunne. Then wee weighed, and flood to the Northward, having the wind at South; and by three of the clocke the next morning, wee came to the North-east Point with the ship. There wee manned our The tenth day.

The

Sixe Beares

Shallop, and Master Thomas Welden and I went on shoare, where hee slue fine Beares, and I one, and I wounded two more very fore. And before a North Sunne, our men had fleyed them flyar. All the Beares all; both them that I flue the day before, and them that wee flue this last time: for they were

The elementh day, we went on Land, and washed some old sleyed Morses skinnes, which had lyen there two yeeres: but they will hardly proue good. The twelfth day, we rid at the West fide, and got some Fowle with shor, and there we rid till the thirteenth.

The thirteenth, wee faw very much Ice to the Southwards and Westwards, wich came driuing fo fast toward the shoarewhere wee rid, that wee were forced to weigh, and stood to the ung to fait toward the incare water week and the see flood to the East fide of the lland : 10 and there wee found both the Hand and our felues encompassed round with Ice. But the winde being Westerly, and a good stiffe gale, it blew the Ice about a mile and an halfe from the Eastern fide: by which meanes wee got betwixt the Ice and the Hand, and flood to the Southward. but faw not any thing in all the Sea faue Ice; fauing close by the Land a little open Sea trending to the South-westward. That way wee stood with our fore top-sayle, and stood one while one way, and another while another way, and could not see open Sea till the fifteenth of the same moneth; at a North-west Sunne wee saw the open Sea: onely a ledge of Ice which began to part infunder, was betwixt vs and it. Toward that place we flood, and intending by Gods helpe to get through, we made provision to defend the ship from the Ice, by hanging Cables ends, and Plankes, and Capitan barres about the bowes of our ship. But for all 20 our fendors, our ship had a great knocke vpon a piece of Ice. About a North Sunne, we got out into the open Sea; with humble thankes to God for our deliuerance.

Snow.

The fixteenth day, the lland did beare North-east and by North, eight leagues from vs: and it did freeze all that day, the wind being at North, which was almost calme. The seuenteenth, at noone the Iland did beare North-east and by North, about nine leagues off, the wind Southerly, snowy weather. The same day we saw a sayle, bearing East North-east off vs about 5. leagues. The eighteenth, the Hand did beare North about 15. leagues off, the wind being at East and by North, Snow and frosty weather. The nineteenth, at twelue of the clocke at noone the lland bare North and by East: and we finding the Ice somewhat scattered, and the wind Southerly, put roome toward the Iland, and vpon one piece of Ice we faw fue Scales: one I killed, and one 30 I tooke aliue, and brought it aboord our flip. But wee could not come neere the Iland by fixe leagues. The wind came to the West with thicke weather and Snow. The twentieth, at twelve at noone the Hand beare North North-west, about twelue leagues off, We sounded, and had 100.

Snow.

Fine Scales.

fathoms, greenish Oze, faire weather, but cold. The one and twentieth, we faw the ship that wee had seene the seventeenth day; wee spake A ship of Hull. With them about 12. at noone. The Master told vs he was of Hull. Wee demanded whether he was bound? He told vs, to Cherie Hand, and that there he would make his Voyage. The Hand at this time did beare North and by East about nine leagues off; and it was faire, but cold frostie Frosty wether. weather. The 22. 23.24. and 25. dayes, we did beate vp and downs in the Ice. The 26. 27. and 28. dayes, likewise wee sayled vp and downe in the Ice; hauing the wind Northerly, and 40 the Iland bearing betweene the North and the North North-east; cold weather. The nine Snow & frost. and twencieth, the Hand beare North nine leagues off, the wind at North-east, snowy weather

26. Scales.

The thirtieth day, we flue 26. Seales, and espied three white Beares: wee went abourd for Shot and Powder, and comming to the Ice againe, we found a shee-Beare and two young ones: A Beare killed Master Thomas Welden shot and killed her: atter shee was slayne, wee got the young ones, and on the Ice. brought them home into England, where they are aline in Paris Garden. The one and thirtieth, we heate up and downe in the Ice, but could not come neere the Land for Ice; the winde was white Beares

Two young brought into

Froft.

The first of Iune, we got within fine or fixe miles of the Iland: but finding very much Ice 50 close by the Land, we flood off againe, the wind being at North-east, cold weather. The second day, we got within three leagues of the Iland: but finding exceeding much Ice round about vs. we stood off againe, the wind at North-east, cold frostie weather. From the second day to the fift, wee fayled first one way, and then another, as the wind and Ice would give vs leave. The wind being at North and by East, and the Iland being betweene the North-west and by North, within fixe leagues and leffe.

The Hall man, the Hand.

The fixth day, we spake with the Hull man, who told vs, that he was put swentie leagues to the North-west of the Iland, being fast in the Ice. We had the wind Northerly, and frosty weather; the Land bearing North North-west The seuenth and eight, we beate vp and downe in the Ice : the Iland did beare North-west eight leagues off. The winde was Northerly, with 60 No fog in a cold and frostie weather.

The ninth, the Land beare North-west off vsabout six leagues off. That day we had the first fogge fince the time of our arrivall, which was the eight of May. Neither loft wee the fight of the Hand about eighteene houres in all this time. This day, about a North-rast Sunne it began to thaw ; and in fixe houres the fnow was melted, which lay vpon the Ice aboue fixe inches The first than thicke; which put vs in good hope that the Ice was almost past.

The tenth, we got within fixe miles of the shoare : where I made an attempt to have got to the land with the Shallop : but comming within three miles of the shoare, I could get no farther. the lee was fo thicke, and fuch foggy weather. I made another attempt the fame day, and got within one mile of the Land: but the Ice was so thicke that I could get no farther. The same day wee faw good ftore of Morfes on the Ice and in the Sea.

The elementh and twelfth, we plyed vp and downe fayre by the lland, to fee if wee could get on Land with our Shallop; but the Ice was so close about the Land, that wee could not by any In meanes, This day the wind was at South-eaft, thicke foggie weather. The thirteenth, we had thicke fogge and calme weather; and when it began to cleere, wee had fight of the Souther Fogges part of the lland, bearing East South-east, about fixe miles off; but it fell thicke suddenly againe. There wee anchored in fortie fathoms, white shelly ground; and rid till ten of the clocke at night : at what time I prepared to goe on shoare, as fast as I could with a Shallop and sixe men. About eleuen of the clocke we put from the Ship, and with great labour got through the Ice to

the Hand, by a North-east Sunne.

The fourteenth day, I landed on the Wester side of the Hand, and determined to goe from The Beares thence to the North fide, where wee flew the Beares. The ninth of May I left three men flaine on the with the Shallop, and tooke three men with me. In my journey I found fuch bad way, that I had North side. no ftomacke to goe through; for where there was no fnow, the ground was fo foft, and without graffe, that we went up to the ancilles in dirt; and where the fnow lay, which was in fome holes, three or foure fathoms thicke, it was fo foft, that we flipt each flep up to the twift; fo that wee were about three houres in going fearce two miles. Whereupon, confidering it would be long before I should get ten miles and backe againe, I returned to our Shallop, and found that the men which I left had killed fome fowle, which wee fod, and when wee had eaten them, I prepared to goe in the Shallop to the North fide. I went close by the shoare; for the Sea was full of Ice. As wee went along by the Cliffes, we got good store of Fowle ; which made vs glad and joyfull, because there was no hope to get aboord the Ship that day, nor the next. About a North-west Sun wee got to the place aboutlaid, and found nine Beares, three of them I flew, the other tooke the 30 Sea. Those three that were flaine we flead, and tooke their flesh and salted it in their skinnes; Three Beares which I stowed in the Shallop for feare of a dearth. I had a terce full of falt there, which wee flaine, powdered, and eaten.

The fifteenth day, when wee had ended our businesse, and eaten some of our Beares siesh, and Possession refet wp an Enfigne in token of our possession of the Iland, wee prepared to be gone : and about an ken of the in Eaft North-east Sunne the wind came Westerly; which made me thinke, as it proued, that the I land for the Ship would be on the South-east fide of the Hand; and when wee were comming, and almost at Mujernie the North-east point, we saw nine men; presently I knew them to bee the men of Hull. Along Company. I came to the East side, where we tooke in drift wood, and a broad stone to make a fire vpon in Drift wood on our Boat. While wee were there, wee espied our ship vnder her Fore-topfayle, and her Milen, the East fide, 40 We made all the hafte we could, and came to the Coue, where wee made our voyage the Summer We made an the nature we controlled controll the Hull mans Boat rowing into the Coue, and a Tent fet vp in the bottom of the Bay. I went thither, and told him we had taken possession there, the eight of May last. He answered, That if the beafts came on shoare, he would kill them if he could; and that there were as good men which ventured in that Ship, as the Company. I told him he durft not answer these words in England, and so departed and got some Fowle. About a South-west Sunne wee stood toward our Ship, having the wind at West South-west, and the Ship bearing from vs South-east about four leagues. I had not failed ten miles, but the Ice was fo close and firme, that I could not get abourd. so nor backe againe; for it closed with such force, that it made the Shallops sides cracke, as though they would have met together. Wee laboured very fore to faue our Boat, because it did concerne our lines, and got her into a place where shee lay betweene two pieces of Ice. After this sort we draue with the Ice till we had loft fight of our Ship, which was about a North fun; and still wee draue, being not able otherwise to moue till we were aboue eight leagues from the Iland,

The fixteenth day, at an East South-east Sun, the Ice began to open. Then, although my Company were in despaire, and faid it was impossible to get out, to worke wee went, and by cutting off Ice, and remouing of it one piece from another, we made way through toward the Land. The neerer to the Land wee got, wee found the more open Sea ; and by a North Sunne wee got on shoare. After wee had given God thankes for our deliverance out of such extreame danger, wee 6c eate some Fowle and Beares flesh, which wee sod under a Cliffe. There wee found nine young They feed on Foxes, and killed the old one. There also we slept upon the cold Sand, which was not past three scares seek inches thicke and underneath less and daied have all a Court, and Courte the forestand. June 18 forest Seek inches thicke and underneath less and daied have all a Courte and Courte the forestand and the courte seek inches and underneath less and daied have all a Courte and Courte the forestand and the courte seek inches and underneath less and the courte seek inches and the courte see

Flead frund Lead Vre: but having no fit tooles to breake the Rocks, and also because it was in the view of of Lead trums
on Gull-Iland. the Hull mans Tent, I was forced to let it reft, till the Ships could get into the Coue.

The eighteenth day, wee went to the North fide of the Hand, and in our way wee found good Good Sea-coles found on Sea-coales to burne : some wee tooke with vs to try them, and found them good. And on the North fide I flew two Beares. Then wee shated the bread that was left; and wee had but two cakes to a man : for some of my Company while I was asseepe, or killing of the Beares, had broken open the cheft wherein the bread was, and had conveyed fome away. Our betre was fpent before this time, and we were faine to drinke fnow water.

The ninteenth, wee went to the Coue, the wind being Westerly, to see if weecould espy our 10 Ship, but wee could not, neither could fhee come neere the lland for Ice; for all the Sea, as farre as I could fee from the top of an high Hill was couered with Ice, faung that within a quarter of a mile off the shoare, it was cleere round about once in a tyde.

The twentieth day, I went to the North fide againe, and flew a Beare. Thus wee fpent the Another time, fometimes on one fide, fometimes on the other, neuer staying about one day in one place Beare flaine. till the Ship came in ; which was the feuen and twentieth of June, on which day I flew ano-Another ther Beare. I flew seuen in all, vyhose slesh vye eate full sauerly, torgetting the oyly ranknesse Beare flaine. of it; for hunger is a fauourie fawce. Their Ship

The feuen and twentieth, our ship came to an anchor on the North side, where we then were: affeone as vve faw her, we needed no bidding to go aboord. When we were come to the ship side, 20 they bad vs vvelcome : but whereas we thought to have releeved our felues, wee found it farre otherwise; because the Ship had a knocke with a piece of Ice in the Sterne, which brake in the corner of a Planke under the wvater, so that our bread-roome wvas full of wvater, and all our bread Control of a rainer visited by the state of The Matthew. went on shoare, where we found one John Skinner, Masters mate of the Matthew, with eleven men by him. We set vp our Tent, and told him there was no voyage for him to make : but our necessicie vvas such, that vve vvere faine to take foure hundred of bread of them, vpon some condition, which I will not speake of here. The same day were thought to have taken a Copper aboord, which I digged out of the fnow; but by negligence it was let fall into the Sea, yetaf- 30 terward taken vp againe and carried aboord. The fame day, another Ship called the Mary Mar-

garite came into the faid Coue on the South fide. The eighteenth, I went to the Coue with the Shallop and fixe men, where I found the Marie Margarite; there passed no great kindnesse betweene them and me. I slew three Morses there, two vvere loft, the others head I brought aboord. The next day I came aboord our Ship, and we rid on that fide, looking still when any beasts would come on shoare, till the second of Iuly. Then we weighed, and stood to the East side of the Hand; because the wind was at West North-west, and great store of Ice came from those parts. We had not rid one houre to an end, but Logen and Edge, vve faw a Skiffe comming towards vs. In this Skiffe was one lofice Lagen, and Thomas Edge, Factors in the Paul for the vvorshipfull Company. They told vs that the Paul vvas in the Coue, 40 and the ship of Hull. They weent aboord againe, and when the tyde was spent, we weighed and thought to have anchored neere the Coue; but the vvind year fo far Easterly, that we could not: fo vvee vvent to the Wester side, and ridde there till the fourth day, where vve got Fowle; for chiefeft food

in all the time of our being about the Iland, and in the Ice, they were our chiefest food. The fourth, we weighed and went to the North fide; where we were troubled with much Ice: The wind was at West and by North, which brought the Ice whole vpon vs; so that we vvere forced to vveigh againe.

The fixth, vve came into the Coue; vvhere Master Welden slew a Beare. The eight day, he A Beare flaine. flew another Beare; and the same day I vvent to the North side, with the Shallop and victuals for the men which kept on that fide. I flayed there till the fourteenth of July : on which day 50 Beare flaine. wee had the wind Northerly, with fnow and froft, and the Iland enuironed round with Ice, In this time the Ships Company on the South fide did digge some Minerall Lead. And we caught aboue twentie Foxes, which we did eat as fauerly as if they had beene Venifon. Some Minerall The fifteenth day, by a North-east Sunne vve came aboord the Ship, which lay in the Coue,

Aboue twentie vvith our Shallop and all our prouision that vvas on the North side. And the Lionesse prepared Foxes eaten, to goe to Saint Nicolas in Ruffia, as it was appointed before in London,

The fixteenth, the wind being North-east brought such store of Ice to the Iland, that it vvas compassed round close to the shoare; and filled the Coue to full, that by no meanes possible the Ships could get out but ridde ftill that in for fine dayes.

The feventeenth, the Ice began to open at the mouth of the Cove, and some were willing to 60 goe out with their Ships; but couetouinesse had like to have brought vs all to great misery : for each man striuing to ride longest in the Coue, supposing that there the Morses would come first Dragers by the on shoare, they found it cleane contrary; for the wind came Southerly, and blew all the Ice from this fide of the Hand, faue that which was in the Coue: which pressed so fore vpon our

Ships, thatour Anchors could not hold vs. For the Manbew was put from three Anchors. and droue with that imall tyde, that runneth there within her length of a funken Rocke: but a great piece of Ice on ground vpon the Rocke did keepe her from it. And when the floud came againe, the was driven within halfe her length of the Rockes; fo that they were glad to get molt of their victuals out of her vpon the Rockes, looking each minute when the should folit in simder. And though the reit of the thips did not drive as the did , yet they had many a fore ftroke with the Ice. For the Southerly wind caufed a hollow Sea to come in; fo that our ships strooke with fuch force against the Ice, that wee could hardly stand on our feete in them. Then each man layed to his hand to faue his ship, by putting Plancks and old Cables ends, and bundels of To Hoops betweene their ships and the Ice. But they were beaten all to pieces presently. Then we put pieces of Elme Plancke betweene the bowes of the Paul, in which ship I was: Immediately, they also were beaten into small pieces, although they were aboue foure inches thicke. With the stroke that brake the Plancke, the Carpenter faid, the ships side did cracke, and two timbers were broken. Then prefently wee also got out of the ship most of our victuals, and carried it to the shoare. There might you see a forrowfull spectacle. For all the ships, being five in number, were fo fast in the Ice, that all the men that were in them all , which were one hundred eightie two, could not imagine how to laue one. Among the reft, we made account that the Matthew would finke, ere long : because the Ice had broken nine timbers on one fide, and eleuen on the other; fo that the Greene Sea did come into the ship : and her mayne beame was broken at that 20 instant likewise. In this fort we continued till the twentieth day following; when we looked still to bee put on the Cliffes with the force of the Ice, that pressed vpon our ships so fore, that our Anchors could not possibly hold.

Voon the twentieth day, it pleased God to bring the wind Westerly, then the Ice began to open, and to drive out of the Coue by little and little, to our great comforts. But that Ice that did not get cleane out, came backe againe, and ranne round in a Circle: fo that wee had a continual labor to defend the ships from it, Whereupon we made meanes to get out by long 1 Warps, 1 A warpe, is a as weetermethem. Wee were faine to let flip one Cable, and the Lioneffe one. The Matthew Rope (com had but one Cable and Anchor; but they borrowed one of vs. By a North-west Sunne, all feel yield to the ships got out of the Ice to the Coues mouth; where we stayed for the ebbe. When the ebbe warpe a ship, 20 was come, the Lioneffe departed on her Voyage to Saint Nicholas in Ruffia. And prefently the that is, with an Matthew, and the Mary Margarite fet faile and got out. Then wee in the Paul fet fayle, and Anchor bent before our Anchor was vp, it got hold vpon one of Matthewer Cables, that shee lost, when shee and layd out droue out . and brought vs vp toa Bitter, fo that wee were very neere the Rockes:but wee to hale the fhin got off egaine, and ride there till a North-weft Sunne the next day.

The one and twentieth day, we weighed and stood to the East side of the Iland, where wee is done when found the Mary Margarite, which had loft her Boat. Streight way we fayled to the North fide, they want wind to carrie out, where we anchored and rid till a North Sunne.

The two and twentieth day, it cleered up of a fogge, which had continued fince the bour. time of our comming out of the Coue. And wee thought it best to fetch the victuals aboord, m A Bitter, is a 40 which we carried on shoare when the ship was like to be split with Ice.

Then Iofics Logan and I tooke feuen men more with vs, and came to the Coue on the the Bitts, for Southfide : where wee found abundance of Morfes lying on the Ice, that was in the Coue. when they I flue one of them, and tooke off his head; we could not get to the shoare where our victuals lay, come to Anbut we made a fire under a Cliffe in the fame Coue.

The three and twentieth day, wee got to our victuals, and lofias went with it to our shippe: about the Bitts but I tarried at the Coue, hoping that the beafts would come on Land when the Ice was gone; (two mayne as they did afterward. There I tarried till the fine and twentieth of July; at what time Iofias fquarepieces Logan came to mee with the Shallop, and a Skiffe loden with Caske and other prouition; of Timber, and told mee, that they had flaine five or fixe hundred Morfes on the North fide.

Hee tarried with mee till the feuen and twentieth of Iuly : now feeing no beaftes the loofe of 50 did come on Land, because the Ice did hang about the Coue, he went to the North side againe: the ship, to but the same day after he was gone, they began to come on Land.

The next day following, being the eight and twentieth, wee flue about eightie, and tooke Cable vnto) their Blabber and Teeth. Then they began to come on shoare agains the thirtieth day : at what they may time Maiter Bonner was come into the Coue to feeke his Anchors. Then his men came on fhoare, little vere it and we flue about one hundred and fiftie beaft more. But there rofe a fforme at South-eaft, that out at eafe: obrought in such a surge, that it washed aboue sixtie beasts into the Sea; so that most of them therwise, if a were loft.

The next day being the last of Iuly, Master Welden and Master Iones came to the Coue with would runne about twelue men, being all very wearie. For they had left the Shallop in a Coue on the North- out end for 60 west fide of the Iland, and came over Land. Then to worke wee went on all hands, and placed end, that is alour Coppers. And by the fift day of August we had ended our businesse; and the ship came from together; but the North fide into the Coue.

is faid to bee breught to a Bitter. The Bitter end is that end of the Cable within boord at the Bitts,

August.

Note.

The fixt of August, I tooke the Skiffe and seuen men to fetch the Shallop to the Coue, that Included August, a cone the Saint and the weff fide of the Hand, the last of July. When I Matter treases may set, in a course, on the too came to the place, confidering I was never the North fide, where we commonly make our Voycame to the place, connecting a was nected the avoid how to the third was cour voyage, and also defired by Mafter Welden, if I could goe, to doe so, I went thirther, and found about age, and an outrieu by matter resident, it is a good headed beafts for Teeth, as euer I faw. Wee had no more Launes to kill fue and fortice as good headen Dealts for 1 eeth, as even 11 aw. we en use no more Launces to kill the m with all, but two, I tooke one, and a luthe fellow that was our Cooper had the other; we en m with air, but two,1 tooke one, and a mine tenery that was not cooper had the other; we had not killed past ten but his Lance brake. Then I she all the rest in lesse then two houres, had not knied part ten tur in Lance van Ayby a West Sunne wee came aboord the Paul

ith them.

The eight day, wee got the Southermost Point of the Iland: where wee rid all that day. IO In ergnt day, wee got the additional to the state of the I neir Skille from their kong pours terme, and we manned our pour content in er againe; out then rofe fuch a fogge, that we had like to have loft both our Boats and men; but they got to the flip

ame with much acou.

The ninth day, it was calme; but wee had such a fogge, that wee could not see two Cables length from the ship. And about eight of the Clocke at night, wee lost our Skiff-

together.

The tenth day, we had a little Wind at North-west and by West. Then seeing no amend-In eventually, we need about fixe of the flip of Hull behind vs in the lland, and about fixe of the Clocke fet layle for England, and arrued fafely at London the last of August, 1609. Bleffed

A Voyage performed to the Northwards, Anno 1603, in a flip of the burthen of fif-tie tunnes, called the Grace, and fet forth at the cost and charges of the Wor-shipfull Francis Cheris. Written by William GORDEN; being the first Voyage to Cheric Iland; which came to my hands since the former (or rather later Voyages) were in the Prefle.

30 He ship being readie the tenth of Aprill, whereof was Master Siephen Bennet, and for Factor and Ouer-feer William Gorden , our Directions from the faid Merchant, were first to proceed to Cola, and there to make sale of such goods as we had, and to take in fuch other as the Countrey of Lappia did affoord, and then to proceed vpon some Discourie, Wherefore omitting our fourney to Cola, as a matter of small importance, being fo well knowne before, after our Affaires ended, we were readie to proceed forward. But our men not being hired thereunto would have refused, if there had not beene made an agreement by meanes of loss Logan, who was to lye there as Factor for Master Cherie, the Master and my felies partly with promifes, partly with gites, And thus fetting forward the fixt of August, 40 from the River of Cola, being determined to have fayled into 80, degrees of latitude, if nothing did hinder vs;or if we did not light vpon some landsour determination was hindered by meanes of meeting with an Iland, and likewile the yeere being farre fpent, keeping our course from the West end of Kilden, to the Ilands of Ward bonse, which wee passed the tenth of August with little wind; then directing our course North North-west, the wind at South-west easie wind, so that the eleventh day we did reckon our felues to have fayled twentie leagues North-west. The twelfth day, it was most part calme and foggie. The thirteenth day, it was cleere, and the wind at South, and we had sayled twentie two leagues North North-west. The sourteenth day, the at south, and we mad a you treated the form of the firme day being thicke and foggie, we had thought wee had seene Land about foure of the clocke in the after-noone, bearing 50 from vs West North-west, and North-west by West, but sayling towards it three houres, keeping still his forme, and not altering till the wind increasing, caused it to fade away (for it was no other then a banke of fogges) after we had sayled three leagues changing our course, we sayled then fifteene dayes twentie leagues, North-west and by North, still having close weather, that we could not make any observation. The fixteenth day in the morning, at two of the clock, we did see two great high Hils, which did seeme to vs about the Clouds, and did seeme very neere, but we found it otherwise for sayling towards it, we found it further then we did expect, for it was fixe of the clocke at night before wee could come neere vnto the Land, where wee anchored in thirtie fathomes. In which time we could not fayle leffe then eighteene leagues North and by West. That night our Master knowing, better what did belong vinto those Assaires, 69 would not fuffer the Boat to goe aland till the morning: which was the feuenteenth day of Augut, and before our going aland, the Master caused ashanke of Lines to bee shot for, to toy for hih, and then he and my lelfe with foure of our Company went aland. First, vpon a little lland meere adjoyning, where we had much adoe to get to our Boat againe, by reason of the steepnes

of the Rockes : then we went on thouse voon the Mayne, where at our comming on Land, wee did fee two Foxes, one White, the other Blacke. Thus spending most part of the day, wee returned aboord our ship without any profit : only one of our men tooke vp a piece of Lead, and I found a piece of a Morfes Tooth, by which we perceined that the Sea Morfes did vie thither. but the time for that yeere was palt, for we did fee none. After our comming abourd, having haled the Line, we found nothing but one but fish thereon, wherefore prefently weighing Anchor we fayled West to see if we could have any true observation, the next day which wee had and found our felues to bee in 74. degrees 30, minutes, The fame day directing our course for London where we arrived the tenth of September, by Gods helpe, in health and fafetie.

CHAP. XIIIL

Diners Voyages and Northerne Disconeries of that worthy irreconcrable Disconerer Mafter HENRY HVDSON. His Discouerie toward the North Pole, fet forth at the charge of certaine Wor hipfull Merchants of London, in May 1607. Written partly by IOHN PLAYSE one of the Company, and partly by H. Hv D S O N.

Non 1607. Aprill the nineteenth, at Saint Ethelburge in Bilhops Gate ffreet . did communicate with the reft of the Parishioners these persons Seamen, purposing to goe to fea fouredayes after, for to discouera Passage by the North Pole tolds. pan and China. Fuft, Henry Hudfon Mafter. Secondly, William Colines his Mate. Thirdly, lames Young. Fourthly; lohn Colman. Fiftly, lohn Cooke. Sixtly, lames Benbery, Seventhly, James Showston, Eightly, John Pleyce, Ninthly, Thomas Baxter.

Tenthly, Richard Day. Eleventhly, I ames Knight, Twelfthly, John Hadfon a Boy. Tentity, Kebara Day, Lettenkuy, sames Angas, 1 wentiny, som sinajon a Doy.

The first of May 1607, we weyed Anchor at Grangfords and on Tuesday the fixe and twentieth day in the motning, we made the Hes of Shotland, and at noone we were in 60. degrees 12. The Hessef minutes, and fixe leagues to the Eastward of them : the Compasse had no variation. We had fix - Shelland. tie four fathomer at our founding, blacke, ozie, fandir, with some yellow shels. Our ship made No variation, more way then we did suppose. On Saturday the thirdeth of May, by our observation we were minutes in 61. degrees 11. minutes, This day I found the Needle to incline 79. degrees winder the Ho-The inclinity. rizon. For foure dayes space we made very little way by contrary winds.

On Thursday the fourth of June, we were by our observation still in 61. degrees and 14. mi- Needle. nutes, eight and twentie or thirtie leagues from the Norther part of Shotland: the Land bearing by our Accompt East and by North off vs, I found variation in fine degrees Westerly. The seuenth of June, wee were in 63. degrees 25. minutes. The eighth, all the fore-moone 61.degrees 27.

we had a fresh gale Southerly; we steeted away North and by West, and by observation we were minutes. in 64. degrees 27. minutes.

The elementh, wee faw fixe or feuen Whales neere our shippe: wee were in sixtie feuen degrees thirtie minutes. About fine of the clocke, the winde came vp at North-east and by Eaft; wee steered away North North-west with a fresh gale all the night at East. Thetwelfth, the winde was at East North-east, a stiffe gale, wee steered away as afore, and accounted wee had runne by this day noone thirtie leagues. In the after-noone wee steered away North and by West fitteene leagues, all the night prooued a great fogge with much wind.

The thirteenth, betweene one and two in the morning, we saw some Land on head of vs. and fome Ice: and it being a thicke fogge, we fleered away Northerly, and hauing much wind wee 10 flood away South and by East, fixe or eight leagues. Our sayle and shroudes did freeze, At eight in the morning it cleered up, the wind being at North-east and by East, with much wind wee were hardly able to maintayne a fayle. This was a very high Land, most part covered with Snow. The neather part was vncourred. At the top it looked reddish, and vnderneath a blackish Clay, with much Ice lying about it. The part which we saw when wee cast about, trended East and West: And the Norther part which we saw, trended North-east and by North, and Northeast: and the length which wee saw was nine leagues; wee saw much Fowle. Also wee saw a Whaleclose by the shoare. We called the Head-land which we saw, Towngr Cape; and necreit Young Cape. standeth a very high Mount like a round Castle, which wee called, the Mount of Gods Mercie. The Mount of All the after-noone, and all the Ecuening itrained. At eight in the Ecuening we call about, and Gods mosic. 60 feered all night North and by West, and sometimes North North-west.

The fourteenth, being neere the Land we had Snow. At foure in the morning, the wind, vering Northerly, we cast about and stood South-east and by South. This day wee had much wind and raine, we shorted sayle being neere the Land. The sifteenth, in the morning it blowed so much wind at North-east, that wee were not able to maintayne any sayle, wee then strooke a Ccc 2

hull, and let our ship drive, wayting for a fitter wind; this night was very much raine. The fixteenth, was much wind at North-east. The feuenteenth, we fet fayle at noone, we steered away East and by South, and East South-east. The eighteenth, in the afternoone a fine gale Southeast, which toward the Eeuening increased, and we steered North-east three Watches, twelve lesgues. The nineteenth we steered away North North-east fixteene leagues. At nome wee had raine with fogge, From twelue to foute we steered North North-east eight leagues, and did account our selves in seventie degrees neerest hand : purposing to see whether the Land which we made the thirteenth day, were an Illand or part of Graneland. But then the fogge increased very thicke with much wind at South, which made vs alter our courfe, and to shorten our fayle. and we fleered away North-east. Being then as we supposed, in the Meridian of the same land, 10 hauing no observation since the elementh day, and lying a bull from the fifteenth to the sementary haung no onernation innee the execution way, and ying a man from the interest to the telephene the property of the South-well. This day were faw three Whales neere our ship, and hauing steered away North-cast almost one watch shue leagues, the Sea was grownecuery way : we improsed wee were thwart of the North-east part of that Land which we made the threemsh day, and the current fetting to wind-ward. The reason that mooned vs we small the time terms to the time to gale of wind, we steered away North-east vntill the next day at noone, and sayled in that course

mer comt.

tolye theother way.

Land not couered with

The twentieth, all the morning was a thicke fogge with the winde at South : wee steered 20 North-east till noone. Then we changed our courfe, and steered away North North-east, hoping for an open Sea in our course to fall with the bodie of Newland. This day at two in the afternoone it cleered vp. and wee faw the Sunne, which wee had not feene fince the second of this Land on their moneth. Hauing steered North North-east, two watches and an halfe, fifteene or fixteene leagues wee faw Land on our Larboord, about foure leagues off vs, trending as wee could phoffe North-east and South-west. We steered away East North-east, the wind at South a good gale, but reasonable cleere; wee faw many Birds with blacke backes, and white besties in forme much *Toloofe,is to like a Ducke: we saw also many pieces of Ice driving at the Sea. We * loofed for one and went heepeclofeto roomer for another. And this morning about foure, a thicke fogge we faw a head of vs.

The one and twentieth, in the morning we fleered North-eaft, and East North-east two wat- 30 ches, fiue or fixe leagues. Then it grew thicke fogge. And we cast about, and steered North-east and East North-east two watches, fixe leagues, finding wee were embayed. The wind came at * To tacke the East South-east a little gale: we * tacked about and lay South. All this night was a thicke fog thip, is to bring with little wind, East we lay with the stemme.

The two and twentieth, in the morning it elected up, being calme about two or three of the clocke : after we had a prettie gale, and we steered away East and by North three leagues, Our observation was in 72. degrees 38. minutes, and changing our course, we steered North-east, the wind at South-east a prettie gale. This morning when it cleared vp, we saw the Land, trending neere hand East North-east, and West South-west, esteeming our selves from it ewelve leagues. It was a mayne high Land, nothing at all covered with fnow and the North part of that 40 mayne high Land was very high Mountaynes, but we could fee no fnow on them. We accounted by our observation the part of the mayne Land, lay neerest hand in 73. degrees, The many fogs and calmes with contrary winds, and much Ice neere the shoare, held vs from farther Discovery of it. It may bee objected against vs as a fault, for haling so Westerly a course. The chiefecause that moved vs thereunto, was our defire to fee that part of Groneland, which (for ought that we know) was to any Christian vnknowne : and wee thought it might as well have beene open Sea as Land, and by that meanes our passage should have beene the larger to the Pole : and the hope of having a Westerly wind , which would be to vs a landerly wind if wee found Land, And considering wee found Land contrarie to that which our Cards make mention of; we accounted our labour so much the more worth. And for ought that wee could see, it is like to bee a good so Land, and worth the feeing.

On the one and twentieth day, in the morning while we fleered our course North North-east, we thought we had embayed our felues, finding Land on our Larboord, and Ice vpon it, and many great pieces of Drift Ice : we steered away North-east, with diligent looking out every cleare for Land, having a defire to know whether it would leave vs to the East, both to know the bredth of the Sea, and also to shape a more Northerly course. And considering wee knew no name given to this Land , wee thought good to name it, Hold with bope, lying in 73. degrees of latitude.

The Sunne was on the Meridian on the South part of the Compaffe, neerest hand. Heere is The Land of to bee noted that when we made The Mount of Gods Mercie, and Toungs Cape, the Land was 60 Hold with Hope conered with inow for the most part, and extreame cold, when wee approached neere it : But this Land was very temperate to our feeling. And this likewise is to be noted, that being two dayes without observation; notwithstanding, our lying a hull by reason of much contrary wind, yet our observation and dead reckoning were within eight leagues together, our shippe beeing

before vs eight leagues. This night vntill next morning prooued little Winde. The three and swentieth, in the morning we had an hard gale on head of vs. with much ravne that fell in very great drops, much like our Thunder showers in England; wee tacked about and thood East Northerly with a short fayle, to our feeling it was not to cold as before we had it. It

was calme from moone to three of the clocks with fogge. After the winde came vo at East and East South east, we steered away North raft with the fogge and rayne. About seven or eight of the clocke, the winde increased with extreame fogge, wee steered away with short sayle East North-east, and sometimes East and by North. About twelve at mid-night, the wind came vp at South-weft, we steered away North, being reasonable cleere weather.

The four and twentieth, in the morning about two of the clocke, the Mafters mate thought A mayne high he faw Land on the Larboard, trending North North-west Westerly, and the longer we ranne Land North, the more is fell away to the West, and did thinke it to bee a mayne high Land. This day the wind being Westerly, we steered away North, and by observation wee were in 73 degrees nearest hand. At noone we changed our course, and steered away North and by East, and at our last observation, and also at this, we found the Meridian all Leeward on the South and by West,

Westerly part of the Compasse, when we had sayled two Watches eight leagues. The fine and twentieth, the wind feanted and came vp at North North-west, we lav Northeast two Warches & leagues. After the wind became variable betweene the North-east and the North, we fleered away East and by North, and sometimes East, we had thicke forge. About noone three Granpasses played about our thippe. This After-noone the wind vered to the East and South-east, we haled away North and by East. This night was close weather, but small fogge (we vie the word Night for distinction of time, but long before this the Sunne was alway about the Horizon, but as yet we could never fee him you the Meridian North.) This Night being by our accompt in the Latitude of 75 degrees, we saw small flockes of Birds, with blacke Backes and white Bellies, and long speare Tayles. We supposed that Land was not farre Land not farre off, but we could not diferie any, with all the diligence which we could vie, being fo close wea- off. ther, that many times we could not fee fixe or feuen leagues off.

. The fixe and twentieth, in the morning was close weather, we had our wind and held our course agafore. This day, our observation was 76. degrees 28. minutes, and we had Birds of the 76. degrees 28. 30 fame fort as afore, and diversother of that colour, having red Heads; that we faw when we first minutes. made the Mount of Gods Mercy in Greenland, but not fo many. After we fleered away North and by East : two VVatches 10 leagues, with purpose to fall with the Souther part of Newland, accounting our felues 10. or 12. leagues from the Land. Then wee flood away North-east one VVatch fine leagues.

The feuen and twentieth, about one or two of the clocke in the morning we made Newland, Greenland or being cleere weather on the Sea; but the Land was couered with fogge, the Ice lying very thick Newland discoall along the shoare for 15. or 16. leagues which we faw. Having faire wind wer coasted it in a uered. very pleasing smooth sea, and had no ground at an hundred fathoms, foure leagues from the shoare.

This day at noone, wee accounted we were in 78 degrees, and we stood along the shoare. This 78.Degrees, 40 day was so foggie, that we were hardly able to see the Land many time, but by our account we were neare Vosel Hooke. About eight of the clocke this Ecuening, we purposed to shape our votel Hooke. course from thence North-west. Heere is to bee noted, that although we ranne along neere the shoare, we found no great cold, which made vs thinke, that if we had beene on shoare the place is Temperate temperate. Holding this North-west course, about ten of the clocke at night, we saw great store ayre. of Ice on head off vs, bearing Wester off vs; which we could not goe cleere off with the foresavd course. Then we tack about, and stood away betweene the South and the South-east, as much desirous to leave this Land as we were to fee it.

The eight and twentieth, was a hard gale of wind all the fore-noone betweene the South and the South-west. We shaped our course , we did it to bee farther from

so the Ice and Land. It pleased God that about twelve of the clocke this night it cleered vp, and we found that we were betweene the Land and the Ice; Vogel Hooke then bearing nearest hand East off vs. Then we tacked about, and stood in for the shoare, having Sea-roome between the Ice and the Land. The nine and twentieth, at foure in the morning the wind at North-east, a pretie gale, we thought best to shorten our way, so we tacked about and stood North North-west, the wind a little increasing. About twelue at noone, we faw Ice a head off vs; we cast about again, and flood away East South-east with very much wind, so that we shortned our tayles for the space of two Watches. Then about eight this Eeuening, we strucke a Hull, and it proued the hardest florme that we had in this Voyage. The thirtieth, in the morning was flormie; about noone it ceased, at seven in the Ecuening it proved almost calme.

60 The first of July, all the fore-moone the wind was at South-east, we stood North-east for the shoare, hoping to finde an open Sea betweene the shoare and the Ice. About moone wee luly. were embayed with Ice, lying betweene the Land and vs. By our observation we were in 78.degrees 42.minutes, whereby we accounted we were thwart of The great Indraught. And to 78.degrees 42. free our selues of the Ice, we steered betweene the South-east and South, and to the Westward, as minutes.

we could have fea; And about fix, this Ecuening it pleased God to give vs cleere weather; and we we could nature that are into the Inlet, being almost a Bay, and enuironed with very high Mountaynes, with low Land lying betweene them; wee had no ground in this Bay at an hundred fatayine, with now harm young never ever, we fleered away West, the wind at South-call and calme, and found all our Ice on the Norther shoare, and a cleare Sea to the Southward,

The second, it pleased God to give vs the wind at North-east, a faire gale, with cleere wedthe recond, it present also to give ve the want as too trace, where there wester, the fee being to the Northward off ve and the weather short, and an open Sea to the South. there are being to the reactivation of reactive and the source with till swelte of the clocke; having fayled in that course 10.leagues, and finding the Ice to fall from es to the led in that courie 10.leagues, and moung the see to last from to the thankes to God, who marvellously preferred vs from to many dargers, among f to hige a quantitie of Ice and Fogge. We steered away North-west, hoping to be free from Ice, we had ob-73. Degrees 56. femation 78. degrees 56. minutes, we fell with Ice againe, and trended it as it hay betweene the West and South south-east. The third, we had observation 78. degrees 33.minutes. This day Manuer. West and south rough frozen, it was fearching cold, we also trended the Ice, not knowing when

pen Sea.

Much Drift-

Many Scales.

The fourth, was very cold, and our shroudes and sayles frozen, we found we were farre in the and invited in the wind being at North, we beare up and flood South-South-eath, and South and South west by West till ten this night. The fift, was very much wind at North Easterly : at twelve we strooke a Hull, having brought our selves neare the mouth of the Inlet.

The fixth, in the morning the wind was asbefore, and the Sea growne. This morning we 10 came into a very Greene Sea, we had our observation 77.degrees 30 minutes. This after noone the wind and Sea affwaged. About foure of the clocke we fee fayle, and steered North-west and by West, the wind being at North North-east. This day proued the clearest day we had long before. The feuenth, at foure in the morning was very cleare weather, and the fairest Morning rest hand, and out of the Saste. We found we were compassed in with Land and Ice, and were againe entred into a Blacke Sea, which by proofe we found to be an open paffage. Now having againe entree into a biserge oes, which by proofe we sould to be an open panages arow muning the wind at North North-east, we fleered away South & by East, with purpose to fall with the Southermost part of this Land : which we saw, hoping by this meane, either to defray the charge of the Voyage, or elle, if it pleased God in time to gue vs a faire wind to the North-east, to is 10 tisfie expectation. All this day and night afterward proped calme.

The eight, all the fore-noone proued calme, and very thicke fogge. This morning we saw many peeces of Drift-wood drine by vs, we heated out our Boate to ftop a leake, and mended our riggings. This day wee faw many Seales, and two Fishes which we judged to bee Sea-horses, or Morfes. At twelue, this night we had the winde at East and by South, wee stood away

The ninth, all the fore-noone was little wind at South-east, with thicke fogge. This day we were in amongst Ilands of Ice, where we saw many Seales.

The tenth, in the morning was foggie, afterward it proued cleere, we found we were compaffed with Ice enery way about vs; wee tacked about, and flood South and by Weff, and South 40 South-west one Watch fine leagues, hoping to get more Sea-roome, and to stand for the Northeast, we had the wind at North-west.

From hence it feemethitta-

The eleventh, very cleere weather, with the winde at South South-east, we were come out of the Blue Sea into our Greene Sea againe, where we faw Whales. Now having a fresh gale of tenour of area wind at South South eaft, it behooted mee to change my courfe, and to fayle to the North-eaft, by the Souther end of Newland. But being come into a Greene Sea, praying God to direct mee, I Notes.

Range and Greene fleered away North ten leagues. After that, we law Ice on our Larboord, we fleered away Eaft and by North three leagues, and left the Ice behind vs. Then we steered away North till noone. This day wee had the Sunne on the Meridian South and by West, Westerly, his greatest height 79-degrees 17. was 37.degrees 20. minutes. By this observation we were in 79, degrees 17. minutes, we had a 50 fresh gale of wind and a smooth sea, by meanes whereof our ship had out-runne vs. At ten this Ecucaing cleere weather, and then we had the company of our troublefome neighbours Ice with fogge. The wind was at South South-west. Heere we saw plentie of Seales, and we supposed Beares had beene heere, by their footing and dung vpon the Ice. This day, many of my Compa-Sick of Beares nie were ficke with eating of Beares fielh the day before vnfalted.

The twelfth, for the most part was thicke fogge, we steered betweene South and by East, and South South-east 2. . leagues, to cleere vs of the Ice. Then we had the wind at South, we steered till noone North-east fine leagues. This morning we had our shrouds frozen. At noone by our accompt we were in 80, degrees, being little wind at West South-west, almost calme with thicke fogge. This after-noone we steered away North, and sometimes North-east. Then we faw Ice a head off vs, we cast about and stood South-east, with little wind and fogge. Before we 60 call about by meanes of the thicke fogge, we were very neere Ice, being calme, and the Sea fetting on to the Ice, which was very dangerous. It pleased God at the very instant to give vs a small gale, which was the meanes of our deliverance, to him be praife therefore. At twelve this night,

it cleered up, and out of the top William Collins our Boat-Iwaine law the Land, called Newland or by the Hellanders, bearing South South-west twelve leagues from vs.

The thirteenth, in the Morning the wind at South and by East, a good gale, we cast about and which the Hole food North-east and by East, and by observation we were in 80, degrees 22, minutes. This day landers had we faw many Whales. This fore-noone proued cleere weather, and we could not fee any figne of made a little Difcouerie by Ice out of the top. Betweene noone and three of the clocke, we steered away North-east and by Rerents, as be-East five leagues, then we saw Ice on head off vs, we steered East two Glasses one league, and could fore is delivenot be cleare of the Ice with that courfe. Then we freeted away South, east two leagues 1, after red, but neiwe favled East and by North, and East foure leagues; till eight the next morning.

The foureteenth, in the morning was calme with fogge. At nine the wind at East, a small nor to exact, gale with thicke fogge, we steered South-east and by East, and running this course we found not first sabeour Greene Seasgaine, which by proofe we found to be freelt from Ice; and our Azure Blue Sea fore is obserto be our Icie Sea. At this time we had more Birds then we viually found, At noone being a wed of Sir H. thicke forge, we found our felues neere Land, bearing East off vs; and running farther we found Willam a Bay open to the West and by North Northerly, the bottome and sides thereof being to our Discouries fight very high and ragged Land. The Norther fide of this Bayes mouth being high land, is a finding the small Hand, the which we called Collins Cape, by the name of our Boat-swaine, who first saw it. Whale and In this Bay we faw many Whales, and one of our company having a Hooke and Line over-board Morfe Lenenis, to trie for Fish, a Whale came under the Keele of our ship, and made her held, yet by Gods mer- they also ento trie for Fifth, a Whale came vincer the Accre of our imp, and made her neta, yet by Sous met-terloped.

20 cie we had no harme, but the lofte of the hooke and three parts of the line. At a South-well Green Sastie-Sunne from the North-west and by North, a flood set into the Bay. At the mouth of this Bay est of Ice, and we had founding thirtie fathoms, and after fixe and cwentie fathoms, but being farther in, we the Blue Sta had no ground at an hundred fathoms, and therefore judged it rather a Sound then a Bay. Be- Icie. tweene this high ragged, in the swampes and vallies lay much snow. Here wee found it hot. Whale danger!
On the Souther side of this Bay, lye three or four small llands or Rocker.

In the bottome of this Bay, John Colman my Mate, and William Collins my Boat-swaine, with A Sound is a two others of our company went on shoare, and there they found and brought aboord, a payre of greater and Morfes teeth in the jaw, they like wife found Whales bones, and fome dofen or more of Deeres desperin-Hornes, they faw the footings of Beafts of other forts, they also faw Rote-geefe, they faw much draught then a 30 drife Wood on the shoare, and found a streame or two of Fresh water. Here they found it hot on Hearberond

the shoare, and dranke water to coole their thirst, which they also commended. Here we found &o.degreet, the want of a better Ship-boate. As they certified me, they were not on the shoare past halfe an houre, and among other things brought aboord a Stone of the Countriey. When they went from vs it was calme, but prefently after we had a gale of wind at North-east, which came with the Flood with fogge. We plyed too and againe in the Bay waiting their comming; but after they came aboord we had the wind at East and by South a fine gale, we minding our Voyage, and the time to performe it, fleered away North-eaft, and North North-eaft. This inight proued cleere, and we had the Sunne on the Meridian, on the North and by East part of the Compasse, from the vpper edge of the Horizon with the Croffe-staffe, we found his height 10. degrees 40.minutes, grees 40.minutes, green 40

staffe from the Center in the Eye. From a North Sunne to an East Sunne, we sayled betweene mid-night, North and North North-east, eight leagues.

The fifteenth, in the morning was very cleere vveather, the Sunne shining vvarme, but little wyind at East Southerly. By a South-east Sunne we had brought Collins Cape to beare off vs South-east, and we saw the high Land of Newland, that part by vs Discouered on our starboord. eight or ten leagues from vs, trending North-east and by East, and South-west and by West, eighteene or twentie leagues from vs to the North-east, being a very high Mountaynous land, like ragged Rockes with fnow betweene them. By mine account, the Norther pare of this Land which now vve faw, firetched into \$1.degrees. All this day proued cleere vveather, little \$1.degrees. Wind, and reasonable yvarme.

50 The fixteenth, in the morning warme and cleere weather, the wind at North, This morning we faw that vve vvere compassed in with Ice in abundance, lying to the North, to the North-vvest, the East and South-east, and being runne toward the farthest part of the Land by vs disco-Landsstreetuered, which for the most part trendeth nearest hand North-east and South-west, vvce saw inginto 82.demore Land iowning to the fame, trending North in our fight, by meanes of the cleernesse of the grees. vveather, ftretching farre into 82. degrees; and by the bowing or shewing of the skie much farther. Which when I first faw, I hoped to have had a free Sea betweene the Land and the Ice, and meant to have compassed this Land by the North. But now finding by proofe it was vipossible, by means of the abundance of Ice compating vs about by the North, and joyning to the land, and They re untel

fo feeing God did bleffe vs with a faire wind to fayle by the South of this Land to the North-taff, we returned, bearing up the Helme, minding to hold that part of the Land, which the Hollerders had discouered in our fight, and if contrary vyindes should take vs, to Harbour there, and to trie what we could finde to the charge of our Voyage, and to proceed on our Discouerie, as soone as God should bleffe vs with Winde. And this I can affure at this present, that betweene 78. de-

grees and 1. and 82. degrees by this way there is no passage: but I thinke this Land may bee grees and 7, and 62, degrees by this way since a mo panage, out a visite time beam may bee profitable to those that will aduenture it. In this Bay before poken of, and about this coaff, we Abundance of faw more abundance of Seales then we had feen any time before (wimming in the water, At law more annual action of the wind at North, we were thwart of College Cape, standing noone, this day nating a time gate of white a clocke the Cape beare. North-eaft off vs. From thence I fet our course West South-west, with purpose to keepe in the open Sea free from Ice, and layled in that course 16. leagues. At ten this night we steered away South-west, with the wind at North a hard gale, untill eight the next morning 18, leagues.

the wind at North a nare gase, vnon eight are the Aroth; at eight, we altered our course, and The seuenteenth, in the morning a good gale at North; at eight, we altered our course, and steered away South till eight in the Ecuening, and ranne 12, leagues. This day proud reasons 10 feered away south the eight entire morning the wind encreased at South and by be elected and warms. The organization in the monthly proved clofe weather, little fogge, and

The nineteenth, at eight in the morning the wind at South, with thicke fogge, we steered South-eaft 4. leagues till noone: then the wind vered more large; wee fleered South-eaft and by Eaft 4, leagues till foure: then were vered shere, and steered East and by South Easterly, 15. leagues, till eight the next morning. This day after the morning proued reasonable clerre

The twentieth, in the morning little wind: at eight this morning wee faw Land ahead of The experience in the mortaling actor while a second from vs 12. leagues, being parcof New 20 land. It is very high mountainous Land; the highest that we had seene vatill now. As we sayled neere it, we saw a Sound ahead of vs, lying East and west. The Land on the Norther side of this Sounds mouth, trendeth neerest hand West North-west, and East South-east 12. leagues, in our fight being 10, leagues from vs. And the Land on the Souther fide being 8.0r to leagues in our light; at this time trendeth South South-east, and North North-west; trom eight to noone was calme. This day by observation we were in 77. degrees 26. minutes. On the Norther side of the mouth of this Inlet lie three Hands, not farre the one from the other, being very high mountainous Land. The farthest of the three to the North-west, hath source very high Mounts like heapes of Corne. That lland next the Inlets mouth, hath one very high Mount on the like heapes of Corne. And Hand Heat the America mount, man, All this day after the mor- 30 ning, and all night proued calme, enclining rather to heate then cold. This night wee had fome

The one and twentieth, all the fore-noone calme; at foure in the after-noone we had a small gale of wind at South-South-east, with fog; we steered away East to stand in with the Land, and layled 3. leagues vntill mid-night: then the wind came at North-east, we cast about, and fteered South 10. leagues till eight the next morning. The two and twentieth, at eight in the morning much wind at East, and variable, with short sayle wee steered 3. leagues South and by East: then came downe very much wind; wee strooke a hull. All this after-moone and night,

The three and twentieth, all the fore-noone was very much wind at South, with raine and 40 fogge. At foure this after-noone wee faw Land , bearing North-eaft of vs 6. leagues from vs. Then we had the wind at South South-west; wee steered away South-east, and South-east and by East 4. leagues, the Sea being very much growne. We accounted we had hulled North-west by East 4, 1850-29, leagues; and North 3, leagues. Then fearing with much wind to be fee on a lee shoare, we tackt about, and made our way good West and by North, halfe a point Northerly, all this night with much wind.

The foure and twentieth, in the morning much wind as afore, and the Sea growne. This morning wee strooke our mayne Top-mast to eate our ship, and sayled from the last Equening eight to this noone 15. leagues West and by North halfe a point Northerly. From twelue to eight, 6. leagues as afore, with the wind at South and by West: at eight we tackt about with 50 the winde at South South-west, and lay South-east and by East, with much winde, and the

The fine and twentieth, was a cleere morning we fet our mayne Top-mast, we saw Land bearing North of vs, and under our Lee, we fayling South-east and by East. Then the wind scanted: we cast about, and lay South-west and by West a leagues till noone. Then it began to ouer-cast, and the wind to Cantagaine: we cast about, and lay South-east and by South, the wind at Southwest and by West, and sayled in that course 3, leagues till soure in the after-moone. Then the wind feated againe, and we fayled 3. leagues South. Now, feeing how contrarie the winde proued, to doe the good which weedefired this way; I thought to proue our fortunes by the West once againe: and this Eeuening at eight, wee being the latitude of 78. with the better, 60 and from Land 15. leagues, which leagues part whereof beare from the North-east to the East off vs, we steered away West, with the wind at South-east, and cleere weather.

The fixe and twentieth, all this day proued rayne with thicke fog, and an hard gale of wind at East and by North, and East North-east. From the last Eeuening at eight to this noone, wee ranne 24. leagues : from noone till mid-night 19. leagues, the wind at East and by South : from mid-night till two the next morning, 2. leagues West.

The feuen and twentieth, extreme thicke fog, and little wind at East and by South. Then it proued calme, and the Sea very loftie. Wee heard a great rutte or noise with the Ice and Sea. which was the first Ice we heard or faw fince we were at Colling Cape: the Sea heaving vs Westward toward the Ice. Wee heaved out our Boat, and rowed to towe out our ship farther from the danger; which would have beene to finall purpose, by meanes the Sea went so high; but in this extremitie it pleased God to give vs a small gale at North-west and by West, we steered ac way South-eaft 4. leagues till noone. Here we had finished our Discouerie, if the wind had con- Danger clea-10 tinued that brought vs hither , or if it had consinued calme: but it pleased God to make this ped North-west, and by West wind the meane of our deliverance; which wind wee had not found

common in this Yoyage. God give vs thankfull hearts for fo great deliverance. Here we found Whales Bay. the want of a good ship-boat, as once we had done before at Whales Bay : we wanted also halfe a dozen long Oares to rowe in our ship. Achoone, the day cleered vp, and we saw by the skie Ice bearing off vs: from West South-west to the North and North North-east. Then we had a good gale at West, we steered away South vill foure 7. leagues From foure to fix South 4. leagues. and found by the Icy skie and our neereneffe to Groneland, that there is no paffage that way: which if there had beene, I meant to have made my returne by the North of Groneland to Danie his Streights, and fo for England. Here finding we had the benefit of a Westerly wind , which 20 all this Voyage we had found feant, we aftered our courfe, and fleered to the Eastward, and ran South-east foure leagues. From eight this Equening till noone the next day; East South-east 20. leagues. All this day and night proued very cold, by meanes, as I suppose, of the winds comming off fo much Ice.

The eight and twentieth, very cold, the wind at West, not very foggie. At noone this day we fleered away South-east and by East, and by observation we were 76, degrees 36, minutes. From noone to eight to leagues. Then the wind fcanted to South-east and by South, we steered away East and by North 18. leagues, till the next day noone.

The nine and twentieth, all the fore-moone a thicke fog and wet, the wind at South-east and by East, neerest hand, and raw cold. From noone to soure, wee sayled three leagues East and by 30 North, halfe a point Northerly. Then the wind vered more large, we steered East and by South 8. leagues till twelte at night. At this timet to windward we heard the rutte of Land : which I knew to be fo, by the colour of the Sea. It was extreme thicke fog, fo that we could hardly fee a Cables length from our ship. We had ground as fathoms, imall blacke peble stones. Wee founded againe, and had ground at 30. fathomes fmall flories like Beanes, at the next caft no ground at 60. fathomes. I cast about againe, and steered South-west 6. leagues, West and by North two leagues till the next day noone. All this day and night extreme thicke fog,

The thirtieth, all the fore-noone very thicke fog. At noone almost calme : after we had little wind, and fleered North North-west till two: then it cleered vp, so that we could see from vs 2. leagues with the wind at North-west. Then we steered East South-east: after it cleered. At 40 South in the Eeuening, we faw an Iland bearing off vs North-west from vs 5. leagues, and we faw land bearing off vs from vs 7. leagues. We had land likewife bearing off vs from East Southeast, to South-east and by East as wee judged, 10. leagues. Then having the winde at West North-west, we sterred South and by East. It presently proved calme till ten this Eevening: then wee had a little gale at South-west and by West, wee steered away South South-east till twelve this night, and accounted ourselves in 76. from Land 10. leagues: which was the likelieft Land that wee had feene on all the parts of Newland, being playne riggie Land of a meane height, and not ragged as all the reft was that we had feene this Voyage, nor couered with from At twelue this night we faw two Morfes in the Sea neere vs, fwimming to Land. From twelue at night to foure, calme.

50 The one and thirtieth, at foure this morning we had the wind at South-east, we steered South South-west. Then it proued calme, and so continued all the fore-moone. The after-moone wee had the wind at East South-east, we steered South 8. leagues. Then being like to proue much wind, contrarie to our purpole, and finding our fog more thicke and troublesome then before, diuers things necessarie wanting, and our time well nigh spent to doe further good this yeere, I commanded to heare up for our returne for England, and feered away South South-west. And this night proved a hard gale of wind at South-east and by East. Wee were thwart of Cheries Cherielland. Hand the next morning at foure of the clocke, being to windward off vs 5. leagues: knowing we were neere it, we looked out carefully for the same, and it prouing cleere, we saw it, being a very razged Land on the Wester fide, rising like Hey-cockes.

The first of August, a very hard gale of wind at East South-east, 'we shorted sayle, and steered away South South-weft: This night was very foggie, with a hard gale of wind at East and by South, we fleered by our account 27. leagues: and from eight this Equening till the next morning foure, 10. leagues as afore. All this night was very foggie, wet and raw cold.

The fecond, in the morning calme with a thicke fog, cold and flabbie weather. About noone

we had a little gale West and by North, wee steered away as afore. The third, in the morning calme and cleere weather, with a littlegale East and by South, we sayled South South-west: then weehad the wind at South-saft, wee fayled as afore. All this day and night proued close weather, a little fogge at noone, which continued not long. At twelte this night the wind vered to the East and by North, wee held our course South South-west, as afore.

The fifteenth of August, we put into the Iles of Farre, standing in 52. degrees; and the fifteenth of September, I arrived in Tilberie Hope in the Thames,

CHAP. XV.

A second Voyage or Employment of Master Henar Hydson, for finding a passage to the East Indies by the North-east. written by himselfe.

* I haue Robert Inets Lournall alfo for breuitic omitted.

Aprill,

May.

Lewfort.

Heir names employed in this action are as followeth: Henry Hudfon, Master and Pilot; Robert Inst, the Master his Mate; Ludone Arnall; Islan Conte, Boat-Pilot; Robert ' Inst, the Malter his Mate; Leasure Arman; instructions; Philip State, Carpenter; I shin Berns; I ship Branch, Cooke; I shin Aday, I same Straten, Michael Feirer, I benus kilder, Richard Tomfon, Reduction of the Courtes obtained in this bert Rayner, lobs Hudges, and Humfey Gilbs. The couries observed in this 20 Iournall were by a Compasse, that the Needle and the North of the Flye were

directly one on the other.

Anno 1608, the two and twentieth of Aprill, being Friday, we fet fayle at Saint Katherines. and fell downe to Blacke wall.

The twentieth of May, at noone by observation we were in 64. degrees 32.minutes, and at this time and place the Needle declined under the Horizon by the Inclinatory 81, degrees, and wee had a fmooth Sea, by meanes whereof my observation was good.

The one and twentieth, at night thicke fog, wee fayled North North-east, with the wind at Eaft. The zwo and zwentieth, in the fore-noone the winde at South-eaft, wee steered North North-east, as afore: in the after-noone little wind and thicke fog; we accounted vs in 67.de. 30 grees, the Sea smooth, the Needle declined 82. degrees, this night was calme and cleere. The three and twentieth, in the morning the wind was Easterly, we flood North North-East, and North and by East. All the fore-noone was foggie in the after, noone it cleered, and the wind shortned voon vs, we made out way good North all night. The foure and twentieth, the wind at East North-east, and East and by North, we lay as neere as wee could with a full sayle; wee accounted Lowfoot from vs East Northerly, 16, leagues, diffant from vs ; at foure a clocke this after-noone, wee flood all night, as afore.

The fine and twentieth, the wind at East North east, we flood away North as we could lie: all this day was cleere weather, and fearching cold, which cold begunne the one and twentieth day, and then my Carpenter was taken ficke, and to doth yet continue; and three or foure more 40 of our companie were enclining to ticknelle, I suppose by meanes of the cold. All the night it was calme. The fixe and twentieth, cold but cleere weather, the wind betweene Kaft and Eaft North-east, we flood North-easterly till twelpe a clocke at night: then wee had the wind at North-east & North North-east, we stood South-east and East till noone the next day. The seuen and twentieth, cold and drie weather, at noone we had the wind North and North North-west; Wee stood away North-east, and East North-east, as we could, and accounted our selues in 69. degrees 40. minutes, and the Needle enclined, having a smooth Sea, neerest 84. degrees. All night we had wind and weather as afore.

The eight and twentieth, drie cold cleere weather; the wind betweene North North-west Sun s. degrees and North, we made our way good East North-east; wee faw the Sunne on the North Meri- 10 35. minutes at dian about the Horizon c. degrees 35. minutes, All this night we had much wind, as afore, The nine and twentieth, a hard gale at North North-west : by account we ranne from mid-night to noone 21. leagues, East North-east. Wee had the Sunne on the Meridian 5. degrees, the latitude 72. degrees 13. minutes, whereby wee found our ship to have out-runne vs. At mid-night the wind came to South-east: we cast about, and stood East North-east. This day partly clerre weather with some snow. The thirtieth, cold cleere weather, the wind betweene North-east, and East and by North; we went East South-east, and observing, were in 72 degrees 50 minutes. The one and thirtieth, cold and cleere weather: from the last day till this day noone, we flood South-east and by South, in the latitude of 72. degrees 45. minutes.

The first of June, a hard gale at East North-East, with snow: we made our way good South 60 South-east. The second, a hard gale of wind at North-east: towards night, calme with fogge, our course was South-east all day. The third, in the morning we had a fight of the North Cape; Variation west and at a West and by North Sunne, the Cape bore off vs South-west, halfe a point Southerly, being from vs 8. leagues: and observing the variation, I found it to the Westward II. degrees:

and having a smooth Sea, the Needle enclined under the Horizon 84. degrees and a halfe, the Needle inclineerest I could finde. We had the wind at South-west, and wee stood away North-east and by nation & de-Eait. It was cleere weather, and we law Norway Fisher-men at Sea.

The fourth, warme cleere fun-shine, we stood away North-east and by East. Now by Gods halfe. helpe our Carpenter recouered, and made a Mast for our ship-boat, and the companie made a Sayle, we had the Sunne in the light on the North Meridian: his height was s. degrees 40, minutes. Inclination 23. degrees 21. minutes: Poles height 72. degrees 21. minutes. The fift, in the morning calme weather: wee founded, and had 140, fathoms, fand Oze: here wee faw a fwelling Sea fetting North-east and by East, and South-west and by West, with streame-leches: Io and we saw drift wood. After we had wind ; and we sayled and made our way North North-

east: towards night we founded, and found ground at 150. fathoms, fand Oze. This day cleere weather, and not cold. The fixt, wee had cleere weather, the wind being at East North-East, from the last day till this day noone; we shaped our way on divers courses North and by West. in the latitude of 73. degrees 24. minutes. We found that our ship had out-runne vs, founding in 160. fathoms: in the after-noone little wind.

The fewenth, in the morning the wind at South, after at South South-east: from the last day till this day noone, wee accounted our way from divers courses North-east, 15. leagues. This day was close but cleere weather, and we had a good gale of wind at this time. And three dayes before this, our Cooke and one more of our companie were very ficke. In the morning, we had

20 ground at 150, fa: homs, and at night we had no ground at 180. fathoms, which encreated hope. This night we had some show, which continued toure houres: then the wind came at Northeaft and by Eaft with ftorme; and with short fayle we stood North and by West; here the Needle enclined \$6. degrees. I accounted that we were in 74. degrees and a halfe at neerest hand. This 74-degrees night we faw the Sunne on the North Meridian , his height was 7. degrees 40. minutes, which 30. minutes maketh the Poles height 74. degrees 23. mmu es. The eight, from twelve a clocke last night till noone, we accounted our way on divers courfes, North and by East: then our latitude was 74. degrees 28. minutes, and we had no ground at 200. fathoms. In the after-noone the wind came at South-east, and South-east and by East. This day and night wee had cleere weather, and we were here come into a blacke blue Sea.

The minth, cleere weather, the wind came at South-east and by East: from the last day till Sea. this day noone, wee had a good way North-east, in latitude of 75. degrees 29. minutes: then this day notifie, were nite a good way accurately in antibuse to 15. On the 25. In makes; the wee entred into Cee, being the first we faw in this Voyage; courbope was to goe through it, we flood into it, and held our course between North-east, and East North-east, looking for one, and bearing roome for another, till foure in the after-noone : at which time we were so farre in, and the Ice fo thicke and firme ahead, being in it foure or fine leagues, that wee had endangered vs formewhat too farre; wee returned as wee went in , and with a few rubbes of our thip against the Ice ; by eight a clocke this Ecuening wee got free of it. Wee made our way till next day at noone, South-west and by South, 18 leagues: in the middest of this way weehad no ground

at 180. fathoms. The tenth, in the morning hafey weather; but at noone it cleered vp, and 40 then we cast about, and stood away North and by East, the wind being at East South-east, two watches, fine leagues: then we had the wind at East, we cast about, and stood South South-east, and made a South way, fixe leagues. The eleventh, in the morning a hard storme at East, and

The twelfth, in the morning fog, and all day after cleere weather, the wind at South Southwest, we steered East and by North at noone being in the latitude 75 degrees 30.minutes. From noone till foure a clocke, fine leagues East and by North; then we saw Ice ahead of vs, and vnder our Lee trending from the North-west to the North and East of vs: We had founding too, fathorn, greenish Oz: Here we saw divers pieces of drift wood by vs driving, and streame Leeches lying South South-west, and North North-east. We many times saw the like since we saw the 50 North Cape. The thirteenth, cleere weather, the wind at East, we made a South way 6. leagues, two watches: then we caft about, and made a North way one watch 3. leagues 4: At twelve at night, much wind with fog, we strooke shull and layed our ships head to the Southward. The fourteenth, in the fore-noone fog, and our shroudes were frozen: the after-noone was cleere

Sun-shine, and so was all the night. The fifteenth, all day and night cleere fun-shine; the wind at East, the latitude at noone 75. degrees 7. minutes. We held Westward by our account 13, leagues. In the after-noone the Sea was affwaged; and the wind being at East we fee fayle, and stood South and by East, and South South-east as we could. This morning, one of our companie looking ouer boord faw a Mermaid, Mermaide

and calling up some of the companie to see her, one more came up, and by that time shee was seene, and de-6c come cluse to the thips fide, looking earnefly on the men: a little after, a Sea came and ouertur. feribed. ned her: from the Nauill vpward, her backe and breafts were like a womans, (as they say that faw her) her body as big as one of vs; herskin very white; and long haire hanging downe behind, of colour blacke: in her going downe they faw her tayle, which was like the tayle of a Porpose, and speckled like a Macrell. Their names that saw her, were Thomas Hiller and Ro-

The fixteenth, cleere weather, the wind being at East. From the last day till this day noone, we made our way South and by East 9. leagues; and from noon to eight a clocke in the Ecuening, 6. leagues: then we cast about and stood to the Northwards.

The seuenteenth, electe weather, the wind at South-east and by East; from the last day till this day noone, our way was North-east and by East, at noone being in the latitude of 74. degrees 40 minutes. At after-noone we founded, and had ground at \$6.fathom, greene Oze, and our water whitish greene: Here we saw Whales, Porposses, and the Sea full of Fowles: from noone to mid-night North-east and by East we had the Sunne at lowest, on the North and by East. Easterly part of the Compasse : latitude 74. degrees 54. minutes. Sounding we had 92. fathoms

The eighteenth, faire weather, the wind at South-east and by East, from mid-night till this day noone, wee fayled North-east and by East, in the Latitude of 75, degrees 24, minutes, and had ground at ninetie fine fathome Oze, as afore. Heere we had Ice in our fight to the Northward off vs. In the after-noone, having little wind at North-east, we cast about and lay East South-east, and at fixe a clocke, had ground at ninetie fine fathoms and a halfe Oze, as afore, From noone to twelue a clocke at might, our way was South-east, and South-east and by East, and had the Sunne on the Meridian, North and by East halfe a point Eastward. The Sunnes height was eight degrees 40 minutes. Sounding ninetie fathom. All this day, we had Ice on our Larboord trending : and at this time, from the North-west off vs to the East South-east, I have fome reason to thinke there is a Tide or Current setting to the Northwards; the course wee 20 held and the way we made betweene this noone and mid-night Observations, doe make mee

Needles inclination 89.de-

Current.

The nineteenth, faire and warme weather, the sea smooth. Here the Needle inclined under the Horizon 89. degrees and a halfe, being in the Latitude at noone of 75. degrees 22. minutes; Soungrees and a ding wee had ground in an hundred fathom. From twelue a clocke last night till this day at noone, we accounted our way from East and by North to South-east, ten leagues, having Ice alwayes in our fight trending on our Larboord, wee had the winde betweene North, and North North-west. We saw the Sunne at the lowest on the North and by East, halfe a point Easterly, his height was 8. degrees 10. minutes, which maketh the Poles height 74. degrees 56. minutes; Sounding we had ground in one hundred and twentie fixe fathom. From noone to this time, wee accounted our way East and by South, and East South-east, twelve leagues.

The twentieth, faire warme weather, this morning at foure of the clocke, wee had depth one Beares rousing hundred and twentie fine fathom. Heere we heard Beares rouse on the Ice; and we saw upon Store of Seals, the Ice and neare voto it, an incredible number of Seales. We had founding one hundred and fifteen fathom, and after ground at mnetie fine fathomfandie Oze. We had the Sun on the Meridian North and by East, halic a point Easterly; his height was 7. degrees 20. minutes. From twelve a clocke last night, to twelue a clocke this night, our way was made good by our account Southeast and by South, twelve leagues, and South-east, three leagues and a halfe, the Ice alwayes being on our Larboord. The wind this day, betweene North and North-west. The one and twentieth, at foure a clocke in the morning wee founded, and had one hundred 40

and twentie fathome greene Oze, and the Ice bore off vs East, the winde variable; in divers degrees 40,miriation of the Compaffe,

courfes wee made our way good South South-east; our Latitude at noone being 74. degrees 9. minutes, we were haled to the Northward beyond expectation. All this day faire, cleere, and warme weather, and Ice on our Larboord at a North and by East Sunne; being then at lowest. his height was 7. degrees 40. minutes, which made the Poles height 74. degrees 33. minutes. nutes, in 14.

It is neight was yourgees 40 minutes, which made the roles neight /4 uegices 33 minutes.

From the laft day at noone, till twelve a clocke this night, by account of our flips way, we made our way good Eaft North-taft, fixe leagues and a halfe; whereby it doth appears how we were haled to the Northward. Heere wee had ground at one hundred and thirteene fathome,

The two and twentieth, faire cleare weather, the windeat West North-west. At eight a 50 clocke in the Morning, we had ground at one hundred and fifteene fathom, greene Oze. From North to the mid-night to noone, our course was North-east and by East, being in the Letitude of 74. degrees 25-minutes, and we found that our ships way, and our observation were not which had there was carefull heed taken of both. Heere we had Ice a head off vs. trending to the Southdiscely before, east; and all day before Ice on our Larboord. Here we stood South-east fine leagues, then the Ice trended South and by West fixe leagues; we sayled by it, and doubled it by eight a clocke in the Ecuening, and then it bore East off vs. Heere having a smooth sea, the Needle inclined 85, degrees, from eight a clocke to twelue, North and by East Easterly. Then we had the Sunne on the Meridian, North and by East 1. a pount Easterly. The Sunnes height was 7, degrees 45, minutes,

which made the Latitude 74.de rees 43.minutes. The three and twentieth, in the morning thicke fogge, the wind at North North-west. From 60 mid-night till foure a clocke this morning, we fayled North-east fine leagues, and then we were among the Ice; we cast about, and stood two houres South-west, two leagues, and had no ground at one hundred and eightie fathom. Then we cast about againe, and stood East till eight a clocke

two leagues, and then it cleered up, and we had Ice a head off vs. And from North, we flood to South-east, and our shrondes were frozen. Then till noone wee went East and by South, soure leagues, and were neere Ice on our Larboord, in the Latitude of 74. degrees 30. minutes. In the after-moone the wind being at North, wee stood two hourse and a halfe, fine leagues and a halfe; three houres South South-east, fine leagues; one houre South-east and by South, one league and a halfe ; an houre East halfe a league, which brought eight in the Eeuening alwayes Ice on our Larboord. This after-noone, wee had some snow. From eight a clocke to mid-night, South South-well foure leagues, with Ice as afore. We saw the Sunne at the lowest, North Northeaft, his height was 7. degrees 14. minutes, the Poles height 74. degrees 18, minutes.

The foure and twentieth, cleere, but cold and fome fnow, the wind betweene North Northeast, and North-east, from mid-night to foure a clocke, wee stood Southward two leagues, and South-east and by East two leagues. And from some a clocke till noone, South-east Southerly nine leagues, founding we had ground in one hundred and fortie fathome. From noone to three a clocke, we flood South-east and by South three leagues; from three to foure, South-west and by South one league; and had Ice from the North-eaft to the South-eaft off vs. From foure a clocke to eight, we flood South-west two leagues and a halfe, Southward halfe a league, with Ice neere vs vnder our Lead.

The fine and twentieth, eold and cleare, the wind at East South-east; from eight a clocke last night till foure this morning, our way was South and by East, foure leagues and a halfe ; four-20 ding we had ground in eightie fathome, then we had little wind till noone, at East North-east. and the Sunne on the Meridian, on the South-west and by South point of the Compasse, ere it began to fall, wee were in the Latitude of 72. degrees 52.minutes, and had Ice on our Lathoord. and our hope of paffage was gone this way, by meanes of our neareneffe to Nona Zembla, and the abundance of Ice. We had from Noone to eight a clocke in the Ecuening, the wind between North North-east, and North-east, we stood South-east three leagues and a halfe, and had Ice on our Larboord, and thoulding fixtie eight fathome.

The fixe and twentieth, faire Sun-finning weather, and little wind at East North-east. From twelue a clocke at night till foure this morning, we flood Southward two leagues, founding wee had lixtie fixe fathome Oaze, as afore. From foure a clocke to noone, South-east and by South 30 foure leagues, and had the Sunne on the Meridian, on the South-east and by South point of the Compaign in the Latitude of 72. degrees 27 minutes, and had fight of Nona Zembla four or five No passage leagues from vs, and the place called by the Hollanders, Swarz Cliffe, bearing off South-caft. In that way, the after-noone, wee had a fine gale at East North-east, and by eight of the clocke, we had Swar Cliffee brought it to beare off vs East Southerly, and sayled by the shoare a league from it.

The feuen and twestieth, all the fore-noone it was almost calme; wee being two mile from the floare, I fent my Mate Robert Inet, and Iohn Cooke my Boat-fwaine on shoare, with foure o- They goe a thers, to fee what the Land would yeeld that might bee profitable, and to fill two or three theat Caskes with water. They found and brought abourd some Whales Finnes, two Deeres Hornes, and the Dung of Decre, and they told me that they faw Graffe on the shoare of the last yeere, 40 and young Graffe came up amongst it a shaftman long; and it was boggie ground in some places, there are many fireames of Snow water nigh, it was very hot on the shoare, and the snow melted apace, they faw the footings of many great Beares, of Deere, and Foxes. They went from vs at three a clocke in the morning, and came aboord at a South-east Sunne; and at their comming, wee faw two or three companies of Morfes in the fea neere vs swimming, being almost calme. I presently sent my Mate, Ladow the Carpenter, and fixe others a shoare, to a place where I thought the Morfes might come on the shoare, they found the place likely, but found no figne of any that had beene there. There was a Croffe standing on the shoare, much Driftwood and fignes of Fires that had beene made there. They faw the footing of very great Deere and Beares, and much Fowle, and a Foxe; they brought aboord Whale finnes, fome Mosse, Flow-30 ers and certes, and mount rows, and a rowe; they orough another windle minus, none mount, norther formal greene things that did there grow. They brought also two peeces of a Crosse, which they found there. The Summe was on the Mendian on the North North cast, halfe a point Ea-Rerly, before it began to fall. The Sunnes height was 4. degrees 45. minutes, Inclination 22. degrees 22. minutes, which makes the Latitude 72. degrees 22. minutes. There is difagreement betweene this and the last observation ; but by meanes of the cleerenesse of the Sunne, the smoothnesse of the Sea, and the neemesse to Land, wee could not bee deceived, and care was

The eight and twentieth, at four a clocke in the Morning our Boat came aboord, and brought two dozen of Fowle, and some Egges, whereof a few were good, and a Whales sinne; and wee all faw the Sea full of Morfes, yet no fignes of their being on shoare. And in this calme, from 60 eight a clocke last Ecuening, till foure this Morning, we were drawne backe to the Northward, as farre as wee were the last Eeuening at foure a clocke, by a Streame or a Tide; and we chose rather so to drive, then to adventure the losse of an Anchor, and the spoyle of a Cable. Heere our new Ship-boate began to doe vs feruice, and was an incouragement to my Companie, which want I found the last yeere.

which had

578

Riuer and

Iuly.

The nine and twentieth, in the morning calme, being halfe a league from the shoare, the Sea being smooth, the Needle did encline &4. degrees, we had many Morfes in the Sea neere vs. and desiring to find where they came on shoare, wee put to with Sayle and Oares, towing in our Boat, and rowing in our Barke to get about a point of Land, from whence the Land did fall more Easterly, and the Mories did goe that way. VVee had the Sunne on the Meridian on the South and by VVeft point, halie a point to the VVefter part of the Compaffe, in the latitude of 71. degrees 15. minutes. At two a clocke this after-noone we came to anchor in the mouth of a River, where lieth an Iland in the mouth thereof, foure leagues: wee anchored from the Iland in two and thirtie fathomes, blacke fandy ground. There droue much Ice out of it with a in two and there rations so sound, and there were many Morfes fleeping on the Ice, 10 and by it we were put from our Road twice this night; and being calme all this day, it pleafed God at our need to give vs a fine gale, which freed vs out of danger. This day was calme, cleere and hot weather: all the night we rode still.

The thirtjeth, calme, hot, and faire weather, we weighed in the morning, and towed and rowed, and at noone we came to anchor neere the Ile aforefaid in the mouth of the River, and faw very much Ice driving in the Sea, two leagues without vs lying South-east and North-west: and driving to the North-west so fast, that wee could not by twelve a clocke at night fee it out of the top. At the lland where wee rode, lieth a little Rocke, whereon were fortie or fiftie Morfes lying afleepe, being all that it could hold, it being fo full and little. I fent my companie ashoare to them, scauing none aboord but my Boy with mee: and by meanes of their neerenesse alloare to them, reasing more about our my any which they killed, and brought his head abourd; and ere they came abourd they went on the Iland, which is reasonable high and steepe, but sha on the top. They killed and brought with them a great Fowle, whereof there were many, and likewife fome Egges, and in an houre they came aboord. This Ile is two flight-shot ouer in length, and one in breadth. At mid-night our Anchor came home, and wee tayld aground by meanes of the strength of the streame, but by the helpe of Gcd, wee houed her off without hurt. In thort time wee moued our thip, and rode still all night; and in the night wee had little wind at East, and East South-east. VVee had at noone this day an observation, and were in the latitude of 71. degrees 15. minutes.

The first of July, we saw more Ice to Seaward of vs; from the South-east to the North-west, 30 driving to the North-west. At noone it was calme, and we had the Sunne on the Meridian, on the South and by VVest point, halfe a point to the VVesterly part of the Compasse, in the latitude of 71. degrees 24 minutes. This morning I fent my Mate Emeret, and foure of our companie to rowe about the Bay, to fee what Rivers were in the fame and to find where the Morfes did come on land; and to fee a Sound or great River in the bottome of the Bay, which did alwaies fend out a great ftreame to the North wards, against the tide that came from thence : and I found the same in comming in, from the North to this place before this VVhen by the meanes of the great plenty of Ice, the hope of passage betweene Newland and Nona Zembla was taken away; my purpose was by the Vaggats to passe by the mouth of the River Ob, and to double that way the North Cape of Tartaria, or to give reason wherefore it will not be: but being 40 here, and hoping by the plentie of Morfes wee faw here, to defray the charge of our Voyage : and also that this Sound might for some reasons bee a better passage to the East of Noua Zembla, then the Vaggats, if it held according to my hope conceived by the likeneffe it gave : for whereas we had a floud came from the Northwards; yet this Sound or River, did runne fo ftrong, that Brong ream. Ice with the streame of this River was carried away, or any thing elfe against the floud : so that both in floud and ebbe, the ftreame doth hold a ftrong course; and it floweth from the North three houres, and ebbeth nine.

The fecond, the wind being at East South-east, it was reasonable cold, and so was Friday; and the Morfes did not play in our fight as in warme weather. This morning at three of the clocke, my Mate and companie came aboord, and brought a great Derres horne, a white locke of so Deeres haire; foure dozen of Fowle, their Boat halfeladen with drift Wood; and fome Flowers and greene things, that they found growing on the shoars. They faw a berd of white Deere, of ten in a companie on the land; much drift wood lying on the shoare, many good Bayes, and one River faire to fee to on the North shoare, for the Morfes to land on; but they faw no Morfes there, but fignes that they had beene in the Bayes. And the great River or Sound, they certified me, was of breadth two or three leagues, and had no ground at twentie fathoms, and that the water was of the colour of the Sea, and very falt, and that the streame fetteth strongly out of it. At fixe a clocke this morning, came much Ice from the Southward drining upon vs, very fearefull to looke on : but by the mercy of God and his mightie helpe, were being moored with two Anchors ahead with vering out of one Cable, and heaving home the other, and fending off with Beames and Sparres, escaped the danger : which labour continued till fixe a clocke in the Ecuening, and then it was past vs, and we rode still and tooks pursest this night,

The third, the wind at North a hard gale : At three a clocke this morning wee weighed our anchor, and fet fayle, purposing to runne into the River or Sound before ipoken of.

The fourth, in the morning it cleared up with the wind at North-west, we weighed and set fayle, and stood to the Eastwards, and past ouer a Reefe, and found on it fine and a halfe, fixe, fixe and a halfe, and seven fathoms water: then we saw that the Sound wasfull, & a very large River from the North-eastward free from Ice, and a strong streame comming out of it: and wee had founding then, foure and thirtie fathoms water. Wee all conceived hope of this Northerly Ri. The River uer or Sound, and fayling in it, wee found three and twentie fathomes for three leagues, and fearched. after twentie fathomes for five cr fixe leagues, all tough Ozie ground. Then the winde vered more Northerly, and the streame came downe so strong, that wee could doe no good on it: wee came to anchor, and went to supper, and then prelently I fent my Mate Iner, with fue more of our companie in our Boat, with Sayle and Oares to get vp the River, being prouided with Victuall and Weapons for defence, willing them to found as they went; and if it did continue fill deepe, to goe vntill it did trende to the Eastward, or to the Southwards, and wee rode ftill.

CHAP. 15. Cause of the Ice in Noua Zembla. Costing Sarch. Brunell.

The fift, in the morning we had the wind at West: we began to weigh anchor, purposing to fet fayle and to runne vp the Sound after our companie: then the wind vered Northerly vpon vs. and we faued our labour. At noone our companie came abourd vs having had a hard rought a for they had beene vp the River fixe or feven leagues, and founded it from twentie to three and twentie; and after brought it to eight, fixe, and one fathome; and then to foure foot in the best: they then went ashoare, and found good store of wilde Goose quills, a piece of an old Oare, and some Flowers, and greene things which they found growing: they saw many Deere. and fodid we in our after-dayes fayling. They being come aboord, we presently set fayle with the wind at North North-west, and we stood out agains to the South-westwards, with forrow that our labour was in vaine: for , had this Sound held as it did make shew of , for breadth. denth. fafenesse of harbour, and good anchor ground, it might have yeelded an excellent passage to a more Easterly Sea. Generally, all the Land of Nona Zembla that yet wee have seene, is to Nona Zembla a mans eye a pleasant Land; much mayne high Land with no Snow on it, looking in some pleasante the places greene, and Deere feeding thereon: and the Hills are partly concred with Snow, and eye. partly bare. It is no maruell that there is fo much Ice in the Sea toward the Pole, fo many Cause of much Sounds and Rivers being in the Lands of Nona Zembla, and Newland to ingender it; besides Ice in those 30 the coasts of Pechora, Ruffes, and Grownland, with Lappia, as by proofes I finde by my travell makeno nauto the coasts of Februs, any series which feel flopped there will be no naugable paffage this way, gable paffage, This Eeuening weehad the wind at Weft and by South: wee therefore came to anchor work. Deere Point; and it was a storme at Sea, wee rode in twentie fathomes, Ozieground: I fent my Mate, Ladlow, with foure more ashoare to see whether any Morses were on the shoare, and to kill some Fowle, (for we had seene no Morses since Saturday, the second day of this moneth, that wee faw them driving out of the Ice.) They found good landing for them, but no figne that they had beene there: but they found that fire had beene made there, yet not lately. Ac ten of the clocke in the Eeuening, they came aboord, and brought with them neere an hundred Fowles called Wellocks; this night it was wet fogge, and very thicke and cold, the winde at

40 West South-west. The fixt, in the morning wee had the wind stormie and shifting; betweene the West and South-west, against vs for doing any good: we rode still and had much Ice driving by vs to the Eastward of vs. At nine of the clocke, this Ecuening wee had the wind at North North-west : we presently weighed, and set sayle, and stood to the Westward, being out of hope to find pasfage by the North-east: And my purpose was now to see whether willoughbies Land were, as willoughbies is is layd in our Cardes; which if it were, wee might finde Morfes on it; for with the Ice they Land, sconwere all driven from hence. This place vpon Nona Zembla, is another then that which the makers it fee-Hollanders call Costing Sareb, discovered by Oliner Brownell: and William Barent sons observation ming to be no doth witnesse the same, It it layd in plot by the Hollanders out of his true place too farre North: other then to what end I know not, vnleffe to make it hold course with the Compasse, not respecting the Newland or variation. It is as broad and like to yeeld passage as the Vargate, and my hope was, that by the Greenland (as ftrong streame it would have cleered it selfe; but it did not. It is so fall of Ice that you will used again

hardly thinke it. All this day, for the most part, it was fogge and cold. The feuenth, cleere but cold weather : in the morning the wind was at the North; from the Brunell is to last Equening to this morning, we set faile and kept our course West and by South, fifteene leagues, others Nova from morning to eight a clocke in the Eeuening it was calme : then we had the wind againe at Zembla. North, and we fayled till nine a clocke next morning West South-west, eight leagues; then the wind being West and by South, wee went North and by West, three leagues, and wee had the Sunne at the highest South South-west, in the laritude of 71. degrees 2. minutes. The eight, 6c faire weather; at noone we had the wind at East North-east, we stood North three leagues till foureaclocke: then the wind being at west and by North, wee stemmed North and by West one league and a halfe, till fix a clocke in the Equening ; then the wind was at North-eaft a hard gale, and wee flood till next day at noone West and by North, by account three and twentie leagues: we had the Sunne on the Meridian, South and by West, halfe a point neerest West, in

the latitude of 70. degrees 41. minutes. The ninth, cleere weather: from this to the next day at noons, we fayled South-weft and by Weft, twelve lesgues, and Northward three legues; and in their courfes had their Goundings, 41.4.2.4.4.8. and 32.7 fathoms: we had the Sunne South and by Veft, halte a point to the VVeft part of the Compasse. The Sea was lottie: our latitude was 70. degrees 20. minutes.

The tenth, clerre but clofe weather: from this till next day noone, wee had little wind at We'll North-we'll: by account we made our way for leagues North-eaflerly. Wee had the Sun at the higheff on the South and by We'll point, and a terce Weftward, in the latitude of 700 degrees 55,minutes, and I thinke we had a ruftling tide vnder vs; and in this time had foombetweene fortie fine and fortic tathomes, white fand. The eleuenth, cleere weather: from this to the next day at noone, little wind at North North-eafl, and fometimes calme; wee fayled We'll and by North by account fine leagues; and had the Sunne on the Meridian on the South and by We'll point! We'll in the latitude of 700. degrees 26. minutes, and found a ruffling vnder vs. This fore-noone we were come into a greene Sea, of the colour of the mayne Ocean, which we first lot the eight of lune: since which time wee have had a Sea of a blacke blue colour, which (both by the last and this yeers experience) is a Sea soesfered with Ire.

The twelfth, faire weather: from noone to mid-night wee had the wind shifting betweene the North and Welt; our course was betweene VVeit North-west, and South South-west. Then we had the wind at South, we shyled till the next day at noone, West and by North, thirteen leagues: were accounted our way from the last day till this day noone Westward; eighteene leagues. This after-noone wees saw more Porposites then in all our Voyageasore. The thirteenth, cloic weather: in the after-noone hauing much wind at South, with short siyle wee shoot away West and by North; till eight a clocke in the Ecuening: then we had the wind at South, but most times calme till noone the next day: wee flood aways as fore, four leagues, which made in all twelue leagues; we had the Souns cre it began to fall, South and by West, in the latitude of 70, degrees 2 an innites.

The fourteenth, wee flood Weth North-weft till mid-night, feuenteene leagues: then the wind feanted and came at Weft, we flood North North-weft, one league and a halfe; then the wind being more Southerly, wee fayled Weft North-weft, fine leagues. From the laft till this day at noone, our way was our of diners courfes North-weft and by Weft, four and twentie leagues. We had the Sunne beginning to fall at South and by Weft, in the latitude of 70. de. 30 grees 54. minutes,

The fifteenth, faire; but towards night like to be flormie with thunder, the wind betweene South and South South-eaft; from this; till the fixteenth day at noone, our course was West and by North; teven and exemic leagues, and the Soune then began to fall at South, three quarters of a point Westward, in the latitude of 70. degrees 44. minutes. The fixteenth, faire; our way was from this till next day at noone North-west, twelve leagues; out of divers courses: and we had the wind shifting, sometimes at East, at West South-west, and West and West and by North; the latitude by a bad observation, 71. degrees 44. minutes. The seventhe, in the fore-noone faire; the wind being at West and by North. At four a clocke this morning we saw Land beare 40 off vs. West and South South-west, which was about **Ward-bonsse*: this after-noone wee had a forme at West and by North, we layed it to trie till eight a clocke in the Ecuening, and then set tayle with the wind betweene West North-west, and North-west. our course till the next day at noone, was South-westl and by South, swellce leagues: the Cape *Hopewest* bore off vs. South South-westl, and we were fource or the seagues from land.

The eighteenth, gufty, with raine all the fore-noone; then we had the wind (hifting till next day at noone from South South-eaft to Eaft, and South-eaft: our course in generall was North-welf, foure and twentie leagues: then did North Kowe beare off vs Welt halfe a point Southward, being from vs foure leagues; and the North Cape in fight bearing Welf and by North, &c.

The feuen and twentieth, cold with raine and florme; this night we began to burne Candle of in the Betacle, which we had not done fince the injecteenth of May: by reason wee had alwaies of day from thence till now. The thirtieth, we had the Sunne you the Meridan due South, in the latitude of 68, degrees 46. minutes; whereby we found us to bee afore our flip, seen or twelue leagues, and Longfoor bore Eaf of vs., but not in fight.

The feuenth of August, I vied all diligence to arrive at London, and therefore now I gaue my

companie a certificate winder my hand, of my free and willing returne, without perfivation or force of any one or more of them: for at my being at Nous Zembla, the fixt of Iuly, voide of hope of a North-eaft paffage, (except by the Zegest, for which I was not fitted to trie or proue) I therefore refolued to vie all meanes I could to fayle to the North-weft; confidering the time and meanes were had, if the wind thould friend vs, as in the fift part of our Voyage it had done, and to make triall of that place called Lembless India; and the furnous outer-fall by Cap- 60 tayne Dassie, hoping to runne into it an hundred leagues, and to returne as God should enable mee. But now hauing fepent more then halfe the time I had, and gone but the shortest part of the way, by meanes of contrary winds; I thought it my durie to laue Victuall, Wages, and

Снар. 16. Master Hudsons third Voyage to Noua Zembla, Фе.

Tackle, by my speedy returne, and not by foolish rafinesse, the time being wasted, to lay more charge you the action then necessitie should compell, larriued at Granesend the six and twenteth of August.

CHAP. XVI.

The third Voyage of Master Henrie Hydoon toward Nova Zembla, and at his returne, his passing from Farrestands, to New-found Land, and along to to forcis four edegrees and ten minutes, and thence to Cape Cod, and so to thirtie three degrees; and along the Coast to the Northward, to fortie two degrees and an halfe, and up the River necreto fortie three degrees. Written by Robert Iver of Lime-house.

A N Saturday the fine and twentieth of March, 1609, after the old Account, we fet fayle from Amfardam; and by the fenen and twentieth day, we were downed at the Texed: and by twente of the clock we were off the Land, it being Eaff of yet two leagues off. And because it is a journey vitally knowne. I omit to put downe what passed, the we came to the height of The North Cape of Firmants, which we did performe by the fift of May (file none) being Tuelday. On which

day we observed the height of the Pole, and found it to be 71, degrees and 46, minutes; and me found our Compasse to vary fix degrees to the West; and at twelve of the clocke, the North Cape did beare South-west and by South, tenne leagues off, and wee steered away East and by South, and East.

After much trauble with fogges, sometimes, and more dan gerous of Lee. The nineteenth, being Tuetlary, was close fatornic weather, with much wind and snow, and very cold; the wind variable betweenen the North North-weft, and North-eaft. We made our way Weft and by North 100 more. Then we observed the sunne hausing a slake, and found our height to beey o. degrees 30 minutes. And the line had our tourne vs twentic leagues, by reason of the fee of the streame of The White Sac: and we had fight of Workshoofs. Then at two of the clocke were tack to the 25 minutes of the stream of the stre

The two and twentieth, gulling weather with haile and fnow, the Sunne breaking out loins.

And the continued our courie along the Land Weft South-weft. And at tenne of the clocke at night we were thwart of Zemm. The bodie of it did bear East off tweller steel to the leagues: and the courie from the North Cape to Zemminis for the most part Weft and by South, and Weft South-weft, fiftie four leagues.

The three and twentieth, faire Sun-fhining weather; the wind at Eaff and by South, and Eaff South-eaft, were feered along the Land South-weft, and South-weft and by Weff, eight legues a Wasch, for fow we found the Land to lye from Zenam to Lefaste. And the dilthree is fiftile legues from the bodie of Zenam, to the Weftermolf Land of Lefaste. And from the one to the other, the courie is South-weft and by Weff. For the Needle of our Compafe was feet right to the North. As twelne of the clocke at night, the bodie of Lefaste did beare South-eaff, like Lefaste.

The foure and twentieth, faire cleere. Sun-fining weather: the wind variable vpon all 50 points of the Compafe, but most vpon the South-east, and sometimes calme. We continued our course West South-west as before. And at eight of the clocke at night, the South-east em leasues of tv.

The fine and twentieth, much wind at North-eaft, with forme finow and haile. The first watch the wind came to the East a fine gale, and so came to the North-eaft, the second watch at four of the clocks, and firsted in 1. And a teight of the clocks it greaw to a storme, and so continued. At noone we observed, and made the ship to be in 67, degrees 58, minutes. We continued out course South-well, twellow leagues a watch. At nine of the clocks, Leffort did beare East of vy 15, leagues off. And we found the Compasse to large no variation. The wind increased to a storme. No variations

The fix and twentieth, war a great from each to Mark no variation. The wind increased to a flottine.

The fix and twentieth, war a great from eat the North North-eath, and North-eaft, we for fleet earlier and the fixed way South-well after the wind with our fore-course abroad: for wee were able to maintaye no more sayles, it below to whemently, and the Sea went to high, and brake with-all, that it would have during the first me began to case (as four of the clocked feuenty leagues infoure and twentie hourse. The florme began to case (as four of the clocked).

The feuen and twentieth, indifferent faire weather, but a good ftiffe gale of wind at North,

-.

Thunder.

No night in

and North North-east, wee held on our course as before. At moone wee observed and found our height to be 64. degrees 10. minutes. And wee perceised, that the Current had hindred vs in Agreat cur-rent ferting to fortic eight houres to the number of 16, leagues to our best judgement. We set our mayne-sayle, rent tetting to the tetting to the North-east. Sprit-layle, and our mayne-top-layle, and held on our course all night, hasing faire weather.

The eight and twentieth, faire weather and little wind at North-east, we held on our course South-west. At noone wee observed the heigth, and were in 62. degrees and 30, minutes. The after-noone was little wind at North North-west. The second watch it fell calme. At source of the clocke wee had fight of the Iles called Farre, and found them to lye out of their place in the Sea Chart Fourteene leagues to farre Westerly. For in running South-west from Loforte, wee had a good care to our fleerage and observations, and counted our selves thirtie leagues off by our course and observation : and had fight of them fixteene or eighteene leagues off.

The nine and twentreth, faire weather sometimes calme, and sometimes a gale with the wind varying at South-west, and so to the North-east. Wee got to the Hands, but could not get in. So we stood along the Hands. The ebbe being come, we durst not put in,

those which

fayles to en-

large them :

The thirtieth faire weather; the windat South-east and East South-east. In the morning we turned into a Road in Stromo, one of the Ilands of Farre, betweene Stromo and Mugge-neg, and got in by nine of the clocke : for it flowed fo there that day. And affoone as we came in, we went to Romage, and fent our Boat for water, and filled all our emptie Caskes with fresh water, Wee made an end of our Romaging this night by ten of the clocke,

The one and thirtieth, faire Sun-fhining weather, the wind at East South-east. In the fore- 20 noone our Master with most of his Company went on shoare to walke, and at one of the clocke they returned aboord. Then we fet layle.

Inne.

The first of Iune, Bilo nono, taire Sun-shining weather, the wind at East South-east, We continues on our course South-west and by West. At moone wee observed the Sunne, and found our heigth to be 60, degrees \$8, minutes : and fo continued on our course all night with faire westher. This night we lighted Candles in the " Bittacle againe,

The second mystic weather, the wind at North-east. At noone we steered away West Southplace in which welt, to find Buffe Hand, discoursed in the yeste 1 178, by one of the thips of Sir Martin Frethe Compaffe belier, to fee if it lay in her true latitude in the Chart or no : wee continued our course as before all night, with a faire gale of wind : this night we had fight of the first stars, and our water was an changed colour to a white greene. The Compaffe had no variation. Shr of Cars:

The third, faire Sun-shiming, weathersthe wind at North-eaf. We steered on our course Southwest and by West, with a stiffe gale of wind. At noone we observed and found our height to bee 18. degrees 48. minutes. And I was before the faip 16. leagues, by reason of the Current that held vs to ftrong out of the South-west. For it is eight leagues in foure and twentie hours. We Change of was accounted our felues neere Buffe lland : by mid-night we looked out for it, but could not fee it,

The fourth, in the morning was much wind with fogge and raine. Wee fleered away South-A ftrange ourrent out of the west by west all the fore-moone, the wind so increasing, that wee were enforced to take in our top-fayle : the winde continuing so all the after-noone. Wee steered away South-west all the fore-part of the night; and at ten of the clocke at night it was hitle wind; and that was at South, 40

and so came up to the South South-east.

The fit formie weather, and much wind at South, and South by East, so that at foure of the clocke in the morning, we tooke in our fore-fayle, and lay a try with our mayne corfe, and treed away West North-west foure leagues. But at noone it was less wind, and the Sunne flewed forth; and we observed, and found our heigth to be 36.degrees 21.minutes. In the afternoone the wind vered to and fro betweene the South-west and the South-east, with raine and forge, and to continued all night. Wee found that our thip had gone to the Westward of our course. The fixth, thicke hase weather with gusts of wind, and showers of raine. The wind varied betweene East South-East and South-west, wee steered on many courses a West Southwest way. The afternoone watch the wind was at East South-east, a stiffe gate with myst and rame. Wee fleered away South-west, by West eight leagues. At noone the Sunne shone forth, and we found the heigth to bee 56, degrees 8, minutes. The feventh, faire fun-fhining weather all the fore-moone, and calme untill twelve of the clocke. In the after-moone the wind came to the North-west, a stiffegale. We steered South-west by West, and made a South-west way. At are laced and noone we found the height to bee 55, degrees one minute, and it continued all night a hard gale, ecked to the The eight, flormy weather, the wind variable, betweene West and North-west much wind : at eight of the clocke wee tooke off our Bonnets. At noone the Suime shewed forth, and wee obferued, and our height was 54. degrees 30.minutes. The nineh, faire fun-fhining weather, and litmanacourfe, the wind all the fore-part of the day virill eleven of the clocke. Then the wind came to the milien courie, South South-east, and we steered away West South-west. At moone we found our height to bee 60 fore countries

53 degrees and 45 minutes, and we had made our way South by West ten leagues. In the afternoone the wind increased and continued all night at East North-east and East.

The twelfth, faire weather, the wind variable betweene East North-east and South-east, wee fleered on our course as before. At foure of the clock in the afternoon the wind came vp at SouthCHAP. 16. Current to the South, Great forme. Variations of the Compafe.

east. And we held our course as before. At moone wer observed and found our height to be 52. degrees ac. minutes.

The eleventh, in the morning was thicke and foggie, the winde varying betweene South South-weft, and North-weft. At foure of the clocke in the morning, wee tackt about to the Southward: At eleuen of the clocke the winde came to the North-west, and so to the West North-west. This day we had change of water, of a whitish greene, like to the Ice water to the North-west. At moone it cleered vp, and became very faire weather : wee put out our mayne North-west At mounts that the Summe and found our height to be \$1.degrees 24.minutes. We Acurrent from top-rayie tinh we obtained and found our fhip gone to the Southward of our account ten leagues, the North, 10 by reason of a current from the North-ward. The Compasse varied on point to the East.

The twelfth, faire Sun-thining weather, but much wind at the Well : we flood to the South - point Eat. ward all day, the wind shifting betweene the South-west and the West and by North. Wee ward and say, the wind infiling octovers the country and the very those by Aronin. We made our way. South halfe a point Welf, eight and twentile leagues. Our height at noone was 50.degrees 9.minutes. At eight of the clock at night we took off our Bonets, the wind increasing.

The thirteenth, faire Sun-shining weather: the wind variable betweene the West, and North North-west, We made our way South South-west feuer and twentie leagues. At noone we obserued, and found our height to be 48, degrees 44, minutes. But not to be trufted, the Sea went so high. In the after-noone the winde was calmer, and weebrought to our Bonets, and stood to the Southward all night with a stiffe gale.

20 The fourteenth, faire and cleere Sun-shining weather: the winde variable betweene the North-west and South-west by West. At mid-night Toblerued the North starre at a North-west by Welt Guardesa good observation 49, degrees 30. minutes. And at moone wee observed the Latitude 48; Sunne, and our heigth was 48. degrees 6. minutes. And I made account we ranne betweene the degrees 6. ml two observations ewelne leagues. At one of the clocke in the after-noone, wee cast about to the nutes. Westward, and stood so all night: the winde increased to a storme, and was very much winde

The fifteenth, we had a great fforme, and spent o over-board our fore-mast, bearing our fore To spend the corle low fet. The fixteenth, we were forced to trie with our mayne fayle, by reason of the vn- Maft, is roderconflant weather. So wee tried fourt watches South-east and by South eight leagues and an shoul of brea-30 halfe, and two watches fixe leagues! The feventeenth, reasonable faire weather: the wind variable betweene Weft South-weft, and Weft North-weft. And a ftiffe gale of wind, and fo great a swelling Sea out of the West South-west, that wee could doe nothing. So one watch and an halfe wee drone North four-leagues and an halfe, and four-watches and an halfe South and by Baft halfe a point East twelve leagues. The eighteenth, reasonable weather but close and cloudie. and an hard gale of wind, and a great Sea. The winds being at the North-west, wee lay to the Southward, and made our drift South and by Weft, fine leagues. The after-noone prooned little wind, and the night part calme. The nineteenth, in the fore-moone faire weather and calme, In the morning we fet the piece of our fore maft, and fet our fore corfe,

The one and ewentieth, faire Sun-shining weather, but much wind and a great Sea. We split 40 our fore faile at ten of the clocke; then we laid it a trie " with our mayne fayle, and continued " That is, bare foall day. In the night irfell to be little wind. This day our height was 45, degrees 48 minutes. so more layer. The two and twentieth, very faire Sun-filmine weather, and calme all the after none. The two and twentieth, very faire Sun-firlining weather, and calme all the after-noone. At far noone we made a very good observation, and found our height 44, degrees 58, minutes. At eight Variation,

of the clocke at night wee had a small gale of winde at South-east. And wee steered away West for Newfound Land. The true Compaffe varied one point Eaft,

The three and twentieth, thicke weather with much wind and some raine. At eight of the clocke in the morning, the wind came to the Well South-well, and Well to fliffe a gal, that we were forced to take our top-layle, and fleeted away North North-west vitill foure of the clock in the after-moone. Then we tack to the Southward the winde at Well North-well. At eight 50 of the clocke at night wee tooke in our top-fayles, and laid it a trie with our mayne fayle, the

The foure and twentieth, a stiffe gale of wind, varying betweene the West and North North west, we tried till fixe of the clocke; at which time we fet our foresaile, and steered way West and by South by our Compaffeeight leagues in foure watches : and wee tried away South in

The fine and twentieth, faire Sun-shining weather, the wind at North North-west and North, we fleered away West by South by our Compasse till twelve of the clocke: at which time we had light of a layle, and gaue her chase but could not speake with her. She stood to the Raftward; and we flood after her till fixe of the clocke in the after-noone. Then weetact to the 60 Westward againe, and stood on our course it was faire all night, and little wind sometimes.

The fix and twentieth, all the fore-part of the day very faire weather and hoe , but at four of the clocke in the after-noone it grew to bee much winde and raine : the winde was at South South-east. At noone wee observed and found our heigth to bee 44. degrees 33. minutes. At eight of the clocke at night, the wind came to South-weff, and West South-west. Wee steered

Variation one

with reference ™hotoro che tholefayles without their

North-west, one Watch, and at twelve in the night, to the West, and West and by South, very much wind. So we could lye but North North-west.

The feuen and twentieth, very much winde and a foare florme, the wind Westerly. In the morning at foure of the clocke, wee tooke in our fore-corfe, and layd it a trie with our maynecorfe low fet; and so continued all the day and night, two watches to the Northward. At eight of the clocke at night, we tackt to the Southward

The eight and twentieth, faire fun-shining weather, the wind at West and by South; we lav a trie to the Southward till eight of the clocke in the morning. Then wee fet our fore-corfe, and flood to the Southward a stiffe gale of wind, but faire weather and a great Sea, out of the Westerboord, and fo continued all night.

The nine and twentieth, faire fun-shining weather, the wind at West and by South; we stood to the Southward vntill fixe of the clocke at night, and made our way South and by Eaft, foure leagues. Then the winde came to the South-west, and wee cast about to the VVestward, and made our way VVest North-west all night. At noone, I found the height 43. degrees 6. minutes. The variation one point VVeft.

The thirtieth, faire fun-shining weather, the winde at South-west and by VVest, we seered North-west and by VVest. And made our way so, by reason of the variation of the Compasse. At noone, I found the height to bee 43. degrees 18. minutes; wee continued our course all night. and made our way North-west and by VVest, halfe a point VVesterly, fine and twentie leagues.

The first of July, close, mystie and thicke weather, but a faire gale of wind at South-west, and 20 South-west by South. We steered away North-west and by West, Westerly, and made our way fo, by reason of the variation of the Compasse. At eight of the clocke at night, wee sounded for the Banke of New-found Land, but could get no ground.

The second, thicke mystic weather, but little wind, and that at West, and West and by South. New familiand At eight of the clocke in the morning, we cast about to the Southward, and when our ship was on flaves, we founded for the Banke, and had ground in thirtie fathoms, white fand and shells. and presently it cleered : and we had fight of a layle, but spake not with her. In the night we had much Rayne, Thunder and Lightning, and wind thifting.

fingon the

The Banke of

July.

The third, faire Sun-fhining weather, with a faire gale of wind at East North-east, and wee fteered away West South-west by our Compasse, which varyed 17. degrees Westward. This 30 French-men Fis morning we were among a great Fleet of French-pren, which lay Fishing on the Banke; but we spake with none of them. At noone wee found our heighth to bee 43. degrees 41. minutes. And we founded at ten of the clocke, and had thirtie fathoms gray fand. At two of the clocke wee founded, and had fine and thirtie fathoms gray fand. At eight of the clocke at night, we founded againe, and had eight and thirtie fathoms gray fand, as before.

The fourth, at the fore-part of the day cleere, with a faire gale of wind, but variable betweene the East North-east, and South and by East, wee held on our course as before. The after-noone was mystie, the wind shifting betweene the South and the West, till source of the clocke. Then we tooke in our top-layle and sprit-sayle, and sounded and had no ground in seventie fathoms. The winde shifted still entill eight of the clocke, then it came to the North North-east, and 40 North-east and by North, and we figered away West North-west, by our varyed Compasse. which made a West way halfe point North. The Compasse varyed 15. degrees from the North to the West.

The fift, faire fun-shining weather, the wind at North-east and by North, we steered away West North-west, which was West halfe a point North. At noone we found our heighth to be 44. degrees 10. minutes, and founded, and had no ground in one hundred fathoms. The afternoone proued calme fometimes, and fomtimes little wind, vntill nine of the clocke in the night. Then the wind came to the East, and we held on our course. At mid-night I observed and found the height to bee 44 degrees 10. minutes, by the North Starre and the Scorpione heart. The Compaffe varyed 12. degrees.

Variation 13.

The fixth, the fore-part of the day faire weather, and a stiffe gale of wind, betweene South South-east, and South-west, wee steered West and by North, and West North-west, The afterpart of the day from two of the clocke, was all foggie and thicke weather; the wind a hard gale, varying betweene South-west and by South, and West and by North, we made our way Northwest halfe a point Northerly, nineteene leagues, vpon many points foure Watches. At night at eight of the clocke, we founded and had no ground at one hundred fathems.

The fenenth, faire fun-thining weather, the wind varying betweene West and by North, and West and by South. At source of the clocke in the morning, we cast about to the Southward, and flood fo sill one in the after-noons. At noone we found our height to be 44. degrees 26. minutes. At fewen of the clocke, we tackt to the Northward. At eight at night, we tackt to the South- 60 ward, and founded, and had nine and fiftie fathoms, white fand.

The eight, in the fore-noone faire weather, but the morning foggie till feuen of the clocke. At foure of the clocke in the morning we founded, and had fine & fortie fathoms, fine white land, and we had runne fine leagues South and by West. Then wee stood along one Glasse, and went

one league as before. Then we flood one Glasse and founded, and had fixtie fathoms. Then wee takt and stood backe to the Banke, and had fine and twentie fathoms; and tryed for Fish, and it Many great takt and itood backe to the Banke, and then the area to coldes, from eight a clocke till one. Cod taken, fell calme, and we caught one hundred and eighteen great Coddes, from eight a clocke till one. Many great Many great and after Dinner wee tooke twelue, and faw many great Scoales of Herrings. Then wee had a Scoales of Herrings. gale of wind at South, and it shifted to the West North-west, and we stood three Glasses and rings. founded and had fixtie fathomes, and flood two Glasses, and had two and fortie fathoms, red To found is to flones and shells. So wee founded every Glasse and had severall soundings 35-33-30.31.32. trie the depth

The minth, faire calme weather, we lay becalmed all day and caught fome Fish, but not much, &c. to because we had small store of sale. At three of the clocke in the after-noone, wee had a gale at South-east, and South South-east, and we steered away Westerly, our Compasse was West and by South halfe a point South. At foure of the clocke, we founded and had but lifteene, seuenteene. and nineteene fathoms on a fishing Banke; and we founded enery Glasse. Then we could get no ground in fine and twentie fathoms, and had fight of a fayle on head off vs. At noone our height was 44. degrees 37. minutes. We flood to the Westward all night, and spake with a French-man, which lay Fishing on the Banke of Sablen, in thirtie fathoms, and we faw two or three more.

The tenth, very mystic and thicke weather, the wind at South-west, a faire gale. We stood to the South-ward, and made our way South-east and by East. At twelve of the clocke we sounded, and had eight and fortie fathoms: againe at two we founded, and had fiftie fathoms. And at fixe of the clocke we founded: and had eight and fortie fathoms on the end of the Banke. Againe, at eight of the clocke at night wee founded, and had no ground in eightie fathomes, and gaine, at eigness the closest a might be seen that the compasse varyed 17, degrees variation degrees.

The eleuenth, very thicke and myflie weather. At twelve of the clocke at night, we caftabout to the Westward, and stood so all day, and made our way West North-west. We sounded at twelue of the clocke, but had no ground; fo we flood to the Westward all the fore-part of the night, and founded but could get no ground in fiftie or fixtie fathoms till mid-night. Then I founded and had ground at fifteene fathoms, white fand.

unded and had ground at myseus taxonomy, who cause the morning till eleuen of the clocke; at The twelfth, was very foggie, we food our course all the morning till eleuen of the clocke; at Land, being the course of the course o 30 which time we had fight of the Land, which is low white fandie ground, right on head off vs. Land, being low, white and which time we had ught of the Southward, and flood off foure Glaffes: then we tackt low, wh and had ren fathoms. Then we tackt to the Southward, and flood off foure Glaffes: then we tackt findite. to the Land againe, thinking to have rode vnder it, and as we came neere it, the fog was fo thicke that we could not fee; fo wee flood off againe. From mid-night to two of the clocke, we came founding in twelve, thirteene, and foureteene fathoms off the shoare. At foure of the clocke, we had 20 fathoms. At eight of the clocke at night 30 fathoms. At twelve of the clocke 65, fathoms. and but little winde, for it deeped apace, but the necret the shoare the fairer shoalding.

The thirteenth, faire fun-shining weather, from eight of the clocke in the fore-noone all day after, but in the morning it was foggie. Then at eight of the clocke we cast about for the shoare. but could not fee it; the wind being at South by our true Compasse, wee steered VVest and by 4; degrees

40 North. At noone we observed, and found our height to bee 43. degrees 25. minutes; so we stee. 35. minutes, red away VVest and by North all the after-noone. At foure of the clocke in the after-noone. Sight of Land we founded and had fine and thirtie fathoms. And at fixe of the clocke, wee had fight of the Land, and faw two fayles on head off vs. The land by the waters fide is low Land, and white fandie Bankes rifing full of little Hils. Our foundings were 35.33.30.28.32.37.33. & 32.fathoms.

The foureteenth, full of mysts flying and vading, the wind betweene South and South-west, we fteered away West North-west, and North-west and by West. Our foundings were 29. 25. 24. 35. 22. 25. 27. 30. 28. 30. 35. 43. 50. 70. 90. 70.64. 86. 100. fathoms, and no ground. The fifteenth, very mystie, the winde varying betweene South and South-west, wee steered

West and by North, and VVest North-west. In the morning we founded, and had one hundred fathoms, till foure of the clocke in the after-noone. Then we founded againe, and had seventie 50 face fathoms. Then in two Glaffer running, which was not about two English miles, we founded and had fixtie fathoms, and it shoulded a great pace untill we came to twentie fathoms. Then we male account we were neere the Hands that lie off the shoare. So we came to an Anchor, the Sea being very smooth and little wind, at nine of the clocke at night. After supper, we tryed for Fish, and I caught fifteene Cods, some the greatest that I have seene, and so we rode all night.

The fixteenth, in the morning it cleered up, and wee had fight of fine llands lying North, and Fine llands North and by VV eft from vs, two leagues. Then wee made ready to set sayle, but the myst came fo thicke, that we durft not enter in among them.

The seuenteenth, was all mystic, so that wee could not get into the Harbour. At ten of the to clocke two Boates came off to vs, with fixe of the Sanager of the Country, feeming gl.d of our Sixe Salages comming. VVe gaue them trifles, and they eate and dranke with vs ; and told vs, that there come about were Gold, Siluer, and Copper mynes hard by vs; and that the French-men doe Trade with them. them; which is very likely, for one of them spake some words of French. So wee rode still all day and all night, the weather continuing myslie.

Lead,or Pole.

A large River.

The eighteenth, faire weather, wee went into a very good Harbour, and rode hard by the shoare in foure fathoms water. The River runneth vp a great way, but there is but two fathoms hard by vs. VVe went on shoare and cut vs a fore Mass, then at noone we came aboord againe, 44. Degrees 10. and found the height of the place to bee in 44. degrees 1. minute; and the Sunne tofall at 2 South South-west Sunne, VV e mended our sayles, and fell to make our fore-Mast. The Harbour lyeth South and North, a mile in where we rode.

The nineteenth, we had faire fun-shining weather, we rode still. In the after-noone wee went with our Boate to looke for fresh water, and found some; and found a shoald with many Lobsters on it, and caught one and thirtie. The people comming aboord, shewed vs great friend-Lobiters on it, and caught one and annue. The twentieth, faire finne, fining weather, the winde at 10 fin, but we could not truft them. The twentieth, faire finne, fining weather, the winde at 10 South-west. In the morning, our Scute went out to eatch fresh Fish halfe an houre before day, and returned in two houres, bringing feuen and twentie great Coddes, with two hookes and lines. In the after-noone wee went for more Lobsters, and caught fortie, and returned abourd. Then wee espied two French Shallops full of the Countrey people come into the Harbour, but they offered vs no wrong, feeing we flood vpon our guard. They brought many Beauer skinnes, and other fine Furres, which they would have changed for redde Gownes. For the French trade with them for red Cassockes, Kniues, Hatchets, Copper, Kettles, Treuts, Beades, and

The one and twentieth, all mystic, the wind Easterly, wee rode still and did nothing, but about our Mast. The two and twentieth, faire Sun-shining weather, the winde all Northerly, 20 we rode still all the day. In the after-noone our Scute went to catch more Lobsters, and brought with them nine and fiftie. The night was cleere weather.

The three and twentieth, faire fun-shining weather and very hot. At cleuen of the clocke, our fore Mast was finished, and we brought it aboord, and set it into the step, and in the after-noone we rigged it. This night we had some little myst and rayne.

The foure and twentieth, very hot weather, the winde at South out of the fea. The fore-part of the day wee brought to our fayles. In the morning, our Scute went to take Fish, and in two houres they brought with them twentie great Coddes, and a great Holibut, the night was faire also. We kept good watch for feare of being betrayed by the people, and perceived where they

The fine and twentieth, very faire weather and hot. In the morning wee manned our Scute with foure Muskets, and fixe men, and tooke one of their Shallops and brought it aboord. Then we manned our Boat & Scute with twelue men and Muskets, and two stone Pieces or Murderers. and draue the Salnages from their Houses, and tooke the spoyle of them, as they would have done of vs. Then wee fet fayle, and came downe to the Harbours mouth, and rode there all done to so find the winde be wright in, and the night grew myflie with much rayne till main night, because the winde blew right in, and the night grew myflie with much rayne till main night. Then it fell calme, and the wind came off the Land at West North-west, and it began to cleere. The Compasse varyed 10. degrees North-west.

The fixe and twentieth, faire and cleere funne-shining weather. At five of the clocke in the morning, the winde being off the shoare at North North-west, we set sayle and came to sea, and 40 by noone we counted our ship had gone foureteene leagues South-west. In the after-noone, the winde shifted variably betweene West South-west, and North-west. At noone, I found the height to bee 43 degrees cominutes. This Ecuening being very faire weather, wee observed degrees toward the variation of our Companie at the Sunnes going downe, and found it to bee 10. degrees from the North-west the North to the VVestward.

The feuen and twentieth, faire fun-shining weather, the winde shifting betweene the Southwest, and West and by North, a stiffe gale, we stood to the Southward all day, and made our way South and by West, seuen and twentie leagues. At noone, our height was 42 degrees 50 minuts. At foure of the clocke in the after-noone, wee cast about to the Northward. At eight of the clocke, we tooke in our top-sayles and our fore-bonnet, and went with a short sayle all night.

The eight and twentieth, very thicke and mystie, and a stiffe gale of wind, varying betweene South-west, and South-west and by VVest; we made our way North-west and by VVest, feuen and twentieleagues, wee founded many times and could get no ground. At fine of the clocke, we cast about to the Southward, the wind at South-west and by VVest. At which time we founded, and had ground at feuentie fine fathoms. At eight, weehad fixtie fine fathoms. At degrees to the ten, fixtie, At twelve of the clocke at mid-night, fiftie fixe fathoms, gray fand. The Compasse varyed 6. degrees the North point to the VVeil.

Variation 6.

The nine and twentieth, faire weather, we flood to the Southward, and made our way South and by VVest a point South, eighteene leagues. At noone, we found our height to bee 42. degrees 56.minutes, wee founded oft, and had theie 60, 64, 65, 67.65, 65, 70, and 75, fathoms. At 60 Variation 5. & night, wee tryed the variation of our Compasse by the setting of the Sunne, and found that it shalfe degrees, went downe 37. degrees to the North-ward of the VVest, and should have gone downe but 31. degrees. The Compalle varyed 5. 1. degrees.

The thirtieth, very hot, all the fore-part of the day calme, the wind at South South east, wee

fleered away VVest South-west and sounded many times, and could find no ground at one hunfleered away v ven sounds. VVe found a great current and many oues-falls. Our current had A great curdeceived vs. For at noone we found our height to be 41. degrees 34. minutes. And the current rent and mahad heaved vs to the Southward fourteene leagues. At eight of the clocke at night, I founded and ny ouer-lais. had ground in fiftie two fathomes. In the end of the mid-night watch, wee had fiftie three fathomes. This last observation is not to be trusted.

The one and thirtieth, very thicke and mystic all day, vntill tenne of the clocke. At night the wind came to the South, and South-west and South. We made our way West North-well nineteene leagues. Wee founded many times, and had difference of foundings, to fometimes little Rones, and fometimes groffe gray land, fiftie fix, fiftie foure, fortie eight, fortie feuen, fortie foure, fortie fix, fiftie fathomes; and at eight of the clocke at night it fell calme, and we had fiftie fathomes. And at ten of the clocke we heard a great Rut, like the Rut of the shoare. A great Rut, Then I founded and found the former Depths; and miftrufting a current, feeing it so still that the ship made no way, I let the lead lie on the ground, and found a tide set to the South-west, and South-west by West, to fast, that I could hardly vere the Line so fast, and presently came an hur-Acutrente ling current, or tyde with ouer-fals, which cast our ship round; and the Lead was so fast in the the South-well ground, that I feared the Lines breaking, and we had no more but that. At mid-night I foun- and Southded againe, and we had feuentie fine fathomes; and the strong streame had left vs.

The fark of August, all the fore-part of the day was mystie, and at noone it cleered vp. We with over-take and the tour height was at degrees as minutes and we had come interested learner. The first hugust. found that our height was 41. degrees 45. minutes, and we had gone nineteene leagues. The afternoon was reasonable cleare. We found a rustling tide or current, withmany ouer-fals to continue ftill, and our water to change colour, and our fea to bee very deepe, for wee found no ground in one hundred fathomes. The night was cleere, and the winde came to the North, and North North-east, we steered West.

The second, very faire weather and hoe : from the morning till noone we had a gale of wind. but in the after-noone little wind. Atmoone I founded and had one hundred and ten fathomes: and our height was 41. degrees 56. minutes. And wee had runne foure and twentie leagues and an halte. At the Sun-letting we observed the variation of the Compasse, and found that it was come to his true place. At eight of the clocke the gale increased, fo wee ranne fixe leagues that 30 watch, and had a very faire and cleere night.

The third, very hor weather. In the moining, we had fight of the Land, and fleered in with it, thinking to goe to the North-ward of it. So we lent our shallop with fine men, to found in by the shore : and they found it deepe fine fathomes within a Bow-shot of the shoare; and they They goe on by the linger; and they round is very one faction on wathing above sinds of the indirec; and ency went on Land, and found goodly Grapes, and Rofertees, and brought them about with them, Landierer at fine of the clocke in the Equening. We had feuer and eventie fathoms within two miles Capecia. the shoare; and we found a floud come from the South-east, and an ebbe from the North-west. with a very strong streame, and a great hurling and noyses. At eight of the clocke at night, the wind began to blow a fresh gale, and continued all night but variable. Our founding that wee had to the Land, was one hundred, eightie, seuentie foure, fiftie two, fortie fixe, twentie nine, 40 twentie feuen, twentie foure, nineteene, feuenteene, fometimes Oze, and fometimes

The fourth, was very hot: we flood to the North-west two watches; and one South in for the Land, and came to an Anchor at the Norther end of the Headland , and heard the voyce of men call. Then we fent our Boat on shoare, thinking they had beene some Christians left on the Land : but wee found them to bee Sauages, which feemed very glad of our commings So wee brought one aboord with vs, and gaue him meate, and he did eate and drinke with vs. Our Ma-Rer gaue him three or foure glasse Buttons, and sent him on Land with our shallop againe. And at our Boats comming from the shoare he leapt and danced, and held up file stands, and pointed vs to a river on the other fidesfor we had made fignes that we came to fifth there. The bodie of this 10 Headland lyeth in 41 degrees 45 minutes. We let fayle againe after dinner thinking to have got to the Westward of this Headland, but could not; so we beare up to the Southward of it, & made a South-east way; and the Souther point did beare West at eight of the clocke at night. Our foundings about the Easter and Norther part of this Headland, a league from the shoare are these: at the Easterfide thirtie, twentie feuen, twentie feuen, twentie foure, twentie fine, twentie, The North-east point 17. degrees 18. minutes, and so deeper. The North-end of this Headland, hard by the shoare thirtie fathomes : and three leagues off North North-weit, one hundred fathomes. At the South east part a league off, fifteene, fixteene, and seventeene fathomes. The people haue greene Tabacco, and pipes, the boles whereof are made of Earth, and the pipes of

red Copper. The Land is very fweet. 60 The fift, all mystie. At eight of the clocke in the morning, wee tack about to the Wellward and flood in till foure of the clocke in the after-noone; at which time it cleared, and wee had fight of the Head-land againe five leagues from vs. The Souther point of it did beare West off vs : and we founded many times, and had no ground. And at foure of the clocke we cast about. and at our staying wee had seuentie fathomes. Wee steered away South and South by East all

night, and could get no ground at feventie and eightie fathomes. For wee feared a great Riffe. that lyeth off the Land, and steered away South and by East.

The fixth, faire weather, but many times mysling. Wee steered away South South-east, till eight of the clocke in the morning; Then it cleered a little, and wee cast about to the Westward, Then we founded and had thirtie fathomes, groffe fand, and were come to the Riffe. Then we kept our Lead, and had quicke shoalding, from thirtie, twentie nine, twentie stuen, twentie foure, twentie two, twentie and an halfe, twentie, twentie, nineteene, nineteene, nineteene, eighteene, eighteene, seuenteene; and so deeping againe as proportionally as it shoulded. For we steered South and South-east till we came to twentie fixe fathomes. Then we steered Southwest for so the tyde doth set. By and by it being calme we tryed by our Lead; for you shall 10 haue fixteene or leuenteene fathomes, and the next cast but seven or fix fathomes. And farther to the Westward you shall have four and fue foot water, and see Rockes under you; and you shall fee the Land in the top. Vpon this Riffe we had an obsenuation, and found that it lyeth in 40. degrees 10. minutes. And this is that Headland which Captaine Bartholomen Gofnold discourrous Riffe is 1a red in the yeere 1602, and called Cape Cost because of the store of Cod-fish that hee found thereabout. So we steered South-west three leagues, and had twentie, and twentie foure fathomes. Then we steered West two Glasses halfe a league, and came to sifteene fathomes. Then we steered off South-east foure Glasses, but could not get deepe water; for there the tyde of ebbe laid vson; and the streame did hurle so, that it laid vs so neere the breach of ashoald, that wee were forced to Anchor. So at feuen of the clocke at night, wee were at an Anchor in tenne fathomes: 20 And, I give God most heartie thankes, the least water wee had was seven fathomes and an halfe. We rode still all night, and at a still water I founded so farre round about our ship as we could see a light; and had no leffe then eight, nine, ten, and eleven fathomes: The myst continued being

The feuenth, faire weather and hot, but myslie. Wee rode still hoping it would cleere, but on the floud it fell calme and thicke. So we rode still all day and all night. The floud commeth from the South-west, and riseth not about one fathome and an halfe in nepe streames. Toward night it cleered, and I went with our shallop and sounded, and found no lesse water then eight fathomes to the South-east off vs : but we law to the North-west off vs great Breaches.

The eight, faire and cleere weather. In the morning, by fixe of the clocke at flake water wee 30 weighed; the wind at North-east, and set our fore-sayle and mayne top-sayle, and got a mile ouer the Flats. Then the tyde of ebbe came, so we anchored against ill the floud came. Then wee fet fayle againe, and by the great mercie of God, weegot cleere off them by one of the clocke this after-noone. And wee had fight of the Land from the West North-west, to the North North-west. So we steered away South South-east all night; and had ground vintill the middle of the third watch. Then we had fortie fine fathomes, white fand, and little stones. So all our foundings are twentie, twentie, twentie two, twentie fenen, thirtie two, fortie three, fortie three, fortie fine. Then no ground in feuentie fathomes.

The ninth, very faire and hot weather, the wind a very stiffe gale. In the morning, at four of the clocke, our shallop came running up against our sterne, and split in all her stemme; So we 40 were faine to cut her away. Then wee tooke in our mayne fayle, and lay atrie under our forefayle vntill twelue of the clocke at mid-day. Then the wind cented to a faire gale, fo wee flood away South-weft. Then we lay close by, on many courses a South by West way fifteene leagues: and three watches South-east by East, ten leagues. At eight of the clocke at night, wee tooke in our top-fayles, and went with a low fayle; because we were in an vnknewne sea. At noone we observed and found our heigth to be 38. degrees 39. minutes.

The tenth, in the morning some raine and cloudie weather: the windeat South-west, wee made our way South-east by East, ten leagues. At noone, wee observed and found our height to bee 48, degrees 39, minutes. Then wee tackt about to the Westward, the wind being at South and by East, little wind. At foure of the clocke it fell calme, and we had two Dolphines about 10 our thip, and many small fishes. At eight of the clocke at night, wee had a small lingring gale. All night we had a great Sea out of the South-west, and another great Sea out of the North-call.

The eleventh, all the fore-part of the day faire weather, and very hot. VVee flood to the VVeft South-west till noone. Then the wind shorted, and we could be but South-west and by South. At noone, wee found our heigth to bee 29. degrees 11. minutes. And that the current had laid vs to the Northward thirtie two minutes contrary to our expectation. At four of the clocks in the after-noone there came a myst, which endured two houres. But wee had it faire and cleere all night after. The Compasse varied the North point to the V Vest one whole point.

The twelfth, faire weather, the wind variable betweene the South-well and by South, and the North little wind. In the morning we killed an extraordinary fifth, and flood to the West- 60 ward all day and all night. At noone we found our heigth to be 38. degrees 13 minutes. And the observation the day before was not good. This noone, we found the Compasse to vary from the North to the West ten degrees.

The thirteenth, faire weather and hot : the wind at North-east. Wee steered away West and

by our Compafie two and twentie leagues. At noone wee found our height to bee 27, degrees 49. minutes, and that our way from noone to noone war West South-west, halfe a point Southerly. The Compaffe was 7 degrees and a halie variation; from the North point

The fourteenth, faire weather, but cloudie, and a fiffe gale of wind, wariable betweene Northeast and South-weit, wee steered away West by South, a point South all day vntill nine of the clocke at night; then it began to Thunder and Lighten, whereupon we tooke in all our fayles, and layd it a hull, and hulled away North till mid-night, a league and a halfe,

The fifteenth, very faire and hot weather, the winde at North by East. Acforre of the to clocke in the morning we fet fayle, and flood on our course to the Wellward. At noone wee found our height to bee 37. degrees 25. minutes. Theufter-noone proued little wind. At eight 37. Degrees of the clocke at night, the winde came to the North, and wee fleered West by North, and West North-west, and made our way West. The Compasse waryed 7 degrees from the

The fixteenth, faire finning weather, and very hor, the wind variable betweene the North and the West, wea steered away West by North. Atmoone wee found our height to bee 37. 37.Degrees descrees 6, minutes. This morning we sounded and had ground in nirectie fathomes, and in fixe 6, minutes. Glasses running it shoulded to fiftie fathoms, and so to eight and twentie fathoms, at foure of the clocke in the after-noone. Then wee came to an Anchor, and rode till eight of the clocke at 20 night, the wind being at South and Moone-light, we resolved to goe to the Northward to finde deeper water. So we weighed and stood to the Northward, and found the water to Boald and deepe, from eight and twentie to twentie fathomes.

The feuenteenth, faire and cleere Sun-shining weather, the winde at South by West, wee Recred to the Northward till foure of the clocke in the morning, then wee came to eighteene fathomes. So we Anchored vntill the Sunne arole to lookeabroad for Land, for wee judged there could not but be Land neere vs, but we could fee none. Then we weighed and flood to the Westward till noone. And at eleuen of the clocke wee had fight of a low Land, with a white fandie shoare. By twelve of the clocke we were come into fine fathomes, and Anchored; and the Land Alow Land was four cleagues from vs, and wee had fight of it from the West, to the North-west by with a white North Corneight was to distance of minutes. Then the minute of the land foot 30 North. Our height was 27 degrees 26 minutes. Then the wind blew fo ftiffe a gale, and fuch a 37 degrees 56 Sea went, that we could not weigh ; so we rode there all night an hard rode;

The eighteenth, in the morning faire weather, and little winde at North North-east and North-east. At foure of the clocke in the morning, we weighed and stood into the shoare to see the deeping or shoulding of it, and finding is too deepe, we stood in to get a rode; for wee faw as it were three Hands. So wee turned to windward to get into a Bay, as it shewed to vs to the Westward of an Iland. For the three Ilands did beare North off wsi. But toward noone the wind blew Northerly, with guits of wind and rayne. So we stood off into the Sea againe all night; and running off we found a Channell, wherein we had no leffe then eight, nine, ten, eleuen, and twelve fathomes water. For in comming ouer the Barre, wee had fine, and foure fathomes and a 40 halfe, and it lyeth fine leagues from the shoare, and it is the Barre of Virginia. At the North end Barre of Virginia. of it, it is ten leagues broad, and South and North, but deepe water from ninetie fathoms to five, nie and foure and a halfe. The Land weth South and North. This is the entrance into the Kings Kings River. Riner in Virginia, where our English-men are. The North file of it lyeth in 37. degrees 26. minutes, you shall know when you come to should water or sounding; for the water will looke

you come to ten, eleuen, nine, eight, seuen, ten, and nine fathomes, and so to fiue, and source fathomes and a halfe. The nineteenth, faire weather, but an hard gale of winde at the North-east, wee flood off till noone, and made our way South-east by East, two and twentie leagues. At moone wee cast Note. 50 about to the Westward, and stood till fixe of the clocke in the after-noone, and went fine leagues and a halfe North-west by North. Then wee cast about agains to the Eastward, and stood that way till foure the next morning.

Greene or thicke, you shall have ninetie and eightie fathomes, and shoalding a pice till

The twentieth, faire and cleere weather, the winde variable betweene East North-east, and North-east. At foure of the clocke in the morning, weecast about to the Westward, and stood till noone; at which time I founded; and had two and thirtie fathomes. Then we takt to the Eastward againe; wee found our height to bee 37. degrees 22. minutes. We stood to the East- 37. degrees 25. ward all night, and had very much wind. At eight of the clocke at night we tooke off our Bon- minutes nets, and flood with fmall fayle,

The one and twentieth, was a fore storme of winde and rayne all day and all night, wherefore 60 wee flood to the Eastward with a small sayle : till one of the clocke in the after-noone. Then a great Sea brake into our fore-corfe and split it; so we were forced to take it from the yard and mend it ; wee lay a trie with our mayne-corfe all night. This night our Cat ranne crying from one fide of the thip to the other, looking ouer-boord, which made vs to wonder; but we law nothing.

The Place.

minutes, and

from Cape Ced into the

Variation 10.

Ecc

The two and twent eth, formy weather, with guits of rayne and wind. In the morning at eight of the clocke we fee our fore-corie, and food to the Eastward vader our fore-layte, maynefayle and onien, and from nonnecto noone, we made our way East South-east, fourteeneleagues, variation 4. degrees West. The night reasonable drie but cloudie, the winde variable all day and night. Our Compasse was

The three and twentieth, very faire weather, but some Thunder in the morning, the winde variable betweene East by North. At moone wee tackt about to the Northward, the winde at East by Noseh. The after-moone very faise, the wind variable, and continued so all night.

Our way we made Bast South-east, till neene the next day,

for way we made hast courn-car, measurement to see any.

The four and twentieth, faire and hoc weather, with the wind variable between the North 10 and the East. The after-moone variable winde. But at fourt of the clocke, the wind time to the East, and South-east; fo wee floered away North by Weft, and in three Warches wee went thirteene leagues. At noone our beight was 35. degrees 41. minutes, being farre off at

The five and twentieth, faire weather and very hot. All the morning was very calme vntill eleuen of the clocke; the wind came to South-east, and South South-east; fo wee steered away North-west by North, two Watches and a halfe, and one Watch North-west by West, and went eighteene leagues. At noone I found our height to bee 36, degrees 20. minutes, being

The fixe and twentieth, faire and hot weather, the winde variable upon all the points of the 20 Compalie. From two of the clocke in the morning vntill noone, were made our way North by East, seuen leagues. In the after-noone the wind came to the North-east, and vering to the East South-east, wee steered away North-west friteene leagues, from noone till ten of the clocke at night. At eight of the clocke at night wee founded, and had eighteene fathomes, and were The Banke of come to the Banke of Virginia, and could not fee the Land. Wee kept founding, and fteered a. way North, and came to eigh: fathomes, and Anchored there ; for the wind was at East Southeast, so that wee could not get off. For the Coast lyeth along South South-west, and North North-east. At noone our height was 37, degrees 15, minutes. And wee found that we were returned to the same place, from whence we were put off at our first seeing Land.

The feuen and twentieth, faire weather and very hot, the winde at East South-east. In the 20 morning as soone as the Sunne was vp, wee looked out and had fight of the Land. Then wee weighed, and flood in North-west two Glasses, and found the Land to bee the place, from whence wee put off first. So wee kept our loofe, and steered along the Land, and had the Banke Ive all along the sheare; and wee had in two leagues off the sheare, five, feven, eight. nine, and ren fathomes. The Coast lyeth South South-west, and is a white Sandie sloare, and theweth full of Bayes and Points. The streame setteth West South-west, and East Northeast. At fixe of the clocke at night, wee were thwart of an Harbour or River, but we saw a Barrelye before it; and all within the Land to the Northward, the water ranne with many Hands in it. At fixe of the clocke we Anchored, and fent our Boate to found to the shoare-ward,

and found no lelle then foure and a halfe, fine, fixe, and feuen fathomes.

The eight and twentieth, faire and hot weather, the winde at South South-west. In the morning at fixe of the clocke wee weighed, and steered away North twelve leagues till noone. and came to the Point of the Land; and being hard by the Land in fine fathomes, on a fudden wee came into three fathomes ; then we beare vp and had but ten foote water, and toyned to the Point. Then as foone as wee were over, wee had five, fixe, fenen, eight, nine, ten. twelve, and thirteene fathomes. Then wee found the Land to trend away North-weft, with a great Bay and Rivers. But the Bay wee found shoald; and in the offing wee had ten fathomes. and had fight of Breaches and drie Sand. Then wee were forced to stand backe againe; so we Rood backe South-east by South, three leagues. And at feuen of the closke wee Anchored in eight fathomes water; and found a Tide fet to the North-west, and North North-west, 50 and it rifeth one fathome, and floweth South South-east. And hee that will throughly Difcouer this great Bay, must have a small Pinnasse, that must draw but source or fine soote water, to found before him. At fine in the morning wee weighed, and steered away to the Eastward on many courses, for the Norther Land is full of shoalds. Wee were among them, and once wee strooke, and wee went away; and steered away to the South-east. So wee had

Land is full of

The nine and twentieth, faire weather, with some Thunder and showers, the winde shifting betweene the South South-west, and the North North-west. In the morning wee weighed at the breake of day, and flood toward the Norther Land, which we found to bee all Ilands to our fight, and great stormes from them, and are should three leagues off. For we comming by them, 69 had but feuen, fixe, fine, force, three, and two fathoms and a halfe, and strooke ground with our Rudder, we steered off South-west, one Glasse, and had fine fathoms. Then wee steered Southeast three Glasses, then wee found seuen fathomes, and steered North-east by East, foure leagues, and came to twelue and thirteene fathoms. At one of the clocke, I went to the top-

two, three, foure, five, and feuen fathomes, and so deeper and deeper.

CHAP. 16. Deceitfull ftreames, Three great Rivers, Salmons, Mullets, Rayes, 501

mast head, and set the Land, and the bodie of the Ilands did beare North-west by North; And at foure of the clocke, wee had gone foure leagues Eaft South-eaft, and North-eaft by East, and found but seven sathoms, and it was calme, so we Anchored. Then I went agains to the top-mast head, to see how farre I could see Land about vs, and could see no more but the Ilands. And the Souther point of them did beare North-west by West, eight leagues off. So weerode till mid-night. Then the winde came to the North North-weft, so wee waighed

The thirtieth, in the morning betweene twelue and one, we weighed, and flood to the Eaffward, the winde at North North-west, wee steered away and made our way East South-east. From our weighing till noone, eleuen leagues. Our foundings were eight, nine, ten, eleuen twelue.and thirteene fathomes till day. Then we came to eighteene, nineteene, twentie, and to fixe and twentie fathoms by noone. Then I observed the Sunne, and found the height to bee 29. degrees 5. minutes, and faw no Land. In the after-noone, the winde came to North Latindese. by Wett; So wee lay close by with our fore-sayle : and our mayne-sayle, and it was little degrees s.miwinde vntill twelue of the clocke at mid-night, then wee had a gale a little while. Then I autes. founded, and all the night our foundings were thirtie, and fixe and thirtie fathomes, and wee went little.

The one and thirtieth, faire weather and little wind. At fixe of the clocke in the morning we cast about to the Northward, the wind being at the North-east, little wind. At moone it fell 20 calme, and I found the height to bee 38 degrees 39 minutes. And the streames had deceived vs. and our founding was eight and thirtie fathoms. In the afternoone I founded againe, and had never hat thirtie fathoms, So we found that we were heaved too and fro with the streames of the Tide, Deceitfull both by our observations and our depths. From noone till foure of the clocke in the after-noone, freames, it was calme. At fixe of the clocke wee had a little gale Southerly, and it continued all night. fometimes calme, and fometimes a gale; wee went eight leagues from noone to noone. North by East.

The first of September, faire weather, the wind variable betweene East and South, we steered September. away North North-west. At noone we found our height to bee 29. degrees 2. minutes. Wee Latitude 39. had foundings thirtie, twentie seuen , twentie foure, and twentie two fathomes . as wee degrees 3, min 3C went to the Northward. At fixe of the clocke wee had one and twentie fathomes, And all the nutes, third watch till twelue of the clocke at mid-night, we had foundings one and twentie, two and twentie, eighteene, two and twentie, one and twentie, eighteene, and two and twentie fathoms. and went fixe leagues neere hand North North-west.

The second, in the morning close weather, the winde at South in the morning; from twelve untill two of the clocke we steered North North-west, and Ind founding one and twentie fathoms, and in running one Glaffe we had but fixteene fathoms, then seuenteene, and so shoulder and shoulder vntill it came to twelve fathoms. We faw a great Fire, but could not fee the Land. then we came to ten fathoms, whereupon we brought our tackes aboord, and stood to the Eastward East South-east, foure Glasses. Then the Sunne arose, and we steered away North agains. 40 and faw the Land from the West by North, to the North-west by North, all like broken llands, and our foundings were eleuen and ten fathoms. Then wee looft in for the shoare, broken llands, and faire by the shoare, we had seuen fathoms. The course along the Land we found to be North-The course a

and rate by the intert, we may return actions, a necount acong the Lama we round to be courts— eaft by North. From the Land which we lad fift fight of, whill we came to a great Lake long the Land of water, as wee could judge it to bee, being drowned Land, which made it to rife like llands, from the which was in length ten leagues. The mouth of that Lake hath many floadds, and the Sea breeze. River, to the keth on them as it is cast out of the mouth of it. And from that Lake or Bay, the Land lyeth mouth of the North by East, and wee had a great streame out of the Bay ; and from thence our sounding Norther Bay was ten fathoms, two leagues from the Land. At fine of the clocke we Anchored, being little or Lake, winde, and rode in eight fathoms water, the night was faire. This night I found the Land to Variation 8. 50 hall the Compasse 8 degrees. For to the Northward off vs we law high Hils. For the day before the Hills. we found not about 2. degrees of Variation. This is a very good Land to fall with, and a plea. 2. degrees va-The third, the morning myslie vntill ten of the clocke, then it cleered, and the wind came to Sea.

The third, the moranic mystic value and flood to the Northward. The Land is very pleafant the South South-eaft, fo were weighed and flood to the Northward. The Land is very pleafant this and a and high, and bold to fall withall. At three of the clocke in the after-noone, wee came to three bold moare, great Rivers. So we flood along to the Northermost, thinking to have gone into it, but we found Three great it to have a very shoald barre before it, for we had but ten foot water. Then wee cast about to Rivers, the Southward, and found two fathoms, three fathoms, and three and a quarter, till we came to The Northerthe Souther fide of them, then we had fine and fixe fathoms, and Anchored. So wee fent in our ment bettered.

Roste to found and they found no leffe water then fours fine for and found follows and an excellent 60 Boate to found, and they found no leffe water then foure, five, fixe, and feuen fathoms, and re- River. turned in an houre and a halfe. So wee weighed and went in, and rode in fine fathoms, Ozie Latitude 40. ground, and faw many Salmons, and Mullets, and Rayes very great. The height is 40. de. digrees 30.min grees 20. minutes.

The fourth, in the morning as foone as the day was light, wee faw that it was good riding

farther vp. So we fent our Boate to found, and found that it was a very good Harbour; and foure and fine fathoms, two Cables length from the shoare. Then we weighed and went in with our ship. Then our Boate went on Land with our Net to Fish, and caught ten great Mullets, of a foot and a halfe long a peece, and a Ray as great as foure men could hale into the ship. So wee trimmed our Boate and rode still all day. At night the wind blew hard at the North-west, and our Anchor came home, and wee droue on shoare, but tooke no hurt, thanked bee God, for the The people of ground is foft fand and Oze. This day the people of the Countrey came aboord of vs, seeming ground is not raine and Oze. I mis may the people of the control years and control years are dead.

very glad of our comming, and brought greene Tabacco, and gate vs of it for Knitter and Read.

They goe in Deere skins loofe, well drefted. They have yellow Copper. They define Cleathet, come aboord. they are very and are very civill. They have great flore of Maiz or Indian Wheate, whereof they make good 10

Yellow Cop-Bread. The Countrey is full of great and tall Oakes. Tall Oakesa

The fifth, in the morning as foone as the day was light, the wind ceased and the Flood came. So we heated off our ship againe into fine fathoms water, and sent our Boate to found the Bay, The great Bay and we found that there was three fathoms hard by the Souther shoare. Our men went on Land and 30 minute. there, and law great store of Men, Women and Children, who gave them Tabacco at their comming on Land. So they went up into the Woods, and faw great flore of very goodly Oakes and fome Currants. For one of them came aboord and brought fome dryed, and gaue me fome, which were sweet and good. This day many of the people came aboord, some in Mantles of Feathers, Feathers, Furs, and some in Skinnes of divers forts of good Furres. Some women also came to vs with Hempe. They had red Copper Tabacco pipes, and other things of Copper they did weare 20 about their neckes. At night they went on Land againe, so wee rode very quiet, but durst

not truff them.

to the North-A narrow Riner to the Westward.

The fixth, in the morning was faire weather, and our Master fent lobs Colman, with foure on Another River ther men in our Boate over to the North-fide, to found the other River, being four leagues from vs. They found by the way should water two fathoms; but at the North of the River eighteen. and twentie fathoms, and very good riding for Ships; and a narrow River to the Westward betweene two llands. The Lands they told vs were as pleasant with Grasse and Flowers, and goodly Trees, as euer they had feene, and very fweet smells came from them. So they went in two leagues and faw an open Sea, and returned; and as they came backe, they were fet vpon by two Canoes, the one having twelve, the other fourteene men. The night came on, and it began to rayne, so that their Match went out; and they had one man slaine in the fight, which was an English-man, named Iohn Colman, with an Arrow shot into his throat, and two morehurt. It grew fo darke that they could not find the ship that night, but labored too and fro on their Oares. They had so great a streame, that their grapnell would not hold them.

Colman Slaine,

The feuenth, was faire, and by ten of the clocke they returned aboord the ship, and brought our dead man with them, whom we carryed on Land and buryed, and named the point after his colmans Point. name, Colmans Point. Then we hoyfed in our Boate, and raifed her fide with waste boords for defence of our men. So we rode still all night, having good regard to our Watch.

The eight, was very faire weather, wee rode still very quietly. The people came aboord vs, and brought Tabacco and Indian Wheat, to exchange for Kniues and Beades, and offered vs no 40 violence. So we fitting vp our Boate did marke them, to fee if they would make any shew of the Death of our man; which they did not.

Seuages.

The ninth faire weather. In the morning, two great Canoes came abourd full of men; the one with their Bowes and Arrowes, and the other in thew of buying of Kniues to betray vs; but we perceived their intent. Wee tooke two of them to have kept them, and put red Coates on them, and would not fuffer the other to come neere vs. So they went on Land, and two other came aboord in a Canoe: we tooke the one and let the other goe; but hee which wee had taken, got vp and leapt ouer-boord. Then we weighed and went off into the channell of the Riner, and Anchored there all night.

The tenth, faire weather, we rode (till till twelue of the clocke. Then we weighed and went ouer, and found it (hoald all the middle of the Riuer, for wee could finde but two fathoms and a halfe, and three fathomes for the space of a league ; then wee came to three fathomes, and foure fathomes, and to to seven fathomes, and Anchored, and rode all night in toft Ozie ground. The banke is Sand.

The eleventh, was faire and very hot weather. At one of the clocke in the after-noone, wee weighed and went into the River, the wind at South South-weft, little winde. Our foundings were seuen, fixe, fixe, seuen, eight, nine, ten, twelue, thirteene, and fourteene fathomes. Then it shoalded againe, and came to five fathomes. Then wee Anchored, and saw that it was a Good Harbour very good Harbour for all windes, and rode all night. The people of the Country came about very good riarrount to all willows and gaue vs Tabacco and Indian Wheat, and departed for that night; but we durit not truft them.

The twelfth, very faire and hot. In the after-noone at two of the clocke wee weighed, the winde being variable, betweene the North and the North-west. So we turned into the River two leagues and Anchored. This morning at our first rode in the River, there came eight and

twentie Canoes full of men, women and children to betray vs : but we faw their intent, and fuffered none of them to come aboord of vs. At twelve of the clocke they departed. They of men. brought with them Oysters and Beanes, whereof wee bought some. They have great Tabacco Oysters and pipes of yellow Copper, and Pots of Earth to dreffe their meate in. It floweth South-east by Beanes.

Copper Pipes South within.

The thirteenth, faire weather, the wind Northerly. At feuen of the clocke in the morning, as the floud came we weighed, and turned foure miles into the Riuer. The tide being done wee anchored. Then there came foure Canoes aboord : but we fuffered none of them to come into our ship. They brought great store of very good Oysters aboord, which we bought for trifles. To In the night I fet the variation of the Compaffe, and found it to be 13. degrees. In the after- Variation 23. noone we weighed, and turned in with the floud, two leagues and a halfe further, and anchored degrees.

all night, and had five fathoms foft Ozie ground, and had an high point of Land, which shewed out to vs. bearing North by East five leagues off vs.

The fourteenth, in the morning being very faire weather, the wind South-east, we sayled vo the River twelve leagues, and had five fathoms, and five fathoms and a quarter leffe; and came to a Streight betweene two Points, and had eight, nine, and ten fathoms; and it trended Northeast by North, one league: and wee had twelve, thirteene and fourteene fathomes. The Riuer is a mile broad : there is very high Land on both fides. Then wee went vp North-weft, a The River a league and an halfe deepe water. Then North-east by North fue miles; then North-west milebroad. 20 by North two leagues, and anchored. The Land grew very high and Mountainous. The Very high and River is full of fish.

The fifteenth, in the morning was mifty untill the Sunne arofe; then it cleared. So wee weighed with the wind at South, and ran vp into the River twentie leagues, paffing by high Mountaines. Wee had a very good depth, as fixe, feuen, eight, nine, ten, twelue, and thirteene fathoms, and great store of Salmons in the River. This morning our two Savages got out of a Port and Iwam away. After we were under fayle, they called to vs in fcorne. At night we came to other Mountaines, which lie from the Risers side. There wee found very louing people, and Very louing very old men : where wee were well vied. Our Boat went to fifth, and caught great flore of People. very good fifh.

The fixteenth, faire and very hot weather. In the morning our Boat went agains to fishing. but could catch but few, by reason their Canoes had beene there all night. This morning the people came aboord, and brought vs eares of Indian Corne, and Pompions, and Tabacco: which Maiz, Pomple wee bought for trifles. Wee rode ftill all day, and filled fresh water; at night wee weighed and bacco. went two leagues higher, and had shoald water : so wee anchored till day.

The feuenteenth, faire Sun-shining weather, and very hot. In the morning as soone as the Sun was vp, we fet fayle, and ran vp fixe leagues higher, and found shoulds in the middle of the Shoulds and channell, and small Hands, but seuen fathoms water on both sides. Toward night we borrowed small Hands so neere the shoare, that we grounded : so we layed out our small anchor, and heaved off agains. Then we borrowed on the banke in the channell, and came aground againe; while the floud ran

40 we heaved off againe, and anchored all night.

The eighteenth, in the morning was faire weather, and we rode still. In the after-noone out Masters Mate went on land with an old Sauage, a Gouernour of the Countrey; who carried him to his house, and made him good cheere. The nineteenth, was faire and hot weather: at the foud being neere eleven of the clocke, wee weighed, and ran higher vo two leagues about the Shoalds, and had no leffe water then five fathoms: wee anchored, and rode in eight fathomes. The people of the Countrie came flocking aboord, and brought vs Grapes, and Pompions, which Grapes and wee bought for trifles. And many brought vs Beuers skinnes, and Otters skinnes, which wee Pompions:
Beauers and Handess Course and Handess Course and Alambers Course and Handess Course bought for Beades, Kniues, and Hatchets. So we rode there all night.

Otters skins

The twentieth, in the morning was faire weather. Our Mafters Mate with foure men more so went vp with our Boat to found the River, and found two leagues aboue vs but two fathomes water, and the channell very narrow; and aboue that place seuen or eight fathomes. Toward night they returned: and we rode still all night. The one and twentieth, was faire weather, and the wind all Southerly: we determined yet once more to goe farther vp into the River, to trie what depth and breadth it did beare; but much people reforted aboord, so wee went not this day. Our Carpenter went on land, and made a Fore-yard. And our Master and his Mate determined to trie some of the chiefe men of the Countrey, whether they had any treacherie in them. So they tooke them downe into the Cabbin, and gaue them so much Wine and Aqua vita, that they were . Il merrie: and one of them had his wife with him, which fate To modestly, as any of our Countrey women would doe in a strange place. In the end one of them was 60 drunke, which had beene aboord of our ship all the time that we had beene there; and that was ftrange to them; for they could not tell how to take it. The Canoes and folke went all on shoare: but some of them came againe, and brought stropes of Beades : some had sixe, seuen, eight, nine, ten , and gaue him. So he flept all night quietly.

The two and twentieth, was faire weather: in the morning our Mafters Mate and foure more

Ece 3

of the companie went up with our Boat to found the River higher up. The people of the Counor the companie went system on some command and the same system proposed the country came not about dill noone; but when they came, and faw the Sausges well, they were glad. So at three of the clocke in the after-noone they came aboord, and brought Tabacco, and more Beades, and gaue them to our Mafter, and made an Oration, and shewed him all the Countrey tound about. Then they fent one of their co apanie on land, who prefently returned, and brought a great Platter full of Venilon, dreffed by themselves; and they caused him to eate with them: then they made him reuerence, and departed all faue the old man that lay abound. This night at ten of the clocke, our Boat returned in a flowere of raine from founding of the Riser; End of the Ri. and found it to bee at an end for thipping to goe in. For they had beene vp eight or nine leagues, uers Nouiga.' and found but seuen foot water, and voconstant soundings.

They returne downe the

Riuer.

trees, &c.

Oration.

The three and twentieth, faire weather. At twelve of the clocke wee weighed, and went downe two leagues to a should that had two channels, one on the one side, and another on the other, and had little wind, whereby the tide layed vs vpon it. So, there wee fate on ground the oner, and nature whose whereby the case of all little gale of wind at the Well. So wee got our ship into deepe water, and rode all night very well.

The foure and twentieth was faire weather: the winde at the North-west, wee weighed, and went downe the River feven or eight leagues; and at halfe ebbe wee came on ground on a banke of Oze in the middle of the Ruter, and fate there till the floud. Then wee went on Storeof Cheft. Land, and gathered good flore of Cheft-nuts. At ten of the clocke weecame off into deepe

The fine and twentieth was faire weather, and the wind at South a stiffe gale. We rode still, and went on Land to walke on the Weft fide of the River, and found good ground for Corne, Okes, Wal-nut and other Garden herbs, with great flore of goodly Oakes, and Wal-nut trees, and Cheft-nut meetices, Ewe trees, and trees of fweet wood in great abundance, and great flore of Slate for houses.

The fixe and twentieth was faire weather, and the wind at South a stiffe gale, wee rode still. In the morning our Carpenter went on Land with our Masters Mate, and soure more of our companie to cut wood. This morning, two Canoes came up the River from the place where we first found louing people, and in one of them was the old man that had lyen abound of vesat the other place. He brought another old man with him, which brought more ftropes of Beades, and 30 gaue them to our Master, and shewed him all the Countrey there about, as though it were at his command. So he made the two old men dine with him, and the old mans wife: for they brought two old women, and two young maidens of the age of fixteene or feuenteeneyeeres with them, who behaued themselues very modestly. Our Master gaue one of the old men a Knife, and they gaue him and vs Tabacco. And at one of the clocke they departed downe the River, making fignes that wee should come downe to them ; for wee were within two leagues of the place where they dwelt.

The feuen and twentieth, in the morning was faire weather, but much wind at the North, we weighed and fet our fore top-sayle, and our ship would not stat, but ran on the Ozie banke at halfe ebbe. Wee layed out anchor to heave her off, but could not. So wee fate from halfe 40 ebbe to halfe floud: then wee fet our fore-fayle and mayne top-fayle, and got downe fixe leagues. The old man came aboord, and would have had vs anchor, and goe on Land to eate with him : but the wind being faire, we would not yeeld to his request; So heeleft vs, being very forrowfull for our departure. At fine of the clocke in the after-noone, the wind came to the South South-west. So wee made a boord or two, and anchored in fourteene fathomes water, Then our Boat went on shoare to fish right against the ship. Our Masters Mate and Boat-swaine, and three more of the companie went on land to fifh, but could not finde a good place. They tooke foure or fine and twentie Mullets, Breames, Bafes, and Barbils; and returned in an houre.

The eight and twentieth, being faire weather, as soone as the day was light, wee weighed at 50 halfe ebbe, and turned downe two leagues belowe water; for, the streame doth runne the last quarter ebbe: then we anchored till high water. At three of the clocke in the after-noone we weighed, and turned downe three leagues, vntill it was darke : then wee anchored.

The nine and twentieth was drie close weather: the wind at South, and South and by West, we weighed early in the morning, and turned downe three leagues by a lowe water, and anchored at the lower end of the long Reach; for it is fixe leagues long. Then there came certaine Indians in a Canoe to vs. but would not come aboord. After dinner there came the Canoe with other men , whereof three came aboord vs. They brought Indian Wheat, which wee bought for trifles. At three of the clocke in the after-noone wee weighed, as soone as the ebbe came, and turned downe to the edge of the Mountaines, or the Northermost of the Mountaines, and 69 anchored: because the high Land hath many Points, and a narrow channell, and hath many eddie winds. So we rode quietly all night in seuen fathoms water,

The thirtieth was faire weather, and the wind at South-east a stiffe gale between the Mountaynes. We rode still the after-moone. The people of the Countrey came aboord vs, and brought

fome small skinnes with them, which we bought for Kniues and Trifles. This a very pleasant Small skins. place to build a Towne on. The Road is very neere, and very good for all winds, faue an East Apleasant North-east wind. The Mountaynes looke as if some Metall or Minerall were in them. For the place to build Trees that grow on them were all blafted, and some of them barren with few or no Trees on a Towne on them. The people brought a stone aboord like to Emery (a stone vied by Glassers to cut Glasse) it would cut Iron or Steele: Yet being bruifed small, and water put to it, it made a colour like Likelihood of blacke Lead gliftering; It is also good for Painters Colours. At three of the clocke they depar. Minerals. ted, and we rode still all night.

The first of October, faire weather, the wind variable betweene the West and the North. In Octobers In the morning we weighed at feuen of the clocke with the ebbe, and got downe below the Moun-

taynes, which was feuen leagues. Then it fell calme and the floud was come, and wee anchored at twelve of the clocke. The people of the Mountaynes came abourd vs, wondring at our ship and weapons. We bought fome small skinnes of them for Trifles. This after-noone, one Canoe kept hanging vnder our sterne with one man in it, which we could not keepe from thence, who got vp by our Rudder to the Cabin window, and stole out my Pillow, and two Shirts, and two Bandeleeres. Our Masters Mate shot at him, and strooke him on the brest, and killed him. Whereupon all the rest fled away, some in their Canoes, and so leapt out of them into the watet. We manned our Boat, and got our things againe. Then one of them that swamme got hold of our Boat, thinking to ouerthrow it . But our Cooke tooke a Sword, and cut off one of his hands, and 20 he was drowned. By this time the ebbe was come, and we weighed and got downe two leagues, by that time it was darke. So we anchored in foure fathomes water, and rode well-

The second, faire weather. At breake of day wee weighed, the wind being at North-west, and got downe senen leagues; then the floud was come strong, so we anchored. Then came one and got cownie tender agon, of the Sauges that iwamme away from vast our going vp the Ruser with many other, thinking Treachetle of to betray vs. But wee perceined their intent , and fuffered none of them to enter our fhip, the Sausee. Whereupon two Canoes full of men, with their Bowes and Arrowes shot at vs after our sterne: A skirmish and in recompence whereof we discharged fixe Muskers, and killed two or three of them. Then 2- flaughter of boue an hundred of them came to a point of Land to shoot at vs. There I shot a Falcon at them, the Sauages. and killed two of them: whereupon the rest fled into the Woods. Yet they manned off another

30 Canoe with nine or ten men, which came to meet vs. So I that at it alfo a Falcon, and shot it through, and killed one of them. Then our men with their Muskets, killed three or foure more of them. So they went their way, within a while after, wee got downe two leagues beyond that place, and anchored in a Bay, cleere from all danger of them on the other fide of the River, where we faw a very good piece of ground : and hard by it there was a Cliffe, that looked of the A Myne of colour of a white greene, as though it were either Copper, or Silver Myne : and I thinke it to be Copper or one of them, by the Trees that grow vpon it. For they be all burned, and the other places are Siluer. greene as graffe, it is on that fide of the River that is called Manna-bata. There we faw no people to trouble vs: and rode quietly all night; but had much wind and raine.

The third, was very stormie; the wind at East North-east. In the morning, in a gust of wind 40 and raine our Anchor came home, and we droue on ground, but it was Ozie. Then as we were about to haue out an Anchor, the wind came to the North North-west, and droue vs off agains. Then we shot an Anchor, and let it fall in foure fathomes water, and weighed the other. Wee had much wind and raine, with thicke weather; so we roade still all night,

The fourth, was faire weather, and the wind at North North-west, wee weighed and came out of the River, into which we had runne so farre. Within a while after, wee came out also of The great mouth of the great River, that runneth vp to the North-west, borrowing vpon the Thegreat mouth Norther fide of the same, thinking to have deepe water : for wee had founded a great way with of the great Riour Boat at our first going in, and found seuen, fix, and five fathomes. So we came out that way, "".

but we were deceived, for we had but eight foot & an halfe water; and fo to three, five, three, and 50 two fathomes and an halfe. And then three, foure, fine, fixe, seuen, eight, nine and ten fathomes. And by twelve of the clocke we were cleete of all the Inlet. Then we tooke in our Boat, and fet And by twelte of the clocke we were cleere of all the Inlet. Then we tooke in our Boat, and let our mayne-fayle and sprit-fayle, and our top-fayles, and strered away East South-east, and the Cossit of the Cossit of South-east by East off into the mayne sea : and the Land on the Souther-fide of the Bay or Inlet, did beare at noone West and by South foure leagues from vs.

The fift, was faire weather, and the wind variable betweene the North and the Eaft. Wee held on our course South-east by East. At noone I observed and found our height to bee 39. degrees 30, minutes. Our Compaffe varied fixe degrees to the West,

We continued our course toward England, without seeing any Land by the way, all the rest of this moneth of October : And on the feuenth day of Nouember , file none , being Satur-60 day : by the Grace of God we fafely arrived in the Range of Darmont in Denonfoire, in the

CH AP. 17. Cape Worfenholme. Cape Digs. Loufic Bay. Store of Whales.

An Abstract of the Iournall of Master HENRY HYDSON, for the Discourrie of the North west Passage, begunne the seuenteenth of Aprill, 1610. ended with his end, being treacheroully exposed by some of the Companie.

Aprill 17.

He seventeenth of Aprill, 1610. we brake ground, and went downe from Saint Ke. tharines Poole, and fell downe to Blacke-wall : and fo plyed downe with the IC fhips to Lee, which was the two and twentieth day.

The two and twentieth, I caused Master Coleburne to bee put into a Pinke. bound for London, with my Letter to the Aduenturers, in porting the reason wherefore I fo put him out of the ship, and so plyed forth.

May. The Iles of Oriney.

The second of May, the wind Southerly, at Eeuen we were thwart of Flamberough Head. The fift, we were at the Iles of Orkney, and here I fet the North end of the Needle, and the North of the Flie all one.

Note. Farre Ilands 62 degrees 24. Westmany.

The fixt, wee were in the latitude of 59. degrees 22. minutes, and there perceived that the North end of Scotland, Orney, and Shotland are not to Northerly, as is commonly fet downe. The eight day, wee faw Farre llands, in the latitude of 62. degrees 24. minutes. The eleventh 20 day, we fell with the Easter part of Island, and then plying along the Souther part of the Land. we came to Westmony, being the fifteenth day, and still plyed about the mayne lland, vntill the last of May with contrary winds, and we got some Fowles of divers sorts. The first day of Iune, we put to Sea out of an Harbour, in the Westermost part of Island, and

fo plyed to the Westward in the latitude of 66.degrees 24, minutes, and the second day plyed and found our selves in 65. degrees 57. minutes, with little wind Easterly.

The third day, wee found our selues in 65. degrees 30. minutes, with winde at North-eaft, little before this we fayled neere some Ice.

Graneland.

Iune.

The fourth day, we faw Groneland ouer the Ice perfectly, and this night the Sunne went downe due North, and rofe North North-east. So plying the fift day, we were in 65. degrees, 30 fill encombred with much Ice, which hung vpon the Coaft of Groneland, The ninth day, wee were off Frobibers Streights with the winde Northerly, and plyed vnto

Frobificers Streights.

the South-weltwards untill the fifteenth day. The fifteenth day, we were in fight of the land, in latitude 59. degrees 27. minutes, which was called by Captayne lobn Danis, Defolation, and found the errour of the former laying downe of Defelation. that Land : and then running to the North-westward untill the twentieth day, wee found the fhip in 60. degrees 42. minutes, and faw much Ice, and many Riplings or Ouer-fals, and a firong AcurrentWeft ftreame fetting from East South-east, to West North-west.

The one and twentie, two and twentie, and three and twentie dayes, with the winde variable, we plyed to the North-westward in fight of much Ice, into the height of 62. degrees 40

East entrance into the

The foure and twentie, and fine and twentie dayes, fayling to the West-ward about midnight, wee faw Land North, which was fuddenly loft againe. So wee ranne still to the West-Streights. ward in 62. degrees 17. minutes.

July.

The fift of luly, wee plyed up upon the Souther fide, troubled with much Ice in feeking the shoare vntill the fift day of July, and we observed that day in 59 degrees 16. minntes. Then we plyed off the shoare againe, vntill the eight day, and then found the height of the Pole in 60. degrees no minutes. Here we saw the Land from the North-west by West, halfe Norther-Defreprensets. ly vnto the South-west by West, couered with snow, a Champaigne Land, and called it, De-

growne Sea.

We still plyed up to the Westward, as the Land and Ice would suffer untill the eleventh day; when fearing a storme, we anchored by three Rockie Ilands in vncertayne depth, betweene two and nine fathomes; and found it an Harbour vnfufficient by reason of lunken Rockes, one of which was next morning two fathomes about water. Wee called them the Iles of Gods Mercies. The water floweth here better then foure fathomes. The Floud commeth from the North, flowing eight the change day. The latitude in this place is 62. degrees 9. minutes. Then plying to the South-wellward the fixteenth day, wee were in the latitude of \$8. degrees 50. minutes, but found our felues imbayed with Land, and had much Ice : and we plyed to the North-westward vntill the nineteenth day, and then wee found by observation the height of the Pole in 61. degrees 24. minutes, and faw the Land, which I na- 60 Woldswith Hope, med, Hold with Hope. Hence I plyed to the North-westward still, vntill the one and twentieth day, with the wind variable. Heere I found the Sea more growne, then any wee had since wee left England.

The three and twentieth day, by observation the height of the Pole was 61. degrees 33. mi-

nutes. The fine and twentieth day, we faw the Land; and named it Magna Britannia. The fixe Magna Britan and twentieth day, wee observed and found the latitude in 62. degrees 44. minutes. The eight and twentieth day, we were in the height of 63. degrees 10, minutes, and plyed Southerly of the West. The one and thirtieth day, plying to the Westward, at noone wee found our seluces in 62. degrees 24. minutes.

The first of August, we had fight of the Northerneshoare, from the North by East to the West Angus. by South off vs: the North part twelve leagues, and the Wester part twentie leagues from vs: and we had no ground there at one hundred and eightie fathomes. And I thinke I faw Land on the Sunne fide, but could not make it perfectly, bearing East North-east. Here I found the latie

10 tude 62 degrees co. minutes.

20

fed bee God.

The second day, we had sight of a faire Head-land, on the Norther shoare six leagues off, which I called Salisburies Fore-land : we ranne from them Well South-well, fourteene leagues : In the mid-way of which wee were fuddenly come into a great and whurling Sea, whether caused by fore landmeeting of two streames, or an Ouer-fall, I know not. Thence fayling West and by South fe- A great and uen leagues farther, we were in the mouth of a Streight and founded, and had no ground at one whurling Seas uen leagues farther, we were in the mouth of a streight and iounded, and had no ground at one hundred fathomes: the Streight being there not about wo leagues broad, in the paffage in this A Streight being there not about wo leagues broad, in the paffage in this Michael we which led we Wester part : which from the Easter part of Freimm Danis, is distant two hundred and fiftie into the deep

The third day, we put through the narrow passage, after our men had beene on Land, which great Muries. 20 had well observed there, That the Floud did come from the North, flowing by the shoare five fathomes. The head of this entrance on the South fide, I named Cape Werfenbolme; and the head Cape Werfenon the North-wester shoare, I called Cape Dies. After wee had failed with an Easterly winder below. West and by South ten leagues, the Land fell away to the Southward, and the other Hes and Cape Dig. Land left vs to the Westward. Then I observed and found the ship at noone in 61. degrees 20. minutes, and a Sea to the Westward,

A larger Discourse of the same Voyage, and the successe thereof, written by ABACYKPRICKET.

理E began our Voyage for the North-west passage; the seventeenth of Aprill, 1610. Thwart of Sheper, our Mafter fent Mafter Colbert backe to the Owners with his Letter. The next day we weighed from hence, and stood for Harrich, and came thicker the eight and twentieth of Aprill. From Hawich we fet fayle the first of May, along

the Coast to the North, till we came to the Hes of Orkney, from thence to the Hes of Fare, and Orkney, from thence to Island : on which we fell in a fogge, hearing the Rut of the Sea ashoare, but faw Farrelles. not the Land whereupon our Master came to an Anchor. Heere we were embayed in the South- Island. east part of the Land. Wee weighed and stood along the Coast, on the West side towards the 40 North: but one day being calme, we fell a fishing, and caught good store of fish, as Cod and Ling. and Butte, with some other forts that we knew not. The next day, we had a good gale of wind at South-weft, and rayfed the Iles of Weftmonie, where the King of Denmarke hath a Fortreffe, weftmonie

by which we palled to rayle the Snow Hill foot, a Mountayne to called on the North-west part Hand. of the Land. But in our course we saw that famous Hill, Mount Heele, which cast out much Mount Heele fire, a figne of foule weather to come in short time. Wee leave Ifand a sterne of vs, and met a castethout fire. Mayne of Ice, which did hang on the North part of "flund", and stretched downe to the West, A mayne of which when our Master law, he stood backe for Island to find an Harbour, which we did on the North-west part, called * Derefer, where wee killed good store of Fowle. From hence wee * Or Direferd. put to Sea againe, but (neither wind nor weather feruing) our Mafter stood backe for this Harbour againe, but could not reach it, but fell with another to the South of that, called by our

50 Englifbmen, Loufie Bay : where on the shoare we found an hot Bath, and heere all our Englishmen Loufie Bay. bathed themselues : the water was so hot that it would so ld a Fowle.

From hence the first of lune, we put to Sea for Groneland, but to the West wee law Land as The first of we thought, for which we beare the best part of a day, but it proued but a foggie banke. So wee lune, gaue it ouer, and made for Gronland, which we rayled the fourth of June. V pon the Coast thereof hung good store of Ice, so that our Master could not attayne to the shoare by any meanes. The Land in this part is very Mountaynous, and full of round Hils, like to Sugar-loanes, covered with fnow. We turned the Land on the South fide, as neere as the Ice would fuffer vs. Our course for the most part was betweene the West and North-west, till we rayled the Defolations, Hand of Defofo which is a great Hand in the West part of Groneland. On this Coast we faw store of Whales, lation. and at one time three of them came close by vs, so as wee could hardly shunne them then two Store of Whales, passing very neere, and the third going under our ship, wee received no harme by them, pray-

From the Desolations our Master made his way North-west, the wind being against him, who

elfe would have gone more to the North: but in this course we saw the first great lland or Monntayne of Ice, whereof after we faw store. About the latter end of June, we rayled Land to the North of vs. which our Mafter tooke to bee that Hand which Mafter Danis fetteth downe in his Chart. On the West side of his Streight, our Master would have gone to the North of it. but the wind would not fuffer him : fo we fell to the South of it, into a great Rippling or ouer. fall of current, the which ferteth to the West. Into the current we went, and made our way to the North of the West, till we met with Ice which hung on this Iland. Wherefore our Mafter calling about, cleered himselfe of this Ice, and ftood to the South, and then to the West. through store of sloting Ice, and vpon the Ice store of Seales. We gained a cleere Sea, and conthrough note of nothing acc, and per property of the final results and then with flore of the smaller 10 fort. Betweene them we made our course North-west, till we met with Ice againe. But, in this our going betweene the Ice, we saw one of the great Hands of Ice ouerturne, which was a good warning to vs, not to come nigh them, nor within their reach. Into the Ice weep ut ahead, as Iland of Ice obetweene two Lands. The next day we had a florme, and the wind brought the Ice so fast voon vs, that in the end we were driven to put her into the chiefest of the Ice, and there to let her lie, Some of our men this day fell ficke, I will not fay it was for feare, although I faw small figne of

uerturnerb. Danger by Ice.

The storme ceasing, we stood out of the Ice, where wee faw any cleere Sea to goe to; which was sometime more, and sometime lesse. Our course was as the Ice did lye, sometime to the North, then to the North-west, and then to the West, and to the South-west : but still inclo- 20 fed with Ice. Which when our Mafter faw, he made his course to the South, thinking to cleere himselfe of the Ice that way : but the more he stroue, the worse he was, and the more inclosed. till we could goe no further. Here our Master was in despaire, and (as he told me after) he thought he should neuer haue got out of this Ice, but there haue perished. Therefore hee brought forth his Card, and shewed all the company, that hee was entred aboue an hundred leagues further then euer any English was : and left it to their choice, whether they would proceed any further: yea, or nay. Whereupon, some were of one minde, and some of another, some wishing themany had been. felues at home, and fome not caring where, fo they were out of the Ice : but there were some who then spake words, which were remembred a great while after.

Discontents.

There was one who told the Master, that if he had an hundred pounds, hee would give foure- 30 score and ten to be at home : but the Carpenter made answere, that if hee had an hundred , hee would not give ten vpon any fuch condition, but would thinke it to be as good money as ever he had any, and to bring it as well home, by the leaue of God. After many words to no purpofe, to worke we must on all hands, to get our felues out, and to cleere our ship. After much labour and time front, we gained roome to turne our ship in, and so by little and little, to get clere in the Sea a league or two off, our course being North and North-west.

In the end, we rayfed Land to the South-west, high Land and coursed with Snow. Our Ma-Desire promotes. ster named this Land, Desire promotes. Lying here, wee heard the noyse of a great over-fall of a tyde, that came out of the Land: for now we might fee well, that wee had beene embayed before, and time had made vs know, being fo well acquainted with the Ice, that when night, or 40 foggie, or foule weather tooke vs, we would feeke out the broadest Iland of Ice, and there come to anchor and runne, and sport, and fill water that stood on the Ice in Ponds, both sweete and good. But after we had brought this Land to beare South of vs, we had the tyde and the current to open the Ice, as being carried first one way, and then another : but in Bayes they lye as in a pond without mouing. In this Bay where were thus troubled with Ice, wee faw many of those Mountaynes of Ice aground, in fixe or seven score fathome water. In this our course we faw a Beare vpon a piece of Ice by it felfe, to the which our men gaue chase with their Boat : but before they came nigh her, the tyde had carried the Ice and the Beare on it, and joyned it with the other Ice : fo they loft their labour, and came abourd againe.

Exercises of pleafure and profit on the Difference of Tydes and Lee about 100.

We continued our course to the North-west, and rayled Land to the North of our course, to- 50 ward which we made, and comming nigh it, there hung on the Eastermost point, many Ilands of floting Ice, and a Beare on one of them, which from one to another came towards vs. till she was readie to come aboord. But when the faw vs looke at her, the cast her head betweene her hinder legges, and then dived vnder the Ice : and fo from one piece to another, till she was out of our reach. We flood along by the Land on the Southfide ahead of vs, wee met with Ice that hung on a point of Land that lay to the South , more then this that we came vp by : which when our Master faw, he stood in for the shoate. At the West end of this lland (for so it is) we found an Harbour, and came in (at a full Sea) ouer a Rocke, which had two fathome and an halfe on it, and was so much bare at a low water. But by the great mercie of God, we came to an Anchor cleare of it; and close by it, our Master named them , the Iles of Gods Mercie. This is an Har- 60 bour for need, but there must be care had how they come in. Heere our Master sent me, and others with me, to discouer to the North and North-west : and in going from one place to another, we sprung a Couey of Partridges which were young : at the which Thomas Woodbonse shot, but killed only the old one. This Hand is a most barren place, having nothing on it but

A dangerous

Iles of Gods

Partridges.

plashes of water and riven Rockes, as if it were subject to Earthquakes. To the North there is a great Bay, or Sea (for I know not what it will prove) where I faw a great Hand of Ice aground. betweene the two Lands, which with the Spring-tide was fet affoat, and carried into this Bay or Sea to the North-westward, but came not backe againe, nor within fight. Here wee tooke in tione Drift wood that we found ashoare. From hence westood to the South-west, to double the Land to the West of vs. through much

floting Ice: In the end wee found a cleere Sea, and continued therein, till wee rayfed Land to the North-west. Then our Master made his course more to the South then before ; but it was not long ere we met with Ice which lay shead of vz. Our Mafter would have doubled this Ice to the North, but could not; and in the end put into it downe to the South-west through much Ice, and then to the South, where we were embayed agame. Our Mafter ftrone to get the fhoure. but could not, for the great store of Lee that was on the coast. From out of this Bay, we stood to the North, and were foone out of the Ice : then downe to the South-west, and so to the West. where we were enclosed (to our fight) with Land and Ice. For wee had Land from the South to the North-west on one fide, and from the East to the West on the other; but the Land that was to the North of vs, and lay by East and West, was but an Iland. On we wene till we could goe no further for Ice: fo we made our thip fast to the Ice which the tide brought youn vs . but when the ebbe came, the Ice did open, and made way; fo as in feuen or eight houres we were cleere from the Ice, till we came to weather ; but onely fome of the great Hands, that were carag ried along with vs to the North-west.

Hauing a cleere Sea, our Master stood to the West along by the South shoare, and rayled three Canes or Head-lands, lying one aboue another. The middlemost is an Iland, and maketh a Bay Three Capes, or Harbour, which (I take) will proue a good one. Our Mafter named them Prince Henries Prince Henries Cape, or Fore-land. When we had layd this we railed another, which was the extreme point Cape. of the Land, looking towards the North: woon it are two Hills, but one (about the reft) like an Hay-cock; which our Mafter named, Nig James his Cape, To the North of this, lie cer. King Lames his taine Hands, which our Mafter named, Queene Annes Cape, or Fore-land. Wee followed the Cape.
North floare fill. Beyond the Kings Cape there is a Sound or Bay, that hath form Hands in the Cape of the Cape it : and this is not to be forgotten, if need be. Beyond this, lieth some broken Land, close to

20 the Mayne, but what it is I know not : because we passed by it in the night. Wee flood to the North to double this Land, and after to the Weft againe, till wee fell with Land that firetched from the Mayne, like a shewer from the South to the North , and from the North to the West, and then downe to the South againe. Being short of this Land, a fforme tooke vs, the wind at West, we stood to the North, and raised Land : which when our Master faw, he stood to the South againe; for he was loath at any time that wee should fee the North shoare. The storme continuing, and comming to the South shoare againe, our Master found him. Note. selfe shot to the West, a great way, which made him muse, considering his Leeward way. To the South-west of this Land, on the Mayne, there is an high Hill, which our Master named Mount Charles. To the North and beyond this, lieth an Iland, that to the East hath a faire head, Mount Charles and and beyond it to the West other broken Land, which maketh a Bay within, and a good Road

may be found there for ships. Our Master named the first, Cape Salfbarie. When we had left this to the North-east, we fell into a Rippling or Ouer-fall of a Current, which (at the first we tooke to bee a Shoald: but the Lead being cast, wee had no ground. On we passed fill in fight of the South shoare, till we raised Land lying from the Mayne some two leagues. Our Master tooke this to bee a part of the Mayne of the North Land; but it is an Iland, the North fide firetching out to the West more then the South. This Iland hach a faire Head to the East, and very high Land, which our Master named Deepes Cape: and the Land on Deepes Cape. the South fide, now falling away to the South, makes another Cape or Head-land, which our Worfenberg Master named, Worsenhams Cape. When wee were nigh the North or Iland Cape, our Master Gape. 50 fent the Boat ashoare, with my selfe (who had the charge) and the Carpenter, and divers others.

to discover to the West and North-west, and to the South-west : but we had further to it then we thought; for the Land is very high, and we were over-taken with a storme of Raine, Thunder and Lightning. But to it we came on the North-east fide, and vp we got from one Rocke to another, till we came to the highest of that part. Here we found some plaine ground, and saw fome Deere ; as first, foure or fiue, and after, a dozen or fixteene in an Herd, but could not come Deere, nigh them with a Musket shot.

Thus, going from one place to another, wee faw to the West of vs an high Hill about all the reft, it being nigh vs: but it proued further off then we made account; for, when wee came to it, the Land was so steepe on the East and North-east parts, that wee could not get vnto it. To 6c the South-west we saw that wee might, and towards that part wee went along by the fide of a Store of fortie great Pond of water, which lieth vader the East fide of this Hill: and there runneth out of it and grafe. a streame of water, as much as would drive an over-shot Mill; which falleth downe from an Sorell and

high Cliffe into the Sea on the South fide. In this place great ftore of Fowle breed, and there is Scuruy grafe, the best Graffe that I had seene since we came from England. Here wee found Sorell , and that

which wee call Scurny-graffe, in great abundance. Passing along wee saw some sound Hills of ftone, like to Graffe cockes, which at the first I tooke to be the worke of some Christian. Wee passed by them, till we came to the South side of the Hill; we went voto them, and there found more ; and being nigh them, I turned off the vppermost itone, and found them hollow within, and full of Fowleshanged by their neckes. Then Greene, and I, went to fetch the Boat to the South fide, while Robert Billet and hee got downe a Valley to the Sea tide, where wee

Our Master (in this time) came in betweene the two Lands, and shot off fome Peeces to call we aboord; for it was a fogge. Weecame aboord, and told him what we had feene, and percan ye appoore; for 1. was a togge.

fwaded him to flay a day or two in this place, telling him what refreshing might there bee had: 10 but by no meanes would be flay, who was not pleated with the motion. So we left the Fowle, and loft our way downe to the South-west, before they went in sight of the Land, which now beares to the East from vs , being the same mayne Land that wee had all this while followed. Now, we had loft the fight of it, because it falleth away to the East, after some fine and twenty or thirty leagues. Now we came to the shallow water, whereweith wee were not acquainted fince we came from Island; now we came into broken ground, and Rockes, chrough which we passed downe to the South. In this our course we had a storme, and the water did should apace. Our Matter came to an anchor in fiftrene fathoms water.

Wee weighed and flood to the South-east, because the Land-in this place did lie so, When we came to the point of the West Land (for we now had Land on both fides of ws) we came to 20 an anchor. Our Master sent the Boat ashoare, to see what that Land was, and whether there were any way through. They foone returned, and shewed that beyond the point of Land to the South, there was a large Sea. This Land on the West side, was a very narrow Point. Wee weighed from hence, and stood in for this Sea betweene the two Lands, which (in this place) is not two leagues broad downe to the South, for a great way in light of the East sheare. In the end we loft fight thereof, and faw it not till we came to the bottome of the Bay, into fixe or feuen fathomes water. Hence we flood up to the North by the West shoare, till wee came to an Iland in e2. where we tooke in water and ballaft,

Discord : see Relations fol-

From hence wee passed towards the North : but some two or three dayes after (reasoning concerning our comming into this Bay, and going out) our Mafter tooke occasion to reviewe old 30 matters, and to displace Robert Inet from being his Mace, and the Boat-swaine from his place, for words spoken in the first great Bay of Ice. Then hee made Robert Billet his Mate, and Wile ham Wilfon our Boat-fwaine. Vp to the North wee flood, till we raifed Land . then downe to the South , and up to the North, then downe againe to the South : and on Michaelmaffe day Day, and Bay. came in, and went out of certaine Landst which our Mafter fets downe by the name of Michaelmalle Bay, because we came in and went out on that day. From hence wee flood to the North. and came into shoald water; and the weather being thicke and foule, wee came to an anchor in feuen or eight fathome water, and there lay eight dayes: in all which time wee could not get one houre to weigh our anchor. But the eight day, the wind beginning to cease, our Matter would have the anchor vp, against the mind of all who knew what belonged thereunto. Well, 40 to it we went, and when we had brought it to a peake, a Sea tooke her, and cast vs all off from the Capstone, and hurt divers of vs. Here wee lost our Anchor, and if the Carpenter had not beene, we had loft our Cable too: but he (fearing fuch a matter) was ready with his Axe,

From hence we flood to the South, and to the South-west, through a cleere Sea of divers founding, and came to a Sea of two colours, one blacke, and the other white, fixteene or feuenteene fathome water, betweene which we went foure or fine leagues. But the right comming, we tooke in our Top-sayles, and stood afore the wind with our Maine-sayle and Fore-sayle, and came into fine or fixe fathomes, and faw no Land for it was darke. Then we flood to the East, and had deepe water againe, then to the South and Southwest, and so came to our Westermost 50 Bay of all , and came to an anchor neerest to the North shorae. Out went our Boat to the Land that was next vs, when they came neere it, our Boat could not flote to the shoare it was so shallow: yet ashoare they got. Here our men saw the footing of a man and a Ducke in the snowy Rockes, and Wood good store, whereof they tooke some and returned aboord. Being at anchor in this place, we saw a ledge of Rockes to the South of vs, some league of length; It lay North and South, couered at a full Sea; for a ftrong tide setteth in here. At mid-night wee weighed, and stood to goe out as we came in; and had not gone long, but the Carpen er came and told the Master, that if he kept that course he would be vpon the Rockes : the Master conceiued that he was past them, when presently wee ranne on them, and there stucke fail twelve houres : but (by the mercy of God) we got off valuet, though not vafcarred,

Wee flood wp to the East and rayled three Hills, lying North and South: wee went to the furthermost, and left it to the North of vs , and so into a Bay, where wee came to an anchor. Here our Mafter fent out our Boat, with my felfe and the Carpenter to feeke a place to winter in : and it was time; for the nights were long and cold, and the earth concred with Snow. Ha-

ning from three moneths in a Labyrinth without end, being now the last of October, we went Last of October downe to the East, to the bottome of the Bay: but returned without speeding of that we went ber. for. The next day we went to the South, and the South-west, and found a place, whereunto we brought our ship, and haled her aground : and this was the first of November. By the tenth November the thereof we were frozen in : but now we were in, it behooned vs to have care of what we had; reach frozen for, that we were fure of ; but what we had not, was vncertaine.

Wee were victualled for fixe moneths in good proportion, and of that which was good : if our Mafter would have had more, he might have had it at home and in other places. Here we were now, and therefore it behould vs to to fpend, that wee might have (when time came) to bring vs to the Caper where the Fowle bred, for that was all the hope wee had to bring vs home. IC Wherefore our Mafter tooke order, first for the spending of that wee had, and then to increase it, by propounding a reward to them that killed either Beaft, Fish, or Fowle, as in his Iouruall you have feene. About the middle of this moneth of November , dyed John Williams our Gunner : Tohn Williams God pardon the Matters uncharitable dealing with this man. Now for that I am come to speake dyeth. of him out of whose ashes (as it were) that whappy deed grew which brought a scandall upon all that are returned home, and upon the action it felte, the multitude (like the dog) running after the stone, but not at the caster : therefore, not to wrong the living, nor slander the dead, I will (by

the leave of God) deliver the truth as neere as I can. You shall understand, that our Master kept (in his house at London) a young man named Hen-

rie Greine, borne in Kont, of Worshipfult Parents, but by his lead lite and conversation hee had Henry Greenes

20 loft the rood will of all his frinds, and had spent all that hee had. This man, our Master would bad conditions have to Sea with him, because hee could write well : our Master gave him meate, and drinke. and lodging, and by meanes of one Master Venson, with much adoe got foure pounds of his mother to buy him clothes, wherewith Mafter Venfon would not truft him : but faw it laid out himselfe. This Henrie Greene was not set downe in the owners booke, nor any wages made for him. Hee came first abourd at Gramefond, and at Harwich should have gone into the field, with one Wilkinson, At Island the Surgeon and hee fell out in Dutch, and hee beat him a shoare in English, which set all the company in a rage; so that wee had much adoe to get the Surgeon aboord. I told the Master of it, but hee bade mee let it alone, for (faid hee) the Surgeon had a tongue that would wrong the best friend hee had, But Robert Inet (the 30 Mafters Mate) would needs burne his finger in the embers, and told the Carpenter a long tale (when hee was drunke) that our Mafter shad brought in Greene to cracke his credit that should displease him : which words came to the Matters eares, who when hee understood it, would have gone backe to Ifland, when he was fortie leagues from thence, to have fent home his Mate Robert Ines in a Fisher-man. But, being otherwise perswaded, all was well. So Henry Greene flood vpright, and very inward with the Mafter, and was a feruiceable man every way for manhood: but for Religion he would fay, he was cleane paper whereon he might write what hee would, Now, when our Gunner was dead, and (as the order is in fuch cases) if the company fland in need of any thing that belonged to the man deceased, then is it brought to the Mayne Maft, and there fold to them that will give most for the same : This Gunner had a gray cloth gowne, which Greene prayed the Mafter to friend him to much as to let him haue it, paying for it as another would give : the Mafter faith hee should, and thereupon hee answered some, that fought to have it, that Greene should have it, and none else, and so it refled.

Now out of season and time, the Master calleth the Carpenter to goe in hand with an house Green cenon shoare, which at the beginning our Master would not heare, when it might have beene done, spiracie, The Carpenter told him, that the Snow and Frost were such, as hee neither could, nor would goe in hand with such worke. Which when our Mafter heard, hee ferreted him out of his Cabbin to strike him, calling him by many foule names, and threatning to hang him. The Carpenter told him that hee knew what belonged to his place better then himselfe, and that hee was no

House Carpenter. So this passed, and the house was (after) made with much labour, but to no end. The next day after the Master and the Carpenter fell out, the Carpenter tooke his Peece and Henry Greene with him, for it was an order that none should goe out alone, but one with a Peece, and another with a Pike. This did moue the Master so much the more against Henry Greene, that Robert Billet his Mate must have the gowne, and had it delivered vnto him; which when Henry Greene faw, he challenged the Mafters promite : but the Mafter did so raile on Greene, with so many words of difgrace, telling him, that all his friends would not trust him with twenty shillings, and therefore why should he : As for wages he had none, nor none should haue, if he did not please him well. Yet the Master had promised him to make his wages as good, as any mans in the ship; and to have him one of the Princes guard when we came home. But you

60 finall fee how the deurl out of this fo wrought with Green, that he did the Mafter what mischiefe hee could in feeking to differedit him , and to thrust him and many other honest men out of the Theirhand Ship in the end. To speake of all our trouble in this time of Winter (which was so cold, as it la wintring. med the most of our Company, and my selfe doe yet feele it) would bee too tedious.

But I must not forget to shew, how mercifully God dealt with vs in this time ; for the

Sticke on a

Store of Pate

O:herFowles

space of three moneths wee had such store of Fowle of one kinde (which were Partridges as white as milke) that wee killed aboue an hundred dezen, besides others of sundry sorts: for all was fifth that came to the net. The Spring comming, this Fowle left vs., yet they were with vs all the extreame cold. Then in their places came divers fore of other Fowle, as Swanne, Geefe, Duck, and Teale, but hard to come by. Our Mafter hoped they would have bred in those broken grounds, but they doe not ; but came from the South, and flew to the North, further then we were this Voyage; yet if they be taken short with the wind at North, or North-west, or North-east, then they fall and stay till the winde serue them, and then siye to the North. Now in time their Fowles are gone, and few or none to bee feene. Then wee went into the Woods, Hilles, and Valleyes, for all things that had any shew of subflance 10 in them, how vile focuer: the mosse of the ground, then the which I take the powder of

Milerable diet a post to bee much better, and the Frogge (in his ingendring time as loathlome as a Toade) was not spared. But amongst the divers sorts of buds, it pleased God that The mas Woodboufe brought home a budde of a Tree, full of a Turpentine substance. Of this our Surgeon made a decoction to drinke, and applyed the buddes hot to them that were troubled with ach in any part of their bodies; and for my part, I confesse, I received great and present case

A Sauage.

About this time, when the Ice began to breake out of the Bayes, there came a Sauage to our. Ship, as it were to fee and to bee feene, being the first that we had feene in all this time: whom our Master intreated well, and made much of him, promising vnto himselfe great matters by 20 his meanes, and therefore would have all the Knives and Hatchets (which any man had) to his private vie, but received none but from lohn King the Carpenter, and my felfe. To this Sauage our Master gaue a Knife, a Looking-glasse, and Buttons, who received them thankefully, and made fignes that after hee bad flept hee would come againe, which hee did. When hee came, hee brought with him a Sled, which hee drew after him, and vpon it two Deeres skinnes, and two Beauer skinnes. Hee had a scrip under his arme, out of which hee drew those things which the Master had given him. Hee tooke the Knise and laid it vpon one of the Beauer skinnes, and his Glasses and Buttons vpon the other, and so gaue them to the Maiter, who received them; and the Savage tooke those things which the Mafter them to the Marter, who recently them to the Marter thewed him an Hatchet, 30 had given him, and put them vp into his ferip againe. Then the Marter thewed him an Hatchet, 30 for which hee would have given the Master one of his Deere skinnes, but our Master would haue them both, and so hee had, although not willingly. After many fignes of people to the North, and to the South, and that after so many sleepes he would come againe, he went his way, but neuer came more.

F:fhing.

Turke.

Now the Ice being out of the Sounds, fo that our Boat might go from one place vnto another, a company of men were appointed by the Master to go a fishing with our net; their names were as followeth : William Wilson, Henry Greene, Michael Perce, lohn Thomas, Andrew Moter, Bennet Mathewes, and Arnold Lodlo. These men, the first day they went, caught fine hundred fish, as big as good Herrings, and some Troutes : which put vs all in some hope to have our wants supplied, and our Commons amended : but these were the most that ever they got in one day, for many 40 dayes they got not a quarter fo many. In this time of their fishing, Henry Green and William Wilfon, with some others, plotted to take the net and the shallop, which the Carpenter had now set vp, and so to shift for themselues. But the shallop being readie, our Master would goe in it himfelte to the South and South-west, to see if hee could meete with the people; for, to that end was it fet vp, and (that way) wee might fee the Woods fet on fire by them. So the Mafler tooke the Sayue and the Shallop, and so much victuall as would serue for eight or nine dayes, and to the South hee went. They that remained aboord, were to take in water, wood, and ballast, and to have all things in a readmesse against hee came backe. But hee set no time of his returne; for he was periwaded, if he could meet with the people, hee should have fiesh of them, and that good flore: but hee returned worse then hee went forth. For, hee could by no meanes meete with the people, although they were neere them, yet they would fet the 50 woods on fire in his fight.

Being returned, hee fitted all things for his returne, and first, delivered all the bread out of the bread roome (which came to a pound a piece for euery mans share) and deliuered also a Bill of Returne, willing them to have that to shew, if it pleased God, that they came home: and he wept

when hee gaue it vnto them. But to helpe vs in this poore estate with some reliefe, the Boate and Savue went to worke on Friday morning, and stayed till Sunday noone: at which time they came aboord, and brought fourescore small Fish, a poore reliefe for so many hungry bellies. Then we wayed, and flood out of our wintering place, and came to an Anchor without, in the mouth of the Bay: from whence we wayed and came to an anchor without in the Sea, where our bread Belly fraits. being gone, that flore of cheefe we had was to ftop a gap, whereof there were fine, whereat the company grudged, because they made account of nine. But those that were left, were equally dissipance of the company grudged, because they made account of nine. But those that were left, were equally dissipance of the company grudged, because they made account of nine. But those that were left, were equally dissipance of the company grudged, because they made account of nine. ded by the Mafter, although he had counfell to the contrarie: for there were fome who having it, would make hast to bee iid thereof, because they could not gourne it. I knew when Henrie

Greene gaue halfe his bread, which hee had for fourteene dayes, to one to keepe, and prayed him not to let him haue any vntill the next Munday : but before Wednelday at night, hee neuer left till hee had it againe, having eaten vo his first weekes bread before. So Willen the Boatfwaine hath eaten (in one day) his fortnights bread, and hath beene two or three dayes ficke for his labour. The cause that moved the Matter to deliver all the Cheese, was because they were not all of one goodnesse, and therefore they should see that they had no wrong done them thut every man should have alike the best and the worst together, which was three pounds and a halfe for

The wind feruing, we weighed and stood to the North-west, and on Munday at night (the To eighteenth day of June) wee fell into the Ice, and the next day the wind being at Well, we lay there till Sunday in fight of Land. Now being here, the Mafter told Nicholas Smomes, that there would be a breaking vp of chefts, and a fearch for bread, and willed him (if hee had any) to bring it to him, which hee did, and deliuered to the Mafter thirty cakes in a bagge. This deed of the Mafter (if it bee true) hath made mee maruell, what should bee the reason that hee did not stop the breach in the beginning, but let it grow to that height, as that it ouerthrew himselfe and many other honest men : but there are many denices in the heart of man , yet the counsell of the Lord Shall fland.

Being thus in the Ice on Saturday, the one and twentieth of Iune at night, Wilson the wilson Green, Boatswayne, and Henry Greene came to mee lying (in my Cabbin) lame, and told mee that they their wickedao and the reft of their Affociates, would shift the Company, and turne the Master, and all the sicke nesses. men into the shallop, & let them shift for themselues. For, there was not fourteen daies vi Qual left for all the Company, at that poore allowance they were at, and that there they lay, the Mafter not caring to goe one way or other; and that they had not eaten any thing their three dayes, and therefore were resolute, either to mend or end, and what they had begun they would goe through with it, or dye. When I heard this, I told them I maruelled to heare fo much from them. confidering that they were married men, and had wives and children, and that for their fakes they should not commit so foule a thing in the fight of God and man, as that would bee; for why should they banish themselues from their native Countrie & Henry Greene bad me hold my peace, for he knew the worst, which was, to be hanged when hee came home, and therefore of the two 20 he would rather be hanged at home then flarted abroad : and for the good will they bate me, they

would have mee flay in the Ship. I gave them thankes, and told them that I came into her, not to forfake her, yet not to hurt my felfe and others by any fuch deed. Henry Greene told me then, that I must take my fortune in the Shallop. If there bee no remedie (faid I) the will of Go p

bee done.

Away went Henry Greene in a rage, swearing to cut his throat that went about to disturbe them, and left Wilfon by me, with whom I had some talke, but to no good : for he was so periwaded, that there was no remedie now, but to goe on while it was hor, least their partie should faile them, and the mischiefe they had intended to others, should light on themselves. Henry Greene came againe, and demanded of him what I faid, wilfor answered, He is in his old fong, ft:ll pati-

40 ent. Then I spake to Henry Greene to stay three dayes, in which time I would so deale with the Mafter, that all should be well. So I dealt with him to forbeare but two dayes, nay twelve houres; there is no way then (fay they) but out of hand. Then I told them, that if they would flay till Munday, I would in with them to share all the victuals in the ship, and would justifie it when I came home; but this would not serve their turnes. Wherefore I told them , it was some worse matter they had in hand then they made flew of, and that it was bloud and revenge hee fought, or else he would not at such a time of night vndertake such a deed. Henry Greene (with that)taketh my Bible which lay before me, and sware that hee would doe no man harme, and what hee did was for the good of the voyage, and for nothing elfe; and that all the rest should do the like. The like did Wilfon fweare.

50 Henry Greene went his way, and presently came lust, who because hee was an ancient man, Robert Part San I hoped to haue found some reason in him ; but hee was worse then Henry Greene, for hee sware plainely that he would instifie this deed when he came home. After him came lohn Thomas, and Michel Perce, as birds of one feather : but because they are not living, I will let them goe, as then I did. Then came Moter and Bennet, of whom I demanded, if they were well adusted what they had taken in hand. They answered, they were, and therefore came to take their oath.

Now, because I am much condemned for this oath, as one of them that plotted with them, and that by an oath I should bind them together to performe what they had begun, I thought good heere to fet downe to the view of all, how well their oath and deedes agreed : and thus it was, Ton Shall sweare truth to God, your Prince and Countrie: you shall doe nothing, but to the glory of Oath abused.

60 God, and the good of the action in hand, and harme to no man. This was the oath, without adding or diminishing. I looked for more of these companions (although these were too many) but there came no more. It was darke, and they in a readinesse to put this deed of darknesse in execution. I called to Henry Greene and Wilfon, and prayed them not to goe in hand with it in the darke, but to flay till the morning. Now, euerie man (I hope) would goe to his rest, but wic-Fff'a

kedneff: fleepeth not ; for Henry Greene keepeth the Mafter company ill night (and gaue mee brea i, which his Cabbin-mategaue him) and others are as watchfull as be. Then I asked Henrie Greene, whom he would put out with the Master ! he faid, the Carpenter lohn King, and the licke men. I faid, they should not doe well to part with the Carpenter, what need source they should haue. Why the Carpenter was in no more regard amongst them, was; first, for that he and John King were condemned for wrong done in the victuall. But the chiefest cause was, for that the Matter loued him, and made him his Mate, vpon his returne out of our wintering place, that the marter toda mini, and the state of read. And therefore (faid they) the Mafter and his ignorant Mace would carry the Ship whither read. And therefore (and they) the same and the man to keep account or reckoning, having taken the Matter pleased; the Matter forbidding any man to keep account or reckoning, having taken to Matter pleased of Linguistic Grant and Section 10. from all men whatfoener ferued for that purpofe. Well, I obtained of Henrie Greene and Wifen. that the Carpenter should stay, by whole meanes I hoped (after they had satisfied themselves) that the Mafter, and the poore man might be taken into the Ship againe. Or, I hoped, that some one or other would give fome notice, either to the Carpenter John King, or the Maiter; for foir might have come to paffe by fome of them that were the most forward.

The Carpenter (pared.

> Now, it shall not bee amisse to show how we were lodged, and to begin in the Cooke roome: there lay Bennet and the Cooper lame; without the Cooke roome, on the steere-board side, lay Thomas Wydbonfe ficke; next to him lay Sydrack Funer lame, then the Surgeon, and lobn Hudfon with him; next to them lay Wilson the Boat waine, and then Arnold Lodle next to him: in the Gin-roome lay Robert luct and John Thomas; on the Lar-board fide, lay Michael Bute and A- 20 dria Moore, who had never beene well fince wee loft our Anchor; next to them lay Michael Perce and Andrew Moter. Next to them without the Gun-roome, lay John King, and with him Robert Billet: next to them my felfe, and next to me Francis Clements: In the mid-fhip, betweene the Capftone and the Pumpes, lay Henrie Greene and Nicholas Simmes. This night lobn King was late vp, and they thought he had been with the Master, but he was with the Carpenter, who lay on the Poope, and comming downe from him, was met by his Cabbin-mate, as it were by chance, and fo they came to their Cabbin together. It was not long ere it was day : then came Bennet for water for the Kettle, heerofe and went into the Hold: when hee was in they flut the Hatch on him (but who kept it downe I know not) vp vpon the Deck went Bennet,

In the meane time Henrie Greme, and another went to the Carpenter, and held him with a 20 talke, till the Mafter came out of his Cabbin (which hee foone did) then came lohn Thomas and They bind the Bennet before him, while Wilfon bound his armes behind him. He asked them what they meant? they told him he should know when he was in the Shallop. Now Inet, while this was a doing, came to lobs King into the Hold, who was prouided for him, for he had got a fword of his own, and kept him at a bay, and might have killed him, but others came to helpe him : and so he came vo to the Mafter. The Mafter called to the Carpenter, and told him that he was bound; but, I heard no answere he made. Now Arnold Lodlo, and Michael Bute rayled at them, and told them their knauerie would shew it selfe. Then was the Shallop haled up to the Ship side, and the poore, ficke, and lame men were called vpon to get them out of their Cabbins into the Shallop. The Master called to me, who came out of my Cabbin as well as I could, to the Hatch 40 way to speake with him : where, on my knees I befought them, for the loue of God, to remember themselues, and to doe as they would be done unto. They bad me keepe my selfe well, and get me into my Cabbin ; not suffering the Master to speake with me. But when I came into my Cabbin againe, hee called to meat the Horne, which gaue light into my Cabbin, and told mea that Inet would ouerthrow vs all; nay (faid I) it is that villaine Henrie Greene, and I spake it

ter let gos.

Now was the Carpenter at libertie, who asked them, if they would bee hanged when they came home : and as for himfelfe, hee faid, hee would not flay in the Ship vnleffe they would force him: they bad him goe then, for they would not ftay him: I will (faid hee) fo I may have my cheft with mee, and all that is in it : they faid, hee should, and presently they 50 put it into the Shallop. Then hee came downe to mee, to take his leave of mee, who perswaded him to flay, which if he did, he might fo worke that all should bee well hee said, hee did not thinke, but they would be glad to take them in againe. For he was so perswaded by the Mafler, that there was not one in all the fhip, that could tell how to carrie her home; but (faith he) if we must part (which wee will not willingly doe, for they would follow the ship) hee prayed me, if wee came to the Capes before them, that I would leave fome token that wee had beene there, neere to the place where the Fowler bred, and hee would doe the like for vs : and fo (with teares) we parted. Now were the ficke men driven out of their Cabbins into the Shallep; but Iohn Thomas was Francis Clements friend, and Bennet was the Coopers, fo as there were words betweene them and Henrie Greene, one faying, that they should goe, and the other swea- 62 ring that they should not goe, but such as were in the shallop should returne. When Henrie Greene heard that, he was compelled to give place, and to put out Arnold Lodle, and Michael Bute, which with much adoe they did.

In the meane time, there were some of them that plyed their worke, as if the Ship had beene

enered by force, and they had free leave to pillage, breaking up Chefts, and rifling all places. One of them came by me, who asked me, what they should doe. I answered, hee should make an end of what hee had begun ; for I saw him doe nothing but sharke vp and downe. Now, were all the poore men in the Shallop, whose names are as followeth; Henrie Hudson, John Hudson, Thomames of Arnold Lodlo, Sidrack Faner, Phillip Staffe, Thomas Woodhouse, or Wydhouse, Adam Moore, Henrie the company King, Michael Bute. The Carpenter got of them a Peece, and Powder, and Shot, and some Pikes, exposed in the an Iron Pot, with fome meale, and other things. They flood out of the Ice, the Shallop being fall to the Sterne of the Shippe, and fo (when they were nigh out, for I cannot fay, they were cleane out) they cut her head fast from the Sterne of our Ship, then out with their Topfayles, and towards the East they stood in a cleere Sea. In the end they tooke in their Top-Lyles,

righted their Helme, and lay vider their Fore-fayle till they had ranfacked and fearched all places in the Ship. In the Hold they found one of the veffels of meale whole, and the other halfe fpent, for wee had but two; wee found also two firkins of Butter, some twentie fenen piece of Porke, halfe a bushell of Pease, but in the Masters Cabbin we found two hundred of bisket Cakes, a pecke of Meale, of Beere to the quantitie of a Butt, one with another. Now, it was faid, that the Shallop was come within light, they let fall the Main-layle, and out with their Top-fayles,

and five as from an Enemy.

Then I prayed them yet to remember themselves : but William Wilson (more then the rest) would heare of no tuch matter. Comming nighthe East shoare they cast about, and stood to the West and came to an Hand, and anchored in fixteene or seventeene fathome water. So they sent the Boat, and the Net athore to fee if they could have a Draught ; but could not for Rocks and great stones. Michael Perfe killed two Fowle, and heere they tound good store of that Weede, L. A fight of which we called Cockie-graffe in our wintering place, whereof they gathered store, and came a- the Shallops board againe. Heere we lay that night, and the best part of the next day, in all which time we faw not the shallon, or ever after. Now Henrie Greene came to me and told mee, that it was the Companies will, that I should come up into the Masters Cabbin, and take charge thereof, I rold him it was more fit for Robert Inet: he faid, he should not come in it, nor meddle with the Mafters Card, or Iournals. So vp I came, and Henrie Greene gaue me the Key of the Mafters Cheft. and told me then, that he had laid the Matters best things together, which hee would vie himfelfe when time did ferue : the bread was also deliuered me by tale.

The wind feruing, we flood to the North-east, and this was Robert Billets course, contrarie to Robert Inet, who would have gone to the North-west. We had the Easterne shoare still in fight, and (in the night) had a flout gale of wind, and flood afore it, till wee met with Ice, into the which we ranne from thone to thicke, till we could goe no further for Ice, which lay to thicke ahead of vs (and the wind brought it after vs afterne) that wee could not ftirre backward, nor forward : but fo lay imbayed fourteene daies in worle Ice, then ever wee met to deale withall, for we had beene where there was greater store, but it was not so broad upon the water as this: for this floting Ice contained miles, and halfe miles in compaffe, where we had a deepe Sea, and a Tide of flood and ebbe, which fet North-west and South-east. Heere Robert Inet Would have gone to the North-welt, but Robert Billet was confident to go through to the North-ealt, which he did. At laft, being cleere of this Ice, he continued his courle in fight of the Eafterne shoare, till he raifed foure Ilands which lay North and South: but we passed them fixe or seven leagues, Foure Ilands: the wind tooke vs fo short. Then wee stood backe to them againe, and came to an Anchor betweene two of the most Northermost. We fent the Boat ashpare, to fee if there were any thing there to be had, but found nothing, but cockle Graffe, whereof they gathered flore, and fo return ned aboard. Before we came to this place, I might well fee, that I was kept in the ship against Henry Greenes minde, because I did not favour their proceedings better then I did. Then hee began (very fubtilly) to draw me to take vpon me to fearch for those things, which himselfe had ftolne: and accused me of a matter no lesse then Treason amongst vs., that I had deceived the The wicked so company of thirtie Cakes of bread. Now they began to talke amongst themselves, that Eng. flee where

land was no fafe place for them, and Henry Greene Iwore, the shippe should not come into any none pursued place (but keepe the Seastill) till he had the Kings Majesties hand and Seale to shew for his fafetie. They had many deuices in their heads, but Henry Greene in the end was their Captaine, and so called of them.

From these Ilands we flood to the North-east and the Easter Land still in sight : wee rayled those Ilands, that our Master called Rummes Ilands. Betweene these Ilands and the shallow ground to the East of them, our Master went downe into the first great Bay. We kept the East shoare still in our fight, and comming thwart of the low Land, wee ranne on a Rocke that lay under water, and strooke but once; for if shee had, we might have beene made Inhabitans of that 6c place: but God fent vs foone off without any harme that wee faw. Wee continued our courfe and ravied Land a head of vs, which firetched out to the North : which when they faw , they faid plainly, that Robert Billet by his Northerly course had left the Capes to the South, and that they were best to seeke downe to the South in time for releife, before all was gone : for we had Small flore left. But Robert Billet would follow the Land to the North, faying, that he hoped in

A Rocke.

Note.

July 27.

Sauages.

God to find somewhat to releeue vs that way, as soone as to the South. I told them that this Land was the Mayne of Worsenhome Cape, and that the shallow rockie ground, was the same that the Master went downe by, when he went into the great Bay. Robert Inet and all said, in was not possible, vnlesse the Master had brought the ship ouer Land, and willed them to looke into the Masters Card, and their course how well they did agree. We stood to the East, and left the mayne Land to the North, by many small Hands into a narrow gut betweene two Lands. and there came to an Anchor. The Boat went ashoare on the North fide, where wee found the great Horne, but nothing elfe. The next day wee went to the South fide, but found nothing Cockle graffe, there, faue Cockle graffe of which we gathered. This graffe was a great releefe vnto vs. for without it, we should hardly haue got to the Capes for want of victual. The wind serning we should out, but before we could get cleane out, the wind came to the West, so that we were constrayned to anchor on the North fide.

The next day, wee weighed and doubled the point of the North Land, which is high Land. and so continueth to the Capes, lying North and South, some fine and twentie or thirtie leagues. To the North we stood to see store of those Fowles that breed in the Capes, and to kill fome with our shot, and to fetch them with our Boat. We raised the Capes with joy, and bare for them, and came to the Ilands that lie in the mouth of the streight : but bearing in betweene the Rockie lles, we ranne on a Rocke that lay vinder water, and there flucke fait eight or nine houres. It was ebbing water when we thus came on, so the floud set vs affoat, God guiding both wind and Sea, that it was calme, and faire weather; the ebbe came from the East, and the floud from the West. When wee were affoat, wee stood more neere to the East shoare, and there 20

The next day being the feuen and twentieth of July, we fent the Boat to fetch fome Fowle. and the ship should way and stand as neere as they could: for the wind was against vs. They had a great way to row, and by that meanes they could not reach to the place where the Fowle bred:but found good store of Gull, yet hard to come by, on the Rocks and Cliffes, but with their Peeces they killed some thirtie, and towards night returned. Now we had brought our ship more neere to the mouth of the Streights, and there came to an anchor in eighteen or twentie fathom water, vpon a Riffe or shelfe of ground : which after they had weighed their Anchor, and stood more neere to the place where the Fowle bred, they could not find it againe, nor no place like it: but were faine to turne to and fro in the mouth of the Streight, and to be in danger of Rockes, 30 because they could not find ground to let fall an Anchor in, the water was so deepe, The eight and twentieth day, the Boat went to Digges his Cape for Fowle, and made direct-

ly for the place where the Fowle bred, and being neere, they faw feuen Boates come about the Easterne point towards them! When the Sauages saw our Boate, they drew themselves together, and drew their leffer Boats into their bigger : and when they had done, they came rowing to our Boat, and made fignes to the West, but they made readie for all assayes. The Sauages came to them, and by signes grew familiar one with another, so as our men tooke one of theirs into our Boate, and they tooke one of ours into their Boate. Then they carried our man to a Coue where their Tents flood toward the West of the place, where the Fowle bred : so they carried him into their Tents, where he remayned till our men returned with theirs. Our Boat went to 40 the place where the Fowle bred, and were defirous to know how the Sausges killed their Fowle: Sausges man- he shewed them the manner how, which was thus, They take a long Pole with a snare at the acroffowling, end, which they put about the Fowles necke, and so plucke them downe. When our men knew that they had a better way of their owne, they shewed him the vse of our Peeces, which at one that would kill seuen or eight. To be short, our Boat returned to their Coue for our man, and to deliuer theirs. When they came they made great joy, with dancing and leaping, and flroking of their brefts: they offered divers things to our men, but they only tooke some Morses Teeth, which they gaue them for a Knife, and two glaffe buttons : and io receiving our man they came aboard, much rejoycing at this chance, as if they had met with the most simple and kind people

of the World. And Henry Greene (more then the rest) was so confident, that (by no meanes) we should take care to fland vpon our Guard : God blinding him fo, that where hee made reckoning to receive great matters from these people, he received more then he looked for, and that suddenly by being made a good example for all men: that make no conscience of doing euill, and that we take heed of the Sauage people, how simple soeuer they seeme to be.

The next day, the nine and twentieth of July, they made hafte to be ashoare, and because the ship rid too farre off, they weighed and stood as neere to the place where the Fowle bred, as they could : and because I was lame, I was to go in the Boat, to carrie such things, as I had in the Cabbin of enery thing somewhat : and so with more haste then good speed (and not without fwearing) away we went, Henry Greene, William Wilfon, John Thomas, Michael Perfe. Andrew, 60 Motor, and my selfe. When we came neere the shoare, the people were on the Hils, dancing and leaping : to the Coue we came, where they had drawne up their Boates: wee brought our Boate to the East side of the Coue, close to the Rockes. Ashoare they went, and made fast the

Boat to a great stone on the shoare, the people came, and every one had somewhat in his hand to barter : but Henry Greene Iwore they should have nothing, till he had Venison for that they had fo promifed him by fignes.

Now when we came, they made signes to their Dogges (whereof there were many like Sangers Mongrels, as bigge as Hounds) and pointed to their Mountaine, and to the Sunne, clapping their dogges. hands. Then Henry Greene, John Thomas, and William Willon, flood hard by the Boate head . Min chael Perfe, and Andrew Moter were got up upon the Rocke, a gathering of Sorrell : not one of them had any weapon about him, not fo much as a flicke, faue Henry Greene only, who had a piece of a Pike in his hand : nor faw I any thing that they had wherewith to hurt vs. Henry Sauages tree shewing the people. The Sauages standing round about them, one of them came into the Boats head to me to flew me a Bottle : I made fignes to him to get him ashoase, but he made as though

18 Greene and William Willon had Looking-glaffes, and Iewes Trumps, and Bels, which they were cheriche had not vinderstood me, whereupon I stood vp, and pointed him ashoare. In the meane-time, another stole behind me to the sterne of the Boat, and when I faw him ashoare, that was in the head of the Boat, I fate downeagaine : but fuddenly I fawithe legge and foote of a man by mee. Wherefore I cast vp my head, and faw the Sauage with his Knife in his hand, who strooke at my breft ouer my head : I cast vp my right arme to faue my breft, he wounded my arme, and strooke 20 me into the bodie vnder my right Pappe. He strooke a second blow which I met with my left hand, and then he strooke me into the right thigh, and had like to have cut off my little singer of the left hand. Now, I had got hold of the ftring of the Knife, and had woond it about my left hand, he striuing with both his hands, to make an end of that he had begunne, I found him but weake in the gripe (God enabling me) and getting hold of the fleene of his left arme, to bare him from me. His left fide lay bare to me, which when I faw, I put his sleeue off his left arme into my left hand, holding the ftring of the Knife faft in the fame hand; and having got my right hand at liberrie, I fought for fomewhat wherewith to ftrike him (not remembring my Dagger at my fide) but looking downe I faw it, and therewith strooke him into the bodie, and the

Whiles I was thus affaulted in the Boat, our men were set voon on the shoare. Iohn Thomas Trecherie inft and William Wilson had their bowels cut, and Michael Perfe and Henry Greene being mortally towninft Trays 20 wounded, came tumbling into the Boat together. When Andrew Moter faw this medley, hee tors. came running downe the Rockes, and leaped into the Sea, and so swamme to the Boat, hanging on the sterne thereof, till Michael Perfe tooke him in, who manfully made good the head of the Boat against the Sauages, that preffed fore vpon vs. Now Michael Perfe had got an Hatchet, wherewith I law him ftrike one of them, that he lay forawling in the Sea. Henry Greene crieth Greene flaine. Coracio, and layeth about him with his Truncheon : I cryed to them to cleere the Boat, and Andrew Moter cryed to bee taken in : the Sauages betooke them to their Bowes and Arrowes, which they fent amongst vs, wherewith Henry Greene was flaine out-right, and Michael Perfe received may wounds, and fo did the reft. Michael Perfe cleereth the Boate, and puts it from the shoare, and helpeth Andrew Moter in: but in turning of the Boat, I received a cruell wound in 40 my backe with an Arrow: Michael Perfe and Andrew Moter rowed the Boate away , which when the Sauages faw, they ranne to their Boats, and I reared they would have launched them, to have followed vs, but they did not, and our ship was in the middle of the channell, and could

Now, when they had rowed a good way from the sheare, Michael Perfe fainted, and could row no more ; then was Andrew Moter driuen to ftand in the Boat head, and wast to the ship, which (at the first) saw vs not, and when they did, they could not tel what to make of vs, but in the end they flood for vs, and fo tooke vs vp. Henry Greene was throwne out of the Boat into the Sea, and the rest were had aboard, the Sauage being yet aliue, yet without sense. But they died all there Wicked and that day, William Wilfon (wearing and curfing in most fearefull manner : Michael Perfe lived wretched end two dayes after, and then died. Thus you have heard the Tragicall end of Henry Greene and his of writched Mates, whom they called Captaine, these source the only have men in all the discount wicked men. 50 Mates, whom they called Captaine, these foure being the only lustie men in all the ship.

The poore number that was left, were to ply our ship too and fro, in the mouth of the streight, for there was no place to anchor in neere hand : besides, they were to goe in the Boate to kill Fowle, to bring vs home, which they did, although with danger to vs all. For if the wind blew, there was an high Sea, and the eddies of the Tydes would carrie the ship so neere the Rockes, as it feared our Master, for so I will now call him. After they had killed some two hundred Fowle, with great labour on the South Cape, wee stood to the East: but when wee were fixe or seuen leagues from the Capes, the wind came vp at East. Then wee stood backe to the Capes againe, and killed an hundred Fowle more. After this, the wind came to the Well, fo wee were driven to goe away, and then our Master stood (for the most) along by the North shoare, till he fell in-60 to broken ground about the Queene; Fore-land, and there anchored. From thence wee went to Gods Mercies, and from thence to thole llands, which lye in the mouth of our Streight, not feeing the Land, till we were readie to runne our Bosprite against the Rockes in a fogge. But it cleered a little, and then we might fee our felues inclosed with Rockie Hands, and could find no

Miscrie purfu-

608

ground to anchor in. There our Master lay atrie all night, and the next day the fogge continuing, they fought for ground to anchor in, and found fome in an hundred and odde fathomes of water. The next day we weighed and stood to the East, but before wee came heere, we had put our selues to hard allowance, as halfe a soule a day with the pottage: for yet we had some meale left, and nothing elfe. Then they beganne to make triall of all whatfoeuer: wee had flayed our Fowle, for they wil not pull : and Robert Inet was the first, that made vie of the skins by burning of the Feathers: so they became a great dish of meate, and as for the garbidge, it was not

After we were cleere of these Hands, which lie out with two points, one to the South-east. After we were cited out the standard with the fight as if there were no way through, we con- 10 tinued our course East South-east, and South and by East, to raise the Desalations, from thence to things our course for Ireland. Thus we continued divers dayes: but the wind comming against vs. made vs to alter our course, and by the meanes of Robert Ines who perswaded the company, that they should find great reliefe in Newfound Land, if our Country-men were there, and if they were gone before we came, yet should we find great store of bread and fish lest ashoare by them: but how true, I giue God thankes, we did not trie. Yet we flood to the South-weft, and to the West, almost to fiftie seuen degrees: when (by the will of God) the winde came up at Southweit. Then the Master asked me, if he should take the benefit of this wind, and shape his course for Ireland. I faid it was belt to goe, where we knew Corne grew, and not to feeke it, where it was caft away, and not to be found. Towards Ireland now wee flood, with profeerous winds for 20 many dayes together: then was all our Meale (pent, and our Fowle reftie and dry: but (being no remedie) we were content with the Sale broth for Dinner, and the halfe Fowle for Supper, Now went our Candles to wracke, and Bennet our Cooke made a meffe of meate of the bones of the Fowle, frying them with Candle-greafe, till they were crifpe, and with Vineger put to them, made a good dish of meate. Our Vineger was shared, and to enery man a pound of Candles deliuered for a weeke, as a great daintie. Now Robert Inet (by his reckoning) faith, wee were within fixtie or feuentie leagues of Ireland, when wee had two hundred thither. And fure our course was so much the longer, through our euill steeredge: for, our men became so weake. that they could not fland at the Helme, but were faine to fit. Then Robert Ivet dyed, for meere want, and all our men were in despaire, and said wee were 30

Robert I wets

paft Ireland, and our last Fowle were in the steep-tub. So, our men cared not which end went forward infomuch as our Mafter was driven to looke to their labour, as well as his owne: for fome of them would fit and see the fore-sayle, or mayne-sayle flie vp to the tops, the sheetes being either flowne or broken, and would not helpe it themselves, nor call to others for helpe, which much griened the Master. Now in this extremitie it pleased God to give vs fight of Land, not farre from the place, our Master said he would fall withal, which was the Bay of Gallowar, and we fell to the West of the Derses, and so stood along by the coast, to the South-west. In the end, there was a joyful cry, a layle, a fayle, towards which they flood, then they faw more, but to the neerest A fayle of Fory we stood, and called to him : his Barke was of Fory, and was at anchor a Fishing : he came to vs. are Hauen in and brought vs into Bere Hauen. Here we stayed a few dayes, and delt with the Irifh, to supply 40 our wanes, but found no reliefe: for in this place there was neither Bread, Drinke, nor mony to be had among it them. Wherfore they adulfed vs to deale with our Country-men, who were there a fishing, which we did; but found them so cold in kindnesse, that they would doe nothing without nhing, when we had none in the Ship. In the end, we procured one labs Waymenth, Mafter of the Barke that brought vs into this Harbour, to furnish s with money, which hee did, and received our best Cable and Anchor in pawne for the same. With this money, our Master with the helpe of lohn Waymouth, bought Bread, Beere, and Beefe.

Now, as wee were beholding to Waymouth for his money, fo were wee to one Captaine Taylor, for making of our contracts with Waymonth, by whose meanes hee tooke a Bill for our Cable and Anchor, and for the mens Wages, who would not goe with vs, vnlefle Wagmouth wold paffe 50 his word for the same : for they made shew, that they were not willing to goe with vs for any wages. Whereupon Captaine Taylor swore hee would preffe them, and then, if they would not goe, hee would hang them.

In conclusion, wee agreed for three pound ten shillings a man, to bring our Ship to Plimouth, or Dartmouth, and to give the Pilot five pound : but if the winde did not ferue, but that they were driven to put into Briffor, they were to have foure pound ten shillings a man, and the Pi-They arrive at lot fixe pound. Omitting therefore further circumstances, from Bere Hauen wee came to Phmoust, and so to an anchor, before the Castle: and from Plimonth, with faire winde and weather without flop or flay, wee came to the Downes, from thence to Granefend, where most of our men went a hoare, and from thence came on this fide Erith, and there ftopped : where our Mafter 60 Robert Billet came aboord, and so had mee up to London with him, and so wee came to Sir Themas Smiths together.

For a smuch as this report of Pricket may bappely bee suspected by some, as not so friendly to Hudson, who returned with that Companie which had so cruelly exposed Hudson and his, and therefore may seems CHAP. 18. Widhouses Letter and notes. Articles agains Iuet, erc.

to las beauser imputation, and rip up occasions further then they will believe ; I have also added the report of Thomas Widhouse, one of the exposed Companie, who aferibeth those occasions of discord to Tuet. I take not on mee to fentence, no not to examine ; I have prefented the Enidence inst at I had it : let the Bench censure, hearing with both eares, that which with both eyes they may see in those, and these notes : to which . I have first prefixed his Letter to Mafter Samuel Macham.

M After Macham, I hearfily commend mee unto you, Gec. I cau write unto you no newes, though I have fewe much, but fuch as enory English Fisherman haunting these Coasts cau report butter 10 then my felfe.

Wee kept our Whit funday in the North-east end of Island; and I thinke I never fared better in England then wee feasted there. They of the Country are very poore, and line miserably : yet we found there- Ilanders in store of fresh Fish and daintie Fowle. I my felfe in an after-noone killed so much Fowle, as feasted all poore. our Compunie, being three and tmentie perfous at one time, onely with Partridges; besides Curlue, Plauer, Mallard, Teale, and Goofe. I have frene two hot Bathes in Island, and have beene in one of them. Wee are resolved to trie the ottermost, and lye onely expecting a faire winde, and to refresh our selmes to auord the Ice. which nom is come off the West Coasts, of which wee have seene whole Ilands, but God bee The couse of thanked, have not beene in danger of any. Thus I defire all your prayers for vs. From Island this thir- their stay as tierb of May, 1610.

A note found in the Deske of Thomas Wydowfe, Student in the Mathematickes, hee being one of them who was put into the Shallop.

"He temb day of September, 1610. after dinner, our Master called all the Companie together, to heare and beare witnesse of the abuse of some of the Companie (it having beene the request of Robert Ivet) that the Mafter (bould redreffe forme abuses and flanders, as bee called them, against this I-30 uet : which thing after the Mafter had examined and beard with equitie what hee could say for hims selfe, there were prooued so many and great abujes, and musinous matters against the Master, and action by luct, that there was danger to have suffred them longer : and it was fit time to punish and cut off farther occasions of the like mutinies.

It was prooued to bis face, first with Bennet Mathew our Trumpet upon our first fight of Island. and bee confest, that bee supposed that in the action would bee man-flaughter, and proue bloodie to some. Secondly, at our comming from Illand, in hearing of the companie, hee did threaten to turne the head of the Ship bome from the attion, which at that time was by our Mafter wifely pacified, hoping of amendment.

Thirdly, it was deposed by Philip Staffe our Carpenter, and Ladlie Atnold, to bis face upon the boly 40 Bible, that hee per maded them to keepe Muskets charged, and Swords readie in their Cabbins, for they Should bee charged with Shot, ere the Voyage were over.

Fourtbly, wee being peffered in the Ice, bee had veed words tending to mutinie, discouragement, and flander of the action, which eafily tooke effect in thefe that were timorous; and had not the Mafter in time presented, it might easily have overstrowne the Voyage: and now lately become imbayed in a deepe Bay, which the Masser had despre to see, for some reasons to himselfe knowne, his word tended altogether to put the Companie into a fray of extremitie, by wintering in cold : lefting at our Masters hope to see Bantam by Candlemasse.

For these and diners other base standers against the Master, hee was deposed; and Robert Bylot, who had howed him felfe honeftly reflecting the good of the action, was placed in his flead the Mafters Mate. Also Francis Clement the Boasson, as this time was post from his Office, and William W

to the action. Alfo Adrian Mooter was appointed Boat fons mate : and a promile by the Master, that from this day luats wages should remaine to Bylot, and the Beat fous energins of wages should bee equally divided between Willon and one lohn King, to the owners good liking, one of the Omnan Mafters, who had very well carryed themselnes to the furtherance of the businesse.

Allo the Master promised, if the Offenders yet behaved themselves benceforth honestly, bee would bee ameanes for their good, and that bee would forget maries, with other admonitions.

These things thus premised touching Hudsons exposing, and Gods inst judgements on the Ex-6c polers, as Pricket hath related (whom they referued as is thought, in hope by Sir Dudley Digger his Master to procure their pardon at their returne) I thought good to adde that which I have further received from good Intelligence, that the Ship comming aground at Digges Iland, in 62. degrees 44. minutes, a great flood came from the West and set them on floate : an argument of an open pallage from the South Sea to that, and confequently to these Seas. The Weapons and

The Disconcries of M. M. NICOLO, and ANTONIO ZENI, gathered out of their Letters, by FRANCISCO MARCOLINO: whereto is added Q VIRINO his Ship-wracke.

They are related by Maiter Haplait in his 3.vol pag 121.

Friefland

610

N the yeere 1380. Mafter Nicolo Zeno being wealthy, and of a haughtie spirit. defiring to fee the fashions of the world, built and furnished a Ship at his owne charges, and passing the Straits of Gibralter, held on his course Northwards. with intent to fee England and Flanders. But a violent tempeft affailing him at Sea, hee was carried live knew not whither, till at laft his Ship was carried away vpon the Ile of Frisland; where the men and most part of the goods were faued,

In vaine seemes that deliuerie, that deliuers up presently to another Executioner. The Handers like Neptanes, hungry groomes, or his base and blacke Guard, set vpon the men whom the Seas 20 had spared : but heere also they found a second escape, by meanes of a Prince named Zichmi, Prince of that and many Ilands thereabouts : who being neere hand with his Armie, came at the out-crie, and chasing away the people, tooke them into protection.

This Zichmui had the yeere before given the overthrow to the King of Norman, and was a great aduenturer in feates of Armes. He spake to them in Latine, and placed them in his Mauie, wherewith hee wonne divers Ilands. Nicolo behaved himselfe so well, both in fauing the Fleet by his Sea-skill, and in conquest of the Hands by his valour, that Zichman made him Knight and

Sain: Themes

After divers notable exploits, Nicolo armed three Barkes, with which hee arrived in Engreneland : where hee found a Monasserie of Friers of the Preachers Order, and a Church dedicated to 30 Saint Thomas, hard by a Hill, that cafteth out fire like Vefimus and Aina. There is a Fountaine of hot water, with which they heate the Church of the Monaftene, and the Friers chambers. It and the firange commeth also into the Kitchin so boyling hote, that they vie no other fire to dreffe their meate: effects thereof. and putting their Bread into braffe Pots without any water, it doth bake as it were in an hot Ouen. They have also small Gardens, which are covered over in the Winter time, and being watered with this water, are defended from the violence of the Frost and coll, and bring forth Flowers in their due seasons. The common people assonished with these strange estats, conceiue highly of those Friers, and bring them presen:s of Flesh and other things. They with this Water, in the extremitie of the cold, heate their Chambers, which alto (as the other buildings of the Monafteria per framed of those burning flones, which the mouth of the Hill casts foorth. They to cast water on some of them, whereby they are dislolued, and become excellent white Lime, and so tough, that being contriued in building, it latteth for euer. The rest, after the fire is out, serue in stead of stones to make walls and vaults, and will not dissolve or breake, except with some Iron toole.

Their Winter lasteth nine moneths : and yet there is a faire Hauen, where this water falleth into the Sea, not frozen : by meanes whereof there is great refort of wild Fowle and Fish, which they take in infinite multitudes. The Fishers Boates are made like to a Weavers shuttle, of the skinnes of Fishes, fashioned with the bones of the same Fishes, and being sowed together with many doubles, they are so strong, that in soule weather they will shut themiclues within the fame, not fearing the force either of Sea or winde. Neither can the hard-hearted Rockes breake these yeelding Veffels. They have also as it were a Sleeve in the bottome thereof, by which with 50 a subtill deuice, they conuey the water foorth, that soaketh into them. The most of these Friers fpake the Latine toppue.

A little after this, Nicolo returned and dyed in Friesland, whither his brother Antonio had before reforted to him, and now fucceeded both in his goods and honour; whom Zichmui employed in the Expedition: Eftotiland: which happened upon this occasion. Sixe and twentie yeeres before, foure Fisher-Boates were apprehended at Sea by a mightie and tedious storme; wherewith after mathy dayes, they were brought to Estoriland, aboue a thousand miles West from Frielland: vpon which, one of the Boates was cast away, and fixe men that were in it, were taken and brought to a populous Citie; where, one that fpake Latine, and had been cast by chance wpon that Hand, in the name of the King asked them what Country-men they were; and under- 60 flanding their cafe, hee acquainted the King therewith. They dwelt there five yeeres, and found it obec an lland very rich, being little leffe then I feland, but farre more fruitfull. One of them faid nee faw Latine bookes in the Kings Librarie, which they at this prefent doe not voider-

fland. They have a peculiar Language, and Letters or Characters to themselves. They have mines of Gold and other Mettals, and have Trade with Engroneland. They fow Corne, and make Beere and Ale. They build Barkes (but know not the vie of the Compaffe) and have many Cities and Castles. The King fent these Fisher-men with twelve Barkes Southwards, to 2 Countrey which they call Dregio .: in which Voyage chaping dreadful tempelts at Sea, they presion encountred with Canibals at Land, which denoured many of them. Thefe Fifters flewing them the manner of taking Fish with Nets; escaped ; and for the prefents which they made of their Fuh to the chiefe men of the Country, were beloued and honoured. One of these (more expert is Gemeth then the reft) was holden in fuch account, that a great Lord made waite with their ford to to obtaine him: and fo premyled, that he and his companie were fent water him. And in this order was hee fent to fine and towentie Lords, which had warred one with another to get him in thisteene yeeres space : whereby hee came to know almost all those pares ; which he said; was a great Countrey, and (as it were) a new World The people are all rude, and voide of pood reffe they goe naked neither have they wit to cover their bodies with the Beails skinnes which they

take in Hunting, from the vehement cold. They are fierce; and cate their enemies, having divers Lawes and Gouernours. Their living is by hunting." Further to the South-west, they are more quill, and have a more temperate avre : They have 20 Cities and Temples dedicated to Idols, where they facrifice Men, and after eate them; and have alfo fome vie of Gold and Silver.

Hee fledde awey fecretly, and conveying him felfe from one Lord to another, came at length to Drogio, where hee dwelt three yeeres. After this time finding there certaine Boates of Ello. riland, hee went thither with them : and growing there very rich, furnished a Barke of his owne, and returned into Friefland : where hee made report whto his Lord of that wealthy Countrey. Zichmui prepared to fend thither : but three dayes before they fet foorth, this Fisherman dyed. Yet taking some of the Marriners which came with him in his flead, they profecuted the Voyageand encountred after many dayes an Hand : where ten men of divers Languages, were brought vnto them, of which they could vinderstand none, but one of I faland. Hee told them. that the Hand was called learis, and the Knighes thereof called lears, defeeteded of the ancient pedigree of Dedalus, King of Scots, who conquering that Iland, left his Sonne there for King, 20 and left them those Lawes, which to that present they retayned. And, that they might keepe their Lawes inniolate, they would receive no Stranger. Onely they were contented to receive one of our men, in regard of the Language, as they had done those ten Interpreters.

Zichmui fayling hence, in foure dayes descried Land, where they found abundance of Fowle. and Birds egges, for their refreshing. The Hauen they called Cap Trim, There was a Hill, which burning, catt out Imoake : where was a Spring, from which issued a certayne water like Pitch, which ranne into the Sea. The people of small stature, wilde, and searefull, hid themselves in Caues. Zichmini built there a Citie, and determining to inhabite, fent Antonio backe againe, with the most of his people to Friesland.

This Historie I have thus inserted at large, which perhaps, not without cause in some things, Abrah. Ortel. 40 may feeme fabulous; not in the Zemi, which thus writ, but in the relations which they received charle. from others. Howfoeuer, the beit Geographers are beholden to thefe Brethren, for that little Hattely. knowledge they have of these parts; of which none before had written; nor fince have there Beers. beene any great in-land Discoueries.

The Ship-wracke of Master PIERO QVIRINO, described by CHRI-STOFORO FIORAVANTI, and NICOLO DI MI-CHIEL*, who were present there : beere

contracted. T femeth to bee a convenient dutie to make a memoriall, and not fuffer to bee buryed in obli- in Ramufo, 1 uion, that most lamentable, and cruell Voyage full of innumerable and extreame miseries, Tom. 2. Out of which befell a Venetian Ship, wherein wee carryed about feuen hundred Buttes of Wine, Spices, heere added Cottons, and other Merchandifes of great value, furnished in Candia with threescore and eight diversannotamen, to goe towards the * West. The Master whereof was Master Piero Quini, a Venetian tions, Gentleman, in the yeare 1431. Who after many troubles , misfortunes, and wants befalne "The Italians him, after his departure from Candia towards the Weft, on the fixth of November, in the fore- call the faying him, after his departure from Candia towards the Wett, on the fixth of Problember, in the love-faid yeers of the Lord, by chance came into the mouth of the Channels of Flanders, and went terminas, the 60 larre beyond them, by a thorme from the South, towards the North-weft, about one hundred and Leusintor fortie miles, running field upon the Iland of Vifenti, where, by agreement, wee Christo. East; and ? foro Fioramanti, and Nicolo Michiel, fay, that at noone wee founded the bottome of the thenceint cean, and these parts the Ponent or West. * These are particularly related by Quirino the Patron or Owner. They lost their Rudder on a Rocke, not face from Cales in Spaine, and were faine to make thither to repaire it : and other diaft. rs followed,

* There is also the relation hereof by Dui rizohimicife. extant tode. ther with this

Sea with the Lead, and found our felues in flue and fiftie fathome of water, and afterward toward the Evening wee founded, and found our felues in ninetic tathomes and more, but the forme and furie of the windes was fo great, that it brake fine of the hinges off our rudder.

On the twelith, in the morning, the florme not crafting, but increasing every houre more and more, beat vpon our weake rudder with fo great violence and furie, that it broke away all that held it, in such fort, that it hung on theone fide, where, for the last remedie, wee fastened a great Cable vnto it, with the which, for three dayes wee drew it after vs, not being able to doe itotherwife, in which time in our judgement, wee thought wee had runne two hundred miles and

ore, against our wiss.

Afterward we tooke away the two Rudders, and with many pieces of Timber we made another, which might rather be called a shadow then a true Rudder, and wee put it in his place to guide and direct the ship. But it could not endure longer, then till the six and twentieth of Nonumber, when the violence of the Sea carried it all away: fothat then wee remayined deprined of all hope of gouernment and direction. On the fourth of December, the furie of the windegrew to outragious againe, that it carried away all this third fayle, and to being spoyled and bereft of Sayle and Rudder, we went at adventure vntill the eight day, alwayes wandering, not knowing by any meanes how to prouide for our lafetie. Afterward the winde alwayes increasing from the East, and with so great violence and furie, that the Sea beganne to fwell so high, that the waues seemed Mountaynes, and sarre greater then we had ever seeme before, with the darknesse of the extreame long night, so that we seemed to goe in the bottomlesse 20 depth of Hell : whereby you may imagine how great the anguishand trembling of our hearts was, because although we were living, yet at that inflant wee seemed to bee dead, expessing death euery houre, which we saw present : In this darknesse the Heaven was sometimes seene to open with the lightnings and fudden flashes of fire so bright, that they tooke away the fight of our eyes, And sometimes we seemed to touch the starres, the ship mounted so aloft, and then againe we faw our felues buried in Hell, infomuch as being all aftomfhed, we had loft our firength and force. And being in this miferable case we did nothing else, but with pittie behold one another: & running with so great violence for many houres, in the end a surge of the Sea came over the thip under the wind with such furie, that the water entred into it, filled it almost halfe full, whereby being now much weakened, it was readic to finke, and turned up the Keele, And fure- 30 ly that was the last houre, and our end, and truly we had beene swallowed up of the Sea, if our Lord Ieius Christ had not beene, who forfaketh not them that religiously call vpon him, who put such power and strength into our afflicted minds, that seeing the ship in so dangerous a case, full of water, as it could not be cast out by any humaneforce, we determined to cut downe the mayne Mast, and cast it together with the mayne Yard and Tackling into the Sea, and so wee did, whereby the ship being disburdened, pauled awhile, and we then taking courage, beganne to call out the water, which with our great rouble and about we our came in the end. In this manner wee went footring away all that long right. New when the day was almost come, they agreed to make readie the Boat and the Schuffe, with that little prouifion of victuall which was remayning, equally parted. And the Patron laid, With your confent I command you Ni- 40 colo di Michiel the Notaty, that you fet downe in a note the names of those that are willing to enter into the Schiffe and Boat! fo prefently he gave him fortie five persons in a note, who were willing to enter into the Schiffe, which was capeable but of one and twentie men only, and therefore it was necessary to cast Lots who should goe therein : and so it was done, and they prepared it, and fet it in order, and did the like to the Boate, into the which the Master They leave the with fortie feuen men entred. The one and twentie persons to whom the lot fell , entred the Schiffe, and a rate was given them according to the proportion of the victuall which was remayning of Bisket, and also of Frifoppi, three hundred pound weight, of Cheefe of Candia eightie pounds, of dried Bacon eight pounds, of Tallow to trim their Schiffe fortie pounds, of Oyle about two pound waight and no more: but besides wee bestowed there 30 feuen Carrattells of Tyrias Wine, which is a kind of Maluafic, for the Pinnasse or Schiffe would hold no more. In like manner fortie feuen men, reckoning the Master, entred into the Boate or Pinnaffe, vnto whom rateably fell their proportion of victuals, adding thereto a little Greene Ginger in Sirrope, and Sirrope of Limons, with fome small quantitie of Spices, which wee had taken. We were (in our judgement) distant from the neerest lland or Land about fine hundred miles or more, from the point of Land to Lee-ward of the North part, and we fayled with these Conserues in a quiet and calme Sea, that little time of the day together with our one and twentiecompanions, comforting our felues in that which we had feene the beginning of fo faire

and end, which our companions of the Schiffe were to haue, of whom we had now loft the fight, 60 to that we never faw them any more. The ninteenth day, the morning appearing, and not feeing any token of the Schiffe, it made vs suspitious of their death, whereupon our mindes were much troubled, doubting what might befall them, because the windes raged in such manner, that a wave of the Sea mounted with to

a fortune. But when the night came, a darke mist rose, which was a token of the euil! successes

great violence into the Pinnaffe, behinde the Poope, where wee Christopher and Nucholas were tet downe, that through the force of the furie thereof, two frayes were battered and bent, which left a token of vnsupportable trouble and griefe, by meanes that the Pinnasse was more charged with the weight of the water, then with her owne burthen. Wherefore to remedie it wee ranne all to lade it out with our hands, and being confirmed through feare and necessitie, for the freeing of her, wee were faine to cast out all that, whether with water or without, which came most fit and ready to our hands. The Pinnaffe becomming drie againe, prefently in this fforme. wee agreed to cast ouer-boord the greatest part of the Wine, and wee found our selves in fo great extremitie, that if wee would tafte thereof to comfort our troubled fentes, no more then one gob-Io let of Wine apeece fell to enery mans share for the whole day, and who so would drinke more, was confirmy ned to take the Sea-water : and this measure and quantitie of Wine held out eight

dayes, and normore. And after ward being drivento greater necessitie, wee brought our selves to a greater extremis tie, by reftrayning our proportion to halfe a goblet a day, and hone of vs could fecurely fleepe;

for the divers doubts and dangers, wherein wee alwayes prefently flood. Wee continued every day and night, foure or fixe of vs acthe Helme; and those that were at the Pumpe; flood alwayes firme and voright changing their courses, where wee endured cold beyond comparison faste Great Frontier greater then that, which not many veeres fince was in Ventes, when all the Channels were fro- Ventes. zen, fo that from Margara to Venice, not onely Men and Women, but Oxen, Horfes, Cares, 20 and Waggons, went ouer your the Ice in great multitudes, to the admiration of all the people,

because that Region is (without comparison) much colder then the Countrey of Italy. Now confider what our cale was, being without Clothes to couer yearnd not having any thing to eate, or drinke, or other necessary thing for the maintenance of mans life, except a few Frifsppi which were left, and the nights one and twentie hours long, and thour ke. Through the which cold, Engerme cold wee began to lofe the feeling of our feete, and by heele and little, the cold becomming more vehement, possessed the whole body, procuring a dogged and raging appetite and hunger, fo that every one lought to devoure that which was hid in a corner, and what better hee had next at hand, whereforeir hee could finde it, as well as hee mighe, with that weake and little frength which hee had remayning. Afterward, death feating v pout them, you might fee them shake the 30 head, and fall downe prefently dead.

In the which D. feafes, of feuen and fortie men (which wee found in the eafe) fixe and ewen. The death of tie yeelded up the ghost, and it was not any wonder; confidering wee could not have any fuc. fixe and twee cour, nay, it is a divine miracle that any one remayined aline. And those few of ve that are re-tie. mayning, live onely to commend to memorie, and highly to exalt the great power of God. Those fixe and twentie dyed, from the three and twentieth of December withit the fifth of January, now one, now two, and fometimes more, in one day, whom we buryed in the Sea.

The one and thirtieth of December, our Wine being wholly frent, and having scene the chuell and lamentable experience of our fixe and twencie Companions, who dyed with drinking of the Sea-water, necessities gaue vs a good stomacke, that is to say, to take our owne water to 40 quench our thirft. Now, there were some of the companior recedingly troubled with giddinelle: Great faith. for, wanting the abundant plentie of Wine, they were not able to indure thirlt, nor to expell it, but they accounted it a great fauour to bee able to obtayene of their companions, whereof there were some who denyed it to their desroft friend; to keepe le for themitglues. It is true, elast fome of vs warily mortified it, by mingling a little firmen of greent Ginger, or Limone therewith, which by chance we had remayning. During this time, whill she fifth of lannary, we were

The third of January, 1431, wee had fight of the first Land, which game ve great hope, al- Sight of Land. though it fo fell out, that it was very farre diffant, whose wer faw certaine Rockes to weatherward coursed to the top with infinite heaper of Snow, to the which the winder being conso trary, wee were not able to approach with the fayles, and much leffe with Bares, beckufe our armes were exceedingly weakened : wherefore wer those to come heere them with the winde, but paffing beyond them through the ourrent of the water, wee loft fight of them altogether.

every houre more accustomed to greater extremities. 111 21

And after difficult escape from the Rockes, fayling forward towards a very high Rocke, wee had fight of a Valley icitrated betweene the two next Mountaynes, into the which defiring to enter about the fourth houre of the night; the croell and outing ous windes would not fuffer vs. Notwithstanding, inflamed through an exceeding great defire to got on Land, wee tooks conrage and firength, and (through force of the Gares, and the helpe of God) entred into the layd Valley, at a point of Land in the least doubtfull and dangerons place, as it were at the vary be-

60 ginning and entrie thereof, in the which as from as they perceased the Pinnafe to touch vpon Hot from for the fand, fine of our companie being more defirous of drinke, then of any other refreshing and re- mackes to cold creation, leaped into the water without any regard, although it were very despe, and went small dimker their way toward the Snow, and to glurred themselves therewith, that He was an incredible

And sunning according to our judgement, as wee had runne in this Pinnafie for eighteene dayes, from the day that wee departed from the ship, vntill this fixth of lanuarie, sayling alwayes betweene the North-eaft and the Eaft, and not with leffe winde then after fixe miles an houre, wee had runne about two thousand fine hundred miles and more, without ener feeing On the fixth of lanuary, at the time of the folemne day of the Epiphanie, nineteene of vs went

on land in this defolate and drie place, called the Hand of the Sames, in the Coaft of Normey, 10

fubicat to the Crowne of Demante, leaving two other to looke to the weake Pinnaffe, that it

might not bee broken with the beating of the Sea. And being landed there by meanes of an Oare, we endeauoured to kindle fire, and with a tynder boxe and fleele to firike fire, wee retired is his Map of Our felues into the closest place from the winde, and at the fight of the fire, nature thereby receiued a little ffrength. Finding this Hand not inhabited, and feeking to goe in the Pinnaffe to another Hand five miles off, shee so leaked, that part of vs landing, as it were all in the water, and some of vs vp to the 74.degrees, but middle in shallower water, wee strong to draw her on land, and despairing to bee ener able to goe in her againe, wee determined to fit her in fuch fort, that thee might ferue our turne to couer vs. after the best manner that wee could. Wee broake her into two parts : and of the greater 20 wee made a shelter, or Cottage for thirteene of vs, and of the lesser a shedde, capable of sine men. under the which were entred couring them with part of our fayles, and with the reft, and the cordage of the fayd Pinnasse, wee made continuals fire to preserve our lines. Now being veterly destitute of all sustenance of meate and drinke, wee went wandring vp-

ward 70 miles on the Sea shoare, where Nature gave vs food to maintayne life, with certrine Perewinckles other Rockes; or Shel-fifth and Barnacles. And of thefe, not as many nor when wee would, but in very fmall quantitie. And remoting the Snow in some places, wee found a certayne Herbe, which togeflant, fine in . Guarantee allow removes a source and a series a state of the series a state of the series and a state of ther, with small charitie amongst vs, by reason of the great scarcitie of all thinges and extreame famine, leading rather a brutish life, then the life of men-

Continuing in this rude and homely kinde of life, it happened, that through the intellerable wants foure of our companions of the greater retiring place, failed even where the affiicted Mafter was, with those remedies and sender comforts for their foules and bodies : so that you the extreame may thinke their bodies remayning neere vato ve, who being very weake had loft all our firength, wee were not able to remouse them two yardes out of fight ; and yet I will fav Foure dye and more, that wee had no fooner taken the frozen or wagene water in our mouthes, but prefently Nature of it felfe cast it vp againe, wee not beeing able to abstaine from it, nor almost to stand

The cold festion of the yeers had brought vs to fuch necessitie, that (to warme vs) wee stood 40 Great weakeclose thronged, in such fore, that wes feemed (as it were) to bee freed together. Wherefore I entred under the fayles, which covered both our Cottages round about downe to the ground. the imoake not being able to iffue foorth, which proceeded (as I thinke) from the Pitch which was within certaine peeces of the Pinnesse, which we burned, so that our eyes were swolne that Milerable cold wee could not see : neverthelesse wee indured all, that wee might bee warme. And our garments which wee neuer put off, were full of vermine, and the Lice fwarmed in fuch number. that taking them from our backes, wee cast them by whole handfuls into the fire, and they had entred into the fiefh in such manner through the skinne, even to the bones, that finally they Abundance of brought a young man of our company (that was a Notarie) cuen wate death, so that hee was neuer able to defend himselfe from so loatshome a little vermine. A thing of most manifest example, to abase and abate our pride, and baughtinesse of minde.

Now concord fayling among vs, surry one vied his owne proper adule, whereupon part of our companie wandring through the Sauge and va-inhabited place, came to the knowledge of a folitarie and anciene seturing place made by the Shepherds beretofore, for the time of their abode, and it was feated on the highest part of the Coast of the layd Iland towards the West, distant from ours about a mile and a halfe. Visco the which, fixe of the companie of the number of those eight, which were found in that first and greater retiring place, determined to remouse themselves to that new-found solutarie habitation, for their lefe inconvenience leaning the other two, their other companions alone, in an abandoned and forfaken place, as well because they were not able to travell, as also for that wee were altogether viable to con-

It came to passe, that those sime through the gracious goodnesse and gift of God, found an exceeding great Fift, to the which I know not what name to give, whether Whale, or Por piffe of the Sea, which were are to thinke was fent from the Diuine and excellent bountie to feed vs. And confidering that wee faw it call up by the Sea upon the shoare, atead, fresh good and great, and at the time of our so great necessitie, wee rendred thankes vnto our most gracious Lord God, who at that time would fuftayne our so weake and diseased bodies, with that foode, appealed peraduenture through the prayers of some vigilant and de-

CHAP. 18. Hunger good fance. Ilands of Saints and Rustene.

With this Fish, wee fedde our selues for nine dayes sufficiently. And as it happened those venout foule. ry nine dayes were forempe fluous with windes, rayne and fnow, that by no meanes the cruell

storme would have suffered vs to goe one pace out of our Cottage.

The miraculous Fith being ipent, the furious temped was fomewhat affwaged, wherefore not having wherewith to maintayne life, like Wolves that oppressed with famine, goe to seeke out other places of abode, wee arole out of the Cottage, and went wandring through the defert Rockes to finde any succour to sustayne our life with Perewinckles of the Sea and Barnacles; with the which were were of necessitie to bee contented, although they were very little thinges, and so wee maintayned our selues vntill the last of lanuary; 1431. 1422in Fe. and therefore were were leane, pale, afflicted, and but halfe aline. In which time raine accounts finding certayne dung of Oxen fcorched and dryed with the cold and winde, (whereof wee gathered every day to make a fire) wee certainely knew that place to bee frequented by Oxa en: which thing gaue vsaliured hope of some good end, and through this perlwation wee indu-

20 red part of our grieuous cares and forrowes. In the end the houre came, wherein our benigne Creator and most gracious Lord, purposed to conduct his little flocke fo much afflicted, into the Hauen of their fafetie : and it was in this manner. Two young Heifers of a Fisher-man neere vnto this Iland within fine miles, beeing tleaf Ruft manner. ftraved the former yeere from the place where hee vied to dwell, and neuer understanding any newes of them within the yeere, nor having any hope to finde them againe, on the very first day of February, 1421, at night, one of the Sonnes of the faid Fisher-man of Rustene (torio the faid Hand was called) being of the age of fixteene yeeres, dreamed that certainly the two Heifers were escaped, and gone up to the lland of Saints distant from them, where wee were lodged, at the point of the Weil part, vpon the which no man durst ever goe at the low 30 water. Whereupon the Sonne who had fuch a vision or dreame, prayed the Father, and an

elder Brother of his, that they would accompany him to goe to feeke them. And so, all three in a Fisher-boate tooke their way towards the sayd Iland, and came to the point where wee were, and the find young men landing there, left their Father to looke to the Boate, and having ascended a little vpon the Cliffe, they saw a smoake arise in the avre, from their retiring place which they had formerly vied. Whereupon through feare and aftonilhment they maruelled, and that not a little, how, whence, and by what meanes it might come to passe. Wherefore, they stood a long time much amazed. And desiring to know the cause, they began to talke one with another. And although wee perceived the noyse, and heard the voyce; yet wee could not conceine whence it should bee, but rather indged it to 40 bee the crying of Crowes, then the voyce of men. And wee were the rather induced there-

unto, becaule some few dayes before, wee had steene (vpon the miserable Carkastes of our eight companions cast to the winde) multitudes of Crowes, that rene the ayre with their crokings feeding themselves vpon them : whereupon wee thought it could bee no other. But continuing from good to better, the voyces of the children of God fent to faue vs,

wee cleerely perceined that they were the voyces of Men, and not the crying of Fowles. And at that instant Christophore Fiorassanti arose out of the Cottage, and seeing the two young striplings, crying with a loude voyce came towards vs, saying, Reioyce, behold two come to feekevs. Whereupon, inflamed with an earnest defire, wee rayled our felues on our feete, going rather with the heart then with the feete, and drawing neere vnto them, wee perceived that through the fudden and extreame frangeneffe of the matter, they were afraid, and their countenances began to waxe pale. But contrarily wee cheered our felues, and being comforted with an affared hope, thewed with actions and gestures of humilitie, that wee came not to offend them in any wife. Divers thoughts came in our mindes, whether wee should detaine one of them or both, or whether one or two of vs should goe with them. The first determination was against vs, because wee knew not with whom, nor with how many wee had to doe, for that wee understood not them, nor they vs. But being aduised by the holy Ghost, wee went downe to their Boate, in the best and most

amiable manner that wee could, where the Father was, who expected them : and when he saw vs, hee alforemayned aftonished and amazed. In this meane space, wee looked whether there 6c were any thing in their Boate to fuccour our necessities, to maintayne life : but wee found nothing there. So, they moved through pitie, feeing ws affamished, by fignes and actions which wee made vnto them, were contented to carrie with them Ghirardo da Lione, a Sewer, and Cola di Otranto, a Marriner, who had some kribwledge, and were able to speake the French and the high Dutch, leaving vs in great hope of present safetie and helpe.

Their

Their Boate comming to Ruftene with our two companions, all the people flocked together, and feeing the countenance and habite of our companions, aftonished at 10 great and strange a matter, they demanded among them felues, whence, & how fuch like fellowes as these appeared, or from what place they landed : and that they might be the better aduercised, they attempted to speake vnto them in divers Languages, but in the end an Almaine Prieft of the Order of the Preachers, spake with one of the said companions in the high Dutch, and by that meanes, they were certified what wee were, from whence, and how wee had arrived there. The which matter the morning following, which was the second day of Februarie dedicated to the glorious Mother of Christ, the faid Priest published to all the people of Rustens, exhorting them, that shrough our misfortune, they would bee mooued to pitie and to helpe vs, according to to

In this meane space, through the Catholike remembrance of the Almaine Priest, on the third day of February, 1431.at the very inflant of the day of Saint Biagio, the curteous and pittiful Inhabitants of Ruffene came vnto vs with great plentie of all fuftenance, which they vie for their prouisson, to feed vs and preserue vs, being desirous to conduct vs to their kinde habitations, torefresh our weake bodies. And so wee were guided and received into Rustene vpon the saydday, where wee had great restoratives, which were rather hurtfull for vs, through the exceeding abundance thereof, because wee could never fatisfie our selues with eating, and our weake ftomackes not being able to indure it, it made our hearts to grieue, so that wee thought wee

There were remayning in the first and greater of our two retiring places, two of the companie which were impotent and weake, who knew nothing of this our so miraculous succour. Wherefere giuing these Catholike Countrey people notice of them, and likewise of the other eight that were dead and unburied, affembling themselves together, they went with the Priest linging Pialmes and Hymnes, as well to burie those eight that were dead, as to conduct to the Hauen of safetie the two that were remayning behinde, and arriving at the Iland of Saints, they performed a worke of mercy to the eight that were dead, to the which number, one of the two remayning was added, whom they found dead. Now imagine, how the other could continue being depriued of companie and all humaine fustenance, and yet hee was brought to Reflene with fome little thew of life, where, at the end of two dayes hee departed this tran- 30

Eleuen of vs being come to Rustine, wee landed and went into the house of our Guide, Host, and Lord, as hee and the rest desired, whereinto our most prudent Master, Master Piero Quirini entring, ving his wifedome and difcretion, performed an action of exceeding great humilitie, as Gone as hee faw the companion of our Conductor and Sergeant Major, declaring by femblance that hee would acknowledge her to bee the Mistresse of the house, hee cast himselfe downeat her feet : but shee refused and listed him vp from the ground, embracing him and bringing him to the fire, and with her owne hand gaue him somewhat to eate. In this Iland there are twelue little Houses, with about one hundred and twentie persons, for

Rustine descrit the most part Fishermen, and they are by nature indued with understanding to know how to 40 make Boates, Buckets, Tunnes, Baskets, Nets of all forts, and euery other thing necessarie for their vie and trade. And they are very curteous one toward another and serviceable, desirous to please rather for loue, then for hope of any gift or good turne to bee done them againe. Fishes called Stock-fish, in all their payments and bartering, are vsed in stead of coyned money, and they are all as it were of one bigneffe and measure, of the which euery yeere they drie an infinite Bead of many; number in the winde : and in the time of May fraight themselves with them, carrying them through the Realmes of Denmarke, that is to fay, Sweden, Denmarke, and Norway, being all Subiect to the King of Dacis: where they barter and exchange the faid Fish, for Leather, Cloathes, Iron, Pulse and other things, whereof they have scarcitie,

Few other things for maintenance of life are found there, except Fifh, yet at certaine times, 50 they have some small quantitie of Beefe, and Milke of Kine, of the which, with Rice, and I know not what other mixture, they make Bread of a naughtie taffe. Their Drinke is sowre Milke, displeasing vnto them, who have not beene accustomed thereunto. They vse also Ale, that is to fay, Wine drawne out of Rie. Wee eate of the Plaice or Halibut fish, which are exceeding great, so that you would not beleeue it. Wee saw some of them somewhat longer then sixe feete of the common Venetian measure, aboue two foote broad vpon the Chine, and more then three quarters of a foote in thickneffe : a wonderfull thing to bee spoken. They cloath the men with redde Hides, and likewise blacke, able to defend them from the water, and they vse cloathes very course, of azure, redde, and ash-colour, brought from Demmarks, of small price and

Halibuts very

Their drinke

These Countrey people vie much to frequent the Church, because they are very deuout, and yeeld great reuerence to the worship and service of God. Avarice, is as it were altogether extinguished, for, they understand not in any fort, nor know not what thing of anothers may become theirs, but by barter : and therefore they vie not to locke Doore, House, nor Win-

dowes, nor any Cheft for feare to bee robbed, but onely by reason of the wilde Brafts.

The Inhabitants of this place both young and old, are of fo great simplicitie of heart, and o. Simplicitie, bedient to the Commandement of God, that they seither vinderstand know, nor imagine in any thus the Hewife, what Fornication, or Adulterie may bee: but vie Marriage according to Gods Commanin regard of dement. And to give you a true proofe hereof I Christophero fay, that we were in the house of their different our foresaid Hoft, and slept in one and the same Cottage, where hee also and his Wife slept, iealousie, and fucceffinely in one Bed neere adjoyning, were their Daughters and Sonnes of ripe age toge- which fearfly ther, necre to the which Beds we also slept, almost close adjoyning to them : so that when they Permits the went to fleepe, or when they arole, or when they flripped themielaes naked, and wee in like ar Brotherre no manner, we indifferently faw one another, and yet with that puritie, as if weehad beenelittle fleeperader children. But I will tell you more, that for two dayes together, our faid Hoft, with his elder the fame roofe Sonnes arole to goe a filhing euen at the time of the most delightfull houre of sleepe, leaving his with the Mo-

space of eight houres.

The Inhabitants of this Hand, especially the elder fort, are found so vnited in their wils to ber, their houthe imparitance of this party cafualtie of naturall death, which befalleth Father, Mother, of timber in Husband, Wife, Children, or whatforger other Kinfman, or Friend, when the houre of their round forms paffage vitto another life appeareth, prefently without any griefe of heart and complaining, they with one light affemble themselues together vnto the Cathedrall Church, to thanke and prayse the Heavenly in the top, Creator, who bath permitted such an one to line so many yeeres, and at that prefent, as his crea- which in winture vouchfafed to call him, or her into his gracious fauour, and neere vnto him : and at the appointed house they cause them to be washed cleane, to have them pure and neate, as they were portable cold borne. Whereupon rej voing and contenting themselves with his infallible will and pleasure, is covered they give him prayle and glorie, not shewing any passion either in words or gestures, as if proper- with skinnes of ly they had but flept. Surely we may fay, that from the third of February 1431. vntill the four- great file. teenth of May 1432, which amounteth to an hundred dayes and one, we were within the circuit great luftre, of Paradife, to the reproch and shame of the Countries of Italie. There at the beginning of May we saw great varietie and alteration. First, their women vie den after

30 to goe voto the Bathes, which are very neare and commodious, as well for puritie, as for the foure dairs old cuitome they obserue, which they hold agreeable vato Nature : they vie to come forth of their the same for houses starke naked, as they came out of their Mothers wombe, going without any regard to the snow to fall their way, carrying only in their right hand an heape of graffe, in manner of a broome, as they on them, that fay, to rub the tweat from their backe, and the left hand they hold your their hip, for eading it they may bee as it were for a shadow to couer their hinder parts, that they should not much appeare: where hardned for the cold. having twice feene them, we paffed away by them, as eafily as their owne people, the Countrey From the fire was fo cold, and the continual feeing of them, that it caused vs to make no account thereof. On of Febr. to the the contrary part, these very women were seene on the Sunday to enter into the Church in long 14-of May, it and comely Garments. And that they might not by any meanes be seene in the face, they weare almost alway 40 on their head a thing like a compleat Morion with a Gorget, which hath an hole to fee through fnow d. Their on their head a thing like a compleat Morion with a Gorger, which nath an hole to ree through germents are at the end, like the hole of a Pipe, through the which they behold within that, no further off of course clock from their eyes then the hole is long, so that they seeme to have it in their mouthes to pipe : and of London, &c. worse then that, they can neither see nor speake, volesse they turne themselves a yard or more, more then of from the hearer. I thought good to note these two extreame varieties, as worthy to bee vn. Funerall. derstood. From the twentieth of November, vntill the twentieth of February, the night continueth Long nights

and lafteth there about one and twentie houres or more, the Moon neuer wholly hiding her bodie Quino faith, or her rayes at leaft. And from the twentieth of May vntill the twentieth of August, either the months nich whole Sunne is alwayes feene, or elfe his beames never faile. In this Countrey there is infinite plentie of white Birds, in their Language called Muzi, but light of the we called them Cockes of the Sea, which by nature connerfe, and willingly abide where men Moone: and inhabit, whether they find them in Barkes or on the Land. And they are so domesticall and three others

tame as House doues are with vs. In this Iland, and in the Countries of Succia, we saw very white skins of Beares as white light or light at least of as Armelins, much longer then twelue Venetian feete. Wee abode in Ruftene three moneths and the Sunne. eleven dayes, expecting a fit time to paffe with our Hoft into Smeden, with his vivall fraight of Brds, Mark Stock-fish, which is in the time of May, when these Country people depart, carrying with They returne. them infinite plentie thereof through the Realmes of the aforefaid King of Dacia.

On the fourteenth day of May 1422, came the hours fo much defired, to turne our faces to-60 wards our amiable and beloued Countrey, as our minde and defire alwayes was, and leave the charitable place of Rustene, which was the last succour and refreshing to our miseries. So wee tooke our leave of our Domesticall friends of the House, and of our Mistresse and Hostesse, to whom in token of our loue we left, not that whereunto we were in dutie bound, but what wee had remayning : and that was certayne small trifling things of little value in our opinion, as

Wife and Danghters in the Bed, with that securitie and puritie, as if he had properly left them m Dairing in the armes and embracements of the Mother, not returning to his home in left time then the faithin the

the plankes and ribs of our Skiffe, whereby we plainly knew, that our companions which were in it, were perished and drowned, the first night that they departed from vs. The nine and twentieth of May 1432. we arrived with the laid Barke at Trendon, whon the Coaft of Norway, the Princely Seate of the King of Denmarke, where the Honourable bodie of glorious Saint Olam resteth. There wee slayed ten dayes to waite for passage; and a st time for our Voyage: but not finding it, because we would lose no more time, wee tooke leave of our beloued Hoft, his Sonnes and the reft, to proceed on our journey by Land.

Vollina.

The ninth of Iune we departed from Trenden, travelling on foot, going towards Vastenda place fubject to the King of Denmarks, within the Province of Sweden, where the cheek-bone and part of the bone of the head of Saint Bridget remayneth. Being there, wee vinderstood by the Vene- 20 tians, that the Inhabitants for the reuerence of their glorious King Saint Olam, vinto whom (as they well knew) our Signierie of Venice did great fauour in his going and returning from his Voyage to Hiernfalem, were disposed with deeds to prouide for vs by their counsell, helpe and money. And first, they aduised vs not to goe the direct way into Dacia, by reason of the dangers of wilde beafts, which might befall vs, but to addresseour selves to goe directly to Sticking. borgi, to find out a valiant Venetian Knight called M. Gionen Francisa, from whom wee should receue fauour and helpe in plentifull manner, for loue of our Countrey, although the way were thirtie dayes journey, quite contrary to our direct way. On the eighteenth day we came to the Court of the faid Canalier M. Gionan Francho, an Honourable Baron, and highly effected of the Crowne of Dacis, where (with great joy) we found our two straggling companions.

Venetian

The valorous Knight being now informed of our comming, with a cheereful conntenance declared well unto vs how great the loue of his Countrey was, and especially knowing the calamitie and penurie of vs his Countrey-men, and being easily able to releeue it. And therefore he could not sufficiently satisfie himselse in honouring, clothing and feeding vs, but gaue vs money for our necessities, and furnishing vs afterward with good Horfes, in his owne proper person, together with his only Sonne M. Maphee, with an hundred and twentie Horles of his owne Seruants he accompanied vs many dayes journeyes through his Territories, trauelling alwayes at his owne charge. Afterward, vpon his limits and bounds wee tooke our leave to depart, thanking him with the most reuerent and kind speeches that possibly we coold. Whereupon he being departed, left vs for our Guide, his faid sonne M. Maphee with twentie servants on Horie- 40 backe, who kept vs company vnto Vastena, the place from whence about fortie dayes before we had departed, vnto the which place, for the anoyding of two monethes trauell, wee were faine to returne : fo that on the thirtieth day of July wee entred into Vattera, where wee abode vntill the second of August, being alwayes accompanied, and our charges borne by the said

" Quirine fait foot on Eng-land, her ice-med to bee comme out of Hell and se-Hee came to

Vniuerfitie where a Bene-

On the second of August, we tooke our leave of the foresaid M. Maphie, yeelding him such thankes as we could. And being departed from him wee went to Lodefe, where wee arrived the eleuenth of the faid moneth; in which place we found two passages, the one for England, and the other for the Low Countries : and there we voluntarily divided our selves into two parts.

The two and twentieth of August 1432. we Christophere Fiorauante, one of the Councell of 50 the vnfortunate ship, together with Girardo da Lione, the Sewer, and Nicolo di Michiel of Venice the Notarie, now Writer of this present Discourse, departed from the other eight of our companions, they going towards London and we to Venice, by the way of Rostoch', pretending to goe to Rome for a Pardon: and after many troubles and molestations, passing over Mountaynes Valleyes, Riuers, sometimes on foot, and sometimes on Horse-backe, through the helpe of the Omnipotent God, we came vnto our fo much defired Countrey of Venice, on the twelfth of October, 1432. Safe and found, leaving the faid Girardo da Lien at Vafenech, who from thence went vnto his Countrey : and those that went into " England were these; Master Francesco Quirini, Sonne of Mafter Iacomo a Venetian Gentleman, being Merchant of the vohappie ship. Mafter Piero Gradenico, Sonne of Mafter Andrea, of the age of eighteene yeeres, a young Mer- 60 chant, Bernardo da Cagbire, Pilot of the ship, whose Wife being young, aswellebrough the long don, wherehe delay of time passed, as for that it was many times certainly reported, that the said ship with all them that were therein, were in great danger, and no token at all appearing to the contrary, moneths, &c. being adulfed more halfilly, then vpon mature confideration, as is the manner of needle women,

fayle. The next yeere they preuailed in battell against King Egbert, and after that iovned with the Wellimen to inuade and destroy this Kingdome, but were both chased by the victorious power of the King; and An. 826. another hoalt of them was beaten. Another Fleet of thirtie foure Ships landed at South-Hamton, An. 838. and flew Duke Ethelhelm: after which they proceeded with continuall incursions (two Hydras heads still succeeding, when any English Hercules had cut off one) that it breeds horror to read or thinke of the (poyles, rapes, fires, murthers, barbarisme, heathenisme, desolation and destruction, which they brought enery where with them. And although Aifred, Edward, and Adelfane somewhat healed the Land of that pestilence; yet in Etbeldreds time fuch a mortall relapse happened, that first he charged the people with an insupportable tribute of Danegelt, arifing to 48000. pounds yeerely (euen after the account of those times) and Danegelt con-

buying herewith nothing but perfidie on their part, and beggerly on his, by the aduice of one Ha. traved till Edna the Generall of his Armie, he wrote Letters to all places, that on Saint Brices day (which is ward the Conthe morrow after Saint Martins night, the Danes not having digested that drunken folemnitie 4.1012. should be all massacred, which accordingly was effected on man, woman, and child, not sparing those which fled to the Altars. A few in London escaped, and caused Swejne with a Danish Army and vaspeakable crueltie zo repay that butcherie. Esbeldred fled with his wife and children into Normandie (the feed of a new Conqueft) for that Suanus " having made the sheepefold a shambles " This Swanus," Normandie (the feed of a new Conquett) to that Smanns: nature must the interpretate a mainter of same had and shepheardlesse, proclaimed himselfe King of England, which Canutus or Count and his two killed hista-

ionnes, Harold and Hardioannes, held after him fome thirtie yeeres fpace. And fuch was the Danife tyranny, that every Dane was filled Lord Dane, and had at his commandement the wives, daughters, and the whole houshold where hee became. But after the death of Hardicanutus, that title was turned into the reproachfull terms of Lurdane, and the day of his death "(as the Roman Fugalia) was celebrated with open pastime and feating in the fireets, called Hockiide or Hackiide, as it England (then absolutely freed) made a mocke or Hockiide have forme of her enemies. Canness by treason of Eadrike Streena obtained the Kingdome, first as partforme of her enemies. Cannens by treaton of Endrice Streams obtained the Kingdome, nrtt as partpublished a published and after his death the whole by other perfidie, flaying Endry brother fing in the of King Edmund, and lending Edmunds two fonnes, Edward and Edmund, to the King of Sweden (free the terente was consequently and the hating such squelcie, sent them to Salmen King of Hingary to men also in-bring vp, where Edmand dyed, and Edmard married Agaiba daughter of Henry the Emperour, by dinginthy of bring vp, where Edmand dyed, and Edward married regards adapted of Heart the Zangerous compelling, whom hee had Adam Athling, and Margaret married to Malcolm King of Scots (the mother them to loak

30 of Mand wife to Henry the first) and Christine a Nun. Constitu d'uided the Kingdome into foure parts, of which her referued West Sazenie to him-leite, East England hee committed to Easte Turkill, Mercia to Duke Ediske, and Northumberland night after to Earle Erike. Soone after, he caused Duke Edrike (which treacherously had advanced him to the Crowne) to bee flaine, (a suft reward of treason) and then banished Earle Tarkill and Earle Brike picking quarrell with them (weary of any stalking horses) the former of which was presently after his landing in Denmarte flain. And now did Cametus feeke to win the favour of the English by building and endowing Monasteries, making good Lawes, and marrying Emma the relict of King Ethelred. Thus having Denmarke by inheritance, and England by conquest & treachery, his ambition next aimed at Sweden, where first lie had the worle, but after compelled VIf and Eiglaf the Kines of that Countrie to composition with him, Earle Godwin, the Generall of the English, pro-

uoking and animating the English to recover their pristine glory, and by folid vertue to ouercome quest in Sasthem, who had ouercome their new Lord, whose fortune had subjected the English. Thus Came den. A. 1014. the pressailed by Godwiner policie and English valour, they by night without the Kings know-ledge, or affiftance of the Danish Armie, affaulting and overthrowing the Swedens: hee, the next day, milling the English, and fearing they had turned to the Enemy, till giving the onset with his Danes voon the forfaken Campe of the Enemy, he found there nothing but carkaffes

Anno 1027, having intelligence that the Norwegians contemned their King Olans for his Saint Olans fimplicitie, he fent great fammes of Gold and Silver to the Grandes of Normay, to corrupt them, and caused them to reject Olane, and to choose him for their King. For percerted with gifts they fent him word to come to them, whom he flould find readie to entertayne him. An. 1028. he went with a fleet of fifty fayle to Norway, and expelled Olane, subjecting that Kingdome to himselfe, Olane which had beene the King, Doctor, Preacher and Apostle of the Norwegians, (as Florilegus fileth him) the fonne of Harald King of Norway, was flayne, Anno 1030. and cruelly butchered by his treacherous Norwegians with an Axe or Hatchet, for dilanulling their Pagan superstitions, and hee since is there superstitiously worshipped for a Saint, whom then trayteroully they permitted not to reigne or breathe. The same yeere perished at Sea, or (as some fay) was flayne in one of the Orcades, Earle Hacun, whom Camutus fearing had banished in co-

6c lour of fending him Embaffadour. His greatnesse (having to wife his fisters daughter) made him grow suspicious : And according to the deuction of that time. Anno 1031. Canutus or Courte went to Rome on Pilgrimage, and there made magnificent Offerings, and obtayined divers Immunities of the Emperour and Pope. After his returne he inuaded the Scots, and onescame King Malcolme with two other

When the King of Norway had read this (for hee is a diferent, and modelf, and well learned man) hee reioyced much, and was gratefull to the bearer, respecting him with Royall and M.Parhlisey. bountifull gifts. Thus writeth Matthew Paris of himselfe, and his employment. The cause of age to North his going into Norway he further relateth, that King Custo (or Camitis) having founded a fa- John Abbie.

Canutur before his death fet his Sonne Suanus in possession of Norway, and Hardecanutus his Sonne over the Danes. Harald and Hardecaputus divided England betwixt them after his death. Anno 1035 and Harald dying, Anno 1040, that quarrell was ended; and soone after, by the others death the Danish Empire in England; the small space of King Edward interceding that, and 60 another Conquest of the Normans, descended also of like Northerne, namely of Norwegian Originall, Carnetus his Daughter Curilda was married to Henry the Emperour, and being accused of Adultery, against a Giantly Champion appeared in her defence a childish English Dwarsse which ferued her, who flue the Giant and prefented his head to the Ladie, who thereupon discreed

Monker igno.

runt of their

mous Monasterv of Saint Bennet, of Holm in Norway Cof which title and order hee had founded another in England) it happened that the faid Abbie, with the appurtenances was abnost ruined by an impious Abbat, who forfaking his Order, and flealing away privily the Seale of the Chapiter, either fold, or by forged writings fraudulently engaged almost all the possessions thereof: wherein hee had the Sacrift, the keeper of the Seale, his copartner, both in this fugitive apoftacie and treacherie. Heerenpon the Archbishop of Nidrofia, in whose Diocesse the said Abbie was fituate feiled the fame and the appairrenances into his hands, alledging that the Monkes had only the habite, but were altogether ignorant of Monastike order, and Saint Bennets rule, some of them allo theenes and fugitines. The Monkes appealed to the Pope (which canfed the Arctibifhon to fulpend his proceedings) and the Prior recovering somewhat, and gathering together a summe of the hands and Lime-fingered money, went to the Roman Court, where the Abbat had beene a little before, and intangled by writings the faid house in fine hundred markes; which caused the Prior to returne frustrate and full of griefe. But in his way, hearing that the faid Abbat was dead, in the Abby of Saint Alban in Selio (in Norway) he and the Courat made choice of an Abbat, and this Prior, with another Monke, and three hundred markes in mony, together with the Kings letter, being fent to

> within one yeeres space. But their Spiritualities were much maimed, they by bribes purchasing delayes, left the Archbishop should take possession of the Iland which wholly belonged to the Abby, and of it also, expelling the Monkes. Now the Cardinall B shop of Sabine then comming Legate into Normay, the Monkes fought to him for fuccour, and hee counselled them to go and petition the Pope to provide them of an Instructor and Reformer, and he would write in their behalfe.

> Matthew Paris to take paines for their freedome, it was procured happing that the temporale ties of the faid house were freed from the Camfines (the Popes Viurers) then residing at London.

The Abbat therefore and Prior went with Letters from the King and Legate to the Pope, who gate them leave to chuse any man of whatsoever Region or Monasterie to be their Infin er. They answered the next day, that all the World had not Monkes of that Order living in more composed order then England, nor England any comparable by report, to Saint Albani:
of which House they defired Matthew to be their Reformer, of whose wisdome and faithfulnes they had had experience; a man also almost familiar and friendly to their King, and able by his meanes to order the rebellions and variety. Hereupon the Pope gaue them this Briefe to the Ab- 30 bat of Saint Albane.

Innocentius, &c. Dilecto Falso Abbati Santis Albani in Anglia Ordinis S. Beneditti, &c. Cum ficut ex parte delecti filiy Abbatis Monastery de Holm, Ordinie S. Benedicte Nistorfiensis Diocesis, fuit propitime orane nobus idem Monasserimen propter Pradecosforum seerum negizentiem, sit in bis qua ad Monassicum Ordinom periment desormations; nec innewiator in illis partibus aliquis qui statuta & observantia eius dem Ordmis bene feiat: Nos ad supplicationem emslam Abbatis, discretionem tuam rogamus, attentius & bortamur per Apostolica tivi scripta mandantes, quatemus discrium stiam tratrem Mattheum Monachum tuum que dicitus probata vita acreligionis experta, ad idem Monafferium ve dicham Abbatem & Monaches suos in regularibus disciplinas & statutis que ad cundem ordinem nertinent, informet & instruct, transmittere pro dinina & Apolialice fedis ac nostra renerentia non post- 40 ponus. Dasam Lugdani, &c. Hereto the Abbat obeying, and Matilier to his Abbat, the bus-neffe luckily succeeded, and Monkerie both in that of Holio, and other Norwegian Monasteries was reformed.

I might here flew 1 the great flirres which in the first Ages after the Conquest the Norme-

gians have caused in Ireland, Wales, Man, Anglesey, the Hebrides, and Oreades: as also of Harald (whom the Conquerous flue) his two fonnes and daughter fleeing to Snene King of Den-

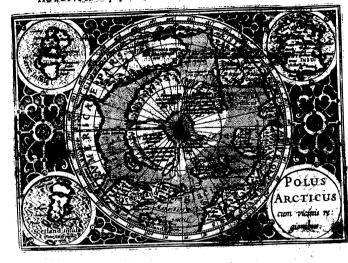

King Havalds

marke, who gave the daughter in Marriage to Ieruflans, or Waldemarns Ring of Ruffle and of Nicolas de Lyuna, a Franciscan Frier and Mathematician of Oxford, before mentioned, of whom Incobne Cuoyen faith in his Journall that he learned of a Priest who had descended of those which King Arthur had left to people the Hands of Norway, Anno 1:64. that in the yeare 1:60, the faid Frier had come into those Ilands, and proceeding further by Art Magicke, had described 50 a See pag. feq. those Antike parts (as the " Map presents) with fourt Whirl-pooles or In-draughts, Yea (as Master Frier of Lines Dee addeth) at the Northerne Hands, the Record whereof at his returne he gaue to the King of England, the Booke being called Innentie fortunata or fortuna, concavering a description from fiftie foure degrees to the Pole, I might also adde out of Thomas of Walfingham, the Travels of House Earle of Darbie, (afterwards Henrie the Fourth, King of England) into Profits and Lettow, or Lithuania, where by his helpe especially was taken Vilna the chiefe Citie (Skingalle the King of Lettow, having fled thicker for refuge) his Colours being first advanced on the walls, fourethouland flaine, of which the King of Polands Brother, and three thouland captived. Also T. of worldock. I might adde the Voyage of Thomas of Madfocke Duke of Glocefler, fonne to King Edward the Third, along the Coatts of Denmarte, Norway, and Scotland. Other Letters likewife of King 60 Edward the Second to Haquin or Hacen, King of Norway in behalfe of English Merchants there arrefted : with Entercouries betwixt the English and the Dutch Knights in Liefland. But hauing only briefe mentions of these, and them or the most of them recorded by Master Haklayes

Marriage.

octore.

The Momefe: are almost Salmadees, retaining still their old superstitions, as to worship the Sun, or the first Beast they meet with, and especially they have in religious reckoning their Dease, unjor the first seast they meet with and expensive they made in the season of Trees, which it is religious to 10 Ints which they can be seeme, or or or ormer, the company of a tech, which it is religious to touch; and he knew a Datchman, Marim Telegiof Derpt, who breaking a bough was swelled a yeere together as big as his skinne would hold. Heere at Marriages and Burialis they pray, but yeare together as ong as his samue would note. Levels as makings, and buttains they pray, but without Image. Their morriage in thus, The man and his Bride are fet firidling on a Horfe, and blinded; and to led into Se-leane, there taken downeand married by their Rites; then fet vpabinded and to ten into or-name, there exact cover and matrice by their articles and enter pagaine, binded as before, and conceyed with their company, and Muncke to their house, finging Kofoku Kofoku Conițu. feamoha: there taken downe and had to bed, still blinded till the next morrow, in the meane white they rest drinking, &c.

They mourne when one is borne, reioyee and make merry at death. Their mourning (in Cur-Land) is then, and when they walke alone, or fetch wood, Terow, yeron yeron, maseuline babe: the dona) is then, and when they want thinke it to have remained fince that Babylong's Towre, 10 When the Momefes die, they are buried in their Leaner, with their knife vinder their arme, and their coate hanging ouer the graue. The Momeles are very ignorant, and aske who learne the Hares in the woods their prayers. At Rie the women haue a thing of Red veluet on their heads, made like a Ship with the keele vpward, at each end a lock of hayre. The women of the Saes differ in their falhion of attire each City from other, a pleted Petti-

Hospitalitie.

cote, with a damaske Vpper-body, a veluet Square on their heads, and thereon a Cloke, &c. The maid vincouered, if the haue had a child and refute to goe couered, the is brought to the Pillory, her. haire cut off, and there nayled, and a Kerchiefe put on. Here and in Norway, and in White Ruffle, &c. strangers pay fighling for entertainment, but salute, sit downe, and expect the Hosts expenoce. Their bed they mult bring with them, which is commonly a Beares skin, or elfe they there 30 haue a locke of straw. To offer money is a difgrace, which yet might seeme to arise of the basenesse of the coyne. Their houses are all of Timber beames laid square, and others laid on them in notches, fo till they come to the roofe, which they couer with ffraw, divided in two roomes; the inner being the Parlour or stoue, where they have as it were one Ouen ouer another: the middle hearth being of stones set grate-wife, the fire is put in on the Back-side or Hal-side, & there also the Sinke issueth. Before that mouth in the Stoue is set a vestell of water, which, when they wil have the heat exceeding, they befprinkle on those hoe stones. A fire lasteth a day, at night they renew it. Sometimes the old Prufees on the borders of Curland, according to their old heathenish Rites do facrifice their Priest in fire.

Ptibui.

Late

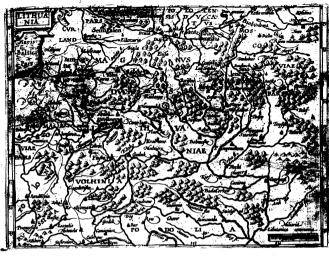

Vilna

Sowed Ships.

Houses.

From Derpt hee went to the Peibus, whereinto runne seventie two Rivers making a great 40 Lake full of rifh. In the Peibus betweene Plaste and Name, the Ships (whereof are many, and Yome an hundred Tunne, with one Maft) are fowed together with Ofiers, having no Iron workes, called Boidacks. They goe to Markets in Sleds, where comming to a walled Towne, and waiting the opening of the Gates, the Sled is drawne in sometime, with his Mafter fitting a before starke dead with cold. Thence he went to Name, which runneth out of this Lake, where the River being twice so bigge as the Thames, hath a fall a mile steepe on a Rocke. Here the Sweden (as is reported) made a Bridge ouer with the bodies of Ruffer, as the Ruffe had done before with his owne people about 40000, hence to Inanograd. These 40000, were onely bearded men flaine, &c. not women or children; these hee dashed by the heeles, the dryed braines whereof hee hath feene on the wals, &c. thefe all out of two Townes, Narme and Imano- 50 grod. The Cattle of Isanogrod is fo fortified, that it must bee thrice conquered before conquered, and built in a yeere, of Stone, which none elle is in Ruffia. Hence hee went to Teraflane, where he and his companion were apprehended by the Ruffer, for travelling without licence, and as they came at any Towne, blinded, and after some feares sent thence into Lette, or Lithnania: passing through Woods full of Bearts, Beares, &c. none hurtfull but en luxe, a kind of ounce or Cat-amountaine, with a tayle a handfull long, spotted, as big as a Dogge, in forme like a Cat, which would from off a tree leap on Trauellers and kill them. Here they came to the Weild or Vilna, the chiefe Citie where the old Dutchesse a Calminist (whom therefore they called the English Queen) kept her Court. Her two fons being fummoned to the Parliamene in Poland, went garded with 30000. Here they viually steale their wives; a man viewing one to his content comes with 60 his company to the place where the dwels, and lies in ambush till night when she comes forth to make water, and then they catch her, and on a Sled-carry her away, &c. her friends not knowing what is become of her perhaps a moneth, and yet know what to suspect because of the custome. Their Churches are thin, and in the Villages they have a Croffe of Wood, with a Pentife, and 2

Hondivs hu Map of Lithvania.

Crucifixe, and there say they their prayers once perhaps in a quarter, having a Priest come to them, or they goe to him in their Church twenty miles off. They worship alio a Snake, which they keepe vp in their houses, saying, they have reason for it, because it keepes their children: thefe Snakes goe often into the Woods, and thence returne, and before the fire vomit vp milke. which the men eate. Here they hunt the Vrochs, and other beatls. When the Lord will hunt, his Tenants or Slaues (as they are heere, and in Sweden, Poland, &c.) doe make fires in the Woods, Hunting, bringing the beatts into a corner, & there they affault them. From Valua he went to Grodno in the Mafe, where are the best Poles fouldiers, & they are Roman Catholikes. From hence to Craconia. From thence to Warfonia, where is a Bridge (couered ouer with a Pentice, where toll is paid, twice to long as London Bridge over Fiftula, which foone after he was passed over brake, and there were drowned many Polonish Gentlemen that came thither to the Parliament at that time there

To this Parliament came a Totar to fue for his two daughters, taken captive by the Christians: but not speeding he returned; and with him went our Author Mafter George Berkley, and stayed with him fixe moneths. This Taxtar lived with his hord of about a thoufand housholds of a His zoing into kindred. They fowed a three square graine (Totarke) had cattle, lived a texle, every day hunting; Totak. these worshipped Mahomet. Their manner is to make fudden Inrodes on the Christians, and prey on them, who therefore are readie for fuch affaults : the Polonib Gentleman at dinner hauing his two Peeces by him, and his Seruing-men, which are Souldiers with their Peeces also, when the Christians make head against them, they cannot most what find them. They are resolute, and wil ride with their Bowes in face of a Peece, If this Tartar could have gotten his daugh-60 ters, he would have bestowed one on him, &c.if he would have lived with him, and he faid he ne-

uer lived in all his lite fo pleafantly as with these Tariars. Hee returned into Poland againe. In Poland all are Gentlemen and Slaues. Punishable it is not for their Gentlemen to keepe Concubines, whole children they bring vp as their other, faue that they doe not inherit. There is freedome of religion. So many Cranes feathers as they weare in their Hats, fo many Tartars or

Turkes are holden to be flaine by them. No Townes very strong but Cammenieca built within a Rocke, the light let in atholes. The Turke went over it but could not win it.

The Polanders had a great murraine of beafts attributed to the Iewes: two Iewes comming to a 40 woman offered her mony for some of her milke, she answered, her child but then sucked, they left their glaffe there, promifing to fetch it anon and to fatisfie her: her husband meane while comming home and feeing fo strange a thing as a glasse, asked from whence it came, and why; being answered two lewes had left it there for milke for a medicine, bid her fleet Cowes milke and fill the glasse : which the lewes receiving, and having entertained a Boy, caused him to climbe vp one of the Ladders which there stand together with their three square gallowes made of stone, with woodden rafters croffe, and to poure it into the mouth of one of the dead men (which there alway hang after execution) his mouth, who presently cryed like a beast, as the boy reuealed, and they thereupon eryed they were cofined : a murren followed which should have been a plague. Manv lewes executed for it ; which yet the lewes faid to bee a pretence for their money. The 50 lewes that farmed the Custome at Samaiden in Carland, killed a Polonyh Merchant without punishment, beating out his braines for delaying to open his packe. Hee returned out of Poland into Pruffia to Torne, the first place obtained by the Kreuzberne, where they built a Castle about an Oake which standeth there still, but is dead. Thence along the Vifte (where the Poles haue their Masts, &c. with wares three miles together tyed downe the itreame) to Dantzike; thence into Pomerland farre more barren then Pruffia, to Caffubia, Cofslin, Colberg. Thence to Statim, every way exceeding pleafant and good. Thence to Roffock in Mackelberg. Thence to Labeck, a fairer Citie then Danske, so to Oldstoe, to Hamberg, to Brome, to Lamenberg, to Mansuels, to Bambere , and thence through Bohemia into Silesia, to Bresslaw, where hee went to schoole three yeeres : whence into Polonia againe, and thence to Pruff. Thence home into England.

Torne.

Hee went againe iuto Norway, to Nilm, Bafin, &c. It is a barren soyle, as being nothing but Rockes and Valleyes : the Rockes are couered with graffe, and the ground betweene they digge and fow with Corne, which yet is not able to fatisfie the Country. The difference betweene the

CHAP. 20, Sweden villenage, Loretto Ladies Legend, rich veftries, &c.

Gentlemen and Bore, is in his command, being otherwise, as raggedly apparrelled as hee, with twentie patches on his breech, and barefoot in winter.

In Sweden he was, at Stockbolm the chiefe Citie, These now vnder Duke Charles hold warre with their King, yet all things passing under hisname, but so having the Poles, that though of an- was there, other Nation, neither the long attire, neither their Gurb, or hooked Sword can paff. fafely among the Bores for suspinion of being Polon: and the rather because they were made beleeue that the Pole was ayded against them by the Tartars that were man-eaters. They are strong in hipping and had given the Dane the overthrow at the battle at Bornabolm, had he not beene affifted by the Lubeckers with money, &c. One also of whose Ships with a shot fired and blew we the Admirall of the Sweden. The Lubeckers therefore pay no custome to the Danes, and for their

cofts hold Borabolas till they be fatisfied out of the Reuene wes thereof. In Sweden (as in Friefland and other those Countries) the Lord holde th the other his Penants as Villaines and Slaues, and at his pleasure ships their Horses and Daughters to Renell, and there fells them; a bushell and halfe a Culmes of Sait for a woman, which yet is of person and complexion very comely , and very able to doe worke. He came againe to Leefland; and thence to

Finland, where hee was with an English Captaine in a Caffle : and thence into Limonia, and so in-

to Rullia, &c.

Beildes those his Easterne trauels, he hath bin in our neerer neighbor places, as in Belyia, France, trauells. Spaine, Portugall, Ge. and paffed to the West Indies by the Hands of Cape Verd : in three of which S. S. Ant on Vincent, Lucie, the Inhabitants cannot profper nor live long, faue in those llands which yet are vikind to other forrainers. He hath also brene in Guinea, in Barbary, in the Straits. at Caribage, where the old ruines remaine, and the stones of Marble, &c. worth the bringing home, in Italy, Slauonia, Morea, at Venice often, at Ferrara, Padua, Mat. Angelo, thence to Fermo, Lorana to Loretto (where he vilited the Ladie of Loretto) it is one fireet, walled about, the Temple faire. and in the Temple of our Ladies house, inscriptions innumerable of divers languages, affirming it to have fled the Turkes conquelts from Inry into Sciencesia, and from thence also hither. Here forfooth it was placed in a piece of ground belonging to two Brethren, which because of this new quest and request could not agree on the proprietie : and to auoyde further suite, in the night it was found remouued to a vac ant place by the high-way, and there this Temple built whither refort Pilgrimes in troopes, as to a Mart from divers Nations. The street on one side all Innes, on the other makers of Images, Beades, and such other holy bables heere fanctified by touch of Madonne.

The Temple is hanged about with Monuments of ther exploits, vpen vowes conceined in diffres of Warres, Difeafes, &c. heerehang the old Swords, &c. There are two Veffries of incredible wealth, and Priefts of divers Nations for their proper Pilgrimes. The House low and means builded with white Brickes, such as in Barbarie they burne in the Sun. There are two roomes, in one whereof the Chimney where thee dreffed het meate, and her difhes, &c. In the other her felfe, or statue with a Childe, aloft of blacke colour: to whom one whole office it is, on a staffe like a Musket-rest doth lift vp Beades, &c. by her touch to bee hallowed. The French Queene sent 40 her a Present to hang about her necke, which present would pull her in peeces by the weight. . It is round, two foot in diameter made like a Sunne, in the center a Carbuncle, the rest set with Diamonds, the rayes pointed with orient Pearles, the Brickes (miraculously) cannot bee remooued, to which end they report of a Bishops superstitious steale : who was not able to passe

Trauelling in divers places of Italy, Rome, &c. hee returned by the Alpes, from Venier to Mefire, thence to Trenife, to to Seranalle, a Towne of Blade-fmithes, which with Water-workes grinde and hammer their Mettals : thence vp the Alpes by a passage so marrow cut out of the Rocke, that sometime the Horse hoose hung ouer, it beeing a steepe mile high, a River running under. Thus to Bafill, thence backe to Tirol

After all these tranels in these parts of Europe better knowns, and those others in the more unknowns, 50 and in Africa and America, bee much affecting the Virginia businesses and especially that of Bermuda, went thither to order publishe affaires. And after all this (as you have heard) went in place of Cape Merchant to the East Inches, and being Captaine of the English House at Bantam, there and thence received to bit leng home. This I thought good to adde to the former relations, which I received many yeeres fuce from his same mount, beeing my loning and familiar friend, and for a general Traveller by Sea and Land, in hote and cold Countries of the old and new world, not easily matchable. Had bee lived, I would have better perfected thefe short Notes ; but Death it felfe bath not taken from mee his lone, shall not from the world his memory; I rather chasing to give the world these unpolished Notes, as his, then either to burie them with him, or by resining and illustrating to make them nine. The best illustra-60 tion feemes that of Mappes, some of which out of Hondius I have added.

and Warre.

The fields Sau-

thofe parts:

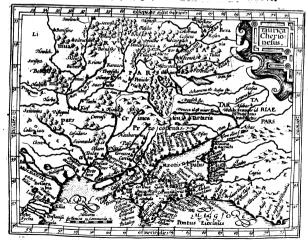

fand in the

rest of this

nea, where the organization sales given gure an array a sguint the externous of the Torters and Walacison. Down the River Torte or Hippenis, you may go almost to Occacon. In the way are the Rivers Triffener, Berfad, Offant, Samen (whence they are called the Fields of Sauran) a stone Bridge and Bathe sometimes belonging to Vitoldius, Great Duke of Luthnania, ruines and graues, Sinawod Riveret, the strong rockie Ile Probite, a good re-Duke of Lubinsania, rumes and graues, someon account of the land o many Ilands of Bogss to fish, armed with their Pieces) Certeles River the greater and the leffe. and that of Capeacles, and Hancocricus (the Tartars call it (bam) and the Lake Berezania, That Field is fiftie miles, or as they call it feuen dayes journey to a speedie traueller, from Braslaw to Oczacow. There are wilde Beafts, Bisonts, Elkes, Hories, Harts, Rammes with one horne. Goates, Swine, Beares : which ten yeeres fince were fayd to bee killed with the sharpnesse of the Winter, and huge heapes of their bones are found in the fields. They had also innumerable herds of Horses, Turkish and Tartarian; Kine and Sheepe which fedde there, by the borde-Sharpe winter, rers of Russia, Volsinia, Kinn, Podolia, and Moldania, not long since destroyed. The hills called Mogili, are tellimonies of Burials and Warres. The Field is fertile, rich of pasture and pleasure.

HONDIVS bis Map of TAYRICA CHERSONESVS.

Passing

Paffing ouer Prut or Hierat, a River of Moldania, you come to Stepanonetia or Iass. chiefe Towne of Valachia; or righter to Pritim Technia, a Towne and Fort of the Tirkes, not long fince Part of Mo'da. Towns of Valachia; or righter to Pritum I counta, a Towns and Fort of the Intres, not long fine uis or the low-tortified on the Neffer; and there are found some Moldanian passages in the Neffer, right into er Valachia.calthe champaines. It diffuleth it felfe into the Lake Pidous or Obidous (to called, as some fabulou- led tometimes lly conceine of Omidim) and soone after disembokes into the Eurine Sea, ouer against Bialogred Restaubia. (named by the antients Moncastrum) not long fince taken by the Turkes, from the Valachian or Like Viden in Moldanian Princes, & holden by them. In the very mouth of Tyras or Nefter, bearing name of Ne- Necter

phinfa on the left hand of the Rauer. After followeth Beriboneum with deepe and large ditches neere the Sea, washed by the Lake Beriboneum where fometimes was a good Port. Advigeli hath three Ditches, many falt Lakes nigh the Sea, Advigeli. where many Cozate relort and often kill each other in mutuall warres and quarrels, which Damina Etremakes at terrible to Trauellers. Then follow Domnina Delnia, and the Lake Berezania, and the Bay Caremum. Strabe placeth five hundred furlongs in the Sea, from the mouth of Tyras the Leuca

Hand Lenca facred to Achilles. Octaconia called antiently Olbia, Olbis, and Olbispolis, is feated on Boriffones or the Carcenite Octaconia. Bay : fometimes builded by the Meletions : the Tower is of Stone, the Towne but meane, is fub. ict to the Turkes. Borifthener or Neper, a deepe, wide and fwitt ftreame, runneth from the Borifthener or North into the Bay, and neere to Occasion into the Enxine. Four miles higher Bogm empties Bozas.

20 it felle into Boriftbenes. There the Turkes exact Cuftomes. The Istomus betwin Boriftbenes and The 18bmms. the Sea is a dayes journey, ouer fandie plaines, with Hills, Lakes, Salt-pits; with Decres, Beares, Goates, wilde Swine well stored. It is extended to Perceptia aboue thirtie miles in length, con- Theirhou'es taining Medowes, Rivers, and Tartarian Costages (which they call vinft) made of small pieces of and pasturewood, daubed with mud or myre and dung of beatts, and thatched with reed. The Tarters line progress. not in them in Summer and Autumne, but in April begin their progresse, with their wives, children, flaues, and houses which are round, couered with clothes, fearthy commodious for foure or free men, carried on two-wheeled carts, with one or two Camels or Oxen, together with their houshold. They carry with them Camels, Horses, Flockes, and Herds innumerable, leauing othere in commodious pastures. They goe towards Perecopia, and fometimes into Tamica, or Tanas or Don.

30 over against Perecopia, to Offen or Azaph, as the Turker call it, a Towne by the Don (Tanais, a great and swift River) sometimes fortified by the Greeker, and since by the Gemois; where the Turker now have a Garrison, and a Commander. They Hway travell into the Isthmu, or the large Plaines which are betwirt Borifthems, and the Lake Meetis, and the Pointing Sea, where they find best pastures. In October the raines, colds, and perpetuall windes force them to returne to their Cottages. For they are afraide of our Nizonian Cozels, which paffe downe the threame in Boats, and the Gunners, which then make incurfions on them. Never is frozen ouer in Winter. Prolemer calls that Ifthmus, Zenos Cherfonefus, and Strabo writes that the Roxans and Roxolans (whom we call Ruffians) pattured those Fields twixt Tanats and Berifibenes (describing their life like that of thefe later Tartars)

40 Perecopia (antiently called Enpateria, Pompeiopolis, Holy Grone, Achilles Race, Gracida, Hera- percona. clea) is feated in the confines of Taurica, or the Septian Cherfanefus, the Towne obscure and fmall, the Tower of itone, not well fortified; in which the Tartar Chans have their perpetuall Palatine or Beg, which keepeth the Marches and paffages of Borifibenes and Don, with all the borders, and is Generall Lieutenant over all the Tartars in the Playnes adioyning. Strabe writes that there was a deepe Ditch made, whence the Towne had, and fill in the Tartarian and Turkill language hath the name. When Sachinhgieres raigned there (hee overthrew the Nagar Tar. tars at Percepia with a memorable victory) there were fenenteene ftone Forts raifed in that Ditch, some of them of the Skuls of the flayne, and the ditch repayred. Heere the Tariars keepe continual Guard, permitting no Stranger thence to paffe without the Chans Letters. And there 50 in occasions of Warres is their principall affembling.

Collow is feuen miles distant on the right hand, on the shore, where the Char hath a perpetual Coffice. garrifon. Ingermenum is hence twelue miles or more: it hach a ftone Fort, a Temple, and Vanles Ingermanum. under the Cattle and ouer against it, with wonderfull Art cut in the stone, being situate in a great and high Mountaine; and therefore the Turkes gine it the name of the Vantes. It hath heene a wealthy Towne. Ouer against it the Promontorie trendeth some turkones broad, and three or foure miles long. There appeare evident figures in the flurie Mountaines, that the ancient Greekes thence cut huge ftones and carried them by Ships to boild Cherfona a Crite in those cheffara. times tamous, as the Grace Christians Still report. The Heraclians of Pomen fent thirlier a Colony. The Fort of Ingermenum was also built by the Greeker, as appeareth by Greeke Inscripcions

60 and Scutcheons therein : and thorow all the Isthmus to the walls were fun pruous buildings, and innumerable Wells digged. There were also two great High-wayes or Causies of flone. There were many good Vineyards and Gardens, now called Belbec, and possessed the Greeke Christians, or Italians, and lewes, and a few Turkes. Of the ruines the Turkes and Tartars make great Stalls and Enclotures for their beafts. This Cheronefus, Corfunum, or Cherfona the Turker called Sari

opiolomus as may feeme by Strabo, who there-awayes placeth Niconia on the right hand, and O- Bissorod.

Germenum, or Tellen Tower of the colour of that Tract; whereof admirable runes remaine to testifie the quendam iplendor. There are channells or conduits of hewen stone vinder ground foure miles to the Citie walls, still containing cleere water. From a place where is a Village of note, and not farre off, neere the Sea is a Greeke Monaftery of Saint George, with anniversarie denotion frequented of the Greekes remaining in Tasrica with great concourse. The Citie hath noe beene inhabited these many ages; the Walls and Towers sumptiously built are yet seene entire. been manufecturer many ages your vanish and services uniqueness of manufecturer of the Butthe Turk carry thence excellent Marbles and Serpentine Columnes and great flones by Sea, for the vie of their publike and printe buildings. Of the Temples the very mines are verify ruined, and the houles lye buried in that Monument and Selfe-lepulchre.

aned, and the houtes tye burses in that resonances and state appearance for and the ornaments. To spoyled. The Russian and Polonian Chronicles relate that Volodomir, great Duke of the Russian or Kisse, carried thence two doores of Corinthias Braffe, and some artificial Greeke Images which or Assa, carried thence two upones of commissions assaultants to the condition of personal pe rour : but after, marrying Anna the fifter of Emperour Basilina, and being baptized in that Ma. mastery after the Greeke Rites by a certayne Patriarch, hee restored it, as is still relaxed by the Christian remainders in those parts. Before the Citie was the Promontorie Parthenium with a Temple and Image of that Goddesse, and other Antiquities by Strabo related.

The Citie Be-

That which the Greekes called Iamboli, the Turkes have filled Balachei, as the Towre of filles. I are writen the createst causes among the arrest natural measures, as the series pipes, in regard of the plennie in that Sea. It was fortified in a high, great and flomis Mountayne by 26 the Genness, whiles the prood cowardly Greciens which held that part of Tauries quartelling amongst themselves, lost it to them. There they had a notable Port, a strong and sumptions Fortresse; and there the Towres, houses and walls with the Genneis Ensignes and Inscriptions, lye ruined. It is now inhabited of a few Greekes, lewes and Turkes, and frequented by fewer Merchants and strangers by Sea. Marcopia stretcheth further to the Mountaynes, and Woods, and is not so neere the Sea : it

Mongara Gity. hath had two Caffles, Greeke Temples and Houses sumptuous, with many cleere Rils running out of the stone : but eighteene yeeres after that the Turkes had taken it (as the Greeke Christians affirme) it was destroyed by a sudden and horrible fire. Neither hath any thing remayned of note but the higher Fort, in which is a goodly Gate, adorned with Greeke writing and store of 30 Marble, and a high house of stone. Into that house the Messengers of the Muscomites are by the barbarous Cheere sometimes thrust, and there endure hard keeping. There remaynes the Greeke Church of Saint Conflantine, and another meane one of Saint George. One Greeke Prieft and some Inves and Turkes dwell there; Oblinion and Ruine hath denoured the rest; nor are there men or Stories of the quandam Inhabitants, which I with great care and diligence enery-where fought in vaine. An old Prieft which I faw there, faid that a little before the Turkes befreged it. two Greeke Dukes of the Imperiall bloud of Constantinople or Trapezand, there refided, which were after carried aliue into Conflantinople, and by Selim the Turkifb Emperour staine. In the Greeke Churches on the walls are painted Imperiall Images and Habits. The Tower and Citie Marcopia is nigh to Cerceffigermenum a new Turbifb Fort taking name from Cerceffimm; but the 40 Turkes, and Turkers, and Greekes also have now lost the name. The Greeke Dukes are faid to have there committed much wickednesse. And in that stony Hill whereon it is seated, it hath houses cut with admirable Artifice in the Rocke, which still for the most part remayne entire, although the place be become wooddie. A Temple adorned with Marble and Serpentine Pillars, now laid profirate on the ground, teffifie the quandum glorie,

The Palaces or Houses of the Chans reach vnto the Mediterranean Taurica (as Strabo calsit.)

BACCA faren.

Cerceffinerme-

It hath a famous Towne, and a principall Store-house, called Baccasaray, wherein he perpetually resideth. That Towne is situated betweene two Mountaynes, and a little River flowes betweene, whereof the Towne is named. There is a stone Mosche, and the Chans Sepulchres built within the Townes Liberty of the Christians ruines, Not farre also from that Towne there is a Mahometan Monasterie, and very many Tartarian Graves curioully rayled out of the Grecian Se ruines. In the further end of that Towne, there is another Towne called Salaticum, adorned with faire buildings by the Turkes there inhabiting. The Royall Seate or Mansion of the Chans is sumptuously garnished by the ancient Tartarian Princes with Houses, Temples, Sepulchres, and exquisite Baths. When the Princes with their Wines, oft give themselves to ease, pastimes, pleasures, and recreation, they go thither. For that place or Region is commodious for huntings. it hath Orchards, Vineyards, Gardens, and many store of good grounds, and it is watered with Chrystaline streames. There are Mountaynes and store of Woods, wherein are seenevery many ruines of Houses, and large Forts and Cities , yet they remayne desert, and are of few or

Almaffaray at the meeting of the River Alma, is a house of the Kings , where he is woont 60 not often to refide, because he lives not there so commodiously, as in other places, and cannot lodge there with his Court : for there is only one base Village. There are some more obscure bordering Townes and Fortreffes, where they are woont to maintayne their Wives. Also not a few

Caffles where the Sultans, the Chans brothers, or their fonnes and wines perpetually dwell. That part of Charlem, which the Chan with his Tarters policife from Percepia, toward the Percepia Fenne or Lake to the Citic Crosson , is culcipated, plaine, champian, fettie, and pleinfull of Crosson graffe; but coward the Sea and the Palace of the Ches, and his Townes, Caffles, and Villages, the Country is Mountaynous, woodie, well husbanded, and very fruitfull. The Mountaynes in that Coast are huge and remarkable. But the greater is the highest of all, and hath in the top a Lake of notinall quantitie. And although I did not ascend it , yet it is well discerned many miles off, and demonstrates no ordinary height and greatnesse. Plentie of Rivers and no small ones runne from those Mountaynes. Also they have much fifth, but not of any greatnesse (for the River is shallow) yet very favourie and daintie. But because the Tartars doe not often feed on 10 fift, the Christians only and our ftrangers when they come thither take paines to catch them. There is also abundance of delicious Fowles , which sometimes Christian or Tarkil Gunners are woont to feeke after, feldome our itrangers. There is much game of Harts, Goates, Boares, and Hares neere the Sea under the Tarters and Turkes. Oftentimes also the Chan himselfe is wont to hant fome dayes there but more often he goes into the champion with Turkib and Tar-

tarian hunting Dogges. Sortaffus is a Tartarian Village adjoyning to the Chans Regall Mansion, wherein the Latton Suraffus oz and Musiconie Ambassadors doe often lodge; it is spacious and delightsome. But when Taurica or the Peninfula beganne fubiect to the Chans Dominion, divers Italian Gentlemen Gemeis after Capha was taken by the Tarkes, or Tartar Princes, having their Charters written and fealed of their right and proprietie (which I have feene among them) they held that Village with speciall Priviledges, or purchased it with that Gold which they carried with them out of their Countrey, or with their feruice to the Chans. In going Ambassador to Christian Princes, it was permitted them to build a Catholike Temple in that Village, wherein I fometimes entred while Labode there. There was in that Temple one Prieft a Franciscan Fryer , whom those Christians had then redeemed with their money from Turkib flauerie.

Cremmy or as the Tatare call it Crimmin, is a Citie and a Castle much volike in the antiquitie, cremme. magnitude, and height of the wall, am plenefie and renowme, to the other Cities of Taurica; It is vnlike the Mediarraneon (for so Prolomio cals it) perhaps this was called by Prolomio Taphres, but by Plinie Taphra, Now in these latter times before the comming of the Genees into Tames, Dut by Pinne Appres, Prow in their acters times because the community of the Charles. The Sandard and inhabited by a great Mahameten Nation, who remooused thicker out of Afra. For there are seens ancient Masser or Mahameten Temples not only in the Citie it selfe, but also beyond the Citie very many with Chaldador. Charlesters engraven in great flones. There are very few Turkilo or Turtar Inhabitants, yet the Greates are fewer, who report this, that their Ancestors have constantly delivered, that that Citie was whilome dwelt in by the Perfier Nation, and that it was a quonders noble and excellent Store-house of Mechanick Mysteries. A man may certainly conjecture by the ruines and largenesse of the place that it hath beene a famous Citie and a great Colonic of people. The Tarters are now vulgarly nomi- crim Tarters nated from that place Crims. They have a Mint in that Citie. In the Towre which is the grea- why so called 40 teft in the Citie, the Chars wives are alway kept and spend their lives.

Sidagios of the Greekes, but Sudacum of the Genoes, was called a Caftle and Citie. The Tartars Sidarias or Suare viterly ignorant of it. In aloftie rockie and spacious Mountaine standing neere the Sea in darum, the top of it, it hath a higher Towre, a second indifferent, and a third of baser esteeme. The Greekes or Italian Genees founded their Castles environed and fortified with Walls and Towres. There are seene innumerable Grecies Churches, and seeme but few, as though they were Chappels, not a few undemolished, but very many are ruinated, and lye ouerturned in the dust. The haughtie diffentious and idle Greeker being overthrowne and weakened by the Italian Genees, loft that Citie. There are seene no contemptible signes of the Genoes much more illustrious then those of the Greekes.

But it is evident by the ruines, that it was once a famous place, & fo it is reported by the Greek, 50 Christians, of whom there are a very few Relikes. Moreouer, many Christians have erected a multitude of Temples which they report to have beene some hundreds. There are three great Catholike Churches, Houses, Walls, Gates, and faire Towres with Arrace and Ensignes of the Genees, are seene in the lower Castle, I heard from a certayne Metropolitane a Greeke and an honest man, who then came thither from the Greeien Iles to visit their Priests , and entertayned mee, That when the most barbarous Nation of the Tarks had belieged that Civie with a great Armada, it was valiantly and manfully defended by the Genoes : but when the Genoes could no more hold out the daily siege and famine, neither could longer sustaine the violence of such a great Armie of Turtes, iome hundreds, or , as hee auouched, about a thousand stout-hearted men conveyed themselves into the greatest Church which yet abides entire, and some dayes hardly and couragiously preferring themselves in the lower Towre, into which the Turker forceably entred, hauing made a notorious and memorable flaughter of the Turkes, at the length they were all flaine in that Temple. The doores and windowes of that Temple being stopt vp with a wall by the

Turkes, the flaine bodies lye vinburied to this day. I was prohibited by the Saniak of Capha forme-

times a Time, that I should not enter into that Temple. The Custome of the Citie is not meaner it hath very fruitfull Vineyards and Orchards, which doe extend aboue two miles, now manuted by Caphaes, Turkes, Iewes, and Christians : For the best Wine of all Touries growes thereall that tract abounds with pleasant Rivers, which runne downe from the highest and middle Mountaynes and Woods, which are there very frequent.

Having now passed overthose vpper Cities, and at the last Sudace, also as farre as Theodolia which the Italian Genoes call Capba, the banke of Taurica in Longitude a thousand furlones. craggie, mountaynous, and tempessuous with North windes. Before the Citie the Promontorie that is there seene, doth hang out into the Sea on the South-side toward Paphlagonia, and the Citie Amastrum, and Strabo relates, that it is called of the Greekes, Orium and Oxon, the to Rammes forehead. And there is another Promontorie Carambis of the Paphlagonians opposite to it, whereby the Envine Sea is divided into the double Sea, and Envipue straightens them both. Strabe favth, that Carambis is diffant from the Citie of the Cherenefitay, two thousand fine hundred furlongs, but from the Rammes forehead, a farre leffer quantitie. Behind that hilly Countrey, as Strabo calls it, hee affirmes the Citie Theodofia to bee founded, and that it hath large Fields notable for fertilitie, and a Hauen able to receive a hundred Ships, and that that Limit Fichia notable for fertuite, and a flauer acre to feature a unique simps, and that that Lime was affigued to the territories of the Beftbernes and Tamete.

Capha or Theodofia, is the excellentedt and best defensed Citie of all Tameica. It was built by

Orism and

the Italian Genoes, and is placed by the Sea. It hath a Hauen alway frequented. It is perspicuous, that in the times of the Genoes, it was a wealthy and populous Citie. But after it was taken 20 from the Genoes by the Turkes aboue a hundred yeeres fince, the Italian Christians were brought into such a straight, that there are but a very few and obscure remaines of them left. The Citie hath in a manner loft her priftine iplendour. The Romish Churches of Christians are demolulaed. the Houses cast downe, the Walls and Towers, wherein are seene many tokens of honour of the Genoer and Latine inscriptions, are fallen. Onely two Cathelicte Temples and two Armenian remayne whole, in which it is granted them of the Twice, after their owne custome to maintaine their proper Priests, and to bee present at their publike deuotions. It is replenished with Tarket, Armenians, lewes, but very few Italian and Greeke Christian inhabitants : Now also it is famous ouer all that part of Taurica for Nauigation and the Hauen. It hath almost innumerable Vineyards, Orchards and Gardens. Men fayle often to Capba, from all the bordering and remote I. 30 lands of Greece, but oftner from the Citie Conflantimople; for with a prosperous winde they come thither by Ship, in the space of two dayes or little more.

Idolerere.

The Petigoren Prouince, or Colebis is inlarged, as farre as the Cafrian or Hircan Sea, and is much subject to Mountaines and very large Woods, which are now seene in these Confines. It is a very free people, and hath many brave Commanders, to whom all the Nations and Families obey. Moreover they professe themselves Christians, and it is manifest in the time of the Genes very many of them were Christians, but now wanting Priests and Churches, they onely retayne the opinion of Religion. Most and the greatest part of them are Idolaters, amongst themselues rapacious and cruell, but to Strangers hospitall and free-hearted. The Parents, although they bee of the more Noble or of the Ruftickes, fell their owne Children, their Sonnes 40 for Slaues, their Daughters for Wives to the Turkes and Tartars, also to many Christians, and those which they are wont to steale secretly among themselves, they fell closely beyond the Sea to barbarous strangers after a more then barbarous manner.

Betweene Perecopia, Cremum, and Customa, are Townes on the North. Taurica or the Peninsula is exceeding plaine, not very hilly, and altogether champaine. It hath a very fertile foyle, in great part flonie, but great scarcitie of good water. Yet there are found in divers places very many extraordinarie deepe Fountaynes or Wells of a wonderfull profunditie and difficultie, in times patt digged and made by the elder Greekes, or those great and antique Nations, who inhabited the Peninfula before the Greekes.

Sak Lake

From Perecopia the space of a mile, there is a great Lake congealed naturally of admirable Salt, 50 from whence the purest and best Salt is continually gathered, as if it were frozen; it hath many other Salt lakes. In certayne commodious and in very many places, in Mountaynes and Groues are found in great number, ancient huge Grecies ruines of Castles, Cities, Temples and Monasteries, which while they have many ages beene destitute of inhabitants, by reason of their antiquitie, have loft their names. All Tauries or that Poninfuls, from the West and North is plaine and champaine, and hath few Townes, many Villages; extends in length the fumme of fiftie miles. But from the South and East, it is mountay nous and wooddie, and hath every where maruellous high, large, flony Mountaynes. In which, betweene Cremum and Capha, it is reported that veynes of Gold and Silver, and the best Iron, were whilem found by the Inhabitants. It hath a very fruitfull ground, Floods, delightsome Rivers, Fishes, Meadowes, Pastures, abundance 60 of wilde Beafts, Harts, Goates, Boares, Beares, Vineyards, Orchards, Territories, Champaines, Townes, Villages, Hamlets, many and large Granges. Taurica or the Peninfula, is i pread in Latitudeafter a fort into a circle; in some places, the distance of one or two dayes journey, but in most places about the quantitie of one.

C. H. A.P. 21. Taurica feafons, foyle bounds, originall Princes.

The Cattles and Sea-cities, and the rest of all the Peninfuls, which are described in their order, with many Villages and Hamlets of Greeke Christians, except the Holds and Sca-townes. and many leffe suspected walled Townes in Perecopia and Casslonia, and a few Villages of Greeke Christians, are subject to the Turkish Emperour, and all obey his behests, and are kept with a fure Garrison. The Peninfula, which lyes in the middle from the East and South against Perecopie, hath a milde winter and temperate ayre. For in the end of December is the beginning of winter, but in the midft of Februarie the sharpeneffe of winter, which is more snowie then coldor fubicet to Ice, neither yet doth that endure about three dayes together, neither continues it any longer then to the beginning of March. Therefore about the beginning of the Spring, and al-In way in a hot Autumne the ayre is very contagious.

In Bratislania, the Sauranen, Oczacomien, and Bialodogroden, Plaines are situate betweene Hipanis or Bagus, Tyra or Nefter. From the North toward Neper or Borifbener and Bogas, are somewhat plaine and champion grounds, but from the West towardes the Riner Nester and Pruth or Hierafus, more wooddie and hilly. Podolia, Camenecia, and Moldania betweene the freames Nefter and Prath, every where border on the middle Tachnia and Bialos gred, which is by the Lake Usdono or Obidono, and the Eurine Sea, on the West confine on the Plaines, and on the Euxine Sea, on the South Bralogrod, Kibia, and the River Danubins. Oczacowis hath on the North Borifthenes, (into which Bogus there dischargeth it felte) and featious Plaines, on the South the Ename Sea, and the overflowing Salt meere Berezania, from the Weilt

the adioyning River Nester. Further, that Continent which is betweene Occaconia and Boristheres in the fallion of an Ile, hath into the West Boristones, as though it were betweene Boristones, the Fen Meette and the Enxine Sea : on the North the Rouers Tanais or Donum, on the South the Enxine Sea, and that Illbonus or Continent, but beyond Oczaconia and Borifthenes, as far as Perecopia, that Continent is verie narrow in many places ; but beyond Perecopia to the Caftle Offonum, a ranke foyle, and all champion and plaine : For in that neck of Land almost all the Perecopian and Offemen Tartars feed their Hockes and Cattle, and line there all Summer and Autumne. That Continent or Ifthmus from Oczacouia, as farre as Offonum, for there it is limitted, is firetched out in Longitude, as is manifest out of the Tartars Diaries more then a hundred miles, but in Latitude 30 not after an equall manner. For it is larger, as well beyond Perecopia, as toward Oczacouia, or

The Taurican or Cherfone fen Tartars, who are now called Perecopen or Crims, doe certainely feeme by the ancient Writers of the Schythians to have been the landgenfes, and to have had their original and appellation from Rba, or the River Folga. Moreover between the famous, deepe, and great Rivers of the North Tanais, or Don and Boristbenes, it manifelly appeare that they passed by little and little into the Plaines, and a hundred and fixtie yeeres fince, or very little more to have come into Taurica or the Peninfula.

The stocke of the Chans, or of their Tartar Princes was anciently called Cyngis race, from Cyngis. whom was Locbtonus a certaine Chan, of whom all the Chans take their originall. Hee was the Locbton,

40 first Emperour of Taurica or Chersonessus in Taurica, or the Peninsula. They have procreated the Sirinen, Bachinien, Manguten, and other Kinazy or Dukes, from whom are the Caiacei, who are the Chans Counfellours and chiefe Officers, who also marry the Chans daughters and fifters. The Vlani, which are anciently descended of the Chans bloud, and (if the lawfull posteritie faile) fucceed in the Regall Throne. It is very true that the Mursies are the noblest of each , now also their posteritie remaine & other warlike Tartars; of whom it is certaine he had divers Hords, of some ten thousand a piece in his company passed into Taurica, or the Peninsula with him.

The Chans predeceffors fincerely and constantly much esteemed the Grecian Chiefetaines, who inhabited at Mancopia, and Ingermene, and the Italian Genoes, who dwelt at Iambold and Capia, as also the other people they found in the Peninsula, with whom they had friendship, peace, and league, vntill they were ouercome by the Turkes, and confumed in warre: they had also many

yeeres common mony which I have feene there.

But Selim, Emperour of the Turkes, compelled and subjugated Mechmet Gererius Chan to his Selim. Empire. Those Nations being weakned, almost all the Castles and Cities of the Martime Penin- Gery Chan. fuls, being taken and possessed : Sachmates the Prince of the landgan Tartars put him to flight, with a singular and memorable slaughter having destroyed his Armie of a hundred thousand, Sachmates, Since which time the Chans acknowledge, as chiefe, the Empire of the Turkes. The Viceroyes, or Princes of the Tartars of Taurica, or the Peninfula are conflittuted by them, they receiue thence a Banner, and giue their fonnes and brothers Soldans for perpetuall pledges to

60 Notwithstanding, after the ancient custome of their Nation, they make a Galga or successor The Galbator to the Empire (as the French doe their Dolphines) the brother or eldeft sonne and more sufficient, heyre appawho hath the greatest sway in peace and warre, but the Chans themselves perpetually depute and rant. elect them, but with the approbation of the Tartar Nobles. And if also any diffention or war be raifed betweene the Soldans or the Chan about the Empire, the Turkifb Emperour neglects not to

diffratch the Soldans pledge, with an Armie and Standard into Tanrica or the Peninfula: and it is sufficient for him to be Prince, the Chan and Sultan being appealed or forced to goe away by warre, for which cause he hath alwaies many Innizaries in Tanrica, or the Peninsula.

Election of the The election of the Chars, after the ancient custome of the Nation, did whilelome confist in the free fuffrages of the Dukes, Murfies, and nobleft Tartars. Furthermore, for their frequent difcord and hidious warres which were occasioned by the Nogain Tartars bordering on Tawica, or Sachibeiereim. the Peninfula about the Empire, Sachibeiereim and Dealeingereins, being Chansouer the Tartare. hauing by lubtilty destroyed the more noble and potent Tariars, and cast them into fetters, began absolutely to domineere over the Tartars; and by force to draw the election to their posteritie, the Emperour of the Turkes ayding them.

But if the Chan will not conflitute his brother Galga, but his owne sonne, as it often fortunes, by reason of those discords and reciprocall butcheries among themselves hee circumuents craftily and fubtilly all the Soldans brothers, and couertly makes them away. Yet most of them five to the Twice, of whom they are bountifully entertained and comforted and

receive a perpetuall stipend of him.

The Soldans younger formes of the Chans are educated and tutered by the Tartars, or more noble Murfies , left that when they are at mans effate , by reason of their pluralitie, diffentions, or warres might arife : for each Chan acknowledge a supreme Dominion, and when they are growne vp, those that are fit are fet ouer certaine Tartar troupes, and allure many voluntary Tartars vnto them, notwithstanding they make leaders of the Nogaien Tar- 20 tars, and remunerate with monyes and horses most of their parents, whom they esteeme more speciall and substantial). Very often also through feare of treacheries or seditions among themfelues, being ayded by their Gardians fauour, they flye vinto the Christian or bordering Princes of their people.

Attalicia

Hamiati,

The Chan hath Attalike Councellours, whom they fo terms from the care of their women, parents, or their wives, by whom those Sultans also are continually from their youth educated and promided for : hee hath Hamiatts, who are the Agents for exotick Princes affaires with him, and also perpetuall Court Officers. But especially hee conuocates to him the Dukes, Coracei, Vlani, and the nobler Mursi, and alwayes vieth to confult with them in weightie affaires. Hee hath principall and meet men Ministers of his Court, whose service hee vseth in his Ambassages, and in his divers other necessary businesses and imployments, who also are exalted to Counsellours and Court Officers. He alwayes maintaines those who are chosen out of the more renowned and illustrious Tartarian youth, who are conversant in his Court by moneths interchangeably, and when they are made fit, are honoured with those dignities. Yet hee is chiefly and most delighted with the Cercefins, Nogaiens and Petegorens, who are very industrious, valiant, bold, and warlike. On the principall hee bellowes honourable gifts and annuall penfions, and of these his Court is alwayes replenished. In the Princes Court, the better reputed and nobler Tartars, are very richly and civilly decked, not to pride or superfluous luxurie, but for necessitie and decencie, For they are so inriched by the lazie cowardife, and especially by the irreligious impiety of the neighbouring Christians, through making often inrodes, and getting rich booties, that the greater nobler of them in private wealth and domeftick splendor, are little inferiour to the Tiokes. They 40 may have as many women by the Mahometicall Law as they will, and for the most part, they buy wines of the Petigorens, which although they fuffaine and maintaine, not proudly, but very comely and civilly according to the countrey guife, but those by whom they have iffue very ho-Arabiteletters nourably and gorgeously. They deliver their formes in their infancie to be instructed in the Arabike Letters, but they keepe not their daughtersat home, but commit them to the neerestin bloud to be prouided for. They place their fonnes growne to mans age in the Chans or Sulians

or Turkes. Those Tartars are Mahometans, and have Priests and Mosches, they vie the Chaldack or Arabike Letters, which they have received form what corrupted from the Tinks, although before they 50 came into Taurica or the Peninfula, they feeme to have beene a fauage and brutish Nation, and of very lauge conditions, which now also is very perspicuous by the rusticks : for they wanted then altogether those Lawes, Rites, Letters, and Manners. But the Tartars being taught by

Mahametan Religion.

Gouernment and Lawes. The Cadi and Begs.

they plead their owne

the Tarks humanitie, and that falle worlhip, the more nobler now generally practife hospitality. Law or Iustice, is administred in the Towns or Cities of the Chan & other Sultans among the Tartars after the Mahometane Law. There are alwayes presbiterall Cadi or Judges in the Villages. Begi or Inflices, who heare and decide particular injuries but causes of life, bloud, theft, which we call Criminall, or of Land, which we call Civill or Officiall; the Chan himfelte decideth with his No Atturnies Counsellours. In resoluting of which they need no Lawyer, nor vie tricks of law, calumnies, exnor Lawyers: culations nor procrast mations. The Tarters or Strangers, of meane condition, lay open them- 60 selves very freely their wrongs before the Judges and Chan, of whom they are alwayes heard and speedily discharged, for at any time any may have accesse to him. When hee comes in publike, men of the baself degree are not excluded, but being seene of the Chan are examined, to wit,

feruice, their mariageable daughters in wedlock to the more honourable and nobler Tartars

if they have any fuit, that they relate it. For they doe not onely performe great obedience to the Lawes : they adore and venerate their Princes in Gods fleed. All spiritual Iudges (after Mahomets Law) are accounted among them for Saints, men of all equitie and integritie. fideline and opinion. The Princes and Magistrates execute and dispatch whatsoeuer is bidden or com- Greet peacemanded suddenly and faithfully, with alacritie, promptnesse, and great feare. They are far from abknesse to controueries, oriminations, iuftices, vnnecessary and personall brawlings, enuy, hatred, filthy ex. the shame of ceffe, luxury, and ambition in their victualls and array. I abode their nine moneths, neither Goffellers, heard I Criminall or Ciuill Act to have happened among them, or any composition by reason

of enmitte.

In the Princes Court they weare not, nor at home Swords, neither Bowes nor any other No daily reweapon; except Wayfarers and Trauellers, to whom they are very courteous and friend- of weapons, le. They are alwayes secure from Spoylers; but except they keepe perpetuall watch, they are leffe tate from High-way-theeues, and Night-robbers, who fteale nothing from them but

their Horses. Although they have a rich foyle, yet very few Gentlemen, or Plebeians provide for the houshold effate, for many neither till nor fow their ground : they abound with Horses . Camels. Oxeng Kine, Sheepe and Flockes of all Cattle, and thereof line. Yet the Gentlemen have bread fielh, meate, diftilled * wine and Metheglin ; but the rufticks want bread, but vie stampe Millet, * Agnaute. and macerated with milke and water, which they vulgarly call Caffa, for meate (and for drinke Meatand 20 they vie Mares milke) and cheefe. They feed on Camels, Horfes, and Oxen vnprofitable for drinke.

burthen, and kill them when they are about to dye, fometimes eate sheeps flesh. The Gentlemen dwell not in the Plaines, but in the Villages of Taurica or the Pennfula. They which are neere Woods live in them, although many doe not possesse proper Villages; yet they have pecu-Jiar Lands and Manors. They vie the Vigarian, Ruffian, Moschonian, Valachian, or Moldanian Slaves flaues, which they keepe, and whereof they have great plentie, as beafts to every worke. Their houses are of Timber, much after the Turkish fashion : but the Greeke Christians, who are in a few Townes, labour and till their grounds as beafts. The Tartars serue the Chan or Tartarian Nobles. being hired at no price, but onely that they may have meate and apparell : but the reft, and the greatest part of them are alwayes idle. In the Cities or Townes are very few Merchants : but 30 fome few practife Mechanick crafts , and fome Merchants or Artificers are found there , either Merchants

Christian Slaves or Turkes, Armenians, Iewes, Cercessians, Petigorens, (which are Christians) Phylistins, or (ingans, men of obscure and lowest degree. Those Tartars, which live in the Plaines beyond Perecopia, or in the Peninfula have no woods, every where digge Wells. They vie in flead of Wood Beatts dung, which their Bond-mengather in the Fields, and dry in the Sunne and houfes of the same forme, whereof mention is made in the former description. Those Tartars, which are Slaves and Subjects of the Chans, Sultans, and other Noble-men, are drudges, and alwayes Taria flaves. keepe and paffure their Lords innumerable Herds of Cattle; and although they goe from place to place, into the Plaines and Pattures, in feuerall Streets, Hamlets, Townes, or Villages, by separated troupes (or hords) whereof they beare the Names, and of their Masters, so that men

40 may eafily find there, those Tartars Slaves which they seeke to buy. The Char hath alwayes by the leagues and agreements, an annuall Donative of the King of Tribute. Polonia, the great Dukedome of Lituania, the Palatine of Moldania, and Cercafian, and Nogaien Embaffidors. Tartars. The Legats, Orators, Meffengers, Truchmen of those Princes come to him yeerely. whom fometimes he entertaines benignely and bountifully, but fometimes receives, mifules, and detaynes a great while after a more then brutish manner. When therefore they come into Perecopie, one of the Chans men meets them in the Summer, in the Medow or Plaine, where they rest under a Tent : in the Winter they are opportunely and commodiously concayed into the Village of Alma, or Bacchafanium more fafely bordering on the Towne of the Kings Palace, But Alma. after they are lodged there, they are faluted by the Counfellours or Servants of the Court in the

50 (bans name, which procure them refreshing or victuals, two oxen, or one, some sheep, bread, wine, and barley, not liberally, but in a kind of hospitalitie, and moderately sufficient for once. But when they are called to the Chan, hee heares them, the Soldans, Tuians, Vlans, Marzies, chiefe Counsellours, and many other Ministers of his Court and principall Tartars being present, they are conducted onely by one man to the Chans gate, but are brought in by two Counsellours. When as therefore they are entred in, they reuerence the Chan, after the ancient custome of the Nation, and having faluted him on bended knees declare their meffige, and are admitted to eate with him. They are honoured with cups and goblets gilded and embofied with gems, filled with Mead or Methegline reached from the Chans hand, after the order of that people, in figne of clemencie and beneuolence, which they drinke on bended knees. And when they are dispatched. 60 the Chan inuites them againe to a Feast. The Feast being ended, they goe backe a little from the Palace doores, and are rewarded with Silke Vests wouen with Gold as low as the anches, prepared after the guile of the Nation, with one Horse or two, not seldome with Captines of their

owne people. And fo attired with those Vests they return again to the Cher. and render

thankes to him for his hospitalitie and liberalitie, and having saluted him, depart from the Ban-

ket. Sometimes a small prouision is procured for them by one of the Chans men in his Domis nions when he takes his journey, and he is conjuged by him as farre as Boriffhenes.

The Turkilb Emperours have made that authoritie conftant to the Chan, in Taurica, or the Easta of Carba, Peninsula, to that when the Bassa of Capba, or the Sansak dye, he rules all the Signiories in the Pea ninfula, vntill the Turke hath lent thither another Saniak, or whom he will preferre ouer Cabba. The Chan hath a common Custome-house with the Turke, at Percepia, Cassonia, Capha, 2ndother Cities of Tauries, or the Peninfula, which are of the Turkelb Empire. Hee demands annually a contribution of the Tartars, Armenians, lewes, Gercasians, Petigorens, and Grecian Christians, of whom he hath very few in his Dominion; the Turkes are only excepted : euery day are paid for a perpetuall stipend out of the Turkes Exchequer twentie fine Dollers to the Cher, twelue 10 a perpetualitipena out or the America Landaugue variation and bases to the Loran, twelve Dollers and a halfe to the Gaiga, to the Scham pledge two and a halfe, and to the same Hostage, Villages, and ample Farmes neere Advisionals, called Lambola, are given by the Tarke. To the Dukes, Caiaks, Vlans, and Murzies, and many others which take pay, are given conftant wages according to each of their estates. Notwithstanding the Chan alwayes payes curry yeers to the Turkel Emperour Captines taken in warre of both fexes, the most excellent and precious Furs, and allo baser. Butter and Salt, wherewith Taurica or the Poninfula abounds. And into whatso ener warre he shall bee sent or called, he may refuse; neither may hee wage warre with any, but the Duke of Moscho, without the Emperour of the Tinkes leaue or knowledge. The Chan exacts annuall pecuniarie Rents from the better fort of Captines taken in warre, three pieces of Gold; of the raskalitie one Doller, and a tenth of them; but from each of the Fountaines, which 20

Warres.

Money.

are many in his Dominions, in the Plaines of Taurica, or the Peninsula, one Horse of the Tartara but any necessitie enforcing the Chan, all the Tartars decree a certaine contribution to him. The Tartars Nobles, alwayes at home, and in warre also, yeeld him sustenance of divers forts; for hee neither tills nor fowes. Hee hath alwayes proper Herds of Horfes , Camels, Oxen, and infinite Flockes of Sheepe. Hee hath a peculiar money of base Copper, which is coyned in Crimum, a Towne of his Dominion , round money, whereof tenne are efteemed at a Tarkif Silver Afper. which makes one Polonian Groat or leffe. But I being present, there were flamped greater Copper money filuered ouer, which was valued at fine Afpers. In coyning it he hath a great and plentifull gaine; for in three or foure yeeres, of the fame money, which is carried by all the Tarter or Strangers into the Mint, new invented money is alway stamped. For in all Taurica, or the Pe- 30 nunfala, it is lawfull for none (Tartar or stranger) even in the Cities of the Tarkes Dominion, vnder a capitoll punishment and confiscation of goods, of what estate soener hee bee, to exchange Turkib pieces of Gold, or the Doller of Strangers, or the Turkes Silver Afper into Turtar coyne of the other value. Neither is it lawfull to buy with Gold or Silver coyne, but Tartarian, which all strangers (none excepted) perpetually receive by the Chans Edict.

Provision for

When the Chan is about to go to any war, he first fignifies to all the Tartars of his Dominions by the Seruitors of his Court, and commands them that they prepare themselves for war, within three (or at the most) in foure weekes, and that they provide for themselves victualls for three or foure moneths. That fustenance is carried in Leather-bags, and those Bags among the Gentlemen are carried on Horles. And they carrie with them food of Millet parched in the fire, or 40 flamped, or ground; for they have Mills, and thereof fleeped in water, the most make meate or drinke. They carry Cheefe and Flesh, and Mares-flesh dried in the Suntthey cut them in pieces boyled or drie, and taking out the bones put them in Sackes. They line with Mares-milke and Cheefe, and fowre milke, which they tempering with a certaine Art, hold an excellent food, The Chan hath only one Chariot with him for any danger of ficknesse; also a few Camels, whereon is carried for his owne person Aquanita, or some other prouision wherewith he is easily satisfied. But the Tartars severally set meat before him and his Courtiers, the gentlemen (yet very few of them) not feldome carry a little drie bread, and a little Aquanita on Camels, or in lighter Carts. But after the Chan hath determined any warlike Expedition, he prepares very speedily some

Art of warre.

exercifed men in an indifferent number, and choofeth them fometimes Tartars, but more fre- 50 quently Cercefians, Petigorens, and those which are accounted spies of Regions and Prouinces of other Princes, and expert Way-leaders, they verie well know each particular passage of Places and Borders, and Fords of Rivers. And when they come into the Marches, they goe into the neere confining circuits, and each in fundrie places view all things, and diligently feeke for Captines, which when they have intercepted, they returne with them speedily to the Chan, of whom vling interrogatories, the Chan quickly is acquainted with the estate of those Prouinces where his skouts have beene. Forthwith therefore hee assignes the day of progresfion to the Tartars, wherein hee stirres alone, and premifeth speedily some servants of his Court, through all that Hord or Prouince. They constraine and inforce to goe to warre and follow the Chan all Tartars and Christians of his government, men and youth, if they can but lit on horses (be- 60 fides impotent old men and children) who although they want Armes and Horses, yet are accommodated by the welthier in hope of spoyle. But in eight, or at the vemost in tendayes after the Chans departure, al of them follow him into certain new defined places, which are beyond Perece-I'm toward Boristbenes, the Galga, Soltans, Dukes, Murzies, & the most approved valiant and chiefe

Warriours and Souldiers, being gathered and convocated together: and they being called to his Councell, first the later Caprines and prinie Searchers alto are examined, at length they fuddenly confult of the feaforableneile of time, places, occasion of well ordering the matter, and whether the warre be then commodiously to be profecuted. And mutuall confent and counfell being made and determined; yet none of these things is consusedly disulged to the multitude.

From the same place therefore the Ministersof the Court of the Chan, Galga, and Soltans on ing before the companies of the Dukes, Marzons and other Tartarian Nobles (which they lead and rule according to the ancient claime of their kindred, and call them by various appellations in their Language) the Chan moues the Armie under the Enfignes, following in a meane order To after the ancient custome of the Nation: but after they have fet foot in their enemies Land, againe he sends before a certaine number of the most experienced and skilfullest Espials. They goe before the Atmie, and fen I backe to the (bar whattoeuer Countreymen or others they shall take and meet with; from whom hee may bee certified of the condition and armie of the enemies. But when the Chan is certainly informed that no armie of enemies comes out against him. he againe makes a Campe-councell with his Nobles and Peeres, how farre and wide he ought to endamige his enemies Dominions. Then at length he goeth flowly forward in a perfect order with all his Hoaft, and commands upon penaltie of their heads to kill all the obuious Ruftickes , left 22 after they should be taken by the Tariars, they should peraduenture make an escape, and certifie his enemies of his bands to the hurt of his men. Moreouer, they kill not women nor children, nor lay hold on them, nor dare lay hands of any of the prey, lett his armie should be furcharged

with it, and cause some stay in his proceeding. But when the Chan comes with his armie to the Cassles, Townes, Villages, Hamlets and manured places, he elects ten, or at the most fifteene thousand Souldiers with their Dukes . Marzons, and chiefe of his Court, and most notable, best tryed, and principali men of Armes of all his Hoaft, and leaves them in his owne jurisdiction in his standing Campes, or in the siege of fome Fortresse; then he makes ready the Galga, other Solians, Dukes, Marzons, and the rest of the Armie, which then is mustred some thousands. And that Armie being spread abroad in divers bands, ouer each of which the best esteemed and ablest men are made Captaynes, is extended in longitude more then ten miles, and in latitude as much. And as they affemble among them-30 felues at the farthest in feuen or eight dayes, but at the soonest in three or foure running about in troupes through divers places, and leading straying preyes, and washing with fire and Sword whatfoeuer they meet with, returne to the Campe : but if they come not backe at the prefixed day to the fortified Campe, they waite not for them, but all the Armie with wonderfull celeri-

the moue in their arrayes, out of the flanding Campe.

And when as then also the Chan is truly lignified that no Armie pursues him, he provides for places not medled with by his troupes, an Armie of some thousands of selected Horsemen, and as yet vowcaried. He employes as many more also in ambushes in divers places neere the Townes and Caffles obuious to the Tarters, left that Armie might without delay fall into the lying in waite on any of their companies. But if he bee certified by his Scouts of any numerous hoaft of 40 Enemies, he neuer commits the matter to an univerful fight, but goes forward flowly and cau-telously with his bands; but if the Chas be certainly assured that the Troups of his Adversaries are many and valiant, he retires a little, and feekes for the better husbanded and peaceabler places, and with wonderfull agilitie in his precipitious flight, spoyles them with fire and sword, and intends to returne home with the bootie that hee had hastily driven away. But if then hee hopes his enemies cannot ouertake him, he marcheth with his Armie, yet not too fecurely, almost in the order to his confines.

But affoone as the Chan is entred into his Borders, he takes the tenth of the principall Cap. The Chan tiues throughout all the Armie, But the Captaynes of companies, and they which have brought tenth. a greater number of captines, cull out of each Band the principall for themselves. The other Tartars of the promiscuous multitude divide the Prisoners among their troupes. Notwithstan-50 ding before they come to that partition, they first satisfie all those which running about by Bands haue loft Horses, Garments, or any thing else. They sell to the Tartars both Noble and

Ignoble captines, if they shall appoint no price whereby they may free themselves, because the Chambeing vitjated with the Merchants giftshath feta great value on them. The condition of captives is very miterable among the Tartars, for they are grieuously op- Milery of

preffed by them with hunger and nakednesse, and the Husbandmen with stripes, so that they rather delire to dye then to line. Many of them moned with the present calamitie, and follie, tell the Tartars that they are Gentlemen, and have wealthy and tich parents and friends. They promife of their owne accord a great and almost inestimable ransome, which the barbarous, im-60 pious, couetous, hungry, and cruell Nation feekes almost daily to increase with all kind of subtilcies and Examinations, tyes them in fetters, vieth them therefore more hardly. But when they understand that an Agent of their people is come to the Chan, they meete him with their captines, of whom sometimes they require the price fallly nominated by themselues, or some-

LIB.III.

Manner of redemption.

times promifed by the Prifoners: but the Agent who wel knowes the craft and deceitfulnesse of the Tartars, finds fault with the captines foolifhnesse, and tell the Tartars that they are neither noble nor rich, and that they knew not, nor will euer be able to pay the price, and as though they were neither moued with Pietie nor Religion r. ject them. Yet the Agent is diligent that they be inscribed in the Catalogue, and if they have a purpose to ransome any with their own mony, they hold it expedient to luborne leves or Tarters, and other Merchants being corrupted with mony : by whom, being as it were neglected and rejected by the Agent, they are releated at a far easier rate, Nothing therefore is more frequent to the captines, then to promise and offer to the Testary this price, for which they are fold to the Turker, lewer, and stranger Merchants, and others beyond the Sea , or a little more , or twice fo much , if they bee able to per- Ie forme it: but if they cannot learne of the Ruflickes or others what they are, as the Tertary are for the most part , went often to enquire of their captines, they are content with little. Neither doe they fell them to ftrangers, but rather to the Agent of their Nation : but if they are not redeemed by the Agent, they command them to write to their Parents or Kinffolke. Also many captines are delinered with the exchange of Tariar captines, in prouiding for and freeing of whom , the Tarters exhibite and thew farre greater pietie , friendlineffe and care, then our Christians. For difrepecting all price, they first demand their Tarter captines in exchange of ours, which often promifing the same and not able to performe it. vie to bring upon themselues a farre greater discommoditie. For they aske of them almost an vnualuable fumme, wherewith they prize their Tartars, which when they are not able to pay, 20 they fell them to barbarous Nations over the Sea for perpetuall flaves, for as great a price as they can, and very often at an excessive rate, or if the Tariars are wealthy, they condemne them to

The Chan hath all his Tartar Armie gathered of Horsemen, except some hundred Gunners Imizaries, Footmen, which are either Turkif Auxiliaries, or some of his owne which he maintaynes. He is accustomed to carrie with him fome smaller Ordnance to warre. From Taurica or the Peninsula the Perecopens, and Crims, Offoniens, Nogariens, Cercessians, are Tributaries and Souldiers for aide, the Duke of the Cerceffians, Perigorens are Stipendaries and Mercenaries, and are wont to goe voluntaries to the Chans warres. The Oczaconiens and Bialogradeus, also they who by the continuall couenants which they have with the Twiff Emperour, fometimes allo 30 the Dobrusen Tartars and Inhabitants of Dannbins, by the command of the Emperour of the Turkes follow him to warre. All that Hoaft collected out of those Turturs, is wont to make the number of a hundred and twentie thousand, sometimes also thirtie thousand more, but not seldome to exceed that Summe. I have bin truly informed by many credible Christians, which often follow the Chans warres, and by some captined Gentlemen of our Nation, who have many times feene his Armie.

All baue according to their vie Tartarian Horses, neat, excellent, stomackfull, swift, and indifferent good and commodious to vndergoe great labours. The Chan, most of the Solians, and Tartar Nobles vie in Warre Turkish; Caramanian, Arabian, and other Asian, Tartarian, and the best Out-landish Horses. The swiftest Horses are accounted among them at a great and almost ine- 40 stimable price. They alwayes feed them Summer and Winter in the Plaines of Taurica or the Peninfula, but very often as farre as the Rivers Borifibenes and Tanais: the Gentlemen nourish at home very few Hories, only for their vigent occasions, not for any arrogancie or luxurie. They seldome put their lades and unprofitable Horses for riding in the Waggon, for they doe all their bufineffe with Camels and Oxen.

Their Armes.

The Tartars vie their ancient weapons, a two-edged Sword, or Tartarian Cymiter somewhat long, and a Tarkif Dart, or a Persian, shorter and broader of the best Iron, and well wrought; a peculiar Tartarian Bow, along Arrow, and fwift, a Quiuer, sometimes a short Speare after the old guize of their people. They goe with Brest-plates and Helmets, and in Persian or Mosconian Armes, wherewith they abound being enriched by the spoyle of Christians. They 50 have ancient Saddles and Bridles after the custome of the Nation, very fitting, not for pride or superfluitie : the Nobles have them prepared very elegantly, strongly and compendiously for their vie. But most in the Tartar Armie are altogether vnarmed and cowards, and they carrie with them to warre by reason of their great Hoast, almost an infinite number of Horses. For a Store of Hor - Tartar even of the basest condition will scarcely be content with one or two Horses, but three, foure, and more, which he may have alwayes readie with him at his hand. Therefore the Armie of the Tartars is made fo numerous, great and terrible, which when it is seene afarre off, is decmed by our men almost an infinite and innumerable Hoast.

Now when the Tartarian Armie is come into their enemies Country, the Tartars ranke not themselves in bands or troupes, but all set forward and proceed leisurely. They dispose many 60 Watchmen in all parts throughout their companies, which they make greater or leffer for their Flight fayaed. Supply, but after that the foremost of them have described their enemy, they counterfeit a flight, that they may more easily allure them into those troupes, which they have laid in ambushments,

and so ouer-charge him. But when they espie a great Armie of enemies, they make a rectaite quickly and speedsly to their Armie, Rankes, and Banners.

There is great celeritie in conflictuting and governing their troupes, feeing that they are not ruled onely by the advertizements of the Generals and Przfects of their Regiments, but also by Their Diftithe thew of Whips, as is the long continued practice of the Nation ; and they are subject to to sime.

a becke, that they are very easily brought into their Ranges, when focuser it is neceffary.

The Chan is alwayes for tified in warre, with a band of fome thousands of noble and coura- His strength. gious Totars in number, some hundreds of Imitaries, Footmen, and some small Orlanace. In The principal, the Cham Regiment a very great white Mares tayle, and a piece of Greene and Red Silke of Engineer at very great white Mares tayle, and a piece of Greene and Red Silke of Engineer at the Cham Regiment a very great white Mares tayle, and a piece of Greene and Red Silke of Engineer at the Cham Regiment as the Cham Regiment as the Cham Regiment in the Cham Regiment in the Cham Regiment in the Cham Regiment is a support of the Cham Regiment in the Cham troupes of the other Tarters, many Ancients and Enlignes of various colours.

The more famous Souldiers, and they which are notable in reputation . dexteritie and warlike Prowes, and have archieved in warre fome Noble Spinace and Enterprize, are greatly honice proves, and nice accurate in warrange consequence agreement of the fact of the party more of the fact of the more noble Marteus. That dignitie among the Tarters in the greatest and Hereditary, for they going to warre able and experienced men which posteffe that place, are dignified by the Chan, 20 with the glorie of leading the Troupes. The Char also frees fome Tartar captives with the permutation of captines, and in ranfoming others be largely powres out his owne Treasure, and willingly comforts them as he is able.

CHAP. XXII.

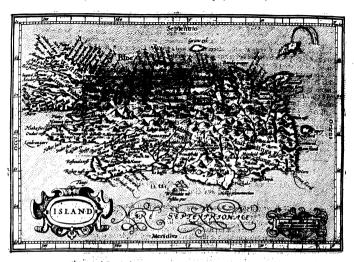

DITHMAR BLEFKENS bu Voyages, and Historic of Island and Groenland.

N the yeere 1565, " two Hamburg Merchants thips determined to fayle to a Hepable 10 Manual the Mariners, two monacons of the state of t Mand, the Mariners, by an ancient custome, defirous to have a Minister of Gods thed this Book Word with them, commend this care to the Ministers of the Church of Ham- dane 16074 burg, and intrest them to prouide them a Minister. One Doctor Paulus ab Etzen was then Superintendent of the Church of Hamburg. While therefore I flayd at Hamburg, expecting my Library from Reflects, I entred into some familiaritie with Pastus, and the refl of the Ministers. This Office was beflowed pron me, which I vadertooke the more willingly, because I had a longing defire to know strange things, and divers Countries, yeelding to their perswasion. Taking thip therefore the tenth of Aprill, wee sayled vpon the Coast of England and Sectiond, and passing beyond the Ilands Oreades, in number fifteene, whereof the most part lye vnmanured for the barrenesse; Foron and Hisland are inhabited : Here wee law a very high Rocke, which in the top representeth the head of a cooled Monke , where also there is a fafe Harbour against all winds, and this Monke delivereth many from prefent dangers. The fourteenth of June we descryed Island, which seemes afarre off, like winter clouds. The next day we attay ned the Land and Hanen of Haffenefords toward the South.

Ifeland is a rough, hilly and snow ie Land, which is supposed to bee twice bigger then Sicilia: it is thought to be a hundred leagues in length, which also Olans Magnus testifieth in his eleventh Booke. It hath the name of the perpetual Ice, and coldnesse of the Ayre, which is there most tharpe : for eight whole moneths it is troubled with Ice : It burneth not withstanding with heat and inward fire in many places. The extremitie of cold increaseth this heate in the bowels of 50 the earth, which cold continueth the greater part of the veere (a few Suramer months excepted) and so bindeth the pores in the vpper part of the Earth, that it can have no free vent. And this Hand hath fo great a Latitude from the Aquator, that the Arctick Circle digides it in the middeft, that is to fay, fixtie five degrees and a halfe. The Hands called Ebude, are object to the North part of this lland. But whether that be of thefe, which Ptolemie, and ancient Writers call Thule, or rather I feland, that great Hand, I dare neither affirme, nor altogether denie, because there is no Iland tound where Ptolemie fet Thule. Now, the later Writers make another manner of longitude about Scotland, and the bordering Hands, then Ptolemie ever thought.

I will draw the Descent of this Nation from their first originall, following the truth of the Ifeland Chronicles. In the years of Christ 900, in the time of Alebrand Bishop of Brome, cer-60 tayne of the Nobilitie of East Frifia, and of the Countrey of Breme, defirous to discouer thrange Countries toward the North, fet fayle from Wefer, and paffing beyond the Oreader, found this Iland almost in the vemost skirts of Europe, yet habitable, but full of Snow : which they called I feland, for the coldnesse and roughnesse thereof. And when they had fayled further towards the North about two hundred leagues, they found another Hand, which (by contraries)

HONDIVS his Map of ISLAND.

they named Groneland. Endeauouring to fayle further towards the North, through the frozen Mifts ordinary or congealed Sea, being long hindred by the Ice, at length with great labour getting out, they in those Seas. fell into whirle-pooles of the Sea, and thicke darkenesse.

In these whirle-pooles and darknesse, this Fleet (one onely Ship excepted) perished. They See of Island original the that were preferred, after many long labours and perils, fayling through the Tartarian Sea, came originall the next Chapter, into a very hote Countrey, and entring into a large Bay, they went on shoare vpon the next Antiquities Land. And when the Inhabitants had hid themselves in secret places, by reason of the great ate often my heate and foorching of the Sunne, they faw Gold, and other precious things fet heere and there, fical ormythi- without a guard. And when they had carryed away afmuch as they would, and hafted to the eal & fabulous Ship, they faw some pursue them with Dogs of strange bignesse. One, who was hindred and laden with a prey that bee could not estape; was torne in peeces of the Dogges. The rest, after long fayling, shunning these Whirle pooles, arrived in Musconia, thence by the Balincke Sea returning vato Breme, they brought backe these tidings to Alebrand the Bishop, with part 50

> Much about this time, the Nornegians, by example of the Helnetians in Iulius Cafars time, are supposed to have come out of Norway, who then long time possessed that part of France, which now also is call Normandie. And when they had performed great attempts by Sea and Land against the Britaines, they did not onely scoure the Sea by hostile incursions, but also expelled the Saracens, who at that time came into Italy, and fought to feat themselves in Calabria and Apulia. After they brought Colonies Northward into Hisland, Feren, and Island: which way, they learned of the Bremians, by meanes of the Nobilitie of Frisa aforesaid. And even the very proprietie of their speech doth testifie, that they came out of Norway: for the pronunciation of the Islanders doth agree with the antient Inhabitants of Norway. For vpon the Sea coalt of Nor- 60 mer, especially where the famous Hauen and Citie of Bergen is, by reason of the resert and familianitie with the Germaines and Danes, the Language is changed.

CHAP. 22. Iseland Bishops. Reformation of Religion. Tadde Bonde.

Of the Iselanders Religion.

N the yeere of Christ 1398. Woldemann, the second of that name governed the Danish King-dome, whereunto Norway was added, whose posteritie held it, vntill Ericus Duke of Pomerania, and Christopher Banar. Vnto this Waldemarns all the Arctoian Colonies obeyed. fo that now, under that Woldemarus, the I folunders were first instructed in the Christian Religion, when before they had worthipped ftrange Gods. And when almost all Christian people, in that lamentable darkeneffe and title of a Church, as it were by Witchcraft deceived, were detayned in most deepe bonds of superstition; it could not bee but they, who were surthest removed from the focietie of Learned men, and dwelling vader an vaciuill and barbarous Climate, should fall into most foule Idolatrie, when sometimes (as hereafter shall bee declared) they had Deuils to serue them, as familiar as domesticall servants. But after Luber began to bee knowne, Christianus the The Christian King of Demoirte procured purer Doctrine to himtelfe, and purged the Churches in the King - care of King dome of Denmarke, Normay, and all the Hands fubied vnto him; fending Ministers into Ifeland, Christian, to fow the feede of the Gospell there, Hee senta Printer also out of Denmarke, to fet forth the Bible, the common places of Philip Melantilion, the Workes of Vibanus Regins and others, in the vulgar Tongue, to the Paltors who were ignorant of the Laime, as at that time almost all of them were. And also sent for fit and apt young men out of Iseland, whom hee maintayned in the Haffnian Vniuerlitie at his owne costs, and gaue them charge over Churches

King Woldemare, as soone as they should professe Christian Religion in Iseland, ordayned them two Bilhops, one in Scalbelden in the East part, and another in Hollen in the West, whose Suc. Two Bishops ceffours at this day retayne nothing but a shadow, and a bare Title, for they have no other reve- in Ifeland mues but Butter and Fish. But when that reformation (whereof I spake) was made by King Christian in the Churches of Island, one of the Bishops in Scalbolden, confpiring with the people, rejects the Doctrine of the Gospell, and making a rebellion they kill the Kings Lieutenant. The yeere following, which was 1535. the King fent a Noble man of the Order of Knighthood, one Paul Hisfelt (whom I faw an old man in Demmarke) furnished with a Fleet, Souldiers, and Municion into the Iland. The feditious being flaine, hee renueth the reformation of the

30 Doctrine of the Gospell, and returneth into Demmarke, leaving a certayne Noble man to take charge of the Church and Hand.

The greatest man in Island at that time was one Tadde Bonds. Hee, after the Kings Armie Tadde Bonds. was departed, conspiring with the principall men (whom by his Authoritie hee drew to take his part) revolted from his Allegiance, and perswaded the rest of the Ilanders to follow. They meete together in a place called Walos, and conspiring to rebell, and cast off the Kings subjection, they impart their counsels together, and Tadde had his post stions not in one place, and many retayners, and for these causes hee thought they could not easily bee suppressed. The Bishop who dwelr in the East, had a speciall care to acquaint the Kings Lieutenant with all that was done (for the Lieutenant was absent in the West part of that Hand) and the Bishop hated Tadde a long time. For in that first Rebellion, hee had fallly accused him to the Lieutenant as guiltie, and au-

thor of the Rebellion. This acculation onely brought great and extreame calamitie v pon him. The Lieutenant being certified what was done, hee perswadeth by fit instruments, some of the Complices of the faction, to continue in their Allegiance, propounding rewards and punishments. Then many of them when they faw the greatnesse of the danger, leaving him, came humbly to the Lieutenant, and begge pardon, and obtayne it. Tadde therefore is adjudged an Enemie, both of the King and of his Countrey, they promife therefore by an Oath and giving of their Faith, that they will purfue him.

Then hee, through feare of the danger, with a few of his Domestickes which hee had gatheso red together, kept himselfe at the soote of Hekelueld, but being circumuented they were all flaine, and hee taken. They that tooke him, brought him to the Bilhop, to commit him to Prifon, but hee refused to receive him. Therefore they draw him to another certains man, of those who had the chiefe place in Iustice, neither would hee receive him, fearing the hatred of the people. There was at that time there a certayne Ifelander, Ionas by name, a man of courage. I know (fayth hee) to whom I will commit him, that will diligently keepe him, and foorthwith hee flew him and buryed him. And to the Sedition was appealed. And from that time vntill this day, the Word of God is taught among it Barbarous men, after the manner of the Couteffion

of Augusta.

The Life and Manners of the Iselanders.

IN the whole Iland, there are three forts of men, who are held in any reckoning and account: Three forts of for the common people, by reason of the scarcitie of Ships wherewith they fish, make them_ People. felues flaues to the richer. Of those three forts, the first is of them whom they call Lofbmaders,

Hibite.

Learning:

Bread.

feruse to him that is willing, and hee is accounted vacuuill who abhorreth this fashion. They Louing entertaine them that come voto them with a kiffe, and they behold and looke each on other, if paraduenture they may fee Lice creeping on their garments, which greatly trouble them for want of linnen : if thy fee any, each taketh them from the other, and as often as he taketh away

one, to often doth he thanke him, with his head diffcourred, and this they doe one to the other, as long as they fee one.

By night the Mafter of the house, with all his family, his wife and children lye in one roome, Lodging, covered with a cloth made of Wooll which they make. And the like clothes they lap vinder them, without firaw or hay put vader. All of them make water in one chamber-pot, with the which in the morning they wash their face, mouth, teeth, and hands; they alledge many reasons thereof, to wit, that this makes a faire face, maintaineth the strength, confirmeth the sinnewes in the hands, and preferueth the teeth from putrifaction. If Catile perish in the waters or (now (which often commeth to paffe) they fay, they are killed of God, and are accounted among the delicates. And it happened in the yeere 1,64, in a place called Ackermiffe, that in the month of lanuary fome Kine strayed in the darke, and the togge was so great, and the depth of fnow, that they could not be found. In the moneth of April they were first found vntainted, and without any euill (mell, and being distributed among the neighbours, fome part was brought to

commanded it to bee given to the poore. In the Winter time, before and after the Solfinisms, when the Sunne declineth, and being in Sagitarius, Capricornus, and Aquarius, it departeth from them, neither doth it afcend about the Long nights Horizon, while it touch Prices, therefore they have no light but of the Moone and Starres. In like manner about the Summer Solfitium, when the Sunne afcendeth to Gemini, Cancer, and Leo, it never seeth downe under the Horizon, therefore at that time they have no Night. In the Winter time, they keepe their Beds many dayes, and exercise themselves in the game of Chesse. Chesse.

the Gouernour, with whom I lued at that time, which was not lawfull for him to despite, yet he

the invention wherof is due to Xerxes the Philosopher: the meane while the fervants bring them 30 their meate dreffed to their beds. They keepe Lampes of the oyle of Fish continually burning, others burne Tallow candles.

In the moneth of Februarie, as foone as the Sunne afcends abone the Horizon by little and little the dayes grow longer, then they begin to Fish, whereof there is so great plentie, that it is scarce credible, for the Fishes which for three whole moneths swamme in the darke, as soone as they fee a fish of Tinne faitened to an Iron, they ranne to it in schooles, that they are not onely drawne vp by the jawes, but wherefoeuer the Iron toucheth them. Having taken them, they plucke out the bones, and lay vp their bowels, and make Fat or Oyle of them. They heape vp their Fish in the open ayre, and the puritie of the ayre is such there, that they are hardened one-40 ly with the winde and Sunne, without Salt, better furely then if they were corned with falt.

And if they kill any Beafts, they preferue the fielh without flinke or putrifaction, without falt, hardened onely with the winde.

Of the wonderfull standing Pooles, Lakes and Fountaines in Iscland.

'N divers places almost throughout the whole Hand are Bathes and fealding Fountaynes, which Hot Bathes I flow out in great abundance. This water as foone as it begins to coole, hath a Sulphurie fubstance in the top thereof. In these scalding waters, wherein I could scarse dippe my finger, red Dine-doppers are feene afarre off, if you come neerer, they vanish, if you depart, they appeare againe, fo all day long (if any pleafe) they play boe-peepe with men. Whether they bee Dine- Dine-doppers. 50 doppers indeed, I leave it to others to decide.

At the West of this Iland, there is a huge smoakie Lake, and very cold, which turneth all sconcemsking things that are cast into it into stones, and that in few dayes, and (which is worthy of great ad- water. miration) if you put afticke vpright into the bottome, the lower part which is flucke into the earth, hath the refemblance and hardneffe of Iron after two dayes, that which was in the water hath the hardnesse and show of a stone, the upper part which remayned about the water, keepeth his wonted forme : And I twice proued the truth of this thing, but when I put the lower Note, part (which represented Iron) to the fire that it might melt, it burned like a Coale.

There are two Fountaynes of most different qualitie, in a place upon the Sea coast, which is called Turlocks Hauen, the one cold, the other hot; these Fountaynes by pipes are drawne into 60 one place, and tempered for bathing, they make a most wholesome Bath. Not farre from these Fountaynes, there is a certaine other Fountayne, which bubbles foorth liquor like Wax, which French diseases

notably cureth the French difeafe, which is very common there. Not farre from the Hauen Haffnefordt, there is a cleft in a Rocke like to a Fountayne of vn-

that is to fay, Men of luftice : for Loch in their language, fignifieth Law. These men administer Inflice, and there are many of them, but twelve of them onely have the yeerely charge of Inflice. ces cach yeere All men obey their Judgement and Decrees. Another fort is of them, who are called Bonden: They are in the place of Nobles, and as every one of them is richeft in Shipping, and Cattle. fo hee hath most Fishers, and followers. This onely power they know. The third fort is of Bisshops and Ministers of the word of God, of the which many are found every where throughout the whole Hand.

There are many of the Ifelanders very proud and high minded, especially by reason of the strength of body which they have. I saw an Ifelander, who easily put an Hamburg Tunne full of Ale to his mouth, drinking off it as if hee had had but one small measure.

Both Sexes in Ifeland have the fame habite, fo that by the garments you shall not easily difeerne whether it bee Man or Woman. They want Flaxe, except it bee brought vnto them by our Countrey-men. The Women-kinde there are very beautifull, but ornaments are wanting.

The whole Nation of the Islanders is much given to Superfittions, and they have Spirits fami-Superstition liarly feruing them. For they onely are fortunate in Fishing, who are raised yo by sight of the and Witchctaft. Deuill to goe a fishing.

And although the Ministers of the Gospell vie all diligence in diffwading them from this im-Night Rauens, pietie ; yet this wickedneffe hath taken roote, and flicketh fo deepely in their mindes, and they are fo bewitched of Sathan, that they can admit no found Doctrine and Dehortation, Yea, by the Deuils meanes, if you offer them money, they promife a prosperous wind and performe it, which 20 I know, as hereafter shall bee spoken. The like Olaus Magnus wruteth of the Finlanders in his third

Books. They hold Ships also by inchantment almost immoueable, and that in a prosperous wind. Sweet factifice And truely it is a wonder that Sathan fo fporteth with them. For hee hath shewed them a refor the Deuill, medie in fraying of their Ships, to wit, the Excrements of a Maide being a Virgin : if they annount the Prow, and certaine planckes of the Ship, hee hath taught them that the Spirit is put to flight, and driven away with this tinke. In the rest of the carriage of their life, they thus behave themselves. The Parents teach their

male Children (euen from their child-hood) letters and the Law of that Iland. fo that very few men are found throughout the whole Iland, but they know Letters, and many Women vie our letters, and have also other characters, with the which they expresse some whole words of 30 theirs, which words can hardly bee written with our letters. They give themselves to hardnesse, and fishing from their Infancie; for all their life contists in Fishing. They exercise not Husbandrie, because they have no Fields, and the greatest part of their foode consisteth in Fish, ynsauerie Butter, Milke and Cheefe. In flead of Bread they have Fish bruited with a Stone. Their Drinke is Water or Whay. So they live many yeeres, without medicine or Phylitian. Many of them

Drinke. line till they bee one hundred and fiftie yeeres old. And I faw an old man who fayd hee had Anoldman or then lived two hundred yeeres. Nay, Olans Magnus in his twentieth Booke fayth, that the a lond lie. Ifelanders live three hundred veeres.

The greater part of Iselanders hath neuer seene Bread, much lesse tasted it. If our men at any time fell them Meale or Corne, they mingle it with Milke, and lay it vp for a long time, as de- 40 licates for Nobles. They call this fauce or mixture, Drabbet.

The Germaines that trade in Iseland have a place in the Haven of Haffenefords fenced by Nature, where vnder Tents they fet their Merchandise to sale, as Shooes, Garments, Glasses, Kniues, and fuch kinde of Merchandite of no price. The Ifelanders have Oyle molten out of the bowels of Fishes, knowne to our Tanners and Shoomakers: they have Fish, Brimstone, white Foxe skinnes, Butter and other things. They barter all these for our Commodities, nor is the

hargaine ratified, before they bee well stuffed with our Meat, Wine or Beere, together with their Wiues and Children whom they bring with them, how many focuer they have. Comming into the Hauen, they have their Daughters with them which are marriage-able:

they after they have inquired of our companie, whether they have Wives at home, or not, they promise a nights lodging for Bread, Bisket, or any other trifling things. Sometimes the Parents 50 yeeld their Daughters freely, even for a whole moneth, or as long as they stay. If shee proove with Child by that lying with her, the parents loue their Daughter better then before, and the Child being borne, they bring it vp some yeeres, while either the Father returne, or they give it to their Sonne in law that shall bee, for a Dowrie with their Daughter, who doth not despile it, because it is borne of the Germaine blood. If any Virgin have familiaritie with a Germaine, fliee is honoured among them, and therefore flee is fought of many Suiters. And the time was before this, that Whoordome, which was without the degrees of Confanguinitie and Affinitie, had no Infamie. And although Preachers crie out against it, and the offenders are seuerely puniflied, ver they hardly abitaine.

They lay not vp Wine and Beere which they buy of our Countrey-men, but quaffe it vp 60 Drinking and house by house by course one with another, and that freely or for nothing. While they drinke, they fing the heroicall acts of their ancestors, not with any certaine composed order or melodie, but as it commeth in every mans head. Neither is it lawfull for any one to rife from the Table to

measurable depth. If you looke into it, you cannot see the water, but if you cast in a stone, halfe an houre after you shall heare it falling, as if it fell into brazen Vessels, and forthwith the water arrifeth, and it is filled to the top of the Wels brimme, and it is a most cleere water, which note withstanding no man dare touch, nor taste, neither doth it flow out, but so long after, as the flone which is cast in, finketh to the bottome. There is another Lake in the middle of the lland. which cafteth forth a peftiferous fume, infomuch as it killeth Birds flying ouer it with the poy-

Of the wonderfull Mountaines in Island.

Here are three Mountaynes in Island very admirable, the one is called the Mountayne of the Crosse, the other Snenelstockes. These two pierce the cloudes with their height, whose heads, or tops no man euer faw, nor are they euer feene without Ice and Snow; in those Lightnings and horrible Thunders are daily heard, when neuerthelesse, in the neighbouring Valleyes the Aire is faire and cleere, as in Summer time. The third Mountayne lyeth on the North of the Hand, and not very high, but it hath burned very many yeeres; with what fire or matter, it is vnknowne; but feeing Brimftone is digged out of the Earth throughout the whole Land, it feemeth, that the Sulphurie matter is sometime inflamed. This Mountayne is not farre from the Sea, and the Sea on one fide beates vpon it : it is called Heela, fometimes it casteth forth flame, fometimes fierie water, then blacke ashes and Pumis stones, in so great abundance, that it darke. 20 neth the Sunne. No man also can dwell neere it by fixe mile, neither are there any pasturesabout it. Sometimes bold men, and fuch as regard not their liues, cast stones into the hollow placest for fometimes there is a wonderfull calme in the Mountayne; especially when the Westerne wind blowes, it caffeth backe the stones slung into it with an horrible noyse and found; the common people thinke the foules of the damned to be tormented heere : it is certayne that diners and horrible spirits are observed in this Mountayne and about it; for if a Battaile be fought in any place, the Islanders, especially they that sayle and fish in the Sea neere to Heela, know the day of the Battaile fought, although they know not where it be done : for they fee (as they report) wicked spirits going forth, and returning, and bringing soules with them. And such a storie is reported all I fland ouer.

ning Hill.

Purga:orie,

A Fisherman fayling by Hecla, met with another ship, both had a prosperous wind, and when (after the manner of Saylers) he was demanded who hee was and of what place, hee answered, that hee had the Bishop of Breme in hisship, whom hee would conuay to Heela: and it was men, or illust knowne that the Bishop dyed the same day, which not with standing, I would not set downe ons of Deuils.

Armym least on truth. If any perish by Sea, or otherwise dye, sometimes leaving their Friends and Acquain-Amunifond an Amunifond and Amu so be witched of Satan, that they thinke them the soules of the departed.

But because no man that is well in his wits, will thinke that Hell is in this Mountayne, yet it may be demanded, whence the Hill hath this matter, whereby it should bring forth somany 40 yeeres flames, so many ashes, and such abundance of Pumis stones ? For wee see the most follid and firme bodies, and all things to be confumed by fire and for that cause some thinke, that it shall come to passe that these shall once be extingished? for the cause fayling, they deny that any effects can follow. But heere (what I thinke) I will freely speake, yet sauing other mens judgements. It is manifest by watry Meteors, that there is a continuall generation of water, by the vapours gathered together in the cauities of the Earth; which issueth forth by Fountayns; but the efficient and materiall causes abiding perpetually, the effects also continually remayne: so allo in the bowels of the Earth, there are certayne places, which by their owne nature draw vnto them a hote and dry exhalation, and that it resolues it into flames, ashes, and Pumis stones, which may eafily be done in this Mountayne, by reason of the Sulphur matter, which is found in 50 Island throughout the whole Land. And as Fountaynessend forth more abundance of water in the Winter time, then in the Summer, nay, some of them are dry, because matter failes; so is it with this Mountayne : for sometimes matter failing, it hath neither flames, nor smoke, and all is quiet, whereby it appeareth that the matter and efficient cause faile. However it bee, I know this, that no man may come to the foot of the Mountayne without danger and feare, as hereafter shall be declared.

Strange Story.

The same yeere I was in Island, the nine and twentieth of November, about midnight in the Sea, neere Hecla, there appeared a flame, which gaue light to the whole Iland, fo that all of vs aftonished, wondred, and carefully expected the issue thereof: the elder fort and such as were skilfull in this matter, faid, that this light came from Hecla: an houre after, the whole Iland 60 trembled, as it should have beene moved out of the place : after the Earthquake followed a horrible cracke, that if all warlike Ordnance had beene discharged, it had beene nothing to this terrour. It cannot be thought, much leffe expressed by word , how horrible it was. Wee thought that the whole frame of the World would fall, and that the laft Day was at hand : but it was

knowne afterwards that the Sea went backe two leagues in that place, and remayned dry. About the beginning of July, at a certayn time of the yeere great flore of Ice fuddenly floteth to the Iland about Heele, and there goes a rumour through the whole Iland, nay it is beleeved, the the damned foules are tormented in this Ice by courfe, in the Flame, in the Mountayne, and Another wellafter in the Ice. This Ice for three whole moneths fwimmeth only about Hetla. If you take a- der. my part of this Ice out of the Sea, and wrap it in a linnencloth, and lay it vp in a Cheft, it remayneth folong vnmelted, as it swimmeth in the Sea; but if the Ice in the Sea vanish, which fuddenly in one night happeneth, this appeareth not, nor leaneth any figne of moyflure in the linnen cloth, which is not a hard thing for Satan to doe, to take away the Ice without movsture. To coincrease their incredulitie. Olass Offigens makes business of this lice in his element Busice. But because I determined to fearch out all things diligently, I sayled not without great feare wato this Ice, and I observed, that this Ice was violently cast against the Rockes by force of the winds, and so made a mournfull sound afarre off, as if miserable howlings were heard there. Hereupon the Islanders thinke the foules of the damned are tormented in this Ice.

Of the Riches of the Islanders.

Haue faid that I fland was a rough and snowie Countrey, and besides, it is full of Rockes and flones; and fo truly, that there is not a field in the whole fland : they have not fo much as OGardens, wherein they may haue Pot-herbes or Pulie: they know no kinde of Corne nor Apples, Peares, nor Cheries, nor any fruit of Trees. And, which is almost incredible, they neither Nofrains yle Bread nor Salt, yet they are well liking, and ftrong. There is no Citie in the whole Hand: they feldome have two or three dwellings together. They have their Cottages on the Sea fide for fishing, and wnder ground by reason of the sierce windes.

There is no lone of money among them, for wares are changed for wares. Brimftone groweth Barret. on the South part, and almost throughout the whole Iland, which is digged out in great abun- Brimfionel dance: they fell this stuffe purged for a small price. Mines of Gold or Silver, nor of any other mettall they have none. They vie Iron, but fuch as is brought wato them. You shall fearfe finde a man, who hath not Iron Nayles in a Bagge, wherewith Horfe-shooes are fastened.

All their houses are vnder ground, for they have no matter for building. There is not a tree in the whole Iland , except the Birch-tree , and that in one place, which also excee- Birch-tree. deth not the stature of a man in length , and that by reason of the venemencie of the winds. that it cannot grow higher. This Birch-tree after the Summer Solftitime beginnes firft to bud, the leaves have a most iweet smell, and of so fragrant a savour, that the Germaner put them in their Tents, and youn their meats for a lingular delight. Yet sometimes great abundance of Firetrees from Tartaria, or elfe-where carried by force of the waves and the Ice, arrived in Island. The chiefe vie of them is in building Cabbins under the ground you shall scarsly find a house out of the earth, by reason of the strong winds, which sometimes overthrow Horses and their Ri-Greatwinds ders. They have great plentie of Butter, for the fatnes of the grafferfor the Ifland graffe is fo fat, 40 that Oxen after a certaine time are to be driven from the Pastures, left they burft. And it is of Fax graffe. so pleasing a fent, that our men lay it vp in their Chests with singular care for their garments. The most part (for scarcitie of Veffels) lay their Butter aide in the corners of their Houses , (as we doe Lime or other matter) and that without Salt. They have domesticall cattle, as kine; but

They have very great sheepe, they keepe not a Hogge nor a Hen, for want of graine, if fodder or horses, and hav faile them in the Winter, they feed their cattle with fish. They have rough Dogs bred with-Dogs of more out tayle and eares for their pleafure, which they fell deere and greatly effeeme, when not withflanding they offer their children to any that will aske them, and that freely. Besides, this Iland children. hath white Foxes, and huge Beares of the same colour. They have no Birds but water-fowle, Beares and so whereof there are divers kinds and forts found there, vnknowne vnto vs. Crowes fometimes Fores.
White Crowes are changed white; and excellent Falcons, and some among them white, which being taken and gotten, with the great coft of the Spaniards and Portugals, are also carried away in great number, which thing was done, while I was in /fland, to my great profit. Ifland also hath white Partridges. There are also every where through the whole lland most pleasant Rivers, which yeeld Rivers, the Inhabitants fish in great plentie, Salmon Trowts, and Sturgeons. There is one only bridge in all the Iland, made of the bones of a Whale. They that goe from one part of the Iland to another Whale-boneby the Continent, have no way which they may follow, for the folitarine fle thereof: but as Say - bridge, lers in the Sea, fo they by the helpe of the Load-stone performe their journeyes. The depth of the Travell by lers in the Sea, to they by the helpe of the Load-trone performe their journeyes, the depth of the compaffe.

Sea neere I fland is very exceeding. In these gulfs there are Whales of wonderful hignes, and many Whales. 60 Sez-monfters which cannot be killed or taken of men , the Ice only through the force of the

sheare dead, whose length was thirty ells, his heigth more then a very long Warlike Pike. A Whale being dead or killed, the Inhabitants make Buildings and Dwellings of the Hugo Whale bones thereof with great dexteritie and skill, they make also seates, benches, tables, and other

many of them are without hornes. Al their Horfes are amblers & very fit for carrying of burdens. Their kine,

winds dasheth them against the Rockes, and killeth them. I saw such a Monster cast vpon the

C HAP. 22. Trials, sentence, execution. Pigmie-fancy. S. Thomas fountaine.

Note.

vtenfils, smoothing them so that they seeme like luory. They that sleepe in these houses, and faid alwayes to creame of shipwrack. And although it bee a huge and fearfull creature, and stue great strength, yet notwithstanding oftentimes he is not onely withstood, but our come of his capitall enemie (not fo great) which is called Orca; this fift hath the shape of a ship turned tofide-downe, and vpon his backe very sharpe and long finnes, wherewith hee wounders the loft of the belly of the Whale, and killeth him, and the Whale so search this fish, that in shunning him, he often dasheth himselfe against the shoare.

A Sea-mon.

The Island Sea bath a Monster also, whose name is vnknowne. They judge it a kinde of Whale at the fift fight, when hee shewes his head out of the Sea, hee so scarreth men that they fall downe almost dead. His fquare head hath flaming eyes, on both sides fenced with long to hornes, his body is blacke, and befer with blacke quills; if he be teene by night, his eyes are fiery, which lighten his whole head, which he putteth out of the Sea, nothing can either bee painted or imagined more tearfull, Olans Magnus makesh mension of this Monster in his twentieth Booke, and faith, that it is twelue cubits long. Such a Monster at that time tore in pieces with his teeth a Fisher-boate, wherein there were three Fisher-men, so that they were drowned, one of them, who held in his hand a little cord, wherewith hee vied to draw the hooke, and the fifthes, land hold of the boord which floted in the Sea; so he was saued getting out of the bottom yoon the planke and Iwam foorth, and declared this to the Kings Gouetnour in my prefence, adding moreover that he was fued from heaven, that he might get maintenance for his children, who otherwile were readie to perish with hunger, when the other two though married, yet were 20

Hacfal another

Another Monster also is often there feene and taken, of ten or twelue elles long, it is called Haefal, it is all fat; it is taken after a wonderfull manner: they have a very long pike wherunto they fasten an Iron with a forked point, that it cannot goe backe, vnto the statle a cord of a maruailous length is fastned; they sticke this speare in the Monster, which swimmeth vnto it for prey, perceining a man in the little boates; as foone as the Monfter teeles himselfe ftrooken and wounded, forthwith he hides himselte in the Deepe, and there (his bloud being powred out) dyes, afterward the Fishers draw him to the land by the long cords fashned to the speare.

Dog-fifh.

Besides, it hath divers Sea Monsters : a Dogge sish, which putting his head out of the Sea barketh, and receiveth his whelps [porting in the Sea again too his belly, while they come to more growth. It hath Horfes and Kine, and what not? and it as a marvell, how skilfull Nature iports, 30 in expressing the shape of all earthly Creatures and Fowles in the Sea. Neither should any man perswade me that these things are true, although ten Arifforles should affirme them vnto me, vnleffe I had feene most of them with mine eyes. Let no man therefore prefently cry out, that what he knowes not is fabulous,

Note.

The men of Lubeck, Hamburg, and Breme, were often wont to goe to this Iland, and leave their feruants in the winter lodgings; but now it is prouded by the Kings authoritie, that no Germaine, either by reason of trading or learning of the language, leave his servants there in the winter; but vpon what occasion this came to passe, the matter standeth thus. In the yeere of Christ 1561. there was a Citizen of Hamburg, one Conradus Bloem, left by an other in Ifeland in the winter lodgings with the Bishop in Scalbolden, for trading and learning of the tongue: the 40 Bishops fishers find a whole Vnicornes horne in the Ice, brought out of Groneland (as it is thought) where yet at this day Vnicotos are faid to be, & thinking it to be a Whales tooth, nor did the Bi-Inna Pools and Shop beleeve otherwise, they bring it to their Master, who gave it to Conradus begging it, he being fomewhat craftic, fold it after at Answerp for some thousands of Florins. When this thing came to the King of Denmarks cares, he forbad that no Germaine should winter in Ifeland in any cause.

Horne of a

Of the judgement of the Iselanders.

There is a most pleasant place almost in the midst of the Iland, you would say it were a Paradise in the Spring time, where sometimes there was a high Mountaine, which burned with inward fire, as Heela doth at this day; which matter after it was confumed, made a Plaine, but 50 the Rocks which were erected about the Mountaine, fland yet, therefore this place is fo fenced by Nature, that they that enter it, must goe one by one. This place is famous for two great falls of water, where two Rivers from the highest Rocks cast themselves steepe downe one against the other, with an aftonishing and horrible dashing of the waters against the Rocks. These Riuers meete together in the middle of the field, and by a great whirlepoole are swallowed up into the ground.

Heere yeerely the nine and twentieth of Iune, the Inhabitants who have any controversie, meete together: for in no other place or time Iustice is administred: after they are entted, standings are placed by the Gouernours guard, who admit all that defire to come in, no man hath libertie to goe out, without the confent and authoritie of the Gouernour. When they are come 60 thither, the Gouernour offreth his Charter to bee publikely read, whereby hee procureth credit to his Office, and having spoken before somewhat of the Kings goodwill, and his owne towards the Ilanders, he exhorteth them to communicate Iustice vnto all, without respect of persons, hee

after departe: h, and keepes himfelte in his Tent, having heard a godly Sermon, the twelve men, whom they call Lochmaders, as it were men of luttice, fit downe on the ground, each of them Manner of hath a Booke in his hand, contayning the Law of that Iland, written in the vulgar tongue. Ac- trials and cufation and answer being made, they goe apart into feuerall places, euery one reades ouer his futes. Booke diligently, going atterwards againe to his place, without Scribe, without replication or doubling, and juglings of fuch brabling Lawyers, they conferre of the fentence and pronounce it: If any thing bee worthy of deliberation, it is brought to the Gouernour for confultation and for his honours fake, when notwithflanding they leave no power of deciding it to him.

There are many acculations of Theft and Adulteries, they make no question of their Bonds, of Io their Fees, their Hereditarie fields, or any fumme of money : there are no controuerlies there. These twelue men, ouer which one is chiefe, are greatly honoured amongst them. These doe determine, and diligently inquire of all publike Controuerfies. If there bee any wicked Act committed that yeere, if Murther bee committed any where, if Theft, if Adulterie, if Cattle be flot- Sentence and len away (which vieth oft to bee done) then these men set downe the punishment. They that execution, are condemned to dye, are beheaded: the rest, who are any way to bee punished, they burne with a marke, this punishment with them is most grieuous : for they are marked in the forehead; they that are io marked are accounted in the number of wicked men : others are beaten with roddes ; and I faw when the Father and the Sonne for theft (for they were Cattell flealers) were

held Captines, that the Father was compelled to beate his Sonne with roddes, and hee after-

20 wards beheaded.

of Groneland.

Seland by Nature is fomewhat long, it hath Normay on the East, the Oreades and Scotland on the South, Groneland on the Weft, and the Hyperborean or Congealed Sea vpon the North. Although I purposed to passe ouer Groneland with tilence, yet seeing I touched vpon the Land, and faw fome few things, I thought it was to bee added. There was in a certaine Monasterie in Ifeland called Helgafiel, a certayne blinde Monke left (for the Abbot of the Monasterie had conuerted the Reuenues to the Kings vie) who lived miferably there : hee was borne in Groneland, of 30 a darke complexion and broad face. The Governour commanded him to bee brought vnto him, that hee might know some certaintie of the state of Groneland. Hee sayd, there was a Monasterie of Saint Thomas in Groneland, into the which his Parents thrust him when he was but young, and after that, hee was taken out by the Bishop of Groneland, when hee was thirtie yeeres of age, to faile with him into Norway, to the Archbishop to Nadrosia (or Dronten) to whom the Iseland Bishops are subiect: in his returne hee was left in a Monasterie by the Bishop, whose Countrey Groneland was: this was done (as hee fayd) 1546. Hee faid, that lland was called Groneland, Antiphraftically. For that it ieldome or neuer waxeth greene, and that there is fo great cold there throughout the whole yeere, except Iune, Iuly and August, that being clothed and couered with Furres, they could scarie bee warme; and that they had at home certayne round 40 peeces of wood, which being continually mooued with the feete, kept their feet warme. Hee fayd, it aboundeth as I feland doth with Fishes, and that they had Beares and white Foxes, nay Their Pienier

Pigmies, and Vnicornes, and that day did not appeare, till the Sunne had runne through Pifess. are Beatts and This Monke told vs maruellous strange things: that there was in the Monasterie of Saint The Vaiconnes.

mas (where hee lived) a Fountayne, which fent forth burning and flaming water, that this wa- Fiftee. ter was conveyed through pipes of stone, to the severall Cells of the Monkes, and that it made them warme, as Stoaues doe with vs ; and that all kinde of meates might bee boyled in this Fountayne and fierie water, no otherwise, then if it had beene fire indeed. Hee added moreouer, that the walls of the Monasterie were made of Pumice stones, out of a certagne Mountayne (not farre from the Monasterie) like to Heela: for if yee powre these burning Waters vpon the Dumice Hones, there will follow a flimie matter, which in stead of Lime they vie for Morter.

After the Gouernours conference with the Monke, I came privatly vnto him, to demand certayne particular things touching the Pigmies and other things; hee had little skill in the Latine tongue, hee vnderstood mee speaking Latine, but answered by an Interpreter. Hee sayd, the Pigmies represent the most perfect shape of Man, that they are hairy to the vetermost joynes of Pigmies, our the fingers, and that the Males haue beards downe to the knees. But although they have the men have not shape of men, yet they have little sense or understanding, nor diffinet speech, but make shew of seene such a kinde of hilling, after the manner of Geele; that his Abbot kept two of them in his Monasterie, male and female, but they lived not long, and that they were varealonable Creatures, and line in perpetuall darknesse. That some say, they have warre with the Cranes, that Of this the 6c hee knew not.

He affirmed, that the same maner of food was in Greneland, as in Island, to wit, of fish but not of was a sin this cattle, because they have no cattle, & that the country is not populous. Forthwith from Island be and the next gins the Hyperborean Sea, which beats vpon Groneland, and the Country of the Piemies, which at Book will this day is called Nona Zembla, & there the frozen Sea hath a Bay which is called the White Sea, light.

or Mare Albam, and there are there certayne passages whereby they sayle into the Sobythian O. of Mare Anoma, and once are once executive panages whereby they make the More cean, if they can for Ice. And the Gouernour had the King of Denmarkes Ship, furnished with all necessaries : but when hee heard (by the Monke) of these passages, and short cut into the annecessates: but which the meate (by the means) of these panages, and more or through the affected this commendation, that her might open thefe passages and lce vnto the Kingdome of China by the Tartarian Sea, which had often beene attempted by o.

The Authors Voyage for Difcoueric.

The last day therefore of March, in the yeere 1 564, hee commanded that Ship to sayle to those places, and mee alio together with them, being willing of mine owne accord: and enjoyned me to marke diligently the scituation of the places, and whatsoener wee met with worthy of fight to marke unigently the serious to us praces, and transparent as I felanders, and the 10 or report. Wee were in the Ship threefcore and four men, as well Daves as I felanders, and the 10 twentieth day of Aprill wee arrived at a certayne Promontoric of Groneland, and when wee found no Hauen, to the which wee might fafely commit our selnes, and letting downe the lead. wee had founded the depth of the Sea, it was such as wee could not anchor there, and the abundance of Ice was so great, that it was neither safe nor pessole to sayle netter to the Rocks s source and twentie therefore of vs armed, with great labour and danger went on shoare in our Skiffes among whom I allo was) to trie whether wee could finde a harbour, and what kinde of men Groneland had. In the meane time, the great Ship floated in the Sea and Ice, in a great calme, halfe of our companie abode in the shoare to keepe the Skiffe; another part (and I with them) ranne abroad to discouer: they that were left on shoare to keepe the Skiffe, going hither and thither, found a little man dead with a long beard, with a little Boate, and a crooked Hooke of 20 the bone of a Fish, and a leather cord : four fish Bladders were bound wnto the Boate (as is supposed) that it should not bee drowned, whereof three were sunke and fallen stat : This Boate (because it was very valike ours) the Gouernour sent to the King of Denmarke. Olaus Magnus in bes first Booke writeth, that there is a Rocke in the middest of Iseland and Grone-

In Sir Thomas Smiths Hall in

A Beare.

land, called Hutilocke, which wee sayled by , and that there they have Ships of leather, which bee testiful eth hee faw, but it was not fuch an one: but Petrus Bembus in his fenenth Booke, in the Venetian Hiflorie, describeib a Ship, which was like vinto this, where bee writeth thus : Whole a French Ship kept ber cone fe not farre from Britaine, free tooke a Boate built of Ofters the middeft beeing cut out, and the fo-Londonts a kind of Boate lid barks of Trees toyned together, whereim there were femen men of a middle flaure, Somewhat darks cokind of Boate the early of a targe and broad face, marked mith strange fearer and violet colour; these bad there par 30 or Barke Lowed ments of Fisher skinner. full of forts, they bere a painted Crowne of reede women in, as it were with fenen eares; they did eater aw Fleft, and drumbe Blood, as wee doe Wene; their speech could not bee understood, fixe of them dyed, one young man was brought aline to the Aulercos, where the King was. It is not unlikely to bee true, that this Ship with thefe feuen men, were driven out of Groneland, into the Britaine Ocean : feeing the description of Bembus his Ship agreeth with that found in

Wee wandred in the meane feafon, in a Land vinknowne vinto vs, which was covered with Snow and Ice, wee found neither footing of men, not any habitation, nor fit Port, but the Sea was closed and fenced on every side with craggie Rockes. Yet we met with a great white Beare, which neither feared vs, nor could be driven away with our cryes, but came full vpon vs, as to 40 his certaine prey, and when hee came neere vnto vs, being twice shot through with a Gunne, hee flood bolt vpright withhis fore-feet as a man flandeth, till hee was shot through the third time, and so fell downe dead : his Skinne was sent to the King of Denmarke. We agreed among st our selves before wee went on shoare, if wee found a sit Harbour, or else had need of their helpe, that wee should plucke vp our standerd, which wee carried out with vs for that purpose, and that they, if they would call vs backe, should fignifie the same with their Ordnance. A tempeft arifing in the meane while, the Mafter of the Ship gives vs a figne to returne, by the difcharging of a piece of Ordnance, and calls vs backe vnto the Ship : all of vs therefore returned with great labour after three dayes vnto the Ship with the Beares skinne; wee sayled therefore to the other side of the Iland toward the North, to the Countrey of the Pigmies or Nona Zem- 50 bla, that by the mouth of the White Sea, wee might come into the Scythian, or Tartarian Sea, from whence (they say) there is a passage to the Kingdome of China, and Cathay; but beeing hindred by the Ice, wee could not paffe the mouth of that Sea : therefore without doing any thing, wee returned into Ifeland the fixteenth of June.

The Authors

T fayd before, that the Ifelanders the nine and twentieth of Iune yeerely came together almost In the middle of the lland to ludgement, and after our returne, the Gouernour went thither, and I with him. Some of the next inhabitants of Hecle then came to Iudgement, whom the Gouernour inuited twice or thrice to dinner and supper. These men while they were at supper, reported wonderfull things of the Mountayne Heels, and other things; I was foorthwith in- 60 flamed with a defire to fee and heareall. Wherefore the Gouernour commended mee to these men, that they should bring mee thither, and commanded all things should be she wed me, which they knew there worthy to bee seene. This Governour was a Dane, a Noble man, and excellent. ly well learned : to this man furely I am much bound for his great liberalitie towards mee, in

that he caused me to be conveighed at his charge to divers places of the Hand, where any notable thing was to be feene. I accompanied with two Islanders, and a certaine Dane, who carried proution, and a Tent on Horse-backe, spent foure whole dayes, while we go through rough places. Hilly and defolate vato this Mountayne. For some Miles about Hecla, all was full of blacke ashes and Pumis stones. The Islanders admised me that I should goe no neerer, leading away the Horfe, which they had lent me;

CHAP.22. The Authors furuer of Hecla, and ficknesse thereupon.

I. because I purposed to see, and search out all things diligently; accompanied with the Dane. came neerer, as though I went to climbe the Hill, and although at the first fight we were afraid. vet I would not leave off my purpose, and by reason of my young yeeres, not understanding Io the danger, I went through the affies and Pumis stones alone to Hecla, leaving the Dane, There was there at that time a wonderfull calme, fo that I faw neither fire nor fmoke. But behold, fuddenly in the bowels of the Earth, a great noyte was heard, after this, followed flames of a greene colour, which had almost killed me with their Sulphurie and filtly flinke, so that I scarfe efcaped to my fortaken horses and companions. Vpon that sudden assonishment I fell into a fickneffe, and vehement cogitation, feeing these horrible flames were alwayes prefent before mine eves: info much that my Island companions were compelled to carry me away vnto their house, with whom I lay licke two whole monethes : while in the meane time the Dane returned to the Gouernour, and to the Hamburgers, and acquainted them with my flate. I lived miferably among it the Barbarians, ficke and voknownes they had Bisket which I fleeped in Milke, and 20 and fo for that time, I indured hunger, while (being ftronger) I might returne to the Governour.

The Hamburgers, by reason of the time of the yeere, least they should loose the opportunitie of favling, despairing now of my returne, set sayle (for they depart before the foure and twentieth of August, lest being hindered after by the Ice, they cannot get out) yet with special care commended me to the Gouernour (if at any time I did returne) leaving Bisket, Wine, and Beere. The Governour hath a dwelling fit enough for the manner and fashion of this Countrey, on the South of this Iland, not farre from the Hauen of Hafnefordt, the place is called Beffede. I was Hafnefordt. brought hither of the Islanders, to the Gouernour, who, for our common studies, entertayned Hisabiding me willingly and honorably. But although wee were plentifully furnished with all necessaries, there two winyet being very wearie of that life in such darknesse, I expected the ships out of Germany the ters.

20 next yeere with great defire.

There grew then warre betweene Ericus of Suetia, and Fredericke the Second King of Denmarke: which was continued with great courage for ten yeeres after. The Lubekers were Conforts and Confederates of Warre vnto the Dane. So most part of the Cities on the Sea-coafts vpon the Balthicke Sea, hindred or intangled with this Warre, intermitted their fayling into Mand this yeere, therefore wayting in vaine, I must stay. The yeere following, when I had wayted till the end of June, all hope of returning into Germany that yeere was taken away, and which was worfe, the yeerely thip came not from Denmarke: and bread and Wine failed vs almost foure monethes.

There lay Portugals at anchor at that time in Island in a small ship; who came thither to fowle, 40 they caried away excellent Falcons, and white ones among them, in great number. I thought good rather to croffe ouer into Portugall with them , then to wayte another yeere, either for Danes or Germanes . And when they gave the Governour his Custome, he dealt with them in my behalfe concerning the charge, that I might passe with them, and he liberally paid the charges, and honorably fent me away with a worthy Prefent. Not far from the Kings house, there was a certayn Minister, londs by name, he familiarly faluted me before I departed for the time I was in Island, I had some familiaritie with him, to whom also I left my Bookes when I departed: he for friendships sake, knit three knots in a handkerchiefe, and promised me a prosperous wind, say ing if by chance the winds at any time grow contrary at Sea, open these knots, and then remem- His National ber me. When therfore about the twentieth of September we had fayled, and now Spaine was in onson the so our view, there was fo great a calme, that we felt not a breath of wind, and that for three whole Goalt of Afridayes. In this calme my friends promife came into my minde, and I defired to proue it. I loofed ca, &c. hee the first knot, by and by, after one houre, there arose a very prosperous winde, but blowing very his Presace, gently, I write the second and the third, forthwith a Tempest beganne more and more to grow, which I have fo truly that after two dayes we ridde in the River Tagus, which beateth upon Liftone.

CHAP. XXIII.

Extracts of ARNGRIM IONAS " an Islander, bis Chrymogaa or Historie of Island : published. Anno Dom. 1600.

> I. Of Island, the Situation, Discouerie, Plantation and Language.

Sland is an Iland of the North, compafied about with the huge Ocean; whose Gofmographicall latitude towards the North, to wit, at Hola, the Epifcopall Seat of North Island, is 65. degrees, and 44. minutes : and the longitude 12. degrees and 30. m:nutes, or thereabouts : for I will not precifely affirme the fame, by reason of that scruple, arising from the Paralaxis of the Moone in the obserworks he con- uation of the Eclipses to be doubted : which only way of finding out the longitude, that most 20

rours of divers hath imparted vnto vs this longitude and latitude of his Sea : and was the first, that I know. Authors which among our Countreymen, who hath delivered any certaintie in Writing, concerning this matter. And furely, that which at this day, and io from the first entrance of Inhabitants, beareth the many things of

his Countrey. name of Island, (while as yet it remayned barren and desolate) had divers names allotted orgiuen vnto it from divers Discouerers : whereof three are mentioned. For first of all it was called Snalandia. For a certaine Pyrate called Naddocus, going towards

the Farensian Ilands (commonly called Farenar, for the multitude of Egges) was brought ynto Diuers names the shoares of East Island, through a Tempest, not farre from the Mountayne Reiderfiell (so called afterward) to the Bay *Reidarfiard*: who afcending the Mountayne, and beholding the bor-dering Countrey farre and neere, found it all Defert. And departing from the Coast about Autumne, he perceived the higher tops of the Mountaynes to bee covered with exceeding much Snow; and therefore, as the prefent case required, he called the Iland Snalandia, that is to lay, The Snowie Countrey Another following him, one Gardarus the fonne of Susuarus a Succian borne, perfwaded

found it, who arrived also neere the Easterne shoare, and from thence being carried about the

Iland, he abode in the Bay of North Mand called Skialfands, and wintered there in the yeere of

Christ 864, and called the name of the Hauen, Hulawich, from the wintering places, or houses

built there. But the Spring beginning, Gardarus being about to depart into Norway, the ship

there was a certayne Mariner called Natrare: from whom also this hauen had the name of Narfa-

rawicke. Moreover, Gardarus returning to his friends, called that new Countrey Gardarsholme,

Boat was driven away by a tempest, into an Hauen neere vnto the former, and in the same Boat 40

Gardar fecond through the report which Naddocus had brought concerning Snalande, went to feeke it : he

Flece third Discouerer.

as it were, the Iland of Gardarus, neglecting the name of Snalanda. Moreouer, the defire also of vifiting a Countrey newly discouered, possessed many. For the third also, one Floco, and he a most famous Pirate purposing to visit Gardar sheime, fet sayle out of an Hauen of Norman, which lyeth neere the watch-towie or rather Pharms Flokawards, lituate in the limits of the Prouinces of Hordaslandia, and Rogalandia: and passing by Hietlandia, (misnamed by some Schetlandia) called a certayne Hauen by the name of Flokawogur, and there the deepest part of the Sea (where Geirbilds the daughter of Floco by chance was drowned) was caled Gewhildarwata, from her : no otherwise then that Sea was called Hellespontus, wherein by 10 misfortune Phryxus loft his fifter Helle. There was yet no vie of the Mariners Compafie: wherefore Floce leaving Hietlandia, tooke certayne Rauens vnto him : and when hee thought hee had fayled a great way, he fent forth one Rauen, which flying aloft, went backe againe to Hietlande, which the faw behind. Whereupon Floco perceiuing that he was yet neerer to Hietland then other Countryes, and therefore couragiously going forward, he fent forth another Rauen : which because she could see no Land, neither before nor behind, light into the ship again. But lastly, the third Rauen was fent forth by Flee, and haning for the most part performed his Voyage, through the sharpnesse of her quicke sight attayning the Land, which the Mariners desired, she speedily flew thither: whose direction Floco following, beheld first the Easterne fide of the Iland, as his Predeceffors did : and from thence directing his course to the South, found a very wide and open 60 Bay twelve Islandist miles broad, betweene the two Promontories or high Lands, afterwards called Renkanes, and Snafelfnes. And hearing by a certayne Mariner (whom he had with him) a See borne, named Faxe, that the Bay they now met with , was the huge mouth of a River or

CHAP. 22. S. 1. Island fo called of Ice. It is not Thule, Length and breadth.

Floud; Flore to reprove the folly of Faxe, supposing so huge a Bay of the Sea to be the mouth of a River called the name of the Bay inclosed betweene the foresaid Promontories, Faxaer, which fignifieth the month of Faxa. This Bay, by reason of the multitude of Hauens, was afterwads called Hafnafiordur : which name Hafnafiordur at this day is more specially vied of a most fafe Hauen of the fame Bay.

After this, Floco fayling along the West side of the Iland, entred somewhat within the Bay Breidafiord, remaining in a certaine Hauen of the Prouince Bardestraund, called Watnifierdur (for I yse the names given them afterwards) and there preparing wintering places, he lived very commodiously and well with fish of divers kindes, wherewith that Bay doth abound. But hano uing the Spring time here very vntemperate through cold, hee found a Bay(which entreth this

pare of the Land on the North) to be filled with Ice of the Sea, which wee call Gronelandif Ice. The name From which Ice, Floco deuised the third name for the lland, and called it Isand. Moreover also Isandofice Flow turning to the South fide, paffed another Winter in Ifland: and returning into Nerway (from the Rauens, which hee vied in stead of the Mariners Compasse) he allotted it the surname

of Rafnaflokes And Hand furely obtained these names consequently from the finders, or discouerers thereof. Mand is not For as touching the fourth, Thule, imposed wpon this Land by some, I cannot bee perswaded to Thule.

beleeue, it is true; chiefly by this argument; That Thyle, or Thule among the ancient Writers. was often in the mouth and writings not onely of Pliny in his fecond booke of Natural Histories 75. Chapter and fourth booke, and fixteenth Chapter (and Pliny flourished about the eightieth yeere of Christ) and of him who was more ancient then Pliny, Pythias Massiliensis: bu. also of Pub. Virgilius, who lived not aboue fourteene yeeres after Christ: but Island, till the yeere of Christ 874, remained altogether desert, as hereafter I shall speake, Thule therefore, which Vogil faid fhould ferue Augustus (Geor. 1. tibi feruiat vitima Thule : where even every child knoweth that Thule is Synecdochically spoken, for the Inhabitanes of Thule) not onely inhabited in the times of Augustus and Vergit, but also knowne to the Romanes, is not Island, which many ages after began firit to be inhabited. Besides, Plinie himselfe seemeth in the later place recited to reckon Thule with the Hands of Britaine : for , faith hee, Vlima omnium qua memorantur eft Thule : to Thule futibell wit, of the British llands, for hee speaketh of them. It is likely also that Forgit meant the same, of the British who said Thuis was the last, in the place before recited and likewise, Pensus toto durings orbs llea.

30 Britannes: that is to fay, the laft. Let me yet vrge the same argument further, from the age of Claudianns Alexandrinus, and Pub. Papinius Statius, farre more ancient then he. For Claudianus about the yeere of Christ 290, writeth thus concerning the successe of the Getick Wars atchieued by Theodofins.

Famaque ingrantes succinsta panoribus alai, Secum cuncta trabens, à Cadibus vique Britanun Terruit Oceanum : & nostro procul axe remotam Infolita Belli, tremefecit murmure Thulen.

Then blackwing'd Fame Feare girt, frights all the World with Warre. From Cades to Britaine, from Our World shakes Thale farre.

But did Report and Fame cause Island not inhabited, and desert to tremble ? And Statist more ancient by three hundred yeeres then Claudian, in his third Booke Sylms, writeth thus.

Quanquam etsi gelidas irem mansurus ad Aritos. Vel super Hesperia vada caligantia Thules.

Though I should dwel in Artike frosts, Or mystic shelves of Thules West coasts.

You heare, not onely a flight report of Thule came to Statius eares, but that the shallow places, quicke fand, or shelues found in approching to the Hand were sufficiently knowne vnto him, by 50 the often relation of Nauigators: of which fort in the circuit of Island, there are none that I know, * The Author which experience speaketh; but in comming to the Hands of Britains they are very ordinatie proceedsth in

and common, as they fay. The Longitude thereof from the East vnto the West, hath not hitherto beene expressed by a then our Reany certaine or affured measure that I know, nor yet the Latitude from North to South; der perhaps faue that in an ancient Codicall or Writing I found that the Longitude was twentie dayes jour- would permit ney : and the Latitude (where it is broadeft) foure dayes, but the journeyes, as elfewhere, fo allo vs. The learney : and the Latting (where it is proparty joure dayes, but the journeyease elewiners, to also ned and customers are the control of the con Go Latitude it felfe is not euery where the fame; by reason of Bayes on both fides, to wit, from the and more yet South and North entring the Land it felfe with vnequall diffances. The Easterly bound is in Orielius his

South and North entring the Land it felte with vnequal diffances. The Laterry bound is both Thefaurus.

Auffurbern: the Westerne Randesandur (for the Promontory Sua-fellouss lyeth more toward and Theatrum. who proucts out of Panpenius, Ptolemans, and Procopius, that Iflend is not Think but(as the name founds) Tylemante, a Region in Norma, or all Scandis, of which that is a part, fill retaining the name.

the South-well) but the North bound is Langanes, and the South Reikranes. The Iland also from the foure quarters of the World, is duided into North, South, East and West, and the Promontorie Langanes divideth North Island from East Island; fromWest Island, the Bay Rutafforder. trom South Island, the valt and buge deferts of rough, and inaccessable places extended the whole length of the Hand, But South Iffand, opposite to the North, through these rough and inaccessable places lying betweene the River localfu, running through the deferts of Solfeima ande, divideth from East / fland: from West / fland alio, a famous River, named Albis, emptying it selfe into the Bay Borg arford: So that, if it pleafed me to represent the sland in humane shape, East Island should haue the proportion of the head. The two more famous Promontories Languages and Reikranes or bounds; the one Northerly, the other Southerly(as hath been (aid)) should serve in stead of armes. 10 And the deferts extended the whole length of the Hand should make the backe, or backe bone: then North and South Island, the shoulders with the sides; the two opposite Bayes Borgar fords. and Ratafordar, the one on the South, the other on the North, should duide the forepart about the short ribs, from both the thighes or hips. But West Island should resemble the rest of the parts of a mans bodie, from the forepart about the short ribbes : which the Bay Breidifiordur comming in from the West, should contract and straighten into the right and left foot.

The Circuit.

The circuit also of the Hand, is no more certainely knowne; yet an ancient rumour and opinion (as in another place where it is noted) reckoneth one hundred and fortie foure Nornegian miles (as I thinke) that is to fay, two hundred eightie eight Germane miles, Chytrem accounting the Normegian mile, to equal two Germane miles, fayling from one Promontorie to the other, not by 20 the Bayes : whereof North Island is esteemed to have eleven, East Island, twentie one, South Mand fixe, and West Island seventie.

" Herald Harefagre finding many pattie Princes made an abfolete Monarchy of

Haraldus Pulcricomus * Swaying the Scepter in Norway, much neglected the chiefe Nobilitie of Normay : which the Nornegian Historie letteth downe at large, yet particular Histories of noble Families expulied by Pulcricomu, more largely profecute the fame, as hereafter wee pur-pole to write. For Pulcricomu not contented with Kingly authoritie, or chiefe four aignetie, that is to fay, with the right of Lawes, Magistracie, and appeale of Warre and Peace, challenged Normay, wher- all vnto himfelte, by the right of a proprietarie. Infomuch, as very many choic rather to leave their Countrey and rich inheritances, then to exchange their Generolitie for flauerie and trifought to free bates : for they thought it altogether vnworthy and ill beseeming their owne valour and their 30 ancestours. Hence, for the most part arose mutuall injuries against the King, or the Kings parriesiand hence takers; as murdering of the Kings friends, allyes, or faction; then the exercises both at Sea and arous the plan- Land were rapines and robberies. From these noble Families therefore, refusing the violence of ration of island Harald, this our Island, with the neighbouring Hands began first to be inhabited, and that almost by these steps and vovages.

A.D. 874. Ingulfus.

In the yeere of our Redemption 874 a certaine Inhabitant of Norway, one Ingulfus, going out of his Countrey, following the steps of Naddocsus, Gardarus, and Floco mentioned before, was made Standard-bearer of the Inhabitants which were to bee conveyed into Island, and that upon this occasion. Ingulfus was famous for his parentage and riches, whose father, called Orne, which fignifieth an Eagle, was Duke of Fyrdafilee in Norway; the fifter of Ingulfus was 40 Helga, a Virgin indued with all womanly ornaments, and his coulin germaine Leifus; who for a notable fword, which through his fingular warlike proweffe he got in Ireland, was named Hiorleifus. For Hir is a Sword. Moreouer, at that time among the Nobilitie of Normay, there were three naturall brothers, Hallftenn, Holmsten, and Herstenn; the sonnes of Atlas, or Atlantes, a certaine Baron of Norway: who bore certaine prime grudges to the foresaid Ingulfus and Hiorlesfus; which prefently after brake forth into cruell and bloudie flaughters. For when by chance they feafted together, after the manner of that age, they injoyned every one to make fome folemne Vow. Herstenus therefore first vowed, that he would take Helga, Ingulfus fifter to wife, or marrie none. Then presently Ingulfus wowed, that hee would admit none into his Fathers Inheritance with him, faue only Hiorlesfus: meaning thereby that his fifter Helga, by his confent should marry none but Hierleifus (contrary to the vow of Herstenus for the marrying of her only.) After that Helmstenus vowed, that if he were chosen Arbitrator betweene the aduerse parties, he would by no meanes be compelled, to suffer an vniust sentence. And so the rest after them. Not long after succeeded the Vow of Ingulfus, for Hiorlessus tooke his Coulin Germane Helga to wife. For at that time the Marriages of Coulin Germanes were lawfull. From hence arole the extreame hatred, and enmitte of Herstenus, against the foresaid Hierleifus, and Ingulfus : who therefore joyning with his Brother Holmstenn, with fixe thips filled with Souldiers, let vpon Hiorleifus vnawares, hauing but three ships only, preparing his Voyage into foreine Countreyes. Whose violence Hiorleifus a long time, and stoutly sustayning, holpen by a certayne friend comming in the meane-while, hauing flaine Herstenus got the upper hand. But Holmitemus providing for himfelfe by flight, and not a little exasperated and grieved through the violent 60 death of his Brother, after some few monethes, came with an armed power to Ingulfus and Hiorleifusto furprize them fuddenly at home. Whereof they being certified by Spies , receive him with an armed force, and kill him. Halftenus the third brother, wifer then the reft, who

and bloudic quarrells en-

conforted not with the vni ift routes of his Brethren, remayined yet alive: to whose arbitrement Insulfus with Hisrleifus commit the whole matter to be determined, holding him mindfull of his Vow, concerning equitie not fo be violated. Halstenns therefore pronounceth his brother Herflenus to be justly flaine : But not Holmflenus who compelled through bitter griefe, defired to reuenge the death of his brother, by any flaughter what focuer. For killing therefore of him he commanded them both to be banished out of the Prounce of Fydafille. They readily obey his award to whom they willingly committed the centure, & with a purpose to leave their Countrey, they fell their Lands and Poffessions for mony and Merchandizes, and conceive in their minds a worthy attempt of planting a strange people in a strange Country; and that not to gratific Halflenns (with whom through this agreement they returned into favour; with whom they might otherwise eably have contended in strength) but also for feare of Pulcycomus himfelfe, raging against his Country, and innocent Countrymen, for the obtayning (as both beene faid) not only of the Morarchie, but Pampella, of all their Poffetfions; nor was that to bee doubted, concerning the violence and oppression of Harald: for in the Historie of Haguinus Adalstenius his succeeding Some it is exprelly read, that he was concented with Kingly authoritie, and restored to every

one their owner which his Father vnjuftly challenged vnto himfelfe. It was the weere of Christ 870, wherein Ingulfus with Hierleifus hift visit Island, but they inhabit it not prefently, but foure yeeres after, in the yeere 874. as hath beene faid; bringing ma- Ifland first in-

ny Families thither. Moreover Ingulfus comming within view of the Hand, cafteth the postes of the houses which 30 he had in Norway into the water, after the manner of Ethnickes accounting it for an Oracle, that that place was fatally chosen for his Habitation, which the postes cast out upon the shoare Superstition: thould note or fignifie. That custome many of the Norwegians retayned by turning of the ground. But Inpulfus arrived not where he caft in the postes, but at the Promontorie of the South shoare (alfe-where erroniously, the West shoare) called by his name Inguishede. Yet not withstanding wanting the postes of the houses three whole yeers, at length he found them in that place, which is named Rerchiarwich, and there he erected his Habitation. But Hiorleifus more estranged from Ethnick Superflition, seated himselfe in the Promontorie Hirleifihofda; fokalled likewise from his name. There he built great houses : one of one hundred twentie fix, and another of one hundred fland had an thirtie fine feet long : who, the first yeere being ended, began to till the ground and sow feed. ciently fairer

3C In which worke, when he had exercised ten servants or slaves, which her brought with him out houses then In which worke, when he had exercise ten creams on many, many wilde Beare (for it was now, thaning in fland, they fayned that Hundigin his labouring beat was flane by a wilde Beare (for it was now, than ing afterwards manifelly knowne, that Mond hath no Betters, but figth as came thirther by Imber from Marse, see, the contract of th chance) which when Histleffus (with a purpose of reuenge) sought in the next neighbouring likewist Ti-Wood, he was deceitfully slaine by these slaues lying in ambush: together with some other lage was then companions which he tooke with him : the Servants aswell ravishing the Wives as spoyling the in vie. goods of the flaine; and flying into the Ilands not very farre diffant from the floare : which after Hierleifus flain. of the same slaves, were called Westmassar, because they were of Ireland. The Norwegians call the Westmassar and Westmassar and Ireft, Englift, and Scots Westmen, that is, men of the West : seeing those Countries are distant from Norman, to the West. Ingulfus pursuing these Murtherers, set vpour them suddenly, and de-stroyed them enery man in the same Ilands, being much grieved in minde for the vntimely and cruell death of his deere friend and allyes.

But Inguiffie found and poffessed Isand altogether barren and desolate; on euery side beset Woods. with very thicke Woods, and scarsly fertile of any but Birches, fo that hee was faine enerywhere to open the Woods with the Axe, for journeyes and habitation. Yet in the mesne space. we might gather by certayne fignes, I know not what Mariners had formetimes touched your certayne shoares of the Countrey, but not inhabited them. For Ingulfus found little facring Bels and Belsand wooden Croffes, and other things made by the workmanthip and arte of the Irifi and Groffes. Britagnes: but no tokens of culture, or habitation. Whereupon it is likely, that Irifh, or Scottifh Fishermen (as also the English at this day) accustomed to fish neere Island; as sometimes it commeth to paffe, went ashoare, and so by chance left facsing Belle and Croffes, the Vtensils of Chri-

ftian Religion. For at that time the Irib were instructed in Christianisme as they fav. And those whosever were the ancient Manders, they called Papa, or Papas: from whom, as seemeth probable to me, the Hand of East Island called Pager, derived the name; because they were often wont to touch there : or their Monuments (fuch as I fayd) were chiefly found there. This side of Island, to fuch as fayle from England, Ireland, and Scotland, is most exposed towards the North-west. Moreouer, what and from whence these Papa, or Pappa came, I cannot fufficiently speake : vnlesse peraduenture from the Ilands of Scotland, whereof one is named

Pappa, and another Wellrapappa, as we may fee in the Mappes : vnto which conjecture let every 60 one give what credit he pleateth. Furthermore, very many of the Normegians, atterwards boldly following the steps of Ingulfus going into Island, with their wives and children, and great multitudes of their Kindred and friends, restored themselves to libertie. Whose names and large Families are recited in the Chronicles; as by the fecond Booke is underflood. Befides it is there recounted what coasts, what shoares, what middle-land places every one possessed; and at what

time; and aliohow the first Inhabitants gaue name to Straights, Bayes, Hauens, narrow time; and atto now the first inhabitants gaue mame to straignes, Dayes, crauens, narrow straights of Load, Ferryes, Clysfes, Rockes, Mountaines, Hills, Vallies, rough and inacceffistraigns of Lena, perfyes, clyfics, rockes, acountaines, rames, roogn and maccedeble Places, Fountaines, Flouds, Rivers, Villages, Farmes or Habitations : whereof at this day ner Fraces, rountaines, froms, Ruers, viniges, raines of frantations. Whereof at this day many are yet retained and in vie. Which Topography, supposing it would be tedious, especially to a fortaine Reader, I have here omitted; applying my selferather to the description of the Insabitants, who in fixtie yeeres space so replenished with their multitudes, the habitable

Here wee see twentie one Characters, but the ancient numbred onely fixteene. And the there we see we would not acknowledge for theirs; because a of the Gracker, that is to 62 fay st. or dt. (as they would haue it) they might write it in their language with diffind letters. But the fourth of from the cighteenth, they diffinguish with some point, or an overthwart line, almost thus a :otherwise it is altogether the same in shape and name, Tr. burd. Stronghous try, that is to fay, pointed Tyr, as P. Lannk, and pointed keen P. g. So Is pointed for e.

CHAP. 22. S. Letters and Grammer of Illand. First Northerne Inhabitants. 650

but Plaster resembleth B. with both the bellies open aboue and beneath. Besides these, the rest are numbred fixteene, as I faid, For they reckoned the Diphthones to the Syllables.

Moreover, it retained the last new Conforant of the old Alphabet, changed in name, but not in thape , which is p. This being fet after a vowell in the fame fyllable, hath the found of d, as Blue for Blad, which is a leafe : which kind of writing was more viuall with the ancient bur at this day is almost growne out of vie : but being fet before a vowell, it hath a peculiar force and pronunciation, not altogether Th, but founding fomewhat more grofly, as it were Tab, putting forth the tongue almost between the fore-teeth; as parthat is to fay, then In times past it had the name of Paff: at this day it is called Porn, or Thorn, if you put p. for th : and therefore it cannot be written or pronounced at all, but by it felfe.

They also of later time write the Conformat' f. after this manner g. The Moderne Writers also dee tomet mes afroirate L. W. R. the ancient very feldome and almost never : as Histor in old time Louar, that is a thing. Hinfor in times past (as also fometimes at this day) Knifer; that is to fay, 2 Knife Hruser in old time Ruser, that is to fay a Ram. In like manner tometimes lod, and Usf, or Land w. Conforants : as Hiel, that is, a Wheele: Hugher, that is, a Whale : which also I thinks the aricient did concerning lod, and Vaf.

In Vowels and Diphthongs, as also abbreulations proper to this language, the varietie is farre 22 greater, which I purpose not to touch. Moreover also, the due handling of the letters, as of the rest of the Etymologie and Syntaxis of this tongue, would bee the copious matter of a peculiar worke, especially it any would adde the Poetrie, purposing to write the Grammer of the Islandish tongue, which would bee no more difficult, then that wee have feene done, concerning the Germane and

About the yeare of the Lord 1216, one of our Country-men wrote in his Country language. Mand Gram. concerning the letters of the proper, or mother tongue : where hee affirmeth thefe ancient Cha- marian. racters to be peculiar to this language, and handleth them both, as well new as old after a legitimare and due manner of tractation, by his definitions and divisions of the letters into Vowels and Confonants, and of the five Titine Vowels, maketh eighteene of his language, diftinguished in found and pronunciation: He divident the Confonants habitrally into halfe Vowels, and Mutes, and those into Liquids and Pirmes, these into open and shut; performing the part of a pretie Lo-20 gician. And in delivering the force and pronunciation of the letters, hee artificially affumeth for euery definitionall the Inffruments of framing the voyce, as well the lungs and throat, as the auxiliary parts of the mouth and tongue. The letter p. alfo, he calleth the, peraduenture in imisation of the Greeke Theta (which almost, as we faid, although not altogether it expresseth) or Tax of the Hebrewes, which Hebrew letter, if th. or t. of the Latines rightly expresse, as is reported by fome, Than shall come nothing neerer to our p. then Theta. The same Country-man of ours, from absolute letters, proceedeth to set downe in writing, the figures of the word and sentence in the Mother tongue, and illustrate them with examples of our language, retaining the Greeketides of the Figures, or names of Epizeusis, Anadiplosis,&c.

And from this Writer of our Countrey, we received the Types of the old Alphabet : for there Norws of whom 40 are Historicall fragments yet extant, concerning Norus the Name-giver of Norway, and founder Norway is of the Kingdome, and thole Toparchi, or little Kings, whom hee vanquished before hee obtained named. the Monarchie.

ð. II.

A discourse of the first Inhabitants of the Northerne World, Supposed to be Giants expelled from Canaan. Of the Islanders Honfes, Fewell, Victuall.

Oreouer concerning some of the ancestors of Norus: among whom his father Ports Chap. 4.

(whom they call Thorre) King of Gotland, Finland, and Kuentand: an excellent Prince Inhabitants of the fifth Inhabitants of the fifth of of his age, from whom the moneth of the old Normegians, and now Islanders hath the the North name of Thorre, which in the Inlian Calender beginneth the 10.11.12.13.14.15.01 16. parts of the of January: for it hath a moueable beginning after the manner of their Calender. And feeing King world,

Therre this month accustomed to facrifice vnto his gods; the Kuenones instituted yerely facrifices Therre. in the same month to him, being dead, as to a certaine god, in token of an happy yeere, which they began with the winter, after the maner of the old Lacedemonians; & called the fame month Porre, 60 of Thorrosno otherwise then the Lacedemonians gave divine honor to Lycurgus being dead building a Temple in memory of him, where hee was honoured for a god; to whom his familiar friends inflituted fer Featting-dayes, and folemne affemblies which remained a long time, and the daies wherein the affemblies were celebrated, they called Lycargide: concerning which matter looke Cragine in his third booke of the Common-wealth of the Lacedemonians.

Or the Ancestors also of Norm, all are mentioned even to his Great-grandfather, who was Fermetin King of Finland: Moreover, one of the three fonnes of Fermetin, and therefore Great vocle of Nasas, called Logie, which fignifieth a flame; who for the excellencie of his beautie was called Halogie, that is to fay, an high or excellent flame. Hee was Monarch of the Halonie. ensian Pronince, bordering upon the Pronince of Nidrofia.

Goe also the daughter of Thorre, by the lifter of Norms, is there recorded, for recourse of whom, being ftolne away (as Cadmu was fent by his father Agents to feeke his daughter Large) Norms was fent by his father Thorro: which, that it might more happily succeed, Thorro instituted new facrifices to the Gods, in the moneth next following the former (afterwards called Thorra) and intituled the same moneth with the name of Gos, after the name of his daughter 10 Ge: which name of the moneth likewife the Islanders that now line doe yet retaine. Furthermore, ancient Histories make mention of Gorss, the naturall brother of Norss: 2s also the nepbew of Gorns, named Gylung, having the loveraigne authoritie in Succia, in whole time Odman hap. pened to come (others call him Others;) Standerd-bearer of the Afrey Immigration, made in the foure and twentieth yeere before Christ was born, which we mentioned before : and Gylasu hada father called Geiterus , and an Vncle Beiterus, the founes of Gorus; from Beiterus, the Hauen neces the Citie Nidrofia, is named Beitflod

I thought good to exhibit these things in a Table.

Fermetse King of Finland. Kere. The same also is esser, That is to say, the Winds, for which other-wise figuriseth in the number of the God of flead of Vulcan after death (as

Hiar. the Sea; hee is supposed an-other Neptune, to have dominion ouer the Sea.

in the number of the Gods after death, he is thought to be having power over the Fire) another Lolm, to rule the and for the excellency of his Windes. beautie was called Halogie, fo named of the Province of He- 30 logalande in Norway.

Frotte. Otherwise called lokal, both from the Froft and Cold

Smer. That is to fay, Sweet: furnamed the Ascient, because hee is reported to have lined three hundred yeeres; he left one fonne, and three daughters.

From this Norm , Haraldon Pulcriconnus is the twelfth of them that descended from the right Line, whom some make the first Monarch The said After immiof Norway, but amiffe, being ignorant of Antiquitie: feeing hee was gration happened in the third Restorer of the Monarchy of Namay: for betweene him and the time of this Gylai, co. Norms, Hemneus the fonne of Odinus "obtayned the Monarchy alfo.

* This Odinus is faid to hane made his plan tation with his ers, about four and twentic yceres before Christ was borne.

Earth-bred or Land-fprung men, which ginall in that

These (I say) besides many other things, are the manifest tokens of the Inhabitants of the Northerne World, farre more ancient then the immigration of Odimer: of whose originall notwithflanding, there is not one word. But because it is most repugnant toa Christian man, knowing the Bookes of Mofes concerning Originals, to affirme themselves to be Assochema, as both others, but especially the Greeker did concerning their Ancestors (yet with better leave then the reft of the people of Europe: who next to the Chalders, Egyptians, and lower, might worthily boalt of Antiquitie in comparison of other people.) It were better truly to confesse the vaknown originall of Ancestors, then to be carried away with the opinion and error of Earth-bred men: 60 left furely wee should heare some fach thing , as sometimes one wittily vpbraided the Grecious with, fo much boafting by reason of their pretended selfe-original, to wit, that Mojes the Law giver of the leves, was more ancient then the Gods of the Gracians.

In the meane space, because through the onely confession of ignorance or doubt, truth doub

Giants first Inhabitants of the North, esc. C HAP.23.

not so some appeare; somewhat is to be alleaged touching the proposed question : that the hithoricall Reader may haue fome thing here which hee may either confuse or confirme. Wee are therefore by probable reatons to inquire, who were the first inhabitants of the Northerne World, and from whence they came: then, when they began to inhabit this our World: that from hence some coniecture may artie concerning the original of the language. And that I may here acquit my felfe without circumstances; I thinke the first inhabitants of the Northerne here acquit my iene without encumerate, nay, mere Giants; men that inhabited the mountaines Giants firft inworth, were of the manners of Clints hift in-of an luge and fomenimes a monitrous body, and of monitrous and exceeding firength'; and that habiters of the they were the posteritie and remnant of the Canaanites, expulsed from the Territories of Pale- Northerne In fina, about the yeere of the World 2500. by lofus and Caleb remouing into Palefina through parts of the find, about the yeere of the World 2500. Dy 10 Jun and Later temporary into I may limb the organ World.

Gods pleasure and direction: and that this Countrey of the World even vntill those times, or Their original

peraduenture longer, remayned altogether not inhabited. from the Saxe Grammaticus argueth in the Preface of his Dania. But (fayth he) the flones of exceeding bignesse fastened to the Tombes and Caues of the ancient, testifie that the Countrey of Den. Along difrecoung organize from the with the inhabiting of Giauts. But if any doubt, that it was done by courte of the monstrous strength; let him looke up to the high tops of certagne Mountagnes, and say, if he know Authours monstrous strength; let him tooke up to the bigh tops of certaine Manniaines, and jay, if we know proue that it well, who halb brought Rockes of such huge greatnesses to the tops thereof? For every one that considerath their have bin this Miracle, shall perceise that it is beyond common opicion, that the simple labour of mortalitie, or v- Giarts, : 0finall force of humane strength Scould rayse so huge a weight (bardly, or not at all moucable open the mitted,

20 Plaine ground) to fo high a top of mountaynous fublimitie. This Saxo writeth, who shall be a fufficient Author vito vs concerning the first Inhabitants of Denmarke, that is to Gy, his owne Countrey. So concerning Norway and Suecia, and the bordering Countreyes, as whatsoeuer is most ancient; so it most resembleth a Giant-like disposition and nature. Whereof examples are to be taken out of Histories, which would be tedious Giants in the here. For that I may omit ancient examples, those things are knowne of late memory to have time of Harbeene done : Concerning the Giant Doffre, unhabitant of the Mountayne Doffrefiell in Nor- elden Hereway; and Foster-father of Haraldus Pulcricomus King of Normay. Also concerning Dunubo fast and since who lived in the time of Droffon: from whom the Bay Boddick or Bothnicke: in time path was called Dumbshaff, who in a Sea-fight, encountring eighteene Giants alone, sent twelve of them 30 first to Hell before he himselfe was slaine. Of thirtie Giants at once destroyed by fire, by Dam-

bos Sonnes left, in reuenge of their Fathers death. There is yet a later example of certavne Giants of Norway, destroyed by authoritie of Olans Triggo King of Norway, about the yeere of Christ 995. But the latest in the yeere 1 338. Magnus the Sonne of Ericus, being King of Nor- 1338, 2 Giant Christ 995. But the latest in the yeere 1338. Magnus the Sonne of Ericus, being King of Nor-reportedois, was, that a Giant of fifteene Cubits was flaine by four mentas it is found recorded in the Chro-Cubits. nicles, Hereunto adde, that a certayne Prouince of Norway, or bordering vpon Finmauchia, in ancient time was called Rifalande, that is to fay, the Land of Giants (for En Rife, and Refe.fignifie a Giant) from whence lotum Heimar, that is, the habitation of Giants is not farre diffinant (whereupon as yet, En Ist, is fail to be a Giant) that I may Speake nothing heere of Istumland: by which name, that which at this day is called Intland, was sometimes called by our Countrey Intland.

40 men, and very many other also, the Land of the Cimbri, or Chersonesus: the same name also heine given it of Kemper, that is, fighting Giants of Nephilbeimar, and Karnephill, elfe-where, and peraduenture by others shall be spoken, as also of the Getthes, and Getts (peraduenture also letts) and fuch like others. Moreouer, the remnant of the Giants came into Island, whole Names, Habitations, worthy Ace and Enterprizes, are fufficiently knowne, and before our eyes. Seeing therefore Giants first inhabited this our World; it is demanded, when, or whence they came?

Gilb. Gemebrand. Chronol. Lib. 1. The first Age, layth hee, (from the (reation of the World unto the Flond) seemeth to have beene passed and spout within the mid-lands of the World, and that ther came not to the borders of Aira, Airica, and Europe. Bodinus fayth, that Mofes wrote the

50 Hiftorie of the whole World (he meaneth inhabited) euen to the yeere of the World, 2470-And Genebrand againe, Lib.1. Chronel. pag.11. Asthe first Originall of Manhind was in Atmenia, Mesopotamia, Chaldaa, and Syria : and men before the Floud dwelt only there : so other Countreves themselnes, were first inhabited after the Flond. Also Gonebrand fayth yet turther, wild. pag. 35. Before three thousand yeares (for bee wrote in the yeare of Christ 1 (97.) almost all Europe was emptie, that is, about the yeere of the World 2541. which is chiefly to bee vinderstood of the Northerne World, if of the reit of Europe. But hee faid , shmoft , not altogether , that hee might not take away the migrations of the Nations then presently beginning after the yeere of the World 2500. wee doe not therefore tye the time (wherein this further Europe began to bes inhabited) to the yeere of the World 2500. But wee fay, that that troublefome time wherein 60 the Nations (and among them the Giants of Canaan) were cast out of their places and dwellings, and compelled to leck new habitations, even in Europe, happened in this yeere; as was propoled by vsin the beginning. And that Europe received her Inhabitants from hence, among the Ancient. Procopius is my Author, a Writer borne at Cafaria of Palaftina, Collector of the worthy Act, of Infimianus, about the yeere of the Lord 530. who to proue this very thing, allea-

The Canamites being callow of the Land of Paleilina, by the Habrewes, went into ligricum and Pannesia (to wit, by the of the Lamb of suspinary the Landsoner, while this options and Common (to wit, by time majorations and removes, which out of the place before alleadged by Procepus, were understand) as Rabbs Danid Kimchi witnesseth at the end of Abdiss.

The ancient /flander sceme to have been ordayned for great frugalitie, wherein first their A ne anxient special activities and before a supplied to the food and manner of apparell : and lattly, the reft of the exercises of their common life,

For first as touching their habitations, the Islanders have followed the first and most ancient 30 Separate dwel-FOR BITT AS COACHING, LICEN HARMAGOOD, ME SPECIALLY INDEED AND WELL LICENSE (PEACHTO I the Go-manner of dwelling. To wit, not by Cities and Townes; but as Tachus (peaketh of the Gomones of his time, they dwelt afunder, as a Field, as a Fountayne, as a Wood, as an Hill, or Valhoses of an intum, my new terms among, as a Kaba, as a Kobasayur, as a vroot, as an inin, or val-key, Shoare, or Bay of the Sea pleafed them: Not only initating here the example of the first Age of the World, but also of the latter Age : as the people of Albers and Laconie, in the beginning dwelt by Villages (as they write) not together or by Cities: and as in the time of Tantas, about the yeere of Christ 120 with the Germanes there was no vie of Mortar nor Tyles: (whereupon any man may rather judge the like concerning the Northerne World) to, nor after, with the Islanders, but they built their houses with Timber and Tursse. Nor furely was it momentany worke which lafted but a while, nor yet deformed in thew, the walks were fometimes made only of Turffe, fornetimes of rough Stones, adding Turffe in flead of Mottar : which at 40 terwards they couered with workmanship of plankes, as also the raftering it selfe; especially in terwards they coursed with worksmanning or putation, as and the interrupt is every pre-may in more motable buildings. And if you might fee the Roofe with the walls before mature old see our-growne with greene graffe every years, for you must volterfland, that the Roofe and walks were coursed with greene larte. Windowes were made in the Roofe, feldome in the walls, and certayne Roofes not very high, such as is reported the building of houses with the Easterne people was wont to be. The Inhabitants had flore of Timber, cast ypon the shoare by the swelling of the wanes of the Sea; through the miraculous testimonic of Gods Prouidence, confidence ring their Woods at home yeelding plentie, as I thinke only of Birches, were not sufficient for their huge houles : which yet were a great helpe also, with those which the Inhabitants, as oft as they would, ferched out of bordering Norwy, and peraducture allo out of Grandand: for the 50 Illumders sayled yestely to both a long time. Every one therefore had the houses of their Villages almost joyning together on their ground : befides the stalls of their Herds, seared some diges almost joy ning togetoes on user ground; center the totals of their sterios, tenes sometimes of their sterios, tenes sometimes of fuell, not altogether joyning together, to auoid the danger of fire : peraduenture also certayne store-houses, which being folitary, might

Some manayned their fires with home-growing Wood: others with clammic Turfe (as I thinke H. Assists aprly calleth it) whereof there are two kindes with vs: the one fort and spongie, growing under the superficies of the Earth; which wee call Soundar: Another more houge growing vasce ton upontance of the best of the deep charmes or kines, and therefore more weightes; which peradoenture wer may very well call digged Turfe, by the opinion of the fame I main: because it as taken out of the deep Charmes or kines, die 60 Reserve the Ingression of the Earth. And both kindes of Turfe (but this much more) must be sense of fifth baked with the Sanne and winde, before it be fit to burne. This latter kind we, as also fome Benter of Turfe-fewel in Of the Germanies call it Torff: the inventor whereof in the Orchades a certayne Orchadessan Duke is faid to become Einarus the Sonne of Rangunaldus a Norwegian Duke of Mare, in the

time of Pulericomus King of Norway, who was therefore called Torffeinarus. He had a brother railed Rolfno, whom Crantzins nameth Rollo, who possessed part of France, afterwards called Normandie of the Normans, or Normegians. The Inhabitants chiefly wanted fewell to expell the difference of cold, belides other vies fufficiently knowne : especially in the Winter time, Stoues when Hot-houses and Chimneyes are in vse, heaped together of Rocks and stone, through which the flame might eafily breake forth; which as foone as through the force of the fire they were throughly heat, and when the Hot-house began now to leave smoking, the cold parts of the Chimney were besprinkled with hote glowing stones : by which meanes heate vieth effectually to difperfe it felfe throughout the whole house, which also is very well so preferred by the wall. 10 and Roofe couered with Turfe.

Yet left the Islanders might seeme through meere pouertie or want of knowledge, to have v. fed rade buildings and poore houses; I can cal to remembrance certayne houses of an hundred and Greater house twentie fixe foot long, and fome of one hundred thirie fine, as I have before declared concerning (es in I fland, in the buildings of Ingulfus : and some of one hundred and twentie feet in length , and fixtie feet broad ; whereof we shall hereafter speake; some also, whose hollowed rafters, and boarded feeling of the walls carued by art, report the ancient Histories, of worthy and memorable Acts. They therefore inclosed their habitations built after this manner, with certayne spaces of fruitfull fields orday ned for tillage, which spaces through toylesome labour, they afterwards compaffed about with a banke cast up, to keepe out the Heards of cattle. Moreouer, sufficient huge pastures were assigned to every Farme or plot of ground, divided by certayne limits, or inclofures from others, whereof we shall speake in the eight Chapter. And every Farme or Habitation for the most part, and in like manner every plot of ground received the name from the first Founders : fometimes also from some other : so Mountaynes and Rivers as hath beene advertized before; fo that by this meanes the places themselves, even by their names only declared to all pofteritie their firft Inhabitants, and improper.

I proceede from buildings to their victuals, and tillage of the field and ground, which part- victuals and ly succeeded well to the first Inhabitants, to procure Corne and fruit from thence : but I know Husbandry. not whether every where alike. Yet in the meane space, that Hierleifus mentioned before, exercifed his flaues in tillage of the ground : and one Gunnerns of Lidarenda, fowing his Seed, was ently in vie. 20 wounded by the enemie on the ball of the cheeke : and likewife Hofebuldus Huitarnelgode bufi-

tayne places. Hence came that Law concerning the gathering together, and carrying of Corne after Harnest (where they speake of the services which the Lawyers call praduall.) All which

are manifest tokens of the tillage of the ground, amongst the first Islanders : which also,

even vnto this day, I heare, is practited by some Inhabitants of South Island, but with

leffe increase: the ground and temper of the Ayre degenerating from the first goodnesse

thereof after so many Ages : peraduenture also the care of the Husbandmen beeing leffe

diligent, may bee the cause; since Corne comming from forreigne parts began more to be in vie;

And because that tillage of the ground seemed in the beginning either not yied of all, or lesse

fently began : whereby they compafied with dunge those fields or spaces, which I said they inclosed within their owne circuit, especially with kowes dunge, at the mowing of the best hay, to the intent they may the betterfeed the Heards; and especially the Kine, that they might

yeeld the more plenty of Milke. Which tillage of the ground is yet retayned : and they only

exercise thesame for the most part, almost by mid-land Inhabitants: seeing such as dwel upon the

Sea-coast line most by fishing: whither also those more remote or mid-land people yeerely send

their Servants to fift, Both Plaines, that is to fay, the ground and the Sea, was to bee ploughed

after a fort by the Islanders, for the comforts of life. To whom besides insteed of victuals, Sheep,

40 fruitfull for Corne, and all manner of graine; a peculiar manner of tillage of the ground pre-

ly imployed in fowing the Seed, was flame. Hence from the fields there are proper names of cer-

Oxen , Swine and Kiddes , fufficiently abounded : and also fishes of divers kindes , besides 50 Sea-fish out of the Flouds , Lakes and Rivers , they met with every where: so that they Beaffy. might take them as it were out of a certayne weele, especially in that Age : also Milke Fowle. and White-meate, with goodly plentie of Butter from the Heards of cattle. Besides Fowle in great number, some tame, as Hennes and Domesticall Geese, or Fowle of another kind

liuing in the open Ayre, wandring also solitarily in Mountaynous places: which the possesfors marked in the feet, that every-one might more eafily demand his owne. They had others also not tame, which they tooke by certayne ginnes : as Geese and Duckes of the Medow, Partridges, and Swannes and very many Sea-fowle, whose names and properties I doe not know. But Fowle of either kind tame or wilde, they either presented their Egges or themselves, or both, for the vie of men. Besides the natural Drinke or pressed Whay of Milke (whereof the great plentie is fo much the better, as the Milke is more excellent : fo that halfe an Drinke, cunce of water mixed with an ounce of Whay, doth not wholly diminish the taste thereof; but Whay: that it relisheth more of the Whay then of the water) they also boyled Barley Flowre, formetimes adding thereto the Honey Combe , or Water mingled with Honey : fometimes Mead.

also a Liquour made of certayne Berries growing heere. Moreoner, the ancient Islanders, Ale.

brought in drinke made of Corne, from forreigne parts, as also all manner of graine, and other brought in drinks made of Come, inconsorting to pray, a mount manner of grame, and other things; for they were furnished with ships of their owne, wherewith they yearely whited at their pleasure, Denmarke, Norway, Suecia, Scotland, Saxonie, England, and Ireland,

Our ancient I flanders wanted not honelt Banquetings and meetings; and that furely without miserable sparing, whether we respect the number of the guests, or the time of the Banquets exhibited. For Theodorus and Thornaldus, brethren, and Citizens of Hialtedat of North fland, folemnizing the Funerals of their Father Histra, made a Banquet for fourteene dayes together, of twelue hundred persons, presenting the men of better note with some gift. And an getter, or twente numerea persons, presenting the ment of better note with some gitt. And an Inhabitant of West Island, furnamed Olam Pa, with his two brethren, were at the charge to banquet nine hundred men, euen for fourteene dayes fpace; not fending the chiefe men away 10

I find money was not vitall with the Islanders, I meane, those of ancient time: butfilter was weighed by the ballance: and bartering of Merchandizes was very commonly vied. Moreous, Rings of Gold, and Bracelets, were both often fent for tokens of remembrance from Superious to private men, or from one friend to another.

d. III.

Of their Politie, and Religionin old times.

Chap.6. mon-wealth Religion.

the Islanders going about to establish an Aristocratie, or State of Nobilitie (considering they dwelt scattered in the Countrey, and not together) first duided their Citie into Fourths or Tetrades, named from the foure principall quarters of the World, and diftinguished besides by setting of bounds (such also as was

the Geographical partition of the lland it felie, mentioned before at the end of the fifth Chapter) dissided into North, Eaft, South, and West quarter. And againe, they divided the Fourths into Thirds, except the North quarter: For this, as it was larger then the reft, was parted into Fourths. But these Thirds they subdivided againe into their parts: the rat, was parted into Fourties. Due there I must they audulined against into their parts: fome Tenths and others fomewhat otherwife. For the which not finding a fit name, I have retay-ned the proper name of the Country, that which with them is Hrepper, wee may counterfore. ly call Reppa: vnto the which also we may imagine no vnapt Esymon, from the word Repo. For here was the first applicate sopposia of them that executed any publike Office, for equitie either of opinion and judgement, and the equall ballancing of mindes, to be preferued in the reft of the Magistrates, worthily ought to begin there, volcife any would rather thinke they had respect heere vnto Reeb, that is to say, Coards, with the which the division was made, after the moit ancient manner of the Hebrewes themselues. Enery Reppa regularly contayned twentie Inhabitants at the least (for oftentimes it contayned more) limited by a certayne increase of the wealth of their Family, under which they might not be reckoned to the poorer Repres; to the

Seats of In-

Idols,

Per and Thers Freyr Nierdur and As. fame that We. des in our Saxon floric. Deuili) made

Moreouer in enery Third, as also in the Fourths of the North Tetrade, (which Iurisdictions 40 in times pall they called Page, at this day allo Sylus bread) they appointed three more famous places confectated to the Seat of Inflice and Indgements; before allo deducated to Ethnick Sacrifices, which they call Hoff: we call them Holy Places, and Temples. Euery Chappell atter the manner of this Countrey was sumptuously built: whereof wee reade of two, of one hundred and twentie foot long. One in the Iurisdiction of Wabdell of North Island: the other in Risdames of South Island: and this surely fixtie foot broad. Moreour, every fixth holy place had a kind of Chappell adjoyning. This place was most holy. Heere stood the Idols and Gods made with hands, vpon a low floole or a certayne Altar; about which the cattle which were to be facrificed voto them, were orderly placed. But the chiefe and middlemost of the Gods was Impier, by them called Por, from whom these Northerne Kingdomes yet call There day Therf. 50 dagb. The rest of the Gods were collateral vinto it; whose certaine number, and names I lique not heard. Yet in the ancient forme of oath (whereof mention shall be made hereafter) three besides Thoras, are specially noted by name : Freyr, Norder and As: whereof the third, to wit At, I thinke to be that famous Odinns, not accounted the fait among those Ethnicke Gods (of whom I made mention before) Synecdochically called As: because hee was the chiefe of the people of Afia, who came hither into the North : for in the fingular number they called him As, which in the plurall they called Afer, or Afer. This Odiones, as aforeleid, for his notable knowledge in Deuillish Magicke; whereby like another Mabonet, hee affected Sorcery(which a Diuinitie after his death, was reckoned among the number of the Gods: from whom at this day, Wednesday, is called Odens Dagur, the day of Odinus: whereupon peraduen-60 ture, I shall not emaptly call Odin Mercurie, as Ther Impiter. Yet the ancients honoured Odm in the place of Mars : and fuch as were flaine in the warres, they ay were facrifaced to Odin. And the companious, or Sonnes of Odin were Freyr and Novelier : who

CHAP. 23. S. 3. Ethnike rites and bumane facrifices . Deuill-circle. Christianitie. 665

through the same artes which their Father or Prince Odinus practited, obtayned an opinion of Diminitie. I have before advertised you, that chiefly in the North Country, Kings, after their death, are honoured for Gods. But the worthipping of them hath not yet come vnto the Islanders: wherefore we will speake nothing of them in this place. w meretore we will speake nothing of the in the forefaid Temples, flood an Altar credted, coursed The Altar. Before that feate of the Gods placed in the forefaid Temples, flood an Altar credted, coursed The Altar.

about with Iron, that it might not be hart with fire, which mult bee continually there. A Calarous with a ron, that a tingen move that a sign and of the factifices, with an Holywater dron also or braien veffell was fet vpon the Altar, to receive the bloud of the factifices, with an Holywater holy water sticke or sprinkle, to bedew the standers by with the bloud of the sacrifices.

My water sticke of spiritage, to below the table of copper) of twentie ounces, which being Holy Ring. Belides, on the Altar a silver Ring was kept (or of copper) of twentie ounces, which being Holy Ring. anointed with the bloud of the facrifices, they who executed any office pertayning to luftice, being now readie to take their oath, religioully handled while they were tworne. Foure-footed beatts, for the most part, were appointed for facrifices; to bee converted to the food of the Sa. Sacrifices.

beauts, for the most part, were appointed to incrinces; so open connected to the road or the 32-3 seneces, criffeers. Although in the meane base, I finde (a lamentable matter) that the bland Ethneet, or the foreign late of Raidensy tied also human facrifices: where at the doore of the Temple, was Human-inbuthe foreign late or Raidensy tied also human facrifices: where at the doore of the Temple, was Human-inbuthe foreign late of Raidensy and Human-inbuther foreign late of Raidensy and Raidensy a wery deepe Pic, wherein the humane lacrifices were drowned; which Pit was called Blottell mane facrifices

da, from the Sacrifice,
Alfo in Well Island, in the Prouince of Thornshing: in the middle of the Market place there was a round circle, into the which, men appointed to be facrificed to the Gods, were gathered : Deuill-circle who being violently smitten against an exceeding great stone set there, were cruelly slaine. The

indegnitie whereof, that those is reported to have declared many ages after, by the bloudy colour, which no shower of raine, or water, could euer wash away. An abominable crueltie surely, yet not wanting examples, derived even from the most ancient times. I omit those of later time, and found in the neare bordering Countries, as the humane factifices of the French, whereof Czcere pro Fonteio, speaketh : and also the custome of nearer bordering Countries. I doe not mention the Roman facrifices: among which, Laperca Valeria, appointed to be facrificed, was delinered from preient death by an Eagle. Let the maphrodistat , and facrificing of noble Virgins of the Greeter, not be remembted : with whom Helena was likewife freed from imminent perill of facrificing, by the benefit of an Eagle. But who is it, that can be ignorant of Benbennon or Gebennow of the Hebrawes, and their crustic farre greater then this, exercised not vpon flanes or guiltie

now of the Hebrewes, and their crueitie rare greater then this, exercited not you like so guilties perions, but even you their deared children? Concerning which matter I thought good to fee downe the wordes of Curiphos. Advisemmes Upibus. Gebruwes, lith the, was a place in the fair whis of Jerudiem over against the East, under the Manusapus of Offices, near the Fofipools of the write of Jerudiem over against the East, under the Manusapus of Offices, near the Fofipools of the Fuller, such placeform, the Tempe. In this Valley floods a Passinon, and the brasel add of Modoch, consider with the Carlot of the Carlot man, was armes processed joint a joint of the fire put under in the concavity of the Idell, burned amidit thefe curfed embracements: For when by the fire put under in the concavity of the Idell, is became all fery, then the most wicked parents, with incredible crueltie, delivered their descrip children, to mit their Somes and Dangbeers to be burned within thefe deseftable embracements. And leaft dren, to we there I ames and I anguest is we common muon note acciptance consucements. And they the military is the militar his cry of the shalten in borroble townsor the best moment being band, making the moment be best of the parents, Of this place the Fringles of Mooles filled the agree and this meant file was the bar h found of trampets, and firsting and their cree the Fringles of Mooles filled the agree and this meant file was the bar h found of trampets, and firsting and their cree up of Drummet, fo long as the facrifice contained. Whereupon also the place was named Tophet, which of the children

And least any might thinke, that the common seminaring people onely of the fewer became thus blinde; behold King; **1.46a.a, **2.87a* | 6. 2.87a* aliay | 5. fluments and Manaffe; there in the 21. and 33. where also the ancient custome of the Nations may bee the reasonal But that crueltie, and those facrifices of Saturas feeme not to have continued long with the was called Ge-

If landers: and furely, they were vied no where elie, fame in the two places aftigued. Nor yet of beneat and Is all the Inhabitants of that Prouince, where it was exercised. For it is reported of Hurlisian, the companion of Lugalfus before mentioned, that he altogether abhorred the worthipping of idols. 50 And Helge also furnamed Books, descended from the Barons of Normay, an inhabitant of the Pro-

uince of Rislarnes fauoured the Esbaick Religion but a little : for he received an Irifo man, a banifhed Christian, into his neighbourhood; one named Ornulfus, with his families (which came with him:) and did not onely receive him, but also permitted him to build a Church confecrated to Saint Columbe, in the Village of Escuberg. A yong man also of the same Province, called Bos, destroied that most accurled Temple of humane lacrifices with fire, and burned all the Gods, although afterward it was repaired by the Proprietors.

Moreouer, Torchillus furnamed Mane (it may bee because hee honoured the Moone, called More, and the reit of the Starres , with more Religion then the reit) a man of a very vpright life, and famous among the Nebilitie of Island, a little before the agonie of death, caused him-60 felfe to bee fet forth ouer against the Surme, and openly admiring the workmanship of Heauen, and the whole World, commended his Soule departing when he was readie to die, to that God who created the Sunne, and the rest of the Starres. He lived about the yeere of Christ 970. The fame, or the like may be reported of very many others, while Ethnicifns yet continued. As of fallers a certaine inhabitant of South Island: who, because hee followed not the worthip of Hallerss a

Chap. 7.

Idols, was called Godlaus, that is to fay, as was also his sonne Helge. adols, was caused contents, that is to my, some, as was also his some energy.

The publique Offices, force of them are diffinguished from hence; others have their original Co. 2. The punisque Conces, some or chem are unemgented from name; others have their original of Magiliraces from tome other place. Those which are taken from hence, are a Ropagage (that I may dende Of Magificace from some other place. Those winch are exacution neares, are a copyagogue (that I may deather and Courts, a word) and the administration of Produces, to wit, as that partition into Reperand Produces, a word) and the automatication of a tomic 23, to was 25 that partition into represent Prounces, ended as it were in funding speeces, but both had some kinde of gouttoment joyned with it. For ended as it were in funding present, our outstrand tome almost or government toyined with it. For alwell the Reproposit (for to I may call the Masters of Repres) as the prominciall Governours, proalwell the Aspp. gog! (for 10 a may can one maniers on negres) as an prountern Courtisums pro-claimed Allemolies, effablished ludgements (enery one in their Court) and pumihed the guildie: claimed Allemolies, enablined 100 gements (euery one in their Court) and pumined the guiltie: whereby it is easilent that they also yield the Law of Appeale in forten Caules (for in their own, whereby it is ensuing that they and you are that the composition of Appeale for that I need not doubt that the Reproposit also were euen prinate men had interete of a ppeais, to that a new not uoung that the acpraging also were comprehended under the Title of a Magnifrate. Wherefore the number hade wanting with giver; at these continuous owing takin away. Wherefore the number of articles (that I may vie the word of Paul) is more abundantly increased, that is rosay, of them, who being void of all discipline, line infamous to themselues, and grieuous and trouble- 50 then, we obtain you as an analysis , the international manners; and greeness and thouses, fome to their common Country, in flothfull and fithy idleness; inserting and changing that order instituted by God himselfe. The care of which thing, if the Magistrate would yet vader-

The second meaner and way of preuenting pouertie, was a Law or Edict, concerning those who defined to be admitted into a Represor become Citizens of Repres. For none was to be receiued into a Reppe, valefic hee had first gone vato the solerane assembly of that Reppe, and defired ten into a kept, vincus need and in gone vincome mening animosy or tout kepte, and noneotiate he might be admitted; which they might not infly denie, vileffe to one considered of their, or otherwise of some other crime, or so poore, that therefore hee was write for the Empty, and of otherwise of forme of the former of the f that are count not must be preferred at this affembly, her was bound to intreat leaue of cobabitation 69 of fine inhabitants, hazing lands of their owne, and next vincolum, whom hee was about to goe vato. If any of honest same and rich in abilitie, would notwithstanding goe into the Repper without demanding lease, he retayned his labitation, but yet was excluded from the Law and primitings of the Ropes. But if any wicked and dulponet person had thrust himselfe in with-

out leave (although he had lawfully hired void and emptie land from the Lord and Owner therof) the fame was to be expelled by force : Trailes de Reppis cap. 48. To the fame purpose appersameth that Edict concerning feruants taken out of the Rep. cap. 47. of the fame.

The third Statute against pouertie was, concerning the restitution of private lose in the title recited before cap. 47. whereof an example shall be given, first in houses by chance confumed by fire ; and those of foure forts. For if a Store-houle, Kitchin, Bed-chamber, or Bed, and Chappel had been burned; the loffe received was to be valued within fourteene dayes, by five of the next neighbours, as well of the house it selfe, as of the most necessary things contained therein : as of the prouision of victuals, apparell, and houshold-stuffe daily vied onely, properly belonging to the Malter of the family, excluding other mens goods, as treasures, and other things more precious; because a man might bee a sufficient Citizen of Reppes without these. Then the halle part of the Ioffe valued by the whole Reppe, was to bee reftored within an appointed time, by Subfidies contributed in common, according to the abilitie of every Inhabitant. Another example of this liberalitie enjoyned by the Lawes, is, concerning Cattle destroyed by the Murren or Rot : for if the fourth part of any mans Cattle, or more dyed, the loffe likewife being valued within fourteene dayes after the Murren ceased, was to bee releeued by common supplies for the halfe part, as the former was. But concerning both, there was a caution added, that this benefit should not be performed the fourth time; least any thing through too much carelefnesse, and retchlesse negligence, should procure damage to himselfe, De Reppis cap. 47. 0 48.

The other part of the Office of the Reppagogi was imployed about the care of the poore, con-20 The other part of the Orince of the Array 8 certaing the maintaining of such with certaine contribution of almes as were now become beggers, either through fickneffe or age, or other casualties not in their owne power : and also concerning the excluding of others, who should not appertaine vnto the almes, and divers cases thereunto belonging. This almes was either private or publike. Private, for the which a law was Lawes of made concerning the receiving of the beggers, into the number of their family by their kindred, Almes. or coulins, one or more, inabled by a certaine increase of wealth limitted by law, and to bee maintained by certaine lawes, according to the degree of hereditarie fuccession: For as any was next to the inheritance of the begger, if hee possessed goods, so was hee accounted the first that fhould fuffaine him. But the next degree failing, or the same being poore, or not having where-30 with to maintaine himfelfe and his, besides that begger, that necessitie was imposed upon the se-

cond, or third degree of kindred,&c, to be releeved.

Publike almes was , as often as the kindred or confins of the beggar failed, they lived by the helpe and reliefe of the Reppes: every one was to bee maintained in his Repp; whereof there are prescript constitutions of lawes, to wit, what beggars should belong to what Ropp, and what not : and concerning the driving away and expelling of them by processe of law, who appertaine not thereunto. Therefore the Reppagogi partakers of a publike Office limited with thele bounds, proclaimed affemblies : Some furely both in time and place, flanding, or ordinary : others not flanding or extraordinary; that is to lay, as often as any new matter came pertaining to their charge to bee determined. Also private men might call extraordinary affemblies, to wit, they 40 who had any cause worthy of an assembly and indgement. But the figure and token of having an

affembly (after the thousand yeere, when they had now sworne to the Christian Faith, peraduenture before Impiters Hammer and battle Axe, Hamor pors) was according to the religion of that time, a woodden Croffe, which every Inhabitant carryed to his neighbour at the day, place, and occasion of the affembly proclaimed, of which signe intermitted or neglected, a certaine pemalrie was inflicted. There therefore the Repagogi, concerning the matters appertaining to their charge, confulted according to equitie and right, determined them, and punished the guiltie : There the guiltie person, if the innury were private, was cited into the Court of Iustice by him that was injured, even without publike authoritie (which also wee reade was vied by the Spartimes:) but if the injury were publike (or if the partie injured in a private offence would not cite the guiltie person, or could not) then was beceited by some of the Rappagosi. Private men also had libertie and power to fue the Reppagogi negligent in their Office . or otherwise injurious :

wherea penaltie of money fell to the Citizens of the Roppes: all which, and other things here belonging are handled, in codice legim de Reppagogijs, cap. 43. And concerning the inferiour Magiftrates, that is to fay, the Repraeogi onely, to wit, the birt frecies of the Civill Magistrate.

Nowfolloweth the superious Magistracie, which is distinguished into Governous of Probin-

ces, and Inflices. They were each of them Gouernours in every Province (which before I called Thirds, to wit, of every Tetrade) executing as well the publike Offices of the Courts of Iuflice, as of holy my fleries : or they were Interpreters of the Law, and matters of Religion : (although afterward the interpretation of the Law belonged more to the Iuftices.) As with the Romanes, 6c the Adiles also vsurped part of the Pratorian Iurisdiction. Among the ancient Hebrewes also the High Priests : also among the Romanes the High Priests were facrificers. Whereupon Horatius carm. lib. 2. Ode 23. Victima Pontificum fecures cernice singit.

Thefe Gouernours therefore, in that they had the charge of holy Mysteries, were Priests in that they had to doe with the Court of Iuffice and Iudgement, they were Iudges : we call them

Noble-men in this place, and the state of the Common-wealth governed by their overfight, an Noble-men in this place, and the frace of the Common-wearing governor by their overlight, an Arifforanie. The lame are called by our Country-men Goden, and Hoffgodar; from the Church Arilloratie. The lame are called by our Country-nier Orang, and a represent; from the Church or Temple (which is Hoff) as it were Ouer-feets of the Church, and their Office or Dignitie or Temple (which is Hoff) as it were Ouer-recision one condition, and until Onice or Dignitic was called Godord; to wit, their name being next derived from their Elbrick gods, which they calwas called Godora; to wit, their name being iteat between 1900 their account gous, which they called God : that even by the name it felfe, they (who almost represented the Name and Office of the led God: that even by the name it lette, they (who aimous represented the Name and Office of the Gods) might bee put in minde of the Vertues, Wisdome, and Iustice, &c. requifite in fuch a

iouernour.

And that they might thew themselues such, I suppose the same place was appointed to indge-And that they might mew themselves usen, I suppose the same place was appointed to sudgements of the seate of suffice, which was ordained for Sacred Mysteries; to wit, at the forelist ments of the feate of futire; which was orvained for savined mayneries, to wit, at the totelaid Temples. And also therefore, because the place of holy Mysteries, was religiously thought fitter 10 Temples. And allo therefore, because the piace or nony mynteries, was rengiously thought fitter for washes, or the taking of good counfell, whereof there is especiall vie in the Court of Inflice. for influence, or the casing or good counters, whereof one is a expectant we make court of nutice.

Moreouer, the Prounciall Gouernours had their two-fold affemblies, as the Rappages had, yette-Moreouer, the Productal Contributes had then two-total attendars, as the Kappager had; yeer-ly or ordinary meetings, and proclaimed or extraordinary, any necessitie requiring (those forly or ordinary meetings, and proclaimed for extraordinary, any incentific requiring (enote tor-mer affemblies, containing many dayes oid. Kampb. cap. 8. Torn. Log.) and that, as it is likely, mer allemblies, containing many dayes. von. Ampr. cay. o. 1070. Lorg., Janu trac, as it is likely, aftembled by some signe of holding a meeting as we have already faid of Represent: which surancomplet op some tigne or metoring a meetings we made attendy must compensate it which little ly, what it was in times path, is not well knowne; valeffe it were that, which afterwards, and by, what it was in times pair, is not with anowine; vinene is were that, which afterwards, and yet remaineth in vie; the forme of a Normegian axe of Wood, carried about after the fame manyet remaineth in vie time iorme or a verregion and or wood, carried about after the lame man-ner, among the prominciall Citizens: as we faid a little before, of the woodden croffe. This toner, among the prouncian circuens. As we and a little veloce, or the wooden crou ken of the Judiciall Court, is called Bod in our language, which fignifieth a meffage.

en of the indicinal Come, is cause Down to un ranguage, which against a meliage.

Moreouer, enery one paid fome yearely tribute or reuenue to the Temples; whereof the Guar- 20 Moreouer, energy one pass usine yeartry tribute or returning to the a timples; whereof the Cultr-dian or Ouerfeer of the Church was the Collector; for fpeaking of holy mysteries pertaining to dian or Ouerieer of the Church was the Conecon that pressure of the Things and Court the Church, I call every Noble man fo. To him also came the penaltic of the Temple, and Court the Charten, I can energy reconstitution a number of the penature of the 1 empte, and Court of furtice prophaned; who likewise ought to maintaine the Temple, or keepe it in reparations, of future propriated twito make the bugget of maintains are a completed accept it in reparations, at his owner charge. Laftly, the necessity, and specially care to amend and make good what source at his owne currge. Lattly the nectury, and specially safe to amend and make good what for the damage done who the Produce, or to forefee and preuent it being imminent, ving the helpe of damage done vnto the Fronnee, or to force and predefin to being imminent, viling the helpe of the Promincial, lay wholly ypon him: is that, for the deftroying of Theces and publique Rob-bers, you may finde some who were prodigall of their owne life. Contrarily, it is a lamentable bers, you may mose ome who were prougated each owne life. Contrarily, it is a lamentable cafe, how at this day we fee it every where come to pafe, where they make a great conficience to condemne a notorious Theefe by the Law, or any other connicted once or twice of any capitall condemne a notorious 1 neers by the Law, be any other committee other or twice or any capitals crime, much more to put him to death. These are the Gouernours of Proninces: The Nometho. 10 crine, much more to put that to death. Allow are the Color by the Color of Mice follow. The Nomephylax was the other kinde of the Superior Magistrate, somewhat later then these: of which fort, in the whole amotion: Citie of Island (for we yet described). What later then there: Or which note, in the whole amount the total or space (for we yet definite it) at one and the fame time, there was onely one: who of pronouncing or delivering the Law, 10) at one and the same time, there was onesy one; who or pronouncing or deliuering the Law, was called Leginson and Legingmons. For the Commonwealth began not fieldenly, but by little was carred Legislans and Legging manner, or one Communication organizes manning, our by utile and little to be framed: therefore the Prominciall Lawes were first, of the like meaning, though and attree to be traumed. Attractions the production between were unit, of the untermeaning, though peraduenture not every where the same, before they had them compact, and gathered into one peraduenture not every where the name, denote they had them compact, and gathered into one body; which when they attained, for the cultody and prefernation of the fame, they admitted body; which when they accumed, for the cultory and presentation or the same, they admitted trudie and wise men, whom I call Nomaphylacu; and whole Office I shall very well describe in trulis and wise men, whom I call Nomephylaces; and whose Office I shall very well describe in the works of D. Niesslaw Crassus, deckaring the Office of the Sportan Nomephylaces. The Office of the Nomephylaces (Table D. Crassis in I. scape, 6de Repolacem), was as we preceive by the 40 matter is felfe, to bean charge of the costeady and preferentiation of Leaves, for the benefit of the Committee in the first of the surface of the content of the state of the state of the content of the state of the s ten courter, compensative Inagrity active two given repermition of court, and execution of court dates, And further, we may thinks these very men were the interpreters of Lawes, if peraductives any thinks And further, we may toints these very men were the interpreters of Lewes, if perducuture any thing doubtfully set downs, or hardly understood, should come on disputation. This Crasim writests, the same demonstrance or analyse some property of the state of sufferences, the frequency of the state of ther with the reft of the Nobility, of changing, or renewing Lawes, and also inlarging them, as ther wan one retent the twomay, to coming any or the range have spand and manging them, as it were Orators and Counfellours; the conlent of the people being added. Therefore the Noa water various aim communities, tooke nothing way from the forme of an Arifferain: but were, 10 mapsylates of course function, scene menting any months course of an example of the Law, armed with publique auas men occur and octive, amountains, and presented of the saw, aimed with puonique authority for this purpole, in whole power alio] the cuffody of the Booke of the Lawes re-

attice.

But I day a proceeds no further with our Author to but Law Suites and Courts, left I be therein Dat 1 date processes no person must make an armour to con Low owner and vereit, top 1 or to reveal detained with Dermers and reduces deletes. I am a Transiter, and bomformer I base (not fo mach for astation with Demark and scanne usiness. I will a litareur, and componers came (not je much jurillan), as for the knowledge of the Actions antiquities) maded thus farre: I will not tire the Reader farther, but remus the more curious to the Author himselfe, who but added much of their Lawes, and a Jerson, our remail to more correct season to construct analysis, was one amount many of some Lawres, and a whole Books of their auncient Grands, and mother of their Kings, but been emitted. The Kings of Norway began to have dominious in fland, A. 1261. divers immunities referred which Kingdome defcentary open Margaret, by her was linked with the of Denmarke, and fo hath continued about 200.60

THE FOURTH BOOKE.

CHAP. I.

30 A Voyage fet forth by the Right Worshipfull Str THOMAS SMITH, and the rest of the Muscouie Company, to Cherry Iland: and for a further discouerie to be made towards the North-Pole, for the likelihood of a Trade or a passage that way, in the Ship called the Amitie, of burthen seuentie tuns ; in the which I IONAS POOLE was Master having fourteene men and one boy: A.D.1610.

HE first of March 1609. I wayed at Black-wall and went to Grausfend. The third day I went downe to the Noore-bead. The ninth, wee wayed and put out to Sea (bleffed bee God:) and by the fifteenth day I was in the Bay of Roffe, on the Coaft of Norway, in Latitude 65. degrees : at what time the wind came Northerly, and blew extreame fierce, with great store of Snow and Frost. The fixteenth day, wee had the like weather and winds, to that wee could not maintaine a * mayne-courfe, and * The Mainwe loft fome of our Beere. The fenenteenth day, we had Snow, favle without and all the Beak-head was fo laden with Ice, that it feemed a a Bonnet. firme lumpe, and the wind at North, which blew fo fierce

that we could not maintaine a * fore-courfe, and draue vs backe . The Foreto the altitude 63. degrees, 56. minutes. The fforme continued fo exceeding violent, that I The Forewas faine to spoone before it fortie eight houres, and the same wind and weather continued till Boans. the twentie one day, and in that time wee were driven as farre to the Southwards as Shottland. Andbeing faire by the Land, and seeing no likelihood of faire weather, I got a Fisher-man to conduct mee to a good Harbour, called Hamer found, not to much to effort whe flormy weather, Hamer found as to flop fome leakes, and so amend our rackling. I tartyed in Shottland till the twelfth of Shottland. April 1010, at which time the wind was Southerly. The former wind came to the North at midnight, with great store of Snow, which froze as fast as it fell : which wind continued 60 till the fourteenth at noone. At two of the clocke it came to the East north-east, and I frond to the Northwards, after many stormes, much cold, Snow, and extreame Frosts. I had North Care fight of the North-cape the second day of May. Then I stood towards Chery lland, the in 71 degrees winde being at West North-west. The third day at noone, the Cape bare South South-east; 20,minutes. fearenteene leagues off, we had much Snow with Frost. The fourth day, it was thicke weather May the us-
